It may be doubted whether the passion for out door games which is so characteristic of the English race has for many a day hit upon so happy a thought as that which brought the old racket and the child's India rubber ball together, stretched a net between two players or sets of players, and with these slight materials, the use of which is regulated by a few simple rules, made the game now so well known as Lawn-Tennis. Did it possess the single claim on our gratitude of superseding Croquet, it would deserve a shrine at which no worshippers would have been more devout than ourselves. The decorous feebleness of Croquet, its consultative cackle, its baby strategy, its immense nothings, its tiny somethings, bored the racket- or tennis-player to death. It holds—or let us say held, for it only survives on sufferance—the same relation to a really good game as a third to a first cup of tea, currant wine to Madeira, or a Quaker to a normal human being. It may conceiveably be for the best interests of society that a game should exist at which bishops can play without incurring reproach, and curates can join in unrebuked. But though the third sex should require such a distraction, this is no reason which it should be suffered to weigh upon society in general, and it is really a hopeful sign that this feeble and dreary game is practically among the things of the past. In justice, however, to the not unimportant part it has played in society during the past fifteen years, and in charitable application to it of the aphorism *de mortuis nil nisi bonum*, it is fair to say that it has not been without its uses and attractions. Mothers have greatly blessed it as affording a field, external and ancillary to the drawing room, for the display of their daughters' graces, nor should the world be ungrateful for an amusement which has presented Nature's most finished work in new lights and not ungraceful attitudes. Croquet, too, had its alliances, its separations, banishments, disappointments, returns and reconciliations. It almost had its language. An unwelcome suitor might discover his unspoken fate in the vigorous blow which needlessly sent his ball to the frigid zone of the lawn.

> Be gone, I will not hear thy vain excuse!

and if the Valentine of this exile resembled his Shakesperean prototype, he would murmur as each step took him further from life,

> And why not death, rather than living torment?
> To die is to be banished from myself;
> And Silvia is myself: banished from her,
> Is self from self; a deadly banishment!
> What light is light, if Silvia be not seen?
> What joy is joy, if Silvia be not by?
> Unless it be to think that she is by,
> And feed upon the shadow of perfection.

If we really wish to estimate the value of Croquet as a game, apart from its social aspect, it is only necessary to imagine four men playing it alone, than which it is not easy to conceive anything more intolerably tiresome and dreary. Whether the gentler sex could extract any pleasure from it under parallel circumstances, it is impossible to say. Women undoubtedly find a certain satisfaction in doing nothing in each others' society, and it is possible that they could extend their tolerance so far as to get through a game of Croquet by themselves without an oppressive feeling of *ennui*. But the game demands more attention than is compatible with an entire abandonment of the mind to the demands of that critical sagacity which they bring to bear so constantly and gracefully upon their neighbours, and any exhaustive discussion upon dress, babies, servants, husbands, and the really great affairs of life, is not possible when the intellect is strained to put a large ball through a small hoop, and the whole mental economy is being racked to discover whether it is wiser to "take two off" an opponent and go into position, or make a brilliant dash to renew communications with a distant ally. Metaphysicians tell us that, in virtue of the dual nature of the brain, two separate and distinct processes of thought can be carried on the same moment, so that there is no insuperable bar to the speculative destruction of a rival's toilette or reputation with one lobe of the brain, at the very moment when the other is occupied with the intricate problems of a game. But it is not what is possible that we have to deal with here; our business is with what is agreeable and amusing, and from this point of view a game of Croquet between four persons of the same sex would probably be something like a round dance on a Turkey carpet. In other words, as a game, it is insipid, tiresome and worthless. Thumbs down, spectators!—*Habet!*

Far different from this is Lawn-Tennis. It is a game, and a good game. The imperious dictates of politeness will seal our lips for ever upon the question whether it is more agreeable to play with a lady as a partner, or with an inferior creature in our own garb. But in deference to the equally imperious dictates of truth, it may be assumed beyond the possibility of doubt that the presence of our sex vastly strengthens and enlivens the game, and gives to it a vigour which is not invariably characteristic of a set made up of four ladies. So far as the pleasure of the spectators is concerned, the presence of ladies in the game is incontestably a great and unalloyed gain. The action demanded of the player is far from ungraceful, provided the racket is swung and not rigidly held as a mere extension of the hand; and when—as is sometimes the case—an indestructible charm of manner pervades every motion of a fair player, her very failures are apt to produce a sense of pleasure which the most skilful successes of our own sex are unable to command.

It is curious to contrast the end of a game at Croquet with that of a game at Lawn-Tennis. The first is relinquished almost with a feeling of relief that it is all over; the latter with a burning desire to begin afresh. One is like a "love pool" with a dozen players, and it has ever been to us an abiding mystery how people could keep the thread of a game so vapid and tiresome. But the whole system is enlivened and invigorated by Tennis. The quickened action of the heart and lungs sends the better oxygenized blood coursing through the veins at a pace which mocks the lethargy of Croquet and laughs at the thermometer. The spirits rise with the action demanded by the game; the eye grows more keen, the hand more sure, the foot more swift, the limbs more lithe. Cares disappear, Nature's cruelty ceases to oppress, the "days that are no more" suggest no regrets, life whispers no problems, there is no sigh for a summons to the land where "weary limbs may rest at last on beds of asphodel."

We do not know how far the game has become common in the East. The sun of India is perhaps too fierce for it, except for four months in the year. The same objection may apply to all the southern ports of China, but Shanghai would hardly be open to it except during July, August, and September. Here we have a climate which permits of its being played, except of course in case of rain, all the year round. Our summer is not too hot, our winter not too keen. It domesticated itself among us almost immediately after its birth, and now has gained so firm a hold as to defy the efforts of any imaginable pastime to dislodge it. Extremely pleasant it is to see the large muster of players and spectators flocking to the Bluff Gardens after the accustomed cup of tea. What could be more agreeable or prettier, as an unstudied, improvised entertainment, than the sight presented by the Gardens on Wednesday last? The band of the *Audacious* made the grounds ring and echo again with all manner of pleasant sounds, —the delightful overture to the *Gazza Ladra*, the sombre and splendid hymn from 'The Huguenots,' and other airs appealing perhaps more strongly to those for whom our national music has a greater charm. Children were playing about the grounds like the elves on an ever memorable night in the wood near Athens. The grounds were thronged with residents from the settlement. On the slope leading to the Tennis-lawn the combatants, retired or expectant, were gathered round the full benches on which the spectators were reclining to watch the game, while the players themselves were pursuing their pastime with vigour and keen enjoyment. We have seen the Gardens more crowded, the toilettes more studied and perhaps more brilliant; but we never there saw so much unaffected gaiety, and the evidence of so much real enjoyment as were visible on this occasion.

As comparisons are justly held to be invidious, we shall easily be excused from attempting any accurate estimate of the value of Lawn-Tennis relatively to other games. It has not of course the royal, historical prescription of tennis, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

though we hardly know why Charles and Louis should not have enjoyed it had it been known in their time,—and the courts of both would have furnished dainty playmates—it certainly does not afford scope for the variety of skill demanded by tennis, it is far less intricate, and, it must be confessed, a far inferior game. Nor will racket-players be blamed for ranking it below their own favourite pastime. Nothing in Lawn-Tennis approaches the art with which a racket-player, by 'cutting' the ball as he serves it, can send it into the corner of a court, and almost defy an adversary by making it so dance up and down the back wall that an equal art is required to get behind it. There is none of the pretty play of angles, and the nice calculation of the spot where the ball will fall after a vigorous stroke, which keeps the mind so alert during a good game at rackets. But Lawn-Tennis has many niceties which may be made pretty arts in the game. Really clever service, especially if varied by 'cutting' the ball—an art the acquisition of which demands so much practice and entails so many failures that it must be studied alone, and not during the regular play—may puzzle even a good hand. It is not easy to send a ball with moderate speed over the net in a parabola and yet make it fall within the prescribed boundary. We are inclined to think that an excellent service might be attained by throwing the ball up, say about a foot above the head, and striking it sharply at the moment of rest, so as to make an acute angle with the earth, instead of describing a parabola, as it must do if struck at a level below that of the top of the net. The rebound of a ball falling at such an angle would be, of course, at an equally acute angle, and if any considerable speed were given to the ball, this service would be very difficult to pick up. Old racket-players, in adapting their game to Lawn-Tennis, are apt to strike too low, and thus catch the net more often than might be expected from their previous familiarity with the racket; but this fault should disappear with practice as the piano-forte touch does gradually in a player who takes up the organ. It is obvious that as the net has to be cleared, the racket should be held high, and not low as in the game of rackets. This is rather against the grace of action which should be more or less a consideration in all games—play should not only be effective but 'pretty'—because it involves the use of the arm at a right angle to the body, and when the whole arm is thus employed, and not only the fore-arm, it is difficult at times to prevent ungainly attitudes. But even this may be greatly diminished by practice devoted to that end, and the game be made graceful enough. There are two practices which we must—in a mere whisper—make our critical protest against, in deference to the sex which alone adopts them. One is the holding of the racket quite rigidly, so that it has no motion but that of the arm; the other is the rare, but not the less objectionable, use of two hands in taking a difficult ball in the left court. The former is bad for two reasons; first, it involves the swing of the whole arm, and even of the shoulder, which is utterly destructive of all grace in action: and, second, that if any speed is to be imparted to the ball, there is a great waste of force. If the racket is allowed to swing in the hand, it imparts to the ball a motion precisely similar in certain respects to that of a stone sent from a sling; whereas, if it is held rigidly, all the advantage of the sling power is lost. The use of two hands is only open to the objection that it is ungraceful, but it is so very much so that some other expedient must be substituted for it. Now the prettiest of all the strokes at rackets is that which is made on the left side of the body with the right hand, by an almost purely wrist-stroke and a swing of the racket. Men who use the left as easily as the right hand, do not often practise it, but it is quite as effective as a left-hand stroke and infinitely more elegant. When men have to take a left-hand ball, they either do so with a back-hand stroke or with the left-hand—a convenient, but always ungraceful, action. Ladies have hardly muscular force enough for this back-hand stroke, and thus sometimes resort to the use of two hands. They will, we are certain, pardon an old racket-player for suggesting this very pretty and effective left-side stroke. The double hand stroke is really inadmissible, and, once abandoned for its substitute, would never be resorted to again. We shall hardly incur much displeasure for desiring to replace a very ungraceful by a very graceful motion.

As a mode of taking exercise, Lawn-Tennis cannot be too much commended. Instead of a weary, dull constitutional walk, or a ride or drive round 'the road,' it affords a capital and healthy stimulant to the appetite, and ensures that very best of all restoratives during a hot season in the East—short though ours may be—sound, calm and refreshing sleep. While half the world is tossing on unresting couch, the Tennis-player is in the blessed land of dreams.

SPIRIT OF THE JAPANESE PRESS.

THE MERCANTILE STEAM SERVICE.

NOTIFICATION No. 82 OF DAIJŌKWAN.

6th day 6th month 9th year of Meiji.

The following General Regulations for the engagement, and examination of Masters, Mates, and Engineers of vessels of Foreign-form of construction, are hereby declared and established.

(Signed) SANJŌ-SANEYOSHI,
Daijō-Daijin.

The Regulations are divided into two parts, as follows:—

Part 1st.—Contains Regulations for the engagement of Masters, Mates and Engineers.

Part 2nd.—Contains Regulations for conducting the examinations, and for granting certificates to Masters, Mates and Engineers.

The following Regulations apply to sea going vessels only, and not to such vessels as are used exclusively for the navigation of any lake, river, harbour, inland sea, or strait.

PART 1ST.

No person to be employed without his possessing the necessary certificate appropriate to his grade.

Section 1.—On and after the 1st day of the 1st month of the 10th year of Meiji, no person shall be employed as master or mate of any sea-going vessel (excepting those of His Imperial Majesty's Navy) of foreign form of construction, being of or above 100 tons register, or as engineer of any sea-going steam vessel, being of or above 50 nominal horse-power, without his having obtained and being in possession of a certificate as hereafter required, and issued in accordance with these regulations.

Certificates to be of two classes.

Section 2.—The certificates of masters, mates, and engineers shall be of two classes, viz.: "certificates of competency" and "temporary certificates":—

(a) Certificates of competency shall be issued to all persons who pass the examination hereafter required (or such other as the Home Department shall direct) and in other ways comply with the required conditions.

(b) Temporary certificates shall also be granted to masters, mates, and engineers, subject to the provisions hereinafter contained; but all temporary certificates shall be null and void after the 1st day of the 1st month of the 15th year of Meiji.

Vessels on board which masters, mates, and engineers, are required to possess certificates, issued in accordance with these regulations.

Section 3.—On and after the date before mentioned no sea-going vessel being of or above 100 and less than 400 tons register, shall proceed to sea unless the master thereof and the first mate, shall have obtained and possess certificates of either class appropriate to their grade; and no sea-going vessel being of or above 400 tons register shall proceed to sea unless the master thereof and the first mate shall have obtained and possess certificates of competency as such, and the second mate either a certificate of competency or a temporary certificate; and no sea-going steam vessel being of or above 50 and under 100 nominal horse power, shall proceed to sea unless the first engineer shall have obtained and possesses a certificate as such, of either class; and no sea-going steam vessel being of or above 100, and under 200 nominal horse power, shall proceed to sea unless the first and second engineer shall have obtained and possess certificates as such of either class; and no sea-going steam vessel being of or above 200 nominal horse power shall proceed to sea unless the first engineer shal

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

have obtained and possesses a certificate of competency as such, and the second engineer has obtained and possesses a certificate of either class: And any master, mate, or engineer, who shall proceed to sea as aforesaid without possessing and being at the time entitled to possess such certificate, (or one of a higher grade,) as hereinbefore required, and any person who employs any master, mate or engineer without ascertaining that he possesses and is entitled to possess the necessary certificate in accordance with these regulations, shall for each offence incur a penalty not exceeding two hundred and fifty *yen*.

Power of Home Department to alter rules as to the conduct of the examinations.

Section 4.—The Home Department may from time to time alter the rules hereafter laid down, as to the conduct of the examinations of masters mates, and engineers, and as to the qualifications of the applicants, as circumstances may require, and such rules must be strictly adhered to by the examiners.

Fees to be paid by applicants for examination.

Section 5.—Every applicant for examination shall pay the fee hereafter mentioned, or any less amount in lieu thereof as the Home Department may from time to time direct, and such fees shall be paid to such persons as the Home Department may appoint for that purpose.

Certificates to be granted to every applicant who passes his examination satisfactorily, and complies with the requirements of the Home Department.

Section 6.—Subject to the proviso hereinafter contained the Home Department shall deliver to every applicant who is duly reported by the examiners to have passed his examination satisfactorily, and to have given satisfactory evidence of his sobriety, ability, and general good conduct, and in every way complied with the requirements of the said Department, a certificate to the effect that he is competent to act as master, first or second mate, first or second engineer, as the case may be, of any sea-going vessel not exceeding the tonnage, or power, according to the class of certificate, in accordance with Section 3; provided that in every case in which the Home Department has reason to believe such report to have been unduly made it may order a re-examination of the applicant, either before the same or other examiners, and a further enquiry into his testimonials and character, before granting him a certificate.

A register to be to be kept of all certificates granted.

Section 7.—A register shall be kept which shall contain a correct record of every certificate granted, together with the names of the examiners, and whenever any master, mate, or engineer proves to the satisfaction of the Home Department, that he has without fault on his part, lost or been deprived of any certificate already granted him, the Department may, upon payment of one half the original fee, cause another copy of such certificate to be made out and delivered to him, which copy shall be marked "duplicate" but shall have all the effect of the original.

The certificates of master, mates, and engineers, to be produced to shipping officer on signing agreement with crew.

Section 8.—The master, or owner of every sea-going vessel on signing the agreement with his crew, shall produce to the shipping officer before whom the same is signed the certificate of the said master, his mate or mates, and engineer or engineers, as the case may be, in accordance with the foregoing regulations, and after satisfying himself that the same are in order the shipping officer shall grant the master a document to that effect, which document shall bear the date of issue, and the date on which it terminates, which shall be the same as the date on which the agreement with the crew terminates, provided the master, mates, and engineers, as the case may be, remain the same during that period, but should change of master or any mate or engineer take place, the master or owner must again produce the certificates to the shipping officer, who will then grant him a fresh document in accordance with the before mentioned regulations, which document must be produced to the officer of customs when applying for a clearance, and no officer of customs shall grant a clearance without such document; and should any master fail to report any such change to the shipping officer, and to obtain a fresh document accordingly, or attempt to take his vessel to sea without the production of such receipt to the officer of customs, he shall for each offence incur a penalty not exceeding twenty-five *yen*.

Note.—Regulations for the engagement of seamen will shortly be notified.

Penalties for forging or altering or fraudulently using or lending any certificate.

Section 9.—Every person who makes or procures to be made, or assists in making, any false representation for the purpose obtaining for himself or for any other person, any certificate, or who forges, assists in forging or procures to be forged or fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any such certificate, or any copy of such certificate, or who fraudulenty makes use of any such certificate which is forged, altered, cancelled or suspended, or to which he is not justly entitled, or who fraudulently lends his certificate to, or allows the same to be used by any other person, shall for each offence incur a penalty not exceeding five hundred *yen*, or be imprisoned for any period not exceeding six months, either with a without hard labor.

Power of Home Department to institute enquiries into certain cases, and to cancel or suspend any certificate.

Section 10.—If the Home Department has reason to believe that any master, mate or engineer is from incompetency, gross carelessness, or misconduct, unfit to discharge his duties, the Department may institute, or cause to be instituted an investigation, and may suspend or cancel the certificate of any master, mate or engineer, in the following cases.

1*st*.—If upon investigation he is found to have been guilty of drunkenness, misconduct, gross carelessness, disobedience of orders, or neglect of duty.

2*nd*.—If upon investigation it is found that the loss, or abandonment of, or serious damage to any ship, or loss of life, or serious injury to any person, has been caused by his wrongful act or default.

3*rd*.—If he is shown to have been convicted of any serious offence.

Penalty for employing any person whose certificate is cancelled, or during the time it is suspended.

And every master, mate, or engineer, whose certificate is cancelled or suspended shall deliver it to the Home Department, or as it directs, and and in default shall for each offence incur a penalty not exceeding two hundred and fifty *yen*; and no shipping officer shall allow any person to engage as master, first or second mate of any sea-going vessel of above 100 tons register, or as first or second engineer of any seagoing steam vessel being of or above 50 nominal horse-power, whose certificate is cancelled or suspended; and any person who shall willfully employ any master, mate, or engineer, whose certificate is cancelled, or during the time it is suspended, shall incur a penalty not exceeding two hundred and fifty *yen*; but the Home Department may at any subsequent time grant to any person whose certificate has been cancelled, a new certificate of the same or of any lower grade, should it think fit so to do.

Offences against these regulations.

Section 11.—In all cases within His Imperial Majesty's Empire the offences hereinbefore mentioned may be enquired into and judged by any ordinary court, or by special officers appointed for the purpose.

Any fine inflicted under these regulations may be paid by the owners out of any wages, emoluments, or other monies due to the offender.

Section 12.—If after due examination by the court as before mentioned, it shall appear that any person has subjected himself to any of the fines mentioned in these regulations, the court shall determine the amount of such fine (so that it shall in no case exceed the limit given,) according to the nature of the case, and may order the said fine to be paid out of any wages, emoluments, or other monies, that may be at that time

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

or become hereafter due or owing to him, and the owner of the vessel or the person by whom he is employed, shall on receiving a written order from the court before which the case was investigated, pay over to the said court the amount of the fine inflicted, and deduct the same from any wages, emoluments, or other monies that may be at that time or may become hereafter due or owing to him, and no owner or other person employing such master, mate, or engineer, shall pay to him any wages, emoluments, or other monies during the time that such investigation is being conducted, or before the decision of the court is known, and any owner or other person employing such master, mate, or engineer, who shall pay him any wages, emoluments, or other monies, during the time that such investigation is pending, or being conducted, and before the decision of the court is known, or who shall after receiving a written order, and without due and sufficient reasons neglect to pay to such court the amount of the fine inflicted, shall himself forfeit twice the amount of such fine.

Power to appeal.

Section 13.—Any person considering himself aggrieved by any decision under these regulations, can appeal to the Superior Court in the usual manner.

(To be Continued.)

Official Oppression.

(Sanó Zasshi.)

The thirteenth article of the Press laws says:—"Any one advocating a change of government or the subversion of the State, or who attempts to stir up revolution, shall be subject" &c., &c.

But does not the word "government" mean all officials from His Majesty the Mikado downwards, irrespective of rank? This being the case, if we say that to urge a change of government is a crime, the logical inference would be that the administration is composed of gods and saints incapable of erring. This surely cannot be the case. Or does Heaven order the doings of the Government? No: this again cannot be the case. The acts of the officials are the doings of the Government, and it is here that the responsibility lies. This being the case, it is quite just and natural that the people should deem it their duty, in case of necessity, to change the sources from which wrongs arise.

I have heard that the English Constitution does not hold the Sovereign responsible for the acts of his Government, and that this responsibility is borne solely by his ministers. This seems to me an admirable idea, and one which deserves to obtain throughout the world. The parliament which is elected by the people has the power of changing the ministers. But the power of electing men to serve in parliament does not exist among the Japanese, and, under these circumstances, if any one here advocates a change in the government he commits a crime. The inference from this is that the English constitution is unsound, that our Emperor is responsible for all the doings of his government, and that it is the duty of the people to forbear whether right or wrong. This must be regarded as an evil scheme planned by the officials to throw the responsibility of their acts upon the Emperor, and thus to carry on an oppressive form of government.

I have said that it is the duty of the people to change their officials in time of necessity. What time is that? It is when the officials, in hopes of furthering their own selfish interests, conceal the actual condition of affairs from the Emperor, in order to prevent the people from making their complaints heard; when they enact unjust laws; when they are partial in administering justice; when they punish those who discuss the acts of the Government; when there is but one narrow and nominal path through which the petitions and memorials of the people can reach the Government; when the only reply vouchsafed to the majority of these petitions and memorials is "Not approved." without any reason being given; when it is prohibited to publish these memorials in the newspapers; when the oppression of the Government gradually but steadily increases and with it the sufferings of the people; and when all this reflects upon the Emperor to the dismay and distress of his people.

Under circumstances and in times such as these, I not only deem it the duty of the people to change the officials who act thus, and but to show their faith in the Emperor by doing so. I am of opinion that for the words "Any one advocating a change of government," the words "Any one advocating a change of the Emperor" should be substituted.

It may be contended that the officials of the government are the servants of the Emperor and for this reason the people have no right to concern themselves about changing them. But, on this plea, all the people of the Empire are the children of the Mikado, and if they have no right to change the officials who oppress them, those officials have equally no right to oppress the children of the Mikado. The oppression of the officials arises from a selfish spirit, while the desire to change them springs from a sense of duty, and a moment's reflection is quite enough to show which is just and which unjust.

It will be said by some that the words "the people have a right to change oppressive officials" are very frequently repeated, but they never could be permitted to take practical effect, because in that case seditious men would raise a general outcry about oppressive officials and create a vast disturbance throughout the nation. But even though the seditious should thus rise, it is the oppression of the officials which makes them do so, and for this reason I think the people should not be afraid of arousing the spirits of seditious men, because this fear protects the officials in a high degree in their oppressive courses. Moreover, even though seditious men should raise the cry to get rid of oppressive officials, if any of the officials act justly, there is not the slightest fear that the people will be deceived by such a cry or a general disturbance be caused by it. But the course which the officials pursue in carrying out their oppressions is widely different from that which the people would pursue in causing a revolution. The officials are not required to incite the people and are not called on to show that the course they are pursuing is the right one. All they need do is to keep the actual state of affairs concealed from the Emperor, and then pursue their oppressions by saying that this or that act is done by the will of His Majesty and therefore must be done. If any one resists such an act he is arrested and punished, and if this fails to restore order, the officials have the power of calling out the troops.

For these reasons I repeat that it is not well to smother the cry against the oppression of the officials from the mere fear that the seditious will be excited by it.

Liberty of Opinion.

(Sanó Zasshi.)

The Fourteenth Article of the Newspaper Press-laws states that "Any one who reviles the existing laws or confuses the sense of duty of the people to observe them, &c., renders himself liable &c., &c."

My ideas on this subject differ widely from those embodied in this Article. When a law is bad, I think that the people not only have the right to criticise it, but are commanded by their sense of duty to do so and thus try to procure its repeal, for the very good reason that if unjust laws exist and the people suffer distress by means of them, the result may not be mere arguments alone, but an appeal to arms.

Now every civilized country in the world (Japan only excepted) thinks that its laws are susceptible of improvement, and that for this reason they are open to reform. But this reform must come from the people expressing their conviction that such laws are bad, and by this means alone. Let us suppose that seven tenths of the now existing laws are perfect and the remaining three tenths imperfect. If the people are prevented from criticising the latter, how are we to hope that they can ever be reformed?

Again, there may be some laws which answer our present purposes very well, but which will be unsuited to us in future, for laws must be amended as times change, and unsuitable laws may be made through the mistakes of officials. Unjust laws are also sometimes enacted to protect the officials in their selfishness, and these things being so, it is impossible to enumerate all the unjust laws which may exist in a country. Yet the Government ordains that such laws may not be reviled. Does this mean that such laws are never to be reformed?

And again: Even on the presumption that all the existing laws are perfect, and that any one reviling them commits an offence, I do not think that we should be prohibited from criticising them unfavourably. A sage has said "However sound an argument may be, it has but little vitality unless it is attacked and the attacks upon it are repelled in virtue of its inherent strength. Similarly, an argument equally true may fall into decay from the very absence of all attack, and, while in this condition, may succumb to assaults made on it which its own strength would have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

enabled it easily to repel."* Thus, if the people are now prohibited from discussing their laws, and are yet not convinced of their perfection, any one who may suddenly denounce them may end in causing their destruction. For this reason the prohibition to discuss the laws not only prevents bad laws from being reformed, but may destroy existing good laws.

Some may say that if the people are permitted to speak against the laws, the uneducated may begin to look on them with contempt and disregard them. But this is a manifest error, for if arguments are used to revile a just law they will be immediately controverted by sound arguments which will spontaneously spring up against any such attempts, and thus add strength to such laws. I therefore hold that any such fears are groundless.

The dangers of Peace.

(Kokai Shinpo.)

The wisdom of men seems to lie concealed during times of peace, and only makes its appearance when war or confusion of some kind arises. I am unable to say why this should be so; but from ancient times downwards it has been thus in all parts of the world. Has Heaven then decreed that the season of war and confusion is good for men, and the time of tranquillity bad? This can hardly be so, for it is in the nature of men to love peace and detest war. Yet when men recline in the soft repose of peace they become inactive in regard to public affairs and think only of their personal interests. During the happy days in which peace prevails, if the people become oppressed in a great degree and find no place where to lay their complaints, they gradually arouse themselves from their happy dreams, and the desire arises in them to regain the rights with which every one of them has been endowed by nature.

The above remarks seem to be aptly illustrated by the insurrection which is at present taking place in Turkey, and in order to show this I will insert here the Declaration made by the insurgents against the Government.

(Here follows a translation of the Declaration.)

Any one who will examine this carefully will acknowledge its straightforwardness and the absence from it of any sign of fear or flattery. I have published it in order that by reading these words the sleepers may be aroused and the weak invigorated.

Were I a man of such powers as Lafayette or Garibaldi, I would immediately go to Turkey and make cause with the insurgents; but I have no such abilities and must remain here. I can only look towards the West and sigh in sorrow.†

* It is highly curious and interesting to watch the fermentation of European thought in the minds of the Japanese. The writer of this article has evidently been studying J. S. Mill's *Liberty*, and the passage which he here paraphrases is the following, which will be found in the 2nd chapter of that truly noble defence of freedom.

"Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience."—Ed. *J.W.M.*]

HISTORY OF THE TOKUGAWA DYNASTY.*

Translator's Note.

Thus far only a few volumes of the work of which the following version is now submitted to the public have been published. As the remaining volumes successively appear the translation of them will be given with as little delay as possible.

The translation is throughout and purposely a free one. Any attempt at rendering such a language as Japanese literally into English cannot but result in disappointment to the translator, and, what is far more important, in weariness to the reader. Every care has however been taken to omit no part of the meaning of the original, and an effort has been made to preserve the *couleur locale* as far as this was possible, while the style of the text, now redundant, now elliptical almost to obscurity, has rendered both curtailment and amplification to some small extent necessary to make the sense clear. It is intended to republish the translation with full explanatory notes, and—if the translator should have sufficient leisure at his command—with a sketch of the social and political condition of Japan before and after the reforms of Iyeyasu, to be followed by a short essay on the military art of the period.

Preface by Yokose Shingen.

I have never doubted but what there are men, who penetrated with sorrow and filled with sympathy for the miseries of mankind take to *sake*, drinking and singing, hand clapping[1] and dancing, and find their pleasure in an abandonment of the world, heedless of blame or praise, careless of gain or loss [2]; but until lately I never met with such a philosopher. Mr. Nakai Hôkô has devoted his time to literature and possesses an excellent style. He does not despise a cup [3] and knows how to talk well. He has long been content with poverty for he says "give me a house six feet and a bit of ground ten feet square, pencil and ink to amuse myself with, and I can pass the time pleasantly enough" A singular person this! He does not hold himself above his follow men, he is no respecter of persons, well-mannered or ill-mannered, dull or clever, you get the same treatment from him, and if you dont suit him he does but dismiss you—and that in the twinkling of an eye—[4] from his thoughts.

In having been admitted to his intimacy I count myself most fortunate—our acquaintanceship was, I may say, pretty close, for, from morning to night we were constantly seeing each other. When we met he was never indisposed to accept the proffered cup, and no sooner had he quaffed it than he began to converse about the history of the past, and always showed himself especially familiar with the annals of the Tokugawa house. Thus he came to collect and compare authorities and busy himself with writing a book, embodying the principal results of his researches in a work of fifteen volumes to which he gives the title of "History of the House of Tokugawa." Beginning with Iyeyasu[5] he brings us down to Yoshinori[6] narrating the reigns of the fifteen Shôguns of the Tokugawa dynasty covering a space of some two hundred and fifty years. The wars that disturbed the country during that period, the intervals of tranquillity, the victories and defeats of adverse parties are described with the greatest lucidity,[7] we seem to be living in the very age and to witness with our own eyes, the events he tells the story of; he wields indeed the pencil of a genius. Then

* By Nakai Hôkô of Ozaka.

(1) Lit. castanet-playing but here meaning clapping the hands, slapping the thigh etc., in a sort of cadenced manner.

(2) The allusion is to a custom, not uncommon under the *ancien régime*, for Samurai who were discontented with themselves or with the world to show their contempt for the vanities of life or their compasion for its pains by turning *ronin* or *komusô*, abandoning their clan or adopting a life of privileged mendicancy.

(3) The preface-writer does not intend to cast any reflection upon the author's sobriety but simply to laud his sociable disposition. A visitor is usually offered a cup of *saké* the drinking of which, accompanied with various polite phrases and gestures and a whiff of tobacco, inaugurates the conversation between host and guest.

(4) Lit. in the gulping of one mouthful.

(5) Commonly known as Gongen Sama.

(6) Hitotsubashi, the last of the Shôguns often vulgarly known as Keiki.

(7) Lit. are made as manifest as the palm of an outstretched hand,

after the first civilities had been interchanged,[8] how he would now gesticulate with merriment, now grasp[9] his arm with rage, now set his teeth in scorn! What a slothful fellow that Uchizane was! he would exclaim, what a dolt that Katsuyori! But what a man was Shingen,[10] a true leader of armies, sagacious as a god, fierce in combat as a demon! And who was ever so brave as Kenshin rapid in battle as the wind, terrible as a clap of thunder! Did not Nôbunaga in his onslaught at Okehazama, Hideyoshi in his march upon Shidsugatake, exhaust the art of war? And Iyeyasu with his crowd of able leaders, was he not an invincible warrior in the field, an incomparable ruler in the cabinet, full of love for the people, the justest of men!" I used to smile at his enthusiasm and bid him cease, telling him he was indeed one of those to whom I have referred, who penetrated with sorrow and filled with sympathy for the miseries of mankind take to *saké*, drinking and singing, to hand clapping and dancing.

And so I wrote this Preface.

YOKOSE SHIN GEN,

A poor fisherman of Bokki (Mokojima.)

CHAPTER I.

From the birth of Iyeyasu to the death of Nôbunaga.

Pedigree of Iyeyasu.

Tokugawa Iyeyasu was descended from Nitta Yoshishige. The father of Yoshishige was Yoshikuni, the son of Minamoto Yoshiiye. He dwelt in Kôtsuke, and exercised seignorial rights over the districts of Ashikaga and Nitta. It was from this circumstance that he adopted Nitta as the family name. The fourth son of Yoshishige was called Yoshisuge, and was Lord of the *mura* of Tokugawa in Kôtsuke and was known as Tokugawashiro. His descendant in the 9th generation was Arichika.

Arichika takes refuge in Mikawa.

Arichika, menaced by dangers in his own country, fled to Mikawa, carrying with him two of his children. The chiefs of the *mura* of Matsudaira and Sakai took a liking to the two boys and each married his daughter to one of them. Their younger brother, Yasuchika by name, was afterwards adopted into the Matsudaira family, and building a house took his father Arichika to live with him. Yasuchika succeeded his adoptive father, and became chief of the Matsudaira *mura*. He afterwards rose to the dignity of *Mokudai* of the province, and was finally invested with the title of Mikawa no kami. His son Nôbumitsu, known as Idsumi no kami, succeeded him and had over forty sons and daughters. The lands and dignities of Nôbumitsu passed on to his son Chikatada, from the latter to his son Nagachika, and from him to his son Nôbutada, whose son, Kiyoyasu, in his turn, succeeded to his father. Kiyoyasu dwelt at Okazaki and was called Okazaki-kô by the people of the province. He made himself master of Western Mikawa, and so greatly extended his power that most of the barons of Mino and Owari became anxious to range themselves under his banner. In the 2nd year of Temmon, (A. D. 1533) Kiyoyasu took the field, and encamped at Moriyama in Owari, where he was suddenly set upon and slain by Masatoyo, son of Abe Sadayoshi, whom some fancied grievance had prompted to the act.

Uyemura Hideyasu, who happened to be at his lord's side at the moment when he was attacked, at once cut down the assassin. Kiyoyasu was succeeded by his son Hirotada. As Sadayoshi was in no way responsible for his son's crime, it was not visited upon him, and he was appointed Governor to Hirotada. Nôbusada, Hirotada's uncle, moved by ambition, engaged in a plot against him, of which Sadayoshi got wind and conveyed his young charge to Isé, where he secretly assembled the leaders of his lord's following and, with their approval, sought assistance from the house of Imagawa. This was accorded, and Hirotada was placed under the protection of that family whereupon Sadayoshi in the 6th year of Temmon (A.D. 1537) returned to Okazaki.

Birth of Iyeyasu.

In the tenth year of Temmon (A. D. 1541) Hirotada married the daughter of Midzuno Tadamasa, and on the 26th day of the last month of the following year (A. D. 1542) a man-child, Iyeyasu, was born to him at Okazaki. The boy was of a sturdy frame, and his great-grandfather Nagachika on his being shown the child could not restrain his admiration, exclaiming that the lad would most assuredly make a name for himself in the land.

On the death of Tadamasa, his son Nôbumoto renounced his allegiance and went over to the Ota family. Hirotada, anxious not to excite the resentment of Imagawa Yoshimoto, put away his wife the daughter of Tadamasa, and married the daughter of Tôda Nôrimitsu in the 16th year of Temmon (A. D. 1547). Nôbuhiro, son of Ota Nôbuhide, by order of his father occupied Anshô, and, after fortifying the place, marched thence against Okazaki. This movement forced Hirotada to seek for the assistance of Imagawa Yoshimoto, who would only grant his aid upon the condition that Iyeyasu should be delivered into his hands as a hostage for his father's good faith. Iyeyasu, who had now attained his sixth year, was accordingly sent to Suruga, accompanied by some fifty retainers as fellow-hostages. He had, however, not been long there before he was carried off by Nôrimitsu, in pursuance of a plan which he had devised to promote the interests of the Ota family and which he had privately communicated to Nôbuhide. A messenger was immediately sent to Hirotada to inform him that his son was in the hands of the Ota party and might come to him if his father should refuse to join the opposition against Imagawa.

Hirotada however disregarded the threat, replying that although Iyeyasu was his only son nothing should induce him break the faith he had sworn with Suruga. In the 3rd month of the 18th year of Temmon (A.D. 1549) Nôbuhide died, and his eldest son Nôbunaga assumed the government of his territories. About the same time Hirotada fell ill, and soon afterwards died, whereupon the leaders of his following became divided into two parties; one wishing to make friendly overtures to Owari and get back Iyeyasu, the other preferring to maintain for the present the long-standing amity with Suruga and gain time for a review of the situation. The question was hotly discussed but without any decision being arrived at. Meanwhile Yoshimoto, on being informed of the death of Hirotada, sent his general Asaina Yoshiyasu to take charge of the defence of Okazaki. The Mikawa leaders were thus forced to decide upon their policy, and adopted that of allying themselves with Yoshimoto, whom they assisted by raising troops and marching against Anshô. In the 11th month, Yoshimoto having gradually assembled his forces placed them under the command of the Bonze Daigen, and ordered him to combine with the Mikawa leaders in the attack upon Anshô, to the relief which Nôbunaga was marching with such troops as he could collect. The latter however fell into an ambush and suffered great losses, the garrison of Anshô that had sallied out to his assistance being at the same time defeated and pursued up to the outworks, which fell into the hands of the victors, leaving only a small part of the inner portion of the castle in the possession of Nôbuhiro. Taking advantage of his success Daigen sent a messenger to Nôbunaga with a proposal that he should give up Iyeyasu in exchange for his own elder brother whom the morrow would see in their power. A meeting was according arranged at the temple of Kasa in Owari where the proposed exchange was effected, Nôbuhiro making his way westwards (to Owari), and Iyeyasu returning to Okazaki, from which place, after a few days' stay, he departed for Suruga there to resume his position as a hostage. Yoshimoto now despatched troops into Mikawa and threw garrisons into the castles of that province, leaving Matsudaira Shigeyoshi and Torii Tadayoshi to collect the revenues, the whole of which were to be remitted to Suruga, but upon the understanding, confirmed by the solemn promise of Yoshimoto to the Mikawa leaders, that they should be returned to Iyeyasu upon his attaining his majority.

In the 2nd year of Koji (A.D. 1556) Iyeyasu now in his 16th year performed *gembuku* in Suruga, Yoshimoto placing the cap upon his head, while his kinsman Sekiguchi Chikanaga adjusted the hair. Iyeyasu now took the individual name (*hommiyo*) of Motonobu and the common name (*zokumiyo*) of Tokugawa-jiro-saburo and married the daughter of Chikanaga. With the consent of Yoshimoto, he then returned to Okazaki, where finding one of the Suruga leaders, a man of the Yamada family, in command of the castle he refrained, out of respect for his protector, from entering, and met the assembled *samurai* of the province outside the walls. Torii Tadayoshi, quitting the ranks, could not restrain his tears as he grasped the hand of the young chief, who was himself deeply moved.

In the 3rd year of Kôji (A.D. 1557) Iyeyasu again visited Suruga. In the same year the Tennô, Gonara, died, and Ogimachi mounted the Imperial throne. Many of the barons of Western Mikawa broke their allegiance to join the party of Nôbunaga, whom Yoshimoto showed a great anxiety to bring back to their obedience.

Iyeyasu returns to Okazaki and suppresses a rising of the barons of Western Mikawa.

In the 2nd month of the first year (A.D. 1558) of Yeiroku, Iyeyasu at the instance of Yoshimoto returned to Okazaki and marching thence against Terabe and Hirose successively, inflicted enormous losses upon the insurgents.

Koromo, Mumetsubo, Ito and Ogawa next fell before his arms, and in the 4th month he returned to Suruga where in the spring of the 2nd year (Yeiroku) an heir was born to him known in history under the name of Nôbuyasu.

Imagawa Yoshimoto collects troops and prepares to carry his arms into the country of Nôbunaga.

The rule of the Imagawa family had been for some time previously acknowledged by the provinces of Suruga, Totomi and Mikawa, and ambitions of bringing Owari also under his authority Imagawa Yoshimoto now marched into that province with a considerable force and occupied the Lordship of the Ota family. Nôbunaga, on hearing of this raid, ordered the castles of Washidsu Marune, Odaka, Kutsugake, Narumi, Mumetsubo and Terabe to be garrisoned and put in a complete state of defence. Odaka, Narumi and Kutsugake, however, surrendered to Yoshimoto, who placed Udono Nagamôchi in command of Odaka and invested Okabe Naganori with that of Narumi.

Iyeyasu throws provisions into Odaka.

Shortly afterwards, the garrison of Odaka were reduced to a state of great extremity through failure of their provisions. They contrived to convey information of their perilous situation to Yoshimoto, who at once ordered Iyeyasu to take a thousand horse(11) with him and throw supplies into the place. Iyeyasu, accordingly, marched towards the town. The front and rear approaches to the castle were overlooked by the enemy's works, and the leaders of the relieving force were dismayed at the difficulties of their task. They were reassured however by the plan Iyeyasu laid before them. Nôbunaga, having occupied Narumi, the young Mikawa chief made a feigned attack upon Washidsu, set fire to the neighbouring villages and hamlets and ordered the drums to be beat to simulate a real assault. The enemy, perceiving the smoke rising from the burning villages, sallied out from Marune and their other strongholds, and hastened to the assistance of Washidsu. Iyeyasu availing himself of the opportunity his stratagem had thus procured for him revictualled Odaka, and having effected the object of his expedition, collected his men and set out on the return march, which he conducted in such excellent order that Nôbunaga did not venture to attack him. In the 5th month of the 3rd year of Yeiroku (A.D. 1560) Yoshimoto assembled a considerable force and penetrated into Owari as far as Chiriu, where Iyeyasu effected a junction with him. Their combined forces then attacked Marune, while the Suruga general Asaina Yasuyoshi sat down before Washidsu. Yoshimoto, having next reduced most of the castles in the province, confided the defence of Odaka to Iyeyasu and encamped in the defile of Okehazama.

The engagement at Okehazama.

Nôbunaga, on being informed of the important successes achieved by his adversary, angrily threw back his sleeves and resolved upon immediate action. Hastily getting together an escort of some ten retainers he rode on towards Okehazama, and by the time of his arrival at the shrine of Atsuta his following had swelled to a thousand men. His forces were increased by detachments from the garrisons of the castles they passed by, and he soon found himself at the head of three thousand troops. The leaders on looking eastwards and perceiving the castles of Washidsu and Marune in flames were seized with a panic, but Nôbunaga, enraged at the sight, whipped his horse to the front. Meanwhile Yoshimoto, flushed with success, had left his camp unguarded, and Nôbunaga by hiding his flags and keeping his drums silent was enabled to approach his adversary unperceived. After having examined the position from an eminence overlooking the defile he mounted his horse, and brandishing his spear, rode at a gallop towards the enemy's lines accompanied by a number of his followers. A high wind blew the dust in their faces, while a thunderstorm broke suddenly over their heads as they cut their way into the camp.

The Suruga men, thus taken by surprise, were thrown into the utmost confusion, in the midst of which their leader Yoshimoto met his death at the hands of Môri Hidetada, and were finally dispersed with immense loss. Iyeyasu's principal officers on hearing of this disaster advised a retreat and Midzuno Nôbumoto, one of Nôbunaga's leaders, sent a messenger with the news of the death of Yoshimoto, warning them at the same time that Nôbunaga would certainly make an attack the next morning, to escape which they would do well to get away under cover of the night. This suggestion, however, was not adopted, and it was unanimously agreed to move at their leisure, repelling any attack that Nôbunaga might choose to make in the meantime. The expedition accordingly effected its retreat in good order and without molestation. Iyeyasu, scorning to take advantage of Yoshimoto's death, refrained from immediately occupying the castle of Okazaki which his protector had shown no intention of rendering to him during his life.

Iyeyasu makes his entry the Castle of Okazaki. The Barons of the province render him homage.

He therefore halted for three days at the temple of Daijin during which time the Suruga men flocked in numbers from their strongholds to his standard, and thus accompanied he took possession of the castle. Nothing could exceed the delight of all classes at the return of Iyeyasu and his gate was thronged by the barons of the province who came to offer him their homage. The partisans of the Ota family did not venture to make a move against him and he had leisure to march against Kômo and Mumetsubo both of which places fell to his arms. He next surprised Hirose after which exploit he presented himself before Kutsugake. Nôbunaga, meanwhile, flattering himself that his victory at Okehazama would deter the Mikawa men from resorting to arms and force them into submission, had rested upon his success, and could not conceal his surprise and alarm when news reached him of the movements of Iyeyasu. Directing Midzuno Nôbumoto to invest Okazaki he himself in the 6th month (3rd year of Yeiroku A.D. 1560) engaged the enemy at Ishise and afterwards under the walls of the castle of Kariya. The men on both sides were well acquainted with each other, and fought with the greater pertinacity in that they were mutually anxious to display their valour. No decisive results, however, ensued, both parties wearied with their exertions withdrawing from the field.

In the 8th month Terabe and Kômo were reduced by Iyeyasu, who, following up his successes, threatened Yamanaka and attacked and destroyed the fort of Iwoyama. These exploits greatly enhanced his fame and the principal barons of Western Mikawa gradually gave in their submission. In this year, too, troops were ordered to occupy Eastern Mikawa. Iyeyasu had previously sent an envoy to Imagawa Uchizane, son of Yoshimoto, begging to be allowed to fight in the forefront of the battle in the event of his taking up arms against Nôbunaga to avenge the

(11) So in the text, but a considerable body of men is simply meant.

Original from UNIVERSITY OF CALIFORNIA

death of his father. Uchizane vouchsafed no answer to this request.

Iyeyasu takes up arms against Suruga.

Of a feeble and suspicious nature he distrusted Iyeyasu and placing Higashijô under the command of Hira Yoshiaki, Nishiwo under that of Makino Narisada and Ushikubo under that of Maki Kiyonari, prepared to meet the attack of the Mikawa leader. Thus originated the struggle between Iyeyasu and Suruga.

Peace between Iyeyasu and the Ôta family.

In the 4th year of Yeiroku (A.D. 1561) Nôbunaga, at the instance of Midzuno Nôkumoto, made overtures of peace to Iyeyasu, which the latter, after conferring on the proposal with his principal officers, accepted, to the great delight of his former foe. Boundaries were settled, and Hirose, Mumetsubo, Kômo and Tange were returned to Nôbunaga while on either side warlike preparations were discontinued. Iyeyasu, desirous of ratifying the treaty by a solemn oath, went to Owari for that purpose, and presented himself at the gate of the castle of Kiyosu where his unexpected visit caused great confusion. Seeing this one of his suite, Honda Tadakatsu by name, a youth of fourteen, ran to the head of his master's horse and brandishing his halberd demanded in an angry tone why his lord was received with such scant ceremony. In lieu of replying, the retainers to whom he addressed his reproaches withdrew abashed, but Nôbunaga at that moment himself appeared, and, receiving his guest with due courtesy, led him into the castle. Iyeyasu was followed by his henchman Uyemura Hidemasa bearing his master's sword, a circumstance which called forth the disapproval of Nôbunaga's guard. Hidemasa, greatly irritated at this treatment, demanded in an angry tone what they saw wrong in his carrying his lord's sword after him, adding that he was pretty well known under the name of Shinroku. Nôbunaga, hearing the dispute, turned round and bade his men treat Shinroku, whose reputation as a valiant samurai had been long notorious, with civility.

Iyeyasu and his host now swore peace, and their authority was fully acknowledged throughout their respective territories. It was at the same time agreed that if Nôbunaga should be named second man in the Empire (i. e. Shogun), Iyeyasu should recognise his authority, while if the latter should be so named the former should yield him due obedience. Nôbunaga entertained his guest with fitting hospitality, and after bestowing a most valuable sword upon Hidemasa, declaring that his conduct that day recalled the devotion of Hankwai at the Kô gate of the palace of Kôsu, allowed them to return. Uchizane on hearing of this visit was filled with anger, and lost no time in signifying his displeasure to Iyeyasu, who, however, by the assistance of a favourite retainer of the Imagawa family, Miura Yoshichika, contrived to appease his wrath.

Hira Yoshiakira having quarrelled with his younger brother Yoshitora, Lord of the castle of Arakawa, the latter through Sakai Masachiko proffered submission to Iyeyasu, and a combined attack was made upon Nishiwo, the commander of which place, Makino Narisada, fled to Ushikubo. Higashijo was next laid siege to and Yoshiaki compelled to surrender.

In the 5th year of Yeiroku (A. D. 1562) Western Mikawa being almost entirely pacified, troops were sent into the Eastern half of the province, and Udôno Nagamôchi who held the command of the Castle of Nishigôri was forced to abandon the place and fly. In the pursuit two of his sons were taken prisoners. Uchizane showed great sympathy with the distressed father, a circumstance which coming to the ears of Ishikawa Katsumasa induced him to make a secret journey to Suruga leaving written word of intention behind, with the view of proposing that the son of Iyeyasu, who still remained as a hostage in Uchizane's hands, should be returned in exchange for the two sons of Udôno Nagamôchi. The proposal was conveyed to Uchizane through Sekiguchi Chikanaga, of kin both to his prisoner and to himself, and accepted by him, although he had intended to put the youth to death, and had only been restrained from carrying his intentions into effect by consideration for Chikanaga.

Ishikawa Katsumasa brings back the son of Iyeyasu from Suruga.

Messengers were at once despatched with the news to Iyeyasu and the two sons of Udôno were brought back to Suruga while Katsumasa and Chikanaga escorted Nôbuyasu to Mikawa and delivered him into his father's care. The exchange had hardly been effected when Uchizane repented his act. Venting his rage upon Chikanaga he ordered him to put to death, and shortly afterwards caused the whole of the rest of the hostages to be summarily butchered.

Disturbances are created by the Ikkô Sect.

In the 10th month of the 6th year of Yeiroku (A. D. 1563) Sugenuma Sada-aki by order of Iyeyasu erected a castle at Sasaki, and on its completion sent a messenger to the neighbouring temple of Jôgû with a request that the priests would lend him supplies for the garrison. The priests, however, refused to accede to his demand, whereupon he took what he wanted by force. The temple belonged to the Ikkô Sect, and the priests, highly incensed at the violence of Sugenuma, sent a letter, demanding armed assistance, to their brethren of the temples of Shômon in Harizaki, Honshô in Nôdera and Zenshu in Tôro. They soon got together over a thousand men and attacked Sugenuma, breathing vows of vengeance. Iyeyasu, enraged at their proceedings, seized some of the ringleaders and put them to death as a warning to their followers. This only incensed the communities of the four temples the more; the whole of the members of the sect were convened, and a holy war was proclaimed, paradise being promised to all who should march with the faithful, while recusants were threatened with the pains of hell. Many of Iyeyasu's principal officers themselves belonged to the sect, and abandoning their lord, joined the insurgents. Yada Sakujiro, Baba Koheida, Hachiya Sadatsugu, Watanabe Moritsuna and Honda Masanobu, with some few hundred men, espoused the cause of the priests, and dividing their troops reinforced each of the four communities. By firing rockets, to which preconcerted signal every one responded, a simultaneous rising was effected, Kira Yoshiaki occupying Higashijo, and Yoshitora, Arakawa; while Sakai Tadahira led the men of Kotsuke Matsudaira, Iyetsuga those of Sakurai, and Natsume Masayoshi the forces he had collected in Nôba. The movement excited the serious fears of Iyeyasu, and Okubo Tadatoshi, Sakai Masachika, Matsudaira Koretada, Honda Hirotaka, and Matsudaira Kiyoyoshi were ordered to take charge of the defence of his castles, with instructions to fire rockets for assistance when the enemy should present himself. Matsudaira Koretada marched against Nôba which submitted while Sakai Tadatsugu advanced upon Nôdera.

(To be Continued.)

Law & Police

IN H. B. M.'s CONSULAR COURT.

Before H. S. WILKINSON, Esq., Acting-Consul.

Monday, June 12th, 1876.

REGINA *vs.* MUSSOR ALI, fireman on board the S. S. *Sunda*.

Charge: Refusal of duty, and abusive language to chief engineer and serang.

Robert Bruce, chief engineer of the *Sunda*: On Saturday last prisoner, who is a fireman, refused to obey orders when sent to work. On the serang insisting on his going to work, he threatened the serang's life. He was then brought before the commander and by him reduced to a coal trimmer and ordered to go to work as such. He refused to do so, and used provoking language.

Prisoner, through an interpreter: The ship was coming into harbour at four o'clock. I cleaned the boilers; afterwards I felt sick and told the serang so, and I went on deck. When I came back the boatswain reproved me for my absence, struck me, pulled my ear and reported me to the chief engineer. The chief engineer told the boatswain to take a rope and tie me up. I said I wanted to see the captain. I saw the captain at 9 o'clock, and the captain said "All right, you go to the engine room about your business." This I did, but then the boatswain came to the engine room and said that I did not understand the engine room, I had better go to the bunker. I said, I am a firemean, I don't go to the coal bunker. Then the boatswain went with me to the chief engineer and afterwards again to the captain, and the captain told

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

me to go and work in the coal bunkers. Then I said: I am a fireman, I don't work in coal.

Sherk Haniff, Serang of *Sunda*: In the morning the chief engineer ordered the engine room to be cleaned, and all hands went down below. Afterwards prisoner went forward and never came back. The boatswain went on deck to look for him and found him eating a banana, and smoking a pipe. The boatswain ordered him to the engine room, and he said "All right," but never came. Then the boatswain sent another fireman to call prisoner, but prisoner did not come. The boatswain then went himself and told prisoner that he would report him to the chief engineer. He did so, and the chief engineer caught prisoner by the ear and told him to go to the engine room. Prisoner then called the chief engineer a pig, and went down to the engine room, but the chief engineer followed him and ordered the boatswain to bring a rope. The rope was brought and they commenced to tie up prisoner. But prisoner would not allow himself to be tied and asked to see the captain. Then the chief engineer, boatswain and prisoner went to see the captain, and the captain sent prisoner to the coal bunkers. But prisoner refused to work in the coal bunkers; he was then reported to the chief engineer who told him, as he would not go to the coal bunkers, to go on the deck and break coal; but prisoner refused.

Moomburrach, fireman of the *Sunda*: Last Saturday at 6 o'clock a.m. prisoner worked in the engine room. The boatswain missed him for half an hour, and when he made his appearance the boatswain asked him where he had been? Prisoner said that the boatswain did not belong to the engine room, he (prisoner) had been forward and had told the engineer's storekeeper so. The boatswain reported prisoner to the chief engineer.

Sentenced to be imprisoned for seven weeks, or such shorter time as the ship may stay in port, and to pay costs of court.

Tuesday, June 13th, 1876.

C. JOHNSON *vs.* JOSEPH SAUNDERS.

This was a claim for $24.60 for clothes supplied.

Plaintiff appeared personally, defendant did not appear.

George Hodges, Consular Constable, sworn: I delivered a summons to defendant at about 3 p.m. yesterday on board the Japanese steamer *Nagoya Maru*. I handed the summons to defendant in person, who said "I saw him a few minutes ago." I suppose he meant plaintiff.

Charles Johnson, sworn: I live at No. 82. I am a clothier and outfitter. In October last I supplied Saunders with clothing to to the amount of $33.60; afterwards he got a cap which cost $1. He has paid me $15 and now owes me $24.60. I saw him on Friday last and he told me he would pay as soon as he got paid himself.

Judgment for plaintiff in the sum of $24.60 with costs, to be paid within ten days.

Tuesday, June 13th, 1876.

JARDINE MATHESON & Co. *vs.* C. P. JONES, master of the British steamer *Oxfordshire*.

Plaintiffs claimed $2,500 as their commission on a charter which they stated they had obtained for defendant from Messrs. Smith, Baker & Co. to carry a cargo of tea from Yokohama to New York, at a freight of £10,000 more or less, and as the steamer was leaving port yesterday afternoon without their claim being satisfied, they had the captain put under arrest and detained here, while the steamer went on its way to Kobe, there to finish loading.

Mr. Ness appeared for plaintiffs, and Mr. Montague Kirkwood for defendants.

Mr. Ness stated that the *Oxfordshire* had, by its owners, been consigned to the firm of Jardine, Matheson & Co., in Hongkong, Shanghai, and Yokohama. The firm here received a letter from defendant asking them to procure him a charter to New York from Yokohama, whither he was bound with a cargo of coal. Accordingly the firm here exerted itself to procure defendant a charter as desired, and such charter was promised from Smith, Baker & Co. They were, therefore, much surprised when they heard that the captain had directly entered into negotiations with Messrs. Smith, Baker & Co. about a charter. The plaintiffs consider themselves authorized by the captain's letter from Hongkong to procure him a charter, and they consider it their duty to put down such practices as the captain has inaugurated.

G. L. Montgomery, sworn: I am clerk in the employ of Messrs. Jardine, Matheson & Co. About a week or ten days before the arrival of the *Oxfordshire*, which took place on the 9th of May last, I was instructed to look out for a charter for that steamer. In consequence I visited several of the commercial houses in Yokohama, amongst them Messrs. Smith, Baker & Co. I was there told, in answer to my enquiry, that they preferred giving anything they had to a vessel which would be under their own control, and they considered the *Oxfordshire* a slow boat. I told them I would bring the captain to them when he arrived. I was asked what the rate of charter would be, and said it would be based on Shanghai rates. The result of my interview I communicated to my employers.

Cross-examined by Mr. Kirkwood: I had no positive promise of cargo from any other firm. I was not told at Smith, Baker & Co.'s that they were perfectly aware that the *Oxfordshire* was coming here. I was told that they should like themselves to see the captain before giving any definite answer. I told the captain that I did not think he would be able to get away before the 1st of July. I think Captain Jones told me he had arranged with Smith, Baker's & Co., on the very same day that he made the arrangement. He did not mention to me anything about Smith, Baker & Co. until after I had told him that I had seen that firm myself. My telling captain Jones that he would not be able to get away until the 1st of July happened within one or two days after his arrival.

J. J. Keswick, sworn: I am a partner of the firm of Jardine, Matheson & Co. The *Oxfordshire* was consigned to our firm both here and at Hongkong. I had sent her down to Hongkong with a cargo of coal from Nagasaki; afterwards she went to Saigon with a cargo of rice. The vessel was in our hands. My object was to keep the steamer employed until such time that we could give her a tea freight. (shown the above mentioned letter.) I received that letter from Capt. Jones. (Letter handed in.) That letter is quite in the customary tone, asking for charter. We also received a telegram from Hongkong, asking if we could procure freight for the *Oxfordshire*. After the receipt of Captain Jones' letter I instructed one of our clerks to try to procure a freight for the *Oxfordshire*. Mr. Montgomery reported to me what he has just stated in the witness box. In consequence of Mr. Montgomery's report I spoke to Captain Jones, told him that we had been in communication with Smith, Baker & Co., and that I thought there was a possibility of his obtaining a freight from them. But when I suggested to Captain Jones to lay him on the berth at once, he demurred, because, he said, Smith, Baker & Co. will then immediately lower the rate. I approved of that consideration and told him that in a few days we would call at Smith, Baker & Co.'s with a view to ascertain what could be done towards a charter to New York. A few days afterwards I told Captain Jones that we would now go to Smith, Baker & Co. He answered me that he had just come from there, that he thought they would charter him at £4 10s., and that he should have an answer at 2 p. m. I said I presumed the answer would come to me, but Captain Jones said, "No, to me." In the afternoon I wrote a letter to Captain Jones informing him that we had not chartered the steamer, and that we were looking out for a charter. I was subsequently informed that the steamer had been laid on for New York, and then I ascertained through the public notices in the local papers that she was chartered by Smith, Baker & Co. I know that she left this port with cargo for Smith, Baker & Co. I applied to the captain to comply with the usual conditions for procuring a charter for a vessel. I asked him how much the freight was, but got no satisfactory reply. (Letter read from the owners of the *Oxfordshire* consigning the ship to the firm of Jardine, Matheson & Co. in Yokohama, and asking their assistance in procuring homeward freight. Letter put in.) The usual commission for procuring a charter is 5 per cent. on the freight; we were first in communication with Smith, Baker & Co. about that charter.

Cross-examined by Mr. Kirkwood: I told Captain Jones that I could not give him any employment at once, and may have mentioned the 1st of July with reference to the tea market. I told Captain Jones that I understood that Smith, Baker & Co. wanted the steamer in their hands, if they gave her charter, but I did not tell the captain that Smith, Baker & Co. would not give a charter, if I laid the steamer on the berth. I telegraphed an offer to the captain in Nagasaki to take a cargo of rice, but I did not renew the offer when the steamer arrived here. Between the arrival of the ship on Monday and the following Thursday the captain never led me to suppose that he was in communication with Smith, Baker & Co. On Friday morning I told the captain that I was only studying the interest of the ship, and that I would not have let the question of commission stand in the way of charter. The captain had asked me to close his accounts and I had to telegraph to Hongkong for some particulars, which detained the closing of these accounts. After the steamer was chartered the captain told me I had no power over the ship. I consider that I introduced Captain Jones to Smith, Baker & Co.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

As far as I know Smith Baker & Co. got this first information about the *Oxfordshire* from me, but subsequent events make me doubt it. Even if I had been aware that Smith Baker & Co. had been in previous communication with the *Oxfordshire*, I should have made my present claim; I should then have considered the steamer taken out of my hands. I do not know how large the steamer's cargo is, but I consider my claim a fair one.

Re-examined by Mr. Ness: Supposing the arrangement had not been made with Smith Baker & Co., I have no reason to doubt that I should have obtained another charter for the steamer. I have never foregone my claim to a commission; that was not my meaning when I said that the question of commission should not have stood in the way of charter. I was offended at not being consulted with regard to the charter. Before the ship was chartered Capt. Jones had never intimated any doubt that the ship was in our hands. I should think from my knowledge of the size of the vessel, that the freight payable under the agreement with Smith Baker & Co. must be £9,000 to £10,000.

Mr. Kirkwood called:

Captain C. Jones, sworn: I am master of the British str. *Oxfordshire*. I arrived here from Hongkong viâ Kobe and Nagasaki on the 29th May. While I was in Hongkong I asked Jardine, Matheson & Co., to telegraph to their house here to look out for a charter for me to New York, and I wrote a letter myself to that purpose from Hongkong to the firm here. When I arrived here I went to see Mr. Keswick and asked him if he could do anything for me with regard to New York. He said there was no chance without Smith, Baker & Co. giving their tea, which they would not do; Mr. Montgomery had informed him of that fact. He asked me then if he should advertise the ship, but to this I strongly objected. I also asked Mr. Montgomery about the prospect of a charter. He ridiculed me and said it was absurd to think of a charter without Smith, Baker & Co.'s freight, and also absurd to think of a rate of £4 10. Plaintiffs offered me simply a rice freight, first at £3.5 and afterwards, at £3.10, but I told them that would never do. I saw Smith, Baker & Co. on the day of my arrival, shortly after I had seen plaintiffs. I had already called on Smith Baker & Co. before, namely on the 29th of March, when I first arrived from England. At that time they would not promise me anything, but they told me that if they put their teas into my ship the vessel must be in their hands. I again called at Smith Baker & Co.'s at Kobe, and Mr. Morse, the head of the Kobe firm said they would probably lay the ship on provided they had her in their hands, but on no other terms. I answered that in common politeness I must first see if Jardine, Matheson & Co. could offer me any charter. Smith, Baker & Co. in Yokohama told me positively, when I asked them, that they would not give me their teas if the ship was in anybody else's hands. Every day I went to Mr. Keswick and told him about Smith, Baker & Co.'s offer. Mr Keswick had no offer to make me. I delayed accepting Smith, Baker & Co.'s offer for three or four days in order to give Jardine, Matheson & Co. a chance to offer me something themselves.

(A dispute here arose between the lawyers if witness had, or not, said that his reason for wishing to give Jardine, Matheson & Co. a chance was that he had put the ship in their hands.)

On Friday, the day after I had accepted Smith, Baker & Co.'s offer, Mr. Keswick wrote me a letter, in which he said that the commission was no object at all. But afterwards when I wanted the accounts settled he spoke about the commission. On Saturday he settled the accounts and wrote at the bottom "commission pending." He told me that he had written home about the commission. It was in no way through the instrumentality of plaintiff that I got Smith, Baker & Co.'s charter. I was never introduced to Smith Baker & Co. by Mr. Keswick; he never went with me to them. It was not due to my conversation with Mr. Keswick on my arrival that I went to see Smith, Baker & Co.; on my coming up I had seen Smith, Baker & Co. at Kobe. The vessel has left with 700 tons of cargo. The amount of freight on this cargo would be £3,100.

Cross-examined by Mr. Ness:—I have no written agreement with Smith, Baker & Co. I am not chartered. The vessel is engaged to take 1,400 tons, 700 here and 700 in Kobe, at £4.10. If the vessel gets the whole of her cargo then I shall be paid on delivery of the cargo £9,500 or £10,000 by the consignees. That is my agreement with Smith, Baker & Co. My former answers of 700 tons and £310 were not given with a view to mislead the Court. I never withdrew my agency from Jardine, Matheson & Co. because there was no agency to withdraw: after the cargo was out there was no more agency. I have not by letter withdrawn my request, dated from Hongkong, that they would use their endeavours to procure me a cargo in Yokohama. They failed in their endeavours. I know of the letter from the owners of the steamer to plaintiffs; the plaintiffs were asked by the owners to obtain employment for my ship subject to my control. I asked the firm of Jardine Matheson & Co. in Hongkong to telegraph to the firm here, to let them immediately know if there was anything offering. On my arrival Mr. Keswick informed me that Mr. Montgomery had been round trying to get freight for the vessel, that Smith Baker & Co. had teas, but that if they gave the teas they must have the vessel. All that I knew already in Kobe, and I myself mentioned it to Mr. Keswick. I was in Kobe about four days before my interview with Mr. Keswick. I did not consider Jardine Matheson & Co. agents for the ship until they had got the cargo. Of course they were agents for the inward cargo; but after that was unloaded they were not my agents until they got me a cargo. If Smith Baker & Co. had offered me a charter of course I should have paid them commission. My reason for objecting to Jardine Matheson & Co. advertising my ship was the ship's interest. I also thought that perhaps the Pacific Mail Company might lower their rates when they saw the ship advertised. I left Kobe on the 25th or 26th of May. Every morning between the 29th of May and the 3rd of June I saw Mr. Keswick; the day before I concluded with Smith, Baker & Co. I told Mr. Keswick that I expected to conclude the business next day; and when I had done so, I went to his office, but as I did not meet him I told Mr. Montgomery. It was either on the 2nd or 3rd day of June that Mr. Keswick invited me to go with him to Smith, Baker & Co's. I refused, and told him my reasons for refusing were that it was of no use to ask for Smith, Baker & Co.'s teas, and that I considered it absurd for me as captain of the ship to go along with him when he was looking for cargo. I understood Smith, Baker & Co. that they wanted the whole commission if they laid the ship on. If a man says that he must have the whole ship, the meaning among business men is that he must have the whole commission. The identical words of our conversations on this matter I cannot now recall. That was already intimated to me in Kobe, three days before my arrival here; on what day it was talked about here I cannot now say. The firm of Smith, Baker & Co. here does not get the whole commission; the agent at Kobe gets part, the agent at Amoy another part. (Mr. Ness here read two letters from plaintiffs to defendant, the first dated 1st June informing him that plaintiffs are not aware of any charter having been given by Smith, Baker & Co., and second dated 11th inst., reminding defendant, as he is leaving the port next day, to settle with plaintiffs for commission.)

Re-examined by Mr. Kirkwood: I have received no monies from Smith, Baker & Co., and shall receive none until the cargo is delivered in New York. In the event of cargo not being delivered, no freight is paid. Commission will be due to Smith, Baker & Co., here £150 and in Kobe £150. When I wrote from Hongkong to plaintiffs that I trusted that they would be able to offer me a cargo on my arrival, I considered if they were not able to do so that I was at liberty to look out for myself.

Case adjourned until to-morrow at half-past nine a.m.

Wednesday, June 14th, 1876.

C. P. Ramee, sworn: I am a partner in the firm of Smith, Baker & Co. My firm made the acquaintance of Captain Jones about a year ago; we then shipped about half a cargo of tea to New York by his vessel through Messrs. Edward Fischer & Co. This year I first saw Captain Jones in March last; he called at our office and asked if we should be able to load his vessel for New York. I replied that we were very much disappointed with his voyage last year, and that we should prefer a faster steamer. He then remarked that on account of the thorough overhauling his steamer had had at home he expected her to do much better this year. I then said we might possibly be able to do something for his steamer provided we dealt with him direct, and that he placed the steamer in our hands, paying us a commission of 5 per cent. The captain replied that he had the power to place the vessel in our hands if we were able to get him a cargo. In the month of May I again heard of the *Oxfordshire*, namely, from our correspondent in Hongkong, that the vessel had left Hongkong for Japan. Afterwards I heard of the *Oxfordshire* from Mr. Montgomery, namely, on the 24th of May in our office. Mr. Montgomery told me that Jardine, Matheson & Co. were thinking of placing the *Oxfordshire* on the berth, and asked what we could offer. I told him we could offer nothing, at the moment we were opposed to shipping through the Suez Canal, and that we considered the *Oxfordshire* too slow; further that should we ship viâ Suez we must have the steamer in our own hands. Previous to saying that, I asked when the ship was expected to be laid on, and also what the rate of freight would be.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

He replied the freight would be governed by rates in China at the time the steamer would be loading, and that their idea was to lay her on at the end of June in Japan, sending her over to China in July. He asked whether I did not think that early enough. Knowing that we could give her no freight if she was laid on in their hands, I replied "Yes." When I said that the steamer must be entirely in our own hands, I meant that we must obtain 5 per cent. commission on the freight. After my conversation with Mr. Montgomery, I heard nothing further from Jardine, Matheson & Co. about the *Oxfordshire*. At this I was not surprised at all, because I thought it must be clearly understood that there was no chance of shipping anything in the *Oxfordshire* through them. On the 29th of May I saw Captain Jones in our office. He said he supposed we knew he was on his way here. I said "Yes." He then asked if we could do anything to procure him a cargo for New York. I said possibly we might do so if he could put the vessel in our care, and pay us a commission of 5 per cent., but that we could do nothing for him if his vessel was in others's hands. He said he could do so, and I replied that we would see what could be done. He said, "All right; but do not fix anything; I must see Jardine, Matheson & Co., and give them a chance to offer me a similar employment." I replied, "Very well; but you must understand that shortly we shall have a steamer of our own coming from China." I made arrangements with Captain Jones on the 1st of June, in the afternoon. I would not have given him our teas if he had not put his steamer entirely in our hands. Captain Jones was not introduced to us by Jardine, Matheson & Co.; we knew him well before Jardine, Matheson & Co. spoke to us about employing his steamer. Mr. Montgomery's conversation on the 24th of May had no effect whatever on our transaction with Captain Jones. We could have had equally good steamers from China.

The statement made in the third paragraph of plaintiff's petition, that we employed the *Oxfordshire* through the instrumentality of the plaintiffs, is not true. We had no occasion at all for Jardine, Matheson & Co.'s assistance in that matter.

Cross-examined by Mr. Ness: I do not see that the captain made any use of Jardine, Matheson & Co.'s assistance in the matter. All the dealings in the matter were direct between the captain and myself. I know the captain went to Jardine, Matheson & Co., on the 29th of May before he came to us. He said to me that Jardine, Matheson & Co., had told him that they had been to us about the *Oxfordshire*, but that we had said that if we should load her we must have the steamer in our own hands. I still say the captain made no use of Jardine, Matheson & Co.'s assistance. My notion of assistance is being instrumental in any way in procuring employment for the ship. I led Mr. Montgomery to believe that I could give employment for the ship, if the whole vessel was placed in our hands. Mr. Montgomery was sent to us by the agents of the ship. I told him I must first see the captain, as I wanted to have his idea about what sort of passage he was going to make home, and so forth. I did not tell Mr. Montgomery that if I made any arrangement with the *Oxfordshire*, I would not do it through Jardine, Matheson & Co., but I distinctly stated that if we should ship by the Suez Canal, we must have the steamer ourselves. We have no animosity at all against Jardine, Matheson & Co. Even supposing we had obtained the same terms from Jardine, Matheson & Co. as we obtained from the captain, we should have had nothing to do with the *Oxfordshire*, if it was to be through Jardine, Matheson & Co. I had spoken with Captain Jones as early as March last, and if we could not deal with the captain direct we preferred to have a steamer from China. At the time of my interview with Mr. Montgomery my mind was made up to have nothing to do with the *Oxfordshire* if it could not be done without Jardine, Matheson & Co. Even if the captain himself had asked us to transact the matter through Jardine, Matheson & Co. that would not have altered our resolution to have nothing to do with Jardine, Matheson & Co. Perhaps we had another reason than the one just mentioned by me. The fact is there has been a certain feeling arising from previous transactions between Jardine, Matheson & Co. and ourselves. Supposing we could have employed the *Oxfordshire* in no other way than through the agency of Jardine, Matheson & Co., we would not have employed her at all. When Mr. Montgomery called on us we were actually in correspondence with people in China about getting a steamer. Mr. Montgomery offered me the steamer for employment, but she had been offered me already in March by Captain Jones. There was then a conditional agreement between us and the captain, namely, that if we were prepared to give him a cargo for New York, the same as the year before, he would place the ship in our hands and pay us commission. Captain Jones receives no commission. I had some conversation with Captain Jones on the 30th or 31st of May about the commission to be paid to Jardine, Matheson & Co. I said to the captain, that from what he had told me regarding his letter to Jardine, Matheson & Co. from Hongkong, that firm could not expect to receive any commission on the business unless the arrangement was made through them. He said that he was most decidedly of the same opinion. I then said: To prevent any possibility of a misunderstanding with Messrs. Jardine, Matheson & Co., would it not be as well to obtain a letter from them showing that the vessel was altogether in the captain's own hands. He replied that he should not like to ask for such a letter, as it might offend Mr. Keswick, because he would know that the disposal of the vessel would remain with me, but that as Mr. Keswick had said that he studied the interests of the vessel and did not think about the commission at all. Captain Jones felt confident that there was no possibility of a house like Jardine, Matheson & Co. claiming commission on a business which could not have been arranged through them. I replied, that being the position, I was satisfied. Assuming that Jardine, Matheson & Co. had been retained to obtain employment for the ship I don't think they were entitled to commission in this case. It was only to prevent misunderstanding that I considered a letter from Jardine, Matheson & Co. desirable, but I did not consider such a letter necessary. I have not myself seen the captain's letter from Hongkong to Jardine, Matheson & Co, The captain told me he had written to them that he was bound to Yokohama with a cargo of coal, and that he hoped on his arrival at Yokohama they would be able to offer him a cargo for New York. If Captain Jones has said that he had no conversation with me about Jardine, Matheson & Co.'s commission, his statement is not true. On arrival at New York Captain Jones will be entitled to between £9,000 and £10,000 for freight earned by the vessel. I knew that during my negotiations with Captain Jones he constantly visited Jardine, Matheson & Co. I do not know that he kept our negotiations secret from Jardine, Matheson & Co. I never asked him to keep them secret. I never asked him to communicate them to Jardine, Matheson & Co. I told him I would have nothing to do with Jardine, Matheson & Co. in connexion with the *Oxfordshire*. I told him so of my own motion.

Re-examined by Mr. Kirkwood: I get 5 per cent. commission on the freight to be paid for tea shipped in Yokohama; the amount will be about £150.

Consular Constable White, sworn: I was present at a conversation between Captain Jones and Mr. Montgomery on the day of Captain Jones' arrival. I went over with Captain Jones to Jardine, Matheson & Co's. Captain Jones asked what chances he had to get a cargo of tea. Mr. Montgomery said that Smith, Baker & Co. were the only house that had a charter of tea to offer; that they would not give it to Jardine, Matheson & Co., and that the captain had better see Smith, Baker & Co. himself.

Mr. Keswick, to Court: It is correct what I have stated that, between the arrival of the ship on Monday, and Thursday, the captain never said anything that could lead me to suppose that he had made private arrangements with Smith, Baker & Co. I had seen the captain once or twice during that interval. He may have mentioned the name of Smith, Baker & Co., but nothing beyond that. Captain Jones's statement that he every day called on me, and told me what Smith, Baker & Co. had offered, is entirely false. With reference to the conversation I had had with Mr. Montgomery, I at the outset said to Captain Jones something to the effect that it was impossible to load the ship for New York without Smith, Baker & Co. I had not said to Capt. Jones that commission was nothing to Jardine, Matheson & Co. If a vessel is placed in my hands as agent, I go round and look for a charter for her. Unless I had carried negotiations on behalf of a vessel so far that the vessel had benefited by my work, I should, where a vessel had been consigned to my care by its owners, not let the question of commission stand in the way of profitable employment for the ship. I have experienced the necessity of giving up commission. On Thursday afternoon we wrote to Captain Jones, informing him, with reference to a conversation held the same morning, which led us to expect to hear by 2 p.m. about his charter with Smith, Baker & Co. being concluded, that we had, as yet, received no intelligence about said charter, and that we were still looking out for a charter. When I had this conversation with Capt. Jones in the morning, I said I supposed Smith, Baker & Co.'s answer would come to me. Capt. Jones replied "No, to me." When I wrote the letter in the afternoon I knew from outside parties that arrangements with Smith, Baker & Co. had been completed. I did not call on that firm myself.

Captain Jones to Court: My statement that I went to Mr. Keswick every day and told him about my negociations with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Smith, Baker & Co. is true, and Mr. Keswick's statement to the contrary is untrue.

Adjourned until 2 p.m. and then continued.

Captain Jones: Every day of those three days I spoke to Mr. Keswick about Smith, Baker & Co. laying on the ship, if it was in their own hands, and Mr. Keswick told me spontaneously that the question of commission should not stand in the way; that was no object to them: what they studied was the interest of the ship. On Wednesday I told him that most likely an arrangement would be finally fixed on the morrow, and he said, "Let me know when it is fixed." When it was finally fixed with Smith, Baker & Co., I went immediately to Jardine, Matheson & Co., and told Mr. Colsden and Mr. Walker, as Mr. Keswick was out, and Mr. Walter went up-stairs and told Mr. Montgomery.

Mr. Keswick: The statement of Capt. Jones, that he told me the arrangement would be finally fixed the next day, and that I said, "Let me know when it is fixed," is entirely false. I had no conversation with Capt. Jones about a charter from Smith, Baker & Co., until the forenoon of Thursday, the 1st of June, when he told me that the matter would be fixed the same afternoon. When I have said that I told Capt. Jones that I understood that Smith, Baker & Co. would have nothing to do with the *Oxfordshire* unless the vessel was entirely in their hands, I meant that this would be purely a matter of arrangement between those whose hands the ship leaves, and those into whose hands it goes. In such a case, I might forego the commission entirely, or share the commission with those into whose hands the ship goes; but neither way is obligatory. When a man says he must have a ship entirely in his own hands, he means he must have the whole control of the vessel; but the commission may, nevertheless, be a matter for arrangement.

Mr. Montgomery: On the first occasion I met Captain Jones I told him that I had seen Smith, Baker & Co., that they had a good deal of tea, but that they had refused to give it unless they had control of the ship or the ship in their own hands. By the last expression I understand that they wanted to have control of the movements of the ship. I do not understand that expression "the ship in their own hands" to imply that they must have the whole commission. This conversation took place on the day of Captain Jones' arrival, or on the following day.

This closed the evidence, and Mr. Kirkwood then rose to address the Court for the defence. He said:—

Last year the *Oxfordshire* sailed to New York from Yokohama, and had a large quantity of tea on board shipped by Smith, Baker & Co. In March this year the *Oxfordshire* came here again from England and the captain had a conversation with Mr. Ramee, of the firm of Smith, Baker & Co., in which Mr. Ramee gave the captain prospect of a cargo of tea for New York, if the vessel were placed in their hands. The *Oxfordshire* then goes to Hongkong, and from Hongkong the captain writes to Jardine, Matheson & Co. here, asking them to look out for a cargo for New York via Suez Canal, and on that letter the plaintiffs' petition in this case is based. The firm of Jardine, Matheson & Co. in Hongkong also telegraphed to the firm here, asking if there was any charter to be obtained, but got the answer, "none." On his way from Hongkong captain Jones sees Mr. Morse of the firm of Smith, Baker & Co. in Kobe, who says there is a possibility of a cargo if the ship is put in their hands. The captain would not make any definite arrangement before he had seen Jardine, Matheson & Co. in Yokohama. In the meantime Mr. Montgomery had, on behalf of Messrs. Jardine, Matheson & Co., been sounding Smith, Baker & Co. for a charter, but had got the answer that if they gave cargo they must have the ship entirely in their own hands. On his arrival here Captain Jones was told the same thing by Mr. Montgomery, and by Mr. Ramee whom he saw the same day. Messrs. Jardine, Matheson and Co. themselves could offer him no other freight than a rice cargo at a rate which the captain could not think of accepting. Messrs. Smith, Baker and Co. would have nothing to do with Jardine, Matheson and Co., and so the captain made his own bargain. Was Captain Jones introduced to Smith, Baker & Co. by Jardine, Matheson & Co? I think not. As far back as March last Captain Jones knew Mr. Ramee. Was the arrangement brought about by Jardine, Matheson & Co.? Neither. Jardine, Matheson & Co.'s first transaction with Smith, Baker & Co. in this matter was Mr. Montgomery's visit, but long before that Smith, Baker & Co. were aware that the *Oxfordshire* was coming here and wanted a cargo of tea for New York. If Captain Jones had written half-a-dozen letters from Hongkong to different commercial houses here, of the same tenor as the one to Messrs. Jardine, Matheson & Co., each of them might have had just the same right to claim commission.

The learned gentleman here quoted several legal authorities; as to custom, he said no custom had been proved.

Mr. Ness replied for the plaintiffs. He said: Were Messrs. Jardine, Matheson & Co. retained by the defendant? Did they perform services thus retained? What is their due renumeration? These three questions appear to me to be paramount. There were two letters from the owners at home which speak for themselves. They are written in the ordinary form of commercial letters, requesting the services of Messrs. Jardine, Matheson & Co., and the contents of these letters were known to Captain Jones. Then Captain Jones himself wrote to the plaintiffs from Hongkong expressing his trust that they would use their endeavours to procure him a freight. The telegram, sent from the firm in Hongkong to the firm here, was sent at the special request of Captain Jones. Moreover, the plaintiffs were consignees of the *Oxfordshire*. Captain Jones says himself in his evidence "Agents for a ship inwards usually have to obtain outward cargo." On his arrival here Captain Jones spoke to Mr. Keswick in a way that clearly indicated that he considered Messrs. Jardine, Matheson & Co. as his agents. We have then the owners' letters, the captain's letter, the telegram and the captain's own behaviour in proof of the existing agency. With regard to the question whether Messrs. Jardine, Matheson and Co. did render any services in their capacity of agent, I maintain that must also be answered in the affirmative. Messrs. Jardine, Matheson and Co. canvassed the town for a cargo for the *Oxfordshire*, they ascertained the conditions on which Smith, Baker & Co. would give their teas, they procured a rice freight for the ship. With regard to the third question, the ordinary law is, that if an agency is withdrawn before any services have been rendered, then half commission shall be paid. But it is clearly laid down that, even if the arrangement is finally completed between the parties themselves, the broker or middleman is entitled to his commission if it was through his agency that the parties were brought together. In this case the contract is one for conveyance of goods from Yokohama to New York by which the captain will earn £10,000, entered into between Capt. Jones and Messrs. Smith, Baker & Co. in Yokohama; and on the part of Smith, Baker & Co., with the very same man whom Mr. Montgomery saw on behalf of Messrs. Jardine, Matheson & Co., namely, Mr. Ramee. It cannot be objected that Captain Jones had seen Mr. Morse of Messrs. Smith, Baker & Co. in Kobe before he arrived here. I answer that the contract is not entered into with the firm of Kobe, but with the firm of Yokohama, and even in that case Mr. Montgomery saw Mr. Ramee in Yokohama one day before Captain Jones saw Mr. Morse in Kobe. It has been intimated that Mr. Keswick had waived his commission; but he had done no such thing. He was nettled by the conduct of the captain, and said that he would not have let his commission stand in the way of the interest of the ship. The expression "taking the vessel in their own hands" means, in my opinion, nothing else than chartering the vessel. Arrangements could then have been made about the commission. Mr. Keswick has said in his evidence that he might have halved the commission with the charterers and charged that half to the owners. While the evidence of Mr. Keswick and Mr. Montgomery is throughout clear and straightforward, the evidence of Captain Jones is only too much in harmony with his tortuous conduct toward Jardine, Matheson & Co. When Mr. Keswick offered to advertise the *Oxfordshire* Captain Jones objected, but did not tell Mr. Keswick that he did not consider him the ship's agent. When Mr. Keswick proposed they should go together to Smith, Baker & Co., Captain Jones objected that it was of no use to go, and yet at that very time his arrangement with Smith, Baker & Co. was all but concluded. Captain Jones said that no conversation took place with Smith, Baker & Co. about Jardine, Matheson & Co.'s commission; but Mr. Ramee deposes that that very commission was the object of a long conversation between them. Mr. Ramee has come into this Court with a very strong bias against Messrs. Jardine, Matheson & Co., and he is an interested party in this case. Nevertheless, he admits that subsequently to the letter of 13th May, the first interview was between him and Mr. Montgomery; that the next interview was between Captain Jones and Mr. Keswick; and that at the third interview, which was between himself and Captain Jones, the latter told him that Mr. Keswick had mentioned that Smith, Baker & Co. had a cargo of tea. It is admitted that 5 per cent. is the usual commission; and 5 per cent. upon £10,000 is $2,500, which we claim.

His Honour then delivered the following:—

JUDGMENT.

The first question is: were Jardine, Matheson & Co. employed

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to obtain a cargo for the *Oxfordshire*? I find that they were, and that, to use the expression made use of by all the witnesses, the ship was in their hands. When a ship is placed in the hands of a ship-broker I understand that it is meant, that so long as that relation subsists, it is the duty of the broker to obtain employment for the ship, and if the ship is in the hands of one broker, it cannot be in the hands of another. If the broker cannot find employment for the ship, he may go to another broker, and this broker may either give or refuse to give him a cargo, and if the latter persists in his refusal and the first broker can obtain no other employment the ship must finally come out of the first broker's hands. But I find that Smith, Baker & Co. did not inform Jardine, Matheson & Co. that they would not deal with them. I find, moreover, that the master did not communicate to the plaintiffs his negotiations with Smith, Baker & Co. before the Thursday, and that the ship had not been taken out of Jardine, Matheson & Co.'s hands when the arrangement was finally concluded with Smith, Baker & Co. Under this arrangement the remuneration is between £9,000 and £10,000. There is some divergence of opinion as to the amount between Mr. Ramee and Captain Jones, the latter saying that only 1,400 tons of Tea are secured, but I take Mr. Ramee's statement. As to Smith, Baker & Co., they were aware that Jardine, Matheson & Co. were consignees inwards, that the master had written to them requesting them to obtain a cargo for her, and that they had offered the vessel in pursuance of that request, and, nevertheless, they made no communication to Jardine, Matheson & Co. They requested the master to obtain a letter from Jardine, Matheson & Co., thus showing an apprehension, at least, that the latter would otherwise be entitled to commission. It is to be regretted that they accepted the master's assurance that it was not necessary. I find that, as an introduction is understood in business, Jardine, Matheson & Co. did introduce Captain Jones to Smith, Baker & Co.; and it is the rule, in such cases, that the first broker is entitled to sue for the whole commission. I therefore find that Jardine, Matheson & Co. are entitled to the commission of 5 per cent. on £9,000, the lowest amount which the arrangement will produce, which will be £450. Plaintiffs get costs.

Mr. Ness observed that defendant had stated yesterday that he would go away in a steamer to-day, and he therefore asked for immediate execution.

G. Hodges, Consular Constable, sworn: I was in court yesterday, and heard defendant say that he would go to Kobe in the first steamer. The steamer leaves this afternoon.

The Court, in consequence, decreed the amount to be paid immediately, or execution would be issued.

Mr. Kirkwood gave notice of appeal.

REPORT OF THE FIRST ANNIVERSARY MEETING OF THE NEWEST SHAKESPEARE SOCIETY.

(The Examiner.)

APRIL 1, 1876.

A paper was read by Mr. A. on the disputed authorship of *A Midsummer Night's Dream*. He was decidedly of opinion that this play was to be ascribed to George Chapman. He based this opinion principally on the ground of style. From its similarity of subject he had at first been disposed to assign it to Cyril Tourneur, author of *The Revenger's Tragedy*; and he had drawn up in the support of this theory a series of parallel passages extracted from the speeches of Vindice in that drama, and of Oberon in the present play. He pointed out, however, that the character of Puck could hardly have been the work of any English poet but the author of *Bussy d'Ambois*. There was here likewise that gravity and condensation of thought conveyed through the medium of the "full and heightened style" commended by Webster, and that preponderance of philosophic or political discourse over poetic interest and dramatic action for which the author in question had been justly censured.

Some of the audience appearing slightly startled by this remark (indeed it afterwards appeared that the Chairman had been on the point of asking the learned member whether he was not thinking rather of *Love's Labour's Lost*), Mr. A cited the well-known scene in which Oberon discourses with Puck on matters concerning Mary Stuart and Queen Elizabeth, instead of despatching him at once on his immediate errand. This was universally accepted as proof positive, and the reading concluded amid signs of unanimous assent, when

Mr. B. had nothing to urge against the argument they had just heard, but he must remind them that there was a more weighty kind of evidence than that adduced by Mr. A., and to this he doubted not they would all defer. He could prove by a tabulated statement that the words "to" and "from" occurred on an average from seven to nine times in every play of Chapman; whereas in the play under consideration the word "to" occurred exactly twelve times, and the word "from" precisely ten. He was therefore of opinion that the authorship should in all probability be assigned to Anthony Munday.

As nobody present could dispute this conclusion, Mr. C. proceeded to read the argument by which he proposed to establish the fact, hitherto unaccountably overlooked by all preceding commentators, that the character of Romeo was obviously designed as a satire on Lord Burleigh. The first and perhaps the strongest evidence in favour of this proposition was the extreme difficulty, he might almost say the utter impossibility, of discovering a single point of likeness between the two characters. This would naturally be the first precaution taken by a poor player who designed to attack an all-powerful Minister. But a more direct light was thrown upon the subject by a passage in which "that kind of fruit that maids call medlars when they laugh alone" is mentioned in connection with a wish of Romeo's regarding his mistress. This must evidently be taken to refer to some recent occasion on which the policy of Lord Burleigh, possibly in the matter of the Anjou marriage, had been ridiculed in private by the Maiden Queen, "his mistress," as meddling, laughable, and fruitless.

This discovery seemed to produce a great impression, till the Chairman reminded the Society that the play in question was now generally ascribed to George Peele, who was notoriously the solicitor of Lord Burleigh's patronage, and the recipient of his bounty. That this poet was the author of *Romeo and Juliet* could no longer be a matter of doubt, he was confident they would all agree with him on hearing that Mr. Martin Tupper had positively assured him of the fact, adding that he (Mr. Tupper) had always thought so when at school. The plaudits excited by this announcement had scarcely subsided when the Chairman clenched the matter by observing that he rather thought the same opinion had ultimately been entertained by his own grandmother.

Mr. D. then brought forward a subject of singular interest and importance—"The lameness of Shakespeare: was it moral or physical?" He would not insult their intelligence by dwelling on the absurd and exploded hypothesis that this expression was allegorical, but would at once assume that the infirmity in question was physical. Then arose the question, "In which leg?" He was prepared, on the evidence of an early play, to prove to demonstration that the injured and interesting limb was the left. "This shoe is my father," says Launce in the *Two Gentlemen of Verona*; "no, this left shoe is my father;—no, no, this left shoe is my mother;—nay, that cannot be so neither:—yes, it is so, it is so; *it hath the worser sole*." This passage was not necessary either to the progress of the play, or to the development of the character; he believed he was justified in asserting that it was not borrowed from the original novel on which the play was founded; the inference was obvious, that without more personal allusion it must have been as unintelligible to the audience as it had hitherto been to the commentators. His conjecture was confirmed and the whole subject illustrated with a new light by that well-known line in the Sonnets, in which the poet describes himself as "made lame by Fortune's dearest spite," a line, of which the inner meaning and personal application had also by a remarkable chance been reserved for him (Mr. D.) to discover. There could be no doubt that we had here a clue to the origin of the physical infirmity referred to: an accident which must have befallen Shakespeare in early life while acting at the Fortune Theatre, and consequently before his connection with a rival company—a fact of grave importance till now unverified. The epithet "dearest," like so much else in the Sonnets, was evidently susceptible of a double interpretation. The first and most natural explanation of the term would at once suggest itself; the playhouse would of necessity be dearest to the actor dependent on it for subsistence, as the means of getting his bread; but he thought it not unreasonable to infer from his unmistakeable allusion that the entrance fee charged at the Fortune may probably have been higher than the price of seats in any other house. Whether or not this fact, taken in conjunction with the accident already mentioned, should be assumed as the immediate cause of Shakespeare's subsequent change of service, he was not prepared to pronounce with such positive confidence as they might reasonably expect from a member of the Society; but he would take upon himself to affirm that his main thesis was now and for ever established on the most irrefragable evidence, and that no assailant could by any possibility dislodge by so much as a hair's breadth the least fragment of a single brick in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the impregnable structure of proof raised by the argument to which they had just listened.

This demonstration being thus satisfactorily concluded, Mr. E. proceeded to read his paper on the date of *Othello*, and on the various parts of that play respectively assignable to Samuel Rowley, to George Wilkins, and to Robert Daborne. It was evident that the story of Othello and Desdemona was originally quite distinct from that part of the play in which Iago was a leading figure. This he was prepared to show at some length by means of the weak-ending test, the light-ending test, the double-ending test, the heavy-monosyllabic eleventh-syllable-of-the-double-ending test, the run on line test, and the central-pause test. Of the partnership of the other poets in the play he was able to adduce a simpler but less cogent proof. A member of their Committee said to an objector lately: "To me, there are the handwritings of four different men, the thoughts and powers of four different men, in the play. If you can't see them now, you must wait till, by study, you can. I can't give you eyes." To this argument he (Mr. E.) felt that it would be an insult to their understandings if he should attempt to add another word. Still, for those who are willing to try and learn, and educate their ears and eyes, he had prepared six tabulated statements.

(At this important point of a most interesting paper our reporter unhappily became unconscious and remained for some considerable period in a state of deathlike stupor. On recovering from this total and unaccountable suspension of all his faculties, he found the speaker drawing gradually near the end of his figures, and so far succeeded in shaking off the sense of coma as to be able to resume his notes.)

That the first and fourth scenes of the third act were not by the same hand as the third scene he should have no difficulty in proving to the satisfaction of all capable and fair minded men. In the first and fourth scenes the word "virtuous" was used as a dissyllable; in the third it was used as a trisyllable.

> Is that she will to virtuous Desdemona.—iii. 1.
> Were virtues, these are more virtuous.—iii. 3.
> That by your virtuous means I may again.—iii. 4.

In the third scene he would also point out the great number of triple endings which had originally led the able editor of Euclid's Elements of Geometry to attribute the authorship of this scene to Shirley:—(1, 2) *Cassio* (twice), (3) *patience*, (4) *Cassio* (again), (5) *discretion*, (6) *Cassio* (again), (7) *honesty*, (8) *Cassio* (again), (9) *jealousy*, (10) *jealous* used as a trisyllable in the verse of Shakespeare's times), (11) *execution* (two consecutive lines with the triple endings), (12) *Cassio* (again), (13) *conscience*, (14) *petition*, (15) *ability*, (16) *importune*, (17) *consecration*, (18) *marriage*, (19) *dungeon*, (20) *mandragora*, (21) *passion*, (22) *monstrous*, (23) *exclusion*, (24) *handkerchief*. He could not imagine any man in his senses questioning the weight of this evidence. Now let them take the rhymed speeches of the Duke and Brabantio act i., scene 3, and compare them with the speech of Othello in act iv., scene 2 –

> If it pleased heaven
> To try me with affliction.

He appealed to any expert whether this was not in Shakespeare's easy fourth budding manner, with, too, various other points already touched on. On the other hand, take the opening of Brabantio's speech –

> So let the Turk of Cyprus us beguile:
> We lose it not, so long as we can smile.

That, he said, was in Shakespeare's difficult second flowering manner – the style of the later part of the earlier stage of Shakespeare's rhetorical first period but one. It was no more possible to move the one passage up to the date of the other than to invert the order of the alphabet. Here, then, putting aside for the moment the part of the play supplied by Shakespeare's assistants in the last three acts – miserably weak some of it was – they were able to disentangle the the early love-play from the later work, in which Iago was principally concerned. There was at least fifteen years' growth between them, the steps of which could be traced in the poet's intermediate plays by any one who chose to work carefully enough at them. Set any of the speeches addressed in the Shakespeare part of the last act by Othello to Desdemona beside the consolatory addresses of the Duke to Brabantio, and see the difference of the rhetoric and style in the two. If they turned to characters, Othello and Desdemona were even more clearly the companion pair to Biron and Rosaline of *Love's Labour's Lost* than were Falstaff and Doll Tearsheet the match-pair of Romeo and Juliet. In *Love's Labour's Lost* the question of complexion was identical, though the parts were reversed. He would cite but a few parallel passages in evidence of this relationship between the subjects of the two plays:—

Love's Labour's Lost iv. 3.	*Othello.*
1. By heaven thy love is black as ebony.	1. An old black ram.—i. 1.
2. No face is *fair* that is not full so black.	2. Your son-in-law is far more *fair* than black.—i. 3.
3. O paradox! Black is the badge of hell	3. How, if she be black and witty? —ii. 1.
4. O, *if* in black my lady's brows be decked.	4. *If* she be black, and thereto have a wit —ii. 1.
5. And therefore is she born to make black fair.	5. A measure to the health of black Othello —ii. 3.
6. Paints itself black to imitate her brow.	6. For I am black.—iii. 3.
7. To look like her are chimney-sweepers black.	7. Begrimed and black.—iii. 3.

Now, with these parallel passages before them, what man woman, or child could bring himself or herself to believe that the connection of these plays was casual, or the date of the first Othello removable from the date of the early contemporary late-first-period-but-one play *Love's Labour's Lost*, or that anybody's opinion that they were so was worth one straw? When therefore, by the introduction of the Iago episode, Shakespeare in his later days had, with the assistance of three fellow poets, completed the unfinished work of youth, the junction then effected of the Brabantio part of the play with this Iago underplot supplied them with an evidence wholly distinct from that of the metrical test, which yet confirmed in every point the conclusion independently arrived at, and supported by the irresistible coincidence of all the tests. He defied anybody to accept his principle of study, or adopt his method of work, and arrive at a different conclusion from himself.

The reading of Mr. F.'s paper on the authorship of the soliloquies in *Hamlet* was unavoidably postponed till next meeting, the learned member having only time on this occasion to give a brief summary of the points he was prepared to establish and the grounds on which he was prepared to establish them. A year or two since, when he first thought of starting the present Society, he had never read a line of the play in question, having always understood it to be admittedly spurious; but on being assured of the contrary by one of the two foremost poets of the English-speaking world, who was good enough to read out to him in proof of this assertion all that part of the play which could reasonably be assigned to Shakespeare, he had of course at once surrendered his own former opinion, well grounded as it had hitherto seemed to be on the most solid of all possible foundations. At their next meeting he would show cause for attributing to Ben Jonson not only the soliloquies usually but inconsiderately quoted as Shakespeare's, but the entire original conception of the character of the Prince of Denmark. The resemblance of this character to that of Volpone in *The Fox* and to that of Face in *The Alchemist* could not possibly escape the notice of the most cursory reader. The principle of disguise was the same in each case, whether the end in view were simply personal profit, combined with revenge; and whether the disguise assumed was that of madness, of sickness, or of a foreign personality, the assumption of character was in all three cases identical. As to style, he was only too anxious to meet, and, he doubted not, to beat on his own ground, any antagonist whose ear had begotten the crude and untenable theory that the Hamlet soliloquies were not distinctly within the range of the man who could produce those of Crites and of Macilente in *Cynthia's Revels* and *Every Man out of his Humour*. The author of these soliloquies could, and did, in the parallel passages of *Hamlet*, rise near the height of the master he honoured and loved.

The further discussion of this subject was reserved for the next meeting of the Society, as was also the reading of Mr. G.'s paper on the subsequent quarrel between the two joint authors of *Hamlet*, which led to Jonson's caricature of Shakespeare (then retired from London society to a country life of solitude) under the name of Morose, and to Shakespeare's retort on Jonson, who was no less evidently attacked under the designation of Ariel. The allusions to the subject of Shakespeare's sonnets in the courtship and and marriage of Epicene by Morose were as obvious as the allusions in the part of Ariel to the repeated incarceration of Jonson, first on a criminal and secondly on a political charge, and to his probable release in the former case (during the reign of Elizabeth – Sycorax) at the intercession of Shakespeare, who was allowed on all hands to have represented himself in the character of Prospero ("it was mine art – that let thee out"). Mr. H. would afterwards read a paper on the evidence for Shakespeare's whole or part authorship of a dozen or so of the least known plays of his time, which, besides having various words and phrases in common with his acknowledged works, were obviously too bad to be attributed to any other known writer of the period.

The Chairman then proceeded to recapitulate the work done and the benefits conferred by the Society during the twelve months which had elapsed since its foundation on that day last year,

Original from UNIVERSITY OF CALIFORNIA

They had ample reason to congratulate themselves and him on the result. They had established an entirely new kind of criticism, working by entirely new means towards an entirely new end, in honour of an entirely new kind of Shakespeare. They had proved to demonstration and overwhelmed with obloquy the incompetence, the imbecility, the untrustworthiness, the blunders, the forgeries, the inaccuracies, the obliquities, the utter moral and literary worthlessness, of previous students and societies. They had revealed to the world at large the generally prevalent ignorance of Shakespeare and his works which so discreditably distinguished his countrymen. This they had been enabled to do by the simple process of putting forward various theories, and still more various facts (but all of equally indisputable value and relevance) of which no Englishman—he might say, no mortal—outside the Society had ever heard or dreamed till now. They had discovered the one trustworthy and indispensable method, so easy and so simple that it must now seem wonderful it should never have been discovered before, by which to pluck out the heart of the poet's mystery, and detect the secret of his touch; the study of Shakespeare by rule of thumb. Every man, woman, and child born with five fingers on each hand was henceforward better qualified as a critic than any poet or scholar of time past. But it was not, whatever outsiders might pretend to think, exclusively on the verse-test, as it had facetiously been called on account of its total incompatibility with any conceivable scheme of metre or principle of rhythm—it was not exclusively on this precious and unanswerable test that they relied. Within the Society as well as without, the pretensions of those who would acknowledge no other means of deciding a debated question had been refuted and repelled. What were the other means of investigation and verification in which not less that in the metrical test they were accustomed to put their faith, and by which they doubted not to attain in the future even more remarkable results than their researches had as yet achieved, the debate just concluded, in common with every other for which they ever had met or ever were likely to meet, would amply suffice to show. By such processes as had been applied on this as on all occasions to the text of Shakespeare's works and the traditions of his life, they trusted in a few years to subvert all theories which had hitherto been held and extirpate all ideas which had hitherto been cherished on the subject; and having thus cleared the ground for his advent, to discover for the admiration of the world, as the name of their Society implied, a New Shakespeare. The first step toward this end must of course be the destruction of the old one; and he would venture to say they had already made a good beginning in that direction. They had disproved, or they would disprove, the claim of Shakespeare to the sole authorship of *Macbeth*, *Julius Cæsar*, *King Lear*, *Hamlet*, and *Othello*; they had established, or they would establish, the fact of his partnership in *Locrine*, *Mucedorus*, *The Birth of Merlin*, *Dr*, *Dodipoll*, and *Sir Giles Goosecap*. They had with them the incomparable critics of Germany; men whose knowledge and judgment on all questions of English literature were as far beyond the reach of their English followers as the freedom and enlightenment enjoyed by the subjects of a military empire were beyond the reach of the citizens of a democratic republic. They had established and affiliated to their own primitive body or church various branch societies or sects, in England and elsewhere, devoted to the pursuit of the same end by the same means and method of study as had just been exemplified in the transactions of the present meeting. Still there remained much to be done; in witness of which he proposed to lay before them at their next meeting, by way of inauguration under a happy omen of their new year's work, the complete body of evidence by means of which he was prepared to demonstrate that some considerable portion, if not the greater part, of the remaining plays hitherto assigned to Shakespeare was due to the collaboration of a contemporary actor and playwright, well known by name, but hitherto insufficiently appreciated; Robert Armin, the author of *A Nest of Ninnies*.

A. C. SWINBURNE.

Shipping Intelligence.

ARRIVALS.

June 11, *Chili Maru*, Japanese steamer, Drummond, 800, from Osaka and Kobe, June 9, mails and general to M. B. Co.

June 14, *Sumida Maru*, Japanese steamer, Gorlach, 690, from Kobe, June 12, General, to Mitsu Bishi Co.

June 14, *Meiji Maru*, Japanese steamer, Peters, 700, from Kamaishi, June 12, Ballast, Light-house Department.

June 15, *Tokio Maru*, Japanese steamer, Dunn, from Shanghai and Ports, Mails and General, Mitsu Bishi Co.

June 15, *Tokai Maru*, Japanese steamer, Ward, 640, from Hakodate, June 12, General, to M. B. Co.

June 16, *Taihei Maru*, Japanese steamer, Hubenette, 500, from Osaka and Kobe, June 14, General, to M. B. Co.

DEPARTURES.

June 12, *Nagoya Maru*, Japanese steamer, Young, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. Co.

June 13, *Bombay*, British steamer, Smith, 1,325, for Shanghai and ports, Mails and General, despatched by P. & O Co

June 12, *Oxfordshire*, British steamer, Jones, 1,228 for New York viâ Hiogo and Amoy, General, despatched by Smith, Baker & Co.

June 12, *Nettie Merryman*, American barque, Masters, 575, for Shinagawa, to load for London.

June 13, *Kiushiu Maru* Japanese steamer, Christensen, 575, for Osaka and Kobe, General, to Mitsu Bishi Co.

June 14 *Ta ais*, French steamer, Reynier, 1,010, for Hongkong, Mails and General, to M. M. Co.

June 15 *Candace*, German 3-masted schooner, Micnschien, 253, for Chefoo, Ballast, despatched by Simon, Evers & Co.

June 16, *Chili Maru*, Japanese steamer, Drummond, 800, for Kobe, General, despatched by M. B. Co.

June 17, *Hiogo Maru*, Japanese steamer, Vroome, 690, for Hakodate, General, despatched by M. B. Co.

June 17, *Lorne*, British steamer, Butcher, 1,218, for Kobe, General, despatched by Jardine, Matheson & Co.

June 17, *Irma* German barque, Sasky, 460, for Europe, Rice, despatched by L. Kniffler & Co.

PASSENGERS.

Per steamship *Oceanic*, for San Francisco.—From Hongkong to San Francisco: Mr. Dolan, Capt. Cary, Mr. Espantoso. From Yokohama to Liverpool: Messrs. Joseph Tayler. F. Yeud, Captain R. Saunders, Marquis of Kildare, Captain H. McCalmont. From Yokohama to New York: Messrs. A. Van Casteel, H. De la Camp, L. M. Coen. F. W. Humphrey, Captain H. Fulton, G. W. Shinner, G. H Howell, Captain T. Burr, Mrs. Saunders, and six in steerage. From Yokohama to San Francisco: Messrs. J. H. Posthlewaite, G. H. Posthlewaite, Revd. H M. Field, and Miss Field. From Shanghai to Liverpool: R Mackenzie. For New York: C. F. R. Allen, Mr. and Mrs Peil and child. For San Francisco: 1 Chinese servant in the steerage.

Per *Nagoya Maru*, for Shanghai and ports.—Mr. Jackson, Mr. Hoskings, Mr. Phillipnes, Mrs. Allen and maid, Mr. Pitts, Mr. Gaines, Mr. Scott, Mr. Lohmann, Mr. Clark, Mr. Ebell and 31 Japanese in the cabin. Steerage: 706 Japanese and 2 foreigner

Per *Bombay*, for Shanghai, &c.—Messrs. Mourilyan, Green, Wood and White, and 13 in the steerage.

Per steamship *Tanais*, for Hongkong:—Madame Dorlia, Messrs. John Heard, Dickins Launcy Cephas, Ernest Legros, D. J. Hare, N. Oroshi, Nandjo, Kasuwara, Geo. Emanuel. John W. Austen.

Per *Tokio Maru*, from Shanghai—Prince and Princess Tamaguchi, Prince Date and Son, Mr. and Mrs Troup, Mr. and Mrs. Dickins, General T van Buren, Messrs. E. de Bavier, Robertson, Salter, Bremner, Nevitt, Wilson, Boag, Holme, Captain Starkey, Grant, Stevens, Van der Polder, Matthews, Nachtigal, Bickerby, Gulick, Brooke, Weckerlin, and 15 Japanese cabin passengers. 1 European, 415 Japanese, and 4 Chinese in the Steerage.

Per Steamship *Hiogo Maru* for Hakodate—Mr. and Mrs. Eusden, Mr. J A. Wilson, and 3 Chinese, and 7 Japanese in the steerage.

CARGO.

REPORTS.

The *Oxfordshire* has left in charge of the 1st officer and a pilot, the Captain having been detained here on urgent business.

The German barque *Irma* came down from Shinagawa with a full cargo of rice, 650 tons, for England or the Continent, and is likely to sail to-morrow. This is the first vessel which has taken a full cargo from this port, but she is not loaded down beyond her load line.

"Berkeley, Sept 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The usual quiet condition of our Import market during the summer months has now set in, and buyers only operate for their immediate wants. Prices have a strong tendency downward for this reason, and also on account of recent heavy arrivals of Manchester goods. Stocks of both *Cotton Fabrics* and *Yarns* are becoming very heavy, and holders feel the necessity of realizing, and in consequence some sales of 28 32 Yarns are reported at extremely low rates. We quote nominally, as follows:—

Grey Shirtings:—						
7 lbs.	38½ yds	39 in.	per pce....	$1.80	to	$2.15
8 lbs.	38½ yds.	44 in.	„ ...	2.15	to	2.50
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	2.15	to	2.50
9 lbs	38½ „	44 in.	„ ...	2.40	to	2.75
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.70	to	1.85
„ 6lbs.	24 „	32 in.	„ ...	1.95	to	1.40

White Shirtings:—						
60 to 64 reed 40 yds. 35 in. nom.			per pce. ...	2.20	to	2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.			per lb...	0.75	to	1.02
Black Velvets			...	7.75	to	8.50
English Drills 15 lbs. 40 yds, 30 in.			... ...	3.10	to	3.25
Taffachelass	13 yds, 43 in....		*nom.*	2.10	to	2.20

Yarns.—

No 16 to 24		per picul..	$30.50	to	33.00	
No. 28 to 32		per picul..	$33.00	to	37.00	
No. 38 to 42		per picul...	$39.00	to	43.00	nom
Reverse Twist ... 16-24 ...	„ ...		33.00			

Woollens.—The past week has been a very dull one, as but very few transactions have taken place in this staple. There still continues very little demand for Bradford goods, and but few sales are reported. Plain *Mousselines de Laine* show a further decline in prices, while all descriptions of *Printed Mousselines* are entirely neglected. The sudden drop of 2 per cent. in Exchange has somewhat contributed to the stagnation at present complained of, as it renders transactions more difficult.

Plain Orleans	40—42 yds	32 in....	6.50	to	7.50	
Figured Orleans	29—30 yds	31 in....	4.75	to	5.25	
Shimagoro	30 yds.	30 in ...	5.25	to	5.75	
Italian Cloth	—30 yds	32 in....	0.25	to	0.33	
Camlet Cords	29—30 yds	32 in....	6.25	to	7.25	
Camlets Asstd.	56—58 yds.	31 in ...	18.50	to	19.00	
Lastings, Japan	22—30 yds.	32 in....	13.00	to	14.50	
Plain Mousseline de Laine	—30 yds.	30 in....	0.18	to	0.20	

Figured Mousseline de Laine..	30 yds.	30 in...	0.25	to	0.28	
Multicolored „ ...	30 yds.	30 in...	0.32	to	0.35	
Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80	to	1.20	
Presidents	54 in. to 56 in...		0.60	to	0.70	
Pilots	54 in. to 56 in...		0.40	to	0.45	
Union	54 in. to 56 in...		0.40	to	0.65	
Blankets, scarlet & green 7 to 8 lbs.		...per lb...	0.40	to	0.41	

Sugar.—We have very few sales to report in either *Formosa* or *China* kinds; the market is very quiet for both and prices are unchanged.

Sugar:—Formosa in bag	per picul....	2.90	to	3.00	
in Basket	„ ...	2.85	to	2.95	
China No. 1 Ping fah	„ ...	7.45			
„ No. 2 Ching-pak	„ ...	6.60	to	7.10	
„ No. 3 Ke-pak	„ ...	5.60	to	6.00	
„ No. 4 Kook fah	„ ...	5.10	to	5.40	

China No. 5 Kong-fun	per picul ...	4.30	to	4.90	
„ No. 6 E-pak	„ ...	3.40	to	3.60	
Swatow	„ ...	2.60	to	2.80	
Daitong	„ ...	2.60	to	2.90	
Japan Rice	„ ...				
Kerosene Oil	per case ...	2.30	to	2.40	

Kerosene Oil.—Quotations are quite nominal, and no transactions are reported.

EXPORTS.

Silk.—Since the 8th instant arrivals are 125 bales including a large parcel of Oshiu sold and delivered in Tôkiô at prices which have not transpired. A mixed parcel of Yonezawa and Akita (Oshiu) is reported to have been sold at $430, and a few bales of filatures (Kikai) have been disposed of at from $550 to $580. Altogether settlements amount to about 150 bales.

The crop of this country is generally represented as being good both as regards quantity and quality of cocoons, and we are informed that a few bales of new Hanks have been bought in Mybash by a native manufacturer at the parity of $415.

Tea.—Our market, which was by no means steady at the date of our last report, has continued in the same condition during the greater part of the current week, despite the fact that rather important settlements have been made. To-day, however, holders are decidedly more confident, and a slight reaction may result.

Settlements for the week amount to 5,600 piculs; but stocks still continue to increase and may be calculated at 14,500 piculs on hand in this port.

Prices remain much as last quoted, and rule as under:

Common	$13.00	to	15.00		
Good Common	16.00	to	18.00		
Medium	19.00	to	21.00		
Good Medium	22.00	to	24.00		

Fine	$26.00	*to*	31.00		
Finest	32.00	to	37.00		
Choice	40.00	& upwards			
					[nominal.

A steamer, viâ Suez Canal to New York, may shortly be laid on the berth, and a sailing vessel for the same destination direct is talked about; but freights by sailing vessel must approach £2 per ton to induce shippers to avail of this kind of conveyance at the present juncture, as none but low class Teas are likely to be forwarded to New York by such means.

EXCHANGE AND BULLION.

Exchange.—Sterling rates are again weaker, with little doing either in Bank Bills or Private Paper.

Rates close as follows:—

STERLING—Bank 6 months' sight	3s. 11d. to ⅛
„ Bank Bills on demand	3s. 10¾d.
„ Private 6 months' sight	3s. 11⅛d.
ON PARIS—Bank 6 months' sight	4.95
„ Private 6 ms. sight	5.00
ON HONGKONG—Bank sight	¼ per cent disct.
„ Private 10 days' sight	1 „ „
On SHANGHAI—Bank sight	75
„ Private 10 days sight	75½
On New York—Bank Bills on demand	92½
„ 30 days sight Private	94½
ON San Francisco—Bank Bills on demand	93
„ 30d. sight Private	95
Kinsatz	398
Gold Yen	387

Twenty-fifth Annual Report

OF THE

COURT OF DIRECTORS

TO THE PROPRIETORS.

THE general statement of affairs and Balance Sheet for 1875, herewith submitted by the Directors for the information of their co-proprietors, shew that the net profit of the Corporation for that period including £6,000 18s. 5d. brought forward from the last account, has been £174,069 17s. 4d., after defraying current expenses and providing for all bad and doubtful debts.

The Dividend of 6 per cent., paid in November last, for the half-year ended 30th June, absorbed £90,000 of the profits, leaving £84,069 17s. 4d. to be dealt with, out of which the Directors now declare a Dividend of 5 per cent. for the half-year ended 31st December, which will take £75,000, and leave £9,069 17s. 4d. to be carried to the credit of the next years's account.

This Dividend, which is equal to £1 5s. per Share, will be payable, free of Income Tax, on the 1st of May next.

The result of the operations of the past year shews a diminished profit on those of previous years, and is chiefly caused by a steady decline in Eastern exchages, by the provision which had to be made for the fall in the value of Indian Government Rupee paper, and by the generally depressed state of commercial and monetary affairs during the period in question.

The Directors have the melancholy duty to report the death on the 8th of December last, of their much respected Chief Manager, Mr. CHARLES J. F. STUART, thereby severing a connection with the Corporation, which had existed for a period of over thirty-two years. While formally announcing this loss, the Directors are conscious their strong feelings of respect and esteem for Mr. STUART, and sympathy with his family, will be shared by many of their fellow proprietors to whom he was personally known and endeared.

The Directors have appointed as Successor to Mr. STUART, Mr. PATRICK CAMPBELL, who has been in the service of the Corporation since 1847, and who has for the last fifteen years filled the office of Sub-Manager, in which he has enjoyed their fullest confidence as well as that of his lamented predecessor.

Mr. DUNCAN JAMES KAY, Mr. WILLIAM WALKINSHAW, and Major-General HENRY PELHAM BURN, are the Directors who retire by rotation. These gentlemen are eligible, and offer themselves for re-election, which the Court have much pleasure in recommending to the Proprietors.

The Meeting will also have to appoint two Gentlemen as Auditors for the present year.

GEORGE ARBUTHNOT,
Chairman.

Threadneedle Street,
13th April, 1876,

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 26.] YOKOHAMA, SATURDAY, JUNE 24, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The following notification has been issued by the Prime Minister.

It is hereby notified that Article 318 of the Kaitei Ritsurei (Amended Code) has been changed (to read) as under.

SANJO SANEYOSHI.
Daijo Daijin.

10th of the 9th Month, 9th year of Meiji.

Verdicts in criminal cases shall be given on the evidence (adduced.) In case of the death (of the accused) before the verdict is given, his crime is not to be further considered.

The highly important fact underlying this announcement is that the use of torture to extract confession from accused persons, is abolished. It may be remarked that for some time past it has been resorted to with extreme reluctance and only under exceptional circumstances, in obedience to orders from the Central Government strongly discouraging it. Still, the actual announcement that convictions are to be made on the evidence adduced alone, without the necessity for confession either voluntary or extorted by torture, is in a high degree gratifying and marks another step in the progress of the Empire. Whether the Japanese have any laws for the punishment of false witness, or can place the obligation to speak the truth in courts of justice on anything at all answering to the footing on which the Christian nations have placed it by the administration of the oath, we do not know. But it is to be feared that they are without these important instruments, though the former can be supplied by statute. The native papers seem somewhat perplexed about the matter, alleging that there has been no formal repeal of the law providing that confession must in all cases precede the infliction of punishment, and that the public can have no certainty that torture is finally abolished until such formal repeal has been definitely announced. The present notification, however, appears to have been accepted by the *Kenchos* in the sense which is alone attachable to it, viz., that torture is henceforth to be abolished in the administration of criminal justice throughout the Empire.—Upon the general question whether the use of torture can be dispensed with, there appears to be the same conflict of opinion as it has always excited wherever raised. It has ever been abhorrent to the instincts of the English nation, though Bacon himself—would that it had been otherwise!—resorted to it in the case of the old clergyman Peachum, and it has long disappeared from among us. It lingered late in some countries in Europe,—in Bavaria we rather think until about the year 1817, when Auerbach procured its abolition, against the unanimous protest of the judges and a strong and furious party arrayed against him. In the dreadful days of the belief in witchcraft and diabolical possession—one of the saddest chapters in the history of the world—the use of torture was the great lever by which convictions were obtained, the accused being sometimes the purest and most guileless of human beings. In that beautiful story The Amber-witch, we are shewn how the anguish and shame produced by torture and exposure overcame the truthfulness and sense of innocence of one of the loveliest creations of European fiction, and how the prospect of death even at the stake was joyfully exchanged for the agony of the torture-chamber. There can be no doubt that the practice has facilitated the administration of criminal justice to a considerable extent, and it has only been employed, generally speaking, where the evidence was very strong against the accused. But strong direct and circumstantial evidence has a thousand times been adduced against persons perfectly innocent of the crimes laid to their charge, and when it is remembered that under these circumstances an acknowledgment of guilt has been extorted by torture in order to avoid the anguish it produced, no doubt can be entertained that it has been an instrument of enormous injustice, wholly irreparable when the crime confessed was punished capitally. It really affords a sensible relief to the mind to think—presuming our reading of the notification to be correct—that thirty-five millions of people are henceforth relieved from the dread that any one of them might become a victim to this horrible, demoralizing and unenlightened method of arriving at conclusions which should be reached by the pure operations of the intellect. It is an event on which to congratulate the whole Japanese nation—Government as well as people.

On Tuesday last a distinguished company, including a Prince of the Blood Royal, the Prime Minister, several members of the Cabinet, the Foreign Ministers, Admiral Ryder, &c., assembled at 2 p.m. by invitation of the Minister of Public Works, at the Kogakuriyo, or Engineering College, to inspect the Institution, and to witness some experiments in Natural Philosophy and Chemistry conducted by the students of the College. The company assembled in the office of the Kogakuriyo and went first into the Library, which forms the central portion of that section of the building which runs parallel with the outer moat of the Castle, and is so well known to the visitors to Tôkiô. Here was displayed part of the apparatus about to be used in the experiments of the afternoon, electrical machines and Leyden jars, small hydrogen balloons, gas reservoirs, and many of the philosophical instruments familiar to the student of Natural Philosophy. A succession of experiments of a highly interesting nature was then exhibited by Professor Ayrton, who accompanied them with explanations. Prominent among these was an exhibition of what are termed Manometric Flames, with the object of showing optically the motion of the air in organ pipes. This is done by attaching to an organ pipe, the interior of which is specially prepared for the purpose, a gas flame which vibrates sympathetically with the current of air passing through it. A revolving mirror, consisting of four plates of silvered glass fastened together at right angles to each other, is fixed on the same plane as the gas flames and put into rapid motion by means of multiplying gear. So long

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

as the flames are uninfluenced by the organ pipe, their reflection in the mirror consists of nothing more than a band of light. But directly the key is touched which admits air into the pipe and causes it to speak, this band of light assumes a serrated edge, (or, perhaps, more properly, is broken into sections resembling the beads strung on wire used in marking the game of billiards in America) finer or coarser as the tone given by the pipe is higher or lower, and this displays optically the vibrations of the air in the pipe. When two notes of different pitch are struck together, the difference between the rapidity of the vibrations is clearly shewn by the reflections in the revolving mirror, so that if an apparatus of sufficient size were to be constructed, it would be possible to exhibit the relations to each other of all the various notes of our gamut; and, indeed, not only of these, but of the various repetitions of the gamut which are found in musical instruments extending from the lowest to the highest note known to us. In default of an apparatus so large, the mind can easily conceive a series of bands with serrated edges, or strings of flat beads as before said, rising from the large sections which would be displayed by the reflected vibrations of a thirty-two feet organ pipe, to the extremely small sections, demanding a magnifying power to make them visible, of a pipe an inch long. Of course it has long been known that the different pitch of sounds is due to the rapidity of the vibrations of the air which cause them. But it is wholly new to have this proved to the eye, and hence the extreme beauty and interest of the demonstration.

The Model-Room was next inspected, where there are some beautiful mechanical models, in wood, plaster and metal, mostly made by the students of the College. None of them surpass in interest that of Newcomen's engine, which, as nearly as may be a century ago, was used for pumping water from the Cornish mines, and was then the most perfect engine in existence. It was to this engine that Watt's genius added "the separate condenser," the greatest mechanical invention—if we err not—that the world has ever seen, and the source of a greater revolution in human affairs than has been produced by any mechanical contrivance whatever. Extremely interesting is this model, which, although clumsy enough by the side of that of an engine of our own day, exhibits the partially successful struggle of a very ingenious mind to cope with difficulties which only finally disappeared before the far brighter genius of his great successor. The models exhibiting the principles of motion are very pretty and ingenious, each one presenting an illustration of the means by which power may be applied either in different planes or various angles, and the beautiful contrivances by which the wit of man has overcome the difficulties he has been obliged to surmount as his progress introduced greater complexity into his wants. It were easy to dilate upon, but difficult to exaggerate, the interest attaching to this room, which is as creditable as it should be improving to the students of the College. It is, of course, yet small; but small as it is, it contains great wealth of delightful entertainment and instruction, and forces upon the mind of a visitor the vast boon, in the form of increased knowledge, which the opening of this country has been to the favoured generation in whose day it has come about. Nor would it be just to the ardent youths who are studying at this College to omit mention of the assiduity with which they pursue their studies, their close and respectful attention to the lessons of their teachers, their insatiable thirst for knowledge and their eager pursuit of it. The curse of schools in the West, idleness,—though we must be held to confine our remarks to those of England—is unknown to these Japanese youths. The rampant worship of athleticism, which has almost become a source of national danger to the English, is here a rational *cultus*, giving health and vigour and activity, but not absorbing all the attention and almost all the ambition of boys, as among ourselves. We shall not pretend that there is here such a prodigious wealth of animal vitality as exists among ourselves, and we must not be understood to discourage a fair proportion of that vigorous exercise which has become such a passion with this generation. But it is impossible to doubt that it has been carried to excess among us, and diminishes to a very calculable extent the aggregate intellectual force which we have to bestow upon the affairs of the world. We hope the young Japanese will continue to avoid this error of excess in a thing very good in itself, and will never allow it to usurp more than its due share of that time and attention which must be properly and wisely used by men if they are to make any mark in the world, still more if they have to make up—as is the case in this country—for the vast loss which the seclusion of ages has entailed upon it.

As there were some twenty experiments in Natural Philosophy, we shall easily be excused from describing or even enumerating them all. But it may be well to bestow a few words upon one in particular which illustrated the action of the spectroscope—that wonderful instrument which, during the last few years, in the hands of Norman Lockyer, Huggins, and many others equally distinguished of all countries, has so vastly increased our knowledge of the constituent elements of the heavenly bodies, and specially of the sun. In the first place then, the visitors were shewn, reflected upon a white wall in a darkened room, a ray of decomposed white light of the solar spectrum. Amid the prismatic colours thus reflected, the black lines denoting the presence of sodium in the sun's atmosphere were visible, the proof of which is afforded by the presence of lines of a like nature presented by a spectrum of incandescent sodium. The spectra of indium and potassium were subsequently exhibited. In the Laboratory some beautiful experiments were shewn illustrative of the various colours assumed by electricity in its passage through different gases, of the impossibility of transmitting it through a perfect vacuum, or such approach to a perfect vacuum as can be attained by means of Sprengel's pump—a vast advance upon the old familiar air-pumps—and the phenomena attending its passage through air of extreme tenuity. Passing into the Telegraph Museum, the action of a very beautiful, but complicated and rather intractable, instrument for transmitting by means of electricity fac-similes of signatures, secret signs, pictures, maps, &c, was shewn. This is effected by drawing these first on tin-foil in insulating ink, which intercepts the current of electricity transmitted to the corresponding instrument wherever situated, and leaves the fac-simile of the original on a piece of tin-foil fastened on to a wheel revolving at exactly the same speed as the wheel on to which the tin-foil inscribed with the sign, picture, signature, or map has originally been fastened. The signature of the Prime Minister was thus successfully transmitted from one end of the room to the other, to the astonishment and admiration of all who witnessed the operation of this beautiful instrument. Various other kinds of telegraphic apparatus were here exhibited at work, specially those which are used on the lines in this country, and all were manipulated by students of the College.

In the English Class Room the composition of vibrations of tuning forks was shewn optically—the union of the fundamental note and the octave, and the fundamental note and the fifth—an experiment of great beauty, but which did not come out quite so well as that of the Manometric Flames already referred to.

The visitors then repaired to the Chemical Department, where various experiments were made and explanations of them given by the students or assistant demonstrators, Messrs. Kurimoto, Nakashima, Mori, Seikichi, Koide, Takamine, Mori, (2) Nakamura and Torii. Among these the most striking were the deposition of metals from their chemical solutions, the transformations of iodide of mercury, the kindling and quenching of fire by the same substance, the variations of colour attending chemical change, the burning of ethelyne and chlorine, the production of fire by ice, the combustion of substances in different gases, the dissolution of gold, light and heavy gases—fancifully and ingeniously shewn—the rapid combustion of gun-cotton—so rapid as to leave unexploded a layer of gunpowder on which it was placed—the gradual and sudden combustion of gases in glass vessels, &c. The explanation of all these and other experiments was given by the young students in their own language with fluency and confidence, and their manipulation of the various chemical apparatus was practised and easy. Of course, there

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was the usual proportion of loud noises and bad smells incidental to chemical experiments, but the various elements which had the honour of combining before so distinguished an assemblage behaved themselves with admirable discipline. The visitors then walked through the class-rooms and inspected the dormitories, and then witnessed a short drill of the students. The explosion of a mine by an electric spark terminated this part of the proceedings. The wires were laid from the upper to the lower part of the grounds overlooking the moat, into a mine surmounted with a stone cairn some two feet high, directly under which, and at some little depth in the earth, the charge of powder had been placed. After an explanation to the Japanese visitors of the action of the battery, the mine was fired, the powder scattering the superincumbent stones and earth so far as to cause a merry stampede among the visitors. All then repaired to the drawing-room of the College in which a cold collation was served; and on bidding adieu to their entertainer, the Minister of Public Works, the visitors, who had been highly gratified and interested with the afternoon's exhibition, warmly congratulated him upon the success which has attended the progress of the institution, the excellent results already achieved, and the still greater results promised, by it.

A proposition has been made to hold a fête in the Bluff Gardens for the benefit of the General Hospital. The bands of the *Atalante* and *Audacious* are to play, separately and together,—presuming always upon the courteous permission of the French Admiral and that of Admiral Ryder and the officers of the *Audacious*—and the grounds are to be illuminated. It is much to be hoped that the proposition will be carried into effect.

The following appears in all the Tôkiô newspapers.

"The twenty-eighth day of this month will be celebrated by the various newspapers at the temple of Kuannon at Asakusa, Tôkiô, and all are invited to attend. This is the anniversary of the day on which the present Press- and Libel-laws were issued last year."

From the "Japan Mail Daily Advertiser."

Monday, 19th.

The champion race for 1st Class Canoes was held on Saturday last, there being only three competitors, The Canoes started from the boat house with a fresh southerly breeze, J. J. Dare leading, followed closely by Hunt, Hamilton being far astern on account of some difficulty he had about setting sail. They ran before the wind to the red buoy which marks the western limit of the harbour, which they rounded in the order above named, and then had a dead beat to windward to round the Spit buoy off the creek. When near the *Audacious* Hunt took the lead, Dare being close up, and Hamilton far astern tacking about amidst the shipping. Hunt, who had an excellent chance of winning, put himself out of the race by taking too long a tack towards the lightship, thus giving an easy lead to Dare and allowing Hamilton to take second place. The winning stake boat was off the Club, which Dare passed five minutes ahead of Hamilton, thus winning the race. The prize, a scarf ring bearing the champion colours, must be held until September to establish the holder's permanent right to it, and during the interval he is liable to be challenged by any other member once in every fortnight, and must, of course, defend his prize and position.

The Japanese Acrobatic Troupe gave their performance at the Gaiety Theatre on Saturday night to a fairly filled house, and those who were present, some two hundred in number, seemed well pleased with the efforts made for their amusement. The acrobatic feats were, generally, particularly good, and the performer on the slack-rope seemed perfectly at home in his elevated position. Quite a new feature in an exhibition of this peculiar skill was walking and posturing on a band of paper about 10 inches broad, which was stretched across the stage at a slight elevation, and which was easily severed by the performer when his use for it had come to an end. The little boy dressed in brilliant red, who displayed so much agility on a hanging bamboo was very clever, but his gymnastic manœuvres were very suggestive of that well-known child's toy—a moveable monkey on a stick. The performance is well worth a visit, and it only requires a little more diversity, and less delay between the various feats, to render it very attractive.

The Swiss Rifle Association held their usual half-yearly meeting at the Rifle Range on Saturday last. The weather was all that could be wished, the very excellent band of the *Atalante* was in attendance, and several ladies graced the Range with their presence, and as the shooting was fairly good throughout the day, the meeting may be considered to have been in every way a success. Shooting commenced at 8.30 a.m. and was continued until 11.30 when an adjournment was made for tiffin. Firing was resumed at 1.30 p.m. and did not cease until after six o'clock.

The first bull's-eye of the day was made by Mr. Mottu and the last by Mr. Beretta, Mr. Abegg scoring the last morning and first afternoon bull's-eye. At the *Patrie* target the prizes were well contested with the following results.

Hagens...	1st.
Becker	2nd.
Beretta...	3rd.
Haenni	4th.
Abegg	5th.
Brennwald	6th.
Mottu	7th.

At the *Point* target a slight falling off was shown compared with former years.

1st Beretta	43 points.
2nd Hagens	42 ,,
3rd Schoene	34 ,,
4th Haenni	33 ,,
5th Goupil	29 ,,

Mr. Mottu made the greatest number of bull's-eyes, viz.: 87; Mr. Beretta, 84; Mr. Abegg, 74; and Mr. Schoene, 54.

We learn from the *Hôchi Shimbun* that the Corean Embassy stated to some officials of the Agricultural Department that the farmers in their country find a difficultly in flooding their paddy fields with water with the primitive means of irrigation which they possess, and that they were, in consequence desirous of introducing some improvement on the present method of procedure. The Japanese officials suggested the employment of European or American pumps or machinery, but this suggestion was scouted by the Coreans, who declared they would in no way be beholden to western ideas for advancement in agriculture or anything else, but expressed their desire to purchase Japanese pumps for the purpose. These are accordingly being made for them on the plan of the inefficient Japanese fire engine with which we are so well acquainted. What a pity that some of the well known English or American firms had not an agent here to demonstrate to the Coreans the superiority of the pumps and agricultural machines and implements which they make. Who knows but that the introduction of some of their productions might have been a means of opening the country to foreign trade?

A visitor to Tôkiô cannot fail to be struck with the fact that the Japanese have adopted, in the houses they have built of foreign form of construction, many of the worst faults which prevail at this port. Hideous wooden parapets surmount many of the buildings in question, and clumsy wooden eaves disfigure most of them, thus rendering them no more secure from fire than an ordinary Japanese house.

From the *Nichi Nichi Shimbun.*

The Loochooans have requested permission to visit the various Government departments.

From the *Hôchi Shimbun.*

Dealers in rabbits who are in arrears with the taxes due for carrying on their business, or those who have been fined for illicitly dealing in these rodents, must pay such arrears of taxes or fines before the 28th inst., or they will be dealt with as bankrupts.

From the same.

Plans for an Imperial Palace to be erected on the site of that which was destroyed by fire some few years ago, have been

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

made by a French gentleman and submitted to the Government for inspection and approval.

The funeral procession of the late Imperial Princess, Yoshiko no Mikoto, left the Mikado's palace at Awayama for the burial ground of Toshimagaoka, Tokio, at 8.30 a.m. on the 16th instant, escorted by detachments of cavalry, infantry and artillery, and attended by various officials and numbers of military and naval officers.

A great storm passed over Kioto on the afternoon of the 11th instant, and a woman was killed by lightning.

Tuesday, 20th.

At seven o'clock on the 14th inst, His Majesty the Mikado and suite left Shirakawa, travelling in carriages. The route lay through Katogawa and Fumase to Yabuki, where a stoppage was made for refreshment, and thence to the flourishing town of Sukagawa, which was reached about 2 p.m. and where the Imperial party stayed for the night. At both Yabuki and Sukagawa the pupils of the Government schools of both sexes, and all gaily dressed, were assembled to greet the Mikado, and at the latter town the firemen turned out in great force at night and made a demonstration in his honour.

The Mikado remained at Sukagawa all day on the 15th instant, and about noon attended a large horse fair which was held in the town. This fair is an annual one and usually held in September, but was purposely held earlier this year in order that His Majesty might witness it. Some six hundred horses had been collected from various districts, and these were sold by auction in presence of His Majesty, the competition among the horse-dealers being very spirited.

His Majesty left Sukagawa early on the 16th instant, passed through Kôriyama and arrived at Kuwano-mura about 2 p.m. This village is situated in a plain of what was until recently waste land, but which has now been reclaimed and farmed to advantage. His Majesty summoned several of the farmers to his presence and expressed his satisfaction at the improvements they had effected. The Imperial party were to remain at Kuwano-mura for the night.

The *Herald* in referring last night to the case of the German barque *Irma* states the limits of the harbour of Yokohama are defined by a line drawn from Mandarin Bluff to the Light-ship, thence extending to Tsurumi-gawa. But, as we understand it, the line is drawn from the Bluff, past the Light-ship, and extending to the opposite shore. The *Irma* having been anchored considerably inside of these limits, the authorities in our opinion were perfectly justified in charging harbour dues, especially as the vessel lay for more than two days where she anchored.

From the *Chôya Shimbun* we learn that recently the Governor of the Ehimé *ken* gave permission that the several wards in the various towns and villages in the *ken* might each elect one or more representatives, according to the size or importance of such ward, who should assemble together to discuss and regulate various matters for the benefit of their constituents. Such an assembly consequently took place, and among other questions raised was one as to whether it was desirable or not that the various *Kuchô* and *Kochô* should be appointed by the Government as at present, or elected by the people. The opinion of the assembly appears to have been in favour of popular suffrage, but we have yet to learn whether the Governor of the *ken*, or his official superiors, approve of this vote and will act on it.

The *Ósaka Nippô* says that the construction of the canal which is to connect Lake Biwa and the Katsuragawa near Kiôto, will shortly be commenced.

From the *Hôchi Shimbun*:

The Coreans, when in Tôkiô, did not purchase many articles, but took away with them some valuable presents. But amongst these none was so valuable as the knowledge of the mode of vaccination, which a medical man in their suite acquired from members of the profession in this country.

From the same.

It is rumoured that Mr. Sanjô, the Prime Minister, is about to make a donation of 1,000 *yen* towards the support of public schools in the capital.

From the same.

The workhouse at Uyéno is about to be removed to the Tôdô *yashiki*, Shitaya, Tôkiô. It is presumed that this change is made in order to afford more accommodation to paupers seeking relief.

From the same.

A fire broke out at Kokegawa, in the Hamamatzu *ken* on the 16th instant and destroyed 120 houses.

Continued rain is doing great damage to the crops in Kôchi *ken*.

Wednesday, 21st.

Yesterday, being the thirty-ninth anniversary of the Queen's accession, the Royal standard was hoisted on board the *Audacious*, and at noon salutes were fired by the men-of-war of all nationalities in harbour, and by the Fort at Kanagawa.

We hear from the *Eiri Shimbun* that a monstrous snake had taken up its quarters at Ozato, in the province of Shima, and committed sad ravages amongst the rabbits and poulty of the inhabitants. One man, of an enterprising turn of mind, determined not only to rid the neighbourhood of the monster but to catch it alive and make a small fortune by exhibiting it. To accomplish this end he made a trap wherein to snare the snake and engaged assistance to dig it out of it's hole and drive it into the trap, but the courage of the digging party utterly failed when they unearthed the monster and saw its great size, so that without attempting to track the animal they bolted in a panic, thus leaving the snake to make a leisurely escape. The *Eiri* adduces the moral that when people endeavour to make a fortune in an irregular way they are usually disappointed, but does not seem to think that there is any credit in ridding a neighbourhood of noxious reptiles.

From the *Eiri Shimbun*.

New Silk was brought to market in the province of Jôshu on the 14th and again on the 19th instant, and on both occasions realized immediate sale.

From the *Hôchi Shimbun*.

Out of the 329 pupils from the Government common schools, and 52 pupils from private schools, who lately competed for admission to the Normal College, only thirty-six were up to the standard of composition in their own language, and out of these thirty-six only two were specially commended.

Thursday, 22nd.

The P. O. & steamer *Mongolia* left Singapore at 5 p.m. on the 11th instant, with English Mails on board to May 12th, which may be expected here by the *Malacca* on Sunday next, the 25th instant.

We understand that the case of the *Irma* will be taken into the German Consular Court, where the matter will, no doubt, be fully discussed and perhaps the disputed limits of the harbour defined.

From the *Hôchi Shimbun*.

Thirty eight Secretaries of the various wards of the Tôkiô *Fu*, were lately examined as to their capability for performing the duties of their office, but not one was up to the simple test to which they were put.

From the *Nichi Nichi Shimbun*.

A branch of the Tôkiô *Saibansho* was removed on the 20th instant to the new building prepared for it at Tsukiji.

From the *Chôya Shimbun*.

A man was arrested on the 18th instant at Tôkiô for wearing a sword, and the weapon was further confiscated.

From the *Nichi Nichi Shimbun*.

A woman was burnt to death at Tôkiô a few evenings ago through the breaking of a kerosene lamp, which set fire to her clothes instantly.

From the *Hôchi Shimbun*.

The proprietors of the various hotels at which the Mikado has hitherto stopped on his northern journey, keep

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with great reverence any articles, however insignificant in themselves, which His Majesty has used, and in some cases such articles have been presented to temples for careful preservation.

Some of the residents of Wakayama *ken*, who live at a considerable distance from the principal town of the province, complain that they have to travel upwards of 30 miles to the *Kenchô* to obtain redress for trifling robberies which have been committed at their resident villages, and that the expenses of so doing often far exceed the value of the stolen property, besides taking up much valuable time. This difficulty in obtaining justice is certainly a great hardship to those who are deprived of their valuables against their will, and, besides, encourages thieves.

From the *Naniwa Shimbun:*

Two commodious harbours for native junks are about to be constructed at the sea-port of Sakai.

Friday, 23rd.

Messrs. Whitfield & Dowson successfully launched a small steamer from their yard yesterday evening. She bears the name *Shinzo Maru*.

We learn from the *Hôchi Shimbun* that the bamboo in the neighbourhood of Kokura has lately blossomed, which is looked upon as a precursor of famine, and the inhabitants of the district are consequently in a distressed state of mind. Instead of pointing out the absurdity of this superstition the editor of the *Hôchi* confirms it, as far as he is able, by stating that he himself remembers the bamboo in the neighbourhood of Tôkiô blossoming twenty-seven years ago, and that a time of great scarcity followed the event, when the people were compelled to use the seed of the bamboo for food in place of rice. It is well known that the seeds of some species of Indian bamboo are constantly used for food, and it is quite probable that, in the instance the editor of the *Hôchi* refers to, the people used the bamboo seeds as a matter of choice.

From the *Hôchi Shimbun.*

It is rumoured that the Japanese Government is about to colonize the Bonin Islands.

From the same.

Six Loochooans have requested permission of the Naimusho to remain in Tôkiô, in order to pursue a course of study.

From the same.

An exhibition of wrestling will take place at Sakuma-cho, Tôkiô, commencing on the 24th instant.

From the *Chôya Shimbun.*

A Public Library will be opened at Tôkiô on the 1st proximo.

From the same.

While the Police Station in Fujimi-cho, Tôkiô, was the other day thronged with people who had business to transact there, a man was robbed of his pocket-book, and although the police present were at once informed of the loss and a strict search immediately made, the thief was not detected.

Saturday, 24th.

We congratulate the Amateur Dramatic Corps on having secured, by the kind permission of Admiral Véron, the assistance of the very excellent band of the *Atalante* for their performance on Tuesday evening next.

A reference to our advertising columns will show, that those who have been in the habit of retaining the same seats at the Theatre at every performance of the Amateurs, must give immediate notice to Messrs. Lane, Crawford & Co. if they wish such seats reserved for them on this occasion, as the list of reserved seats has been mislaid.

Early on the 17th instant H. M. the Mikado left Kuwano-mura, stopped about noon at Motomiya and arrived at Nihonmatzu towards evening. The next morning the Mikado paid a visit to a silk-reeling establishment which now occupies part of the old Castle of Nihon-matzu. His Majesty was received by the proprietor, Mr. Sano, who explained the process of silk-reeling, in which His Majesty seemed much interested, and on his departure presented 50 *yen* to the work-women employed.

On the morning of the 19th instant, the Imperial party left Nihonmatzu and proceeded on the road to Fukushima, which town was reached about noon. His Majesty took up his quarters at the College, and during the afternoon received the Governors of the Imaye, Okitama and Wakamatz *kens*, and questioned them strictly about the condition of the districts under their charge. Telegraphic information states that His Majesty will remain at Fukushima until the 22nd inst.

The *Mainichi Shimbun* warns residents in the native town that, owing to the present hard times, many Chinamen find a difficulty in earning an honest living and have taken to purloining what they can from shops and dwelling houses, having a special *penchant* for abstracting clocks.

From the *Hôchi Shimbun.*

The usual annual festival will be held at Kudan, Tôkiô, next month. Horse races will take place on the 4th and 5th, and wrestling matches on the 6th and 7th, and on the evening of each of these days there will be a display of fireworks.

From the same.

During the sittings of the *Chihokuan Kwaigi* last year it was decided that roads throughout the Empire should be of four classes; the first class 42 feet wide; the second 36 feet; the third 30 feet; and the fourth class, being the ordinary country roads, 24 to 30 feet wide as circumstances might permit. The Government have now, though rather late in the day, expressed their approval of this decision, and it is therefore to be hoped that a thorough improvement of the national highways and byways will now take place.

From the *Shimpu Shimbun.*

The Chikuma *Kencho* was totally destroyed by fire on the 19th instant.

Mr. Yorodzuya, the editor of the *Osaka Nippo*, has come into trouble on account of an article which recently appeared in his paper, and which seems to have constituted some offence against the Press-laws.

THE JAPANESE BANKRUPTCY LAW.

PROMINENT attention has lately been very properly called to the bad working of the Japanese Bankruptcy Law, than which it is impossible to conceive any thing more unsatisfactory. Shortly after the law first came into force (3rd September, 1872), we drew attention to it, and showed what appeared to be its shortcomings, which, indeed, were so obvious as to suggest the conclusion that it was only an instalment of a more comprehensive measure to be issued later. We pointed out that instead of being, as it should have been, a real Bankruptcy Law, explaining clearly what property becomes divisible among the creditors in the event of insolvency, what debts may be proved against a bankrupt's estate, and what shall be the mode of procedure in bankruptcy cases, it was chiefly directed towards determining what property shall not come under the operation of any Bankruptcy Law. It was, however, never supplemented by any further measure, and, after an experience of nearly four years, we are in more than one position to pronounce with sufficient certainty upon its working, which, as before said, is as unsatisfactory as any thing can possibly be.

In order that there may be no question as to the validity of the grounds for this statement, it seems well to recapitulate shortly the evidence, lately published by a foreign creditor on a native bankrupt estate, of his experience of the manner in which his claims were dealt with.

He appears to have had two special cases to which he draws attention, and it may fairly be inferred that he does not stand alone in these. In the first case, his claim (for $3,780.72) dated as far back as the 16th August, 1871, but after presenting it and finding that he could make no way with it, he left for Europe, and, on his return, began to prosecute it afresh. He was vigorously assisted by his Consul, and after a lapse of three years the case was set down for a hearing. After surmounting two or three minor difficulties, he heard what he conceived to be a judgment in his favour, to be delayed in execution, however, until some document could be produced which the debtor seems to have regarded as essential to his case. On attending again after an adjournment of ten days, he found the whole *personnel* of the Court changed, a new judge and a new interpreter, and nothing to show that the case was not regarded as an entirely fresh one. However, an intimation shortly afterwards reached him that his claim had been established, and that the sum of $0,000,6.8.8 was due to him in respect of it. If it were not so deplorable and serious a case, there would be something exquisitely amusing in the formal declaration of a dividend of 3¼d. on a sum of $3,780, but feeling is naturally divided between sympathy with the creditor and indignation at such an insulting conclusion.

In the second case he had a claim against a native merchant for the non-fulfilment of a contract to deliver 1500 piculs of copper, on which he had advanced $1000 in anticipation of delivery. It was no satisfaction to him to hear that his debtor had been thrown into prison and had died there presumably by his own hand. His claims were admitted by the Court, to the extent of $1000, the sum advanced, and $1000 forfeit in case of non-execution of the contract, and were prosecuted against the three sureties to the obligations undertaken. We are not expressly told that all these sureties pleaded insolvency, but this may be inferred from the sequel. The creditor discovered that while the claim was pending, the sureties had made a profit of $1,500 which he hoped to attach. The fact was admitted, but the money had been paid away to relatives pending the adjudication of the claim, and the creditor hoping for a more favourable adjustment of it by private arrangement, withdrew it from the Court. He was soon afterwards informed that the principal debtor had absconded, and from that day to this has not received a fraction of dividend—not even 6 *sen*.

Putting these and other experiences together, he sums up by saying that he does not blame the officials and the judges, he has no reproaches to make his Consul, and, generally speaking, he seems to have met with consideration and urbanity from all who took civil action in his case. He blames the system, and that alone. He says; "It is the system that is thoroughly rotten, or rather it "is no system of justice at all; they have no regular "mode of proceeding, and although I notice that the "judge at the end of a suit is very fond of saying 'he will "settle this according to Japanese law,' I myself have "not yet found out what this law is like, and I am even "sceptic enough to doubt if they have any." He further complains of the extreme unpunctuality of the courts, the necessity for repeated attendance in very trivial cases, and what looks very like intentional delay when a suitor attends in order to drive him away through impatience, the calling of his case in his absence, and its adjournment because he *is* absent.

The fact is that the Bankruptcy Law, as it now stands, is a model of feeble and abortive legislation, as we pointed out when it was issued. To such fragment of a law as the measure itself presents—for it is really only a fragment—no great objection can be taken. But it is wholly inadequate for the purposes it is intended to subserve. It is no check on the debtor, and no protection to the creditor. It neither deters from malpractice nor punishes it. Nothing is said in it of the mode by which adjudication of Bankruptcy is procured, and only one method is named by which a person can be made a bankrupt. It is of high importance to know what does, and what not, constitute an act of bankruptcy; yet of this the measure says nothing. Provisions are made in it exempting certain property from seizure, and other provisions for selling such property as may or shall be seized. But between these, there is a void which has never been filled up. No light whatever is thrown upon the system of procedure, no proper provision is made for the working of the measure, nothing is said regarding the officials or persons by whom the assets are to be administered. To call such a measure as this a Bankruptcy Law is to destroy the value of the word law. There is indeed a figure of speech which permits of the representation of the whole by a part, but the application to legislation of the permissions of rhetoric is hardly the way to produce a good book of statutes.

There can be no good reason why a thoroughly comprehensive Bankruptcy Law for this country should not be made, and there are meanwhile the strongest arguments for making one. The commercial morality of the trading classes is extremely low and would be gradually raised by it, for it must provide against the fraudulent contracting of debt, and against the common practice of fraudulent disposal of assets. Even supposing, as may easily be the case, that there are difficulties in the way of making a good law arising from deeply rooted customs of one kind or another, these difficulties must be surmounted if the security which law ought to give to commerce is to be attained. The lines of European legislation might be followed, without branching off into those intricacies which are demanded by our extremely complex commercial development.

The main difficulty here will be, and must remain for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

many years, to get judges who can administer new laws of exotic growth, and to follow methods of procedure which are not only new to them, but which do not harmonize with the practice under which they have been brought up. Yet all this must be done if the improvement and advance which are so desirable and so much desired, are to become realities.

The writer of the letters which have formed the text of these remarks thinks that the true cure of all this would be a free Press. Without for a moment underrating its enormous value, and while convinced that the present attitude of the Government towards the Press will pave the way to, even if it do not produce, great insubordination, we cannot agree with him. We shall frankly acknowledge that the Press-laws, as at present administered, are doing incalculable mischief, but we doubt if the most dauntless and enthusiastic believer in liberty, bearing in mind the antecedents of this nation and the tremendous responsibility of giving all opinion free rein among a people hitherto absolutely governed—a people, be it remembered, acted upon in the most powerful and exciting manner by external influences, and thus in an extremely unsettled frame of mind—would think the total abolition of them a wise experiment. Better gradual relaxation, cautious preparation, and steady advance, even with much travail and outcry, than leaps in the dark.

But this is not the question at present. The object of these words is to press on the Japanese authorities the urgent necessity for removing the dissatisfaction at present arising from the operation of their Bankruptcy Law, and the loss of reputation they sustain from such narratives of its operation as have suggested these remarks.

SPIRIT OF THE JAPANESE PRESS.

THE MERCANTILE STEAM SERVICE.

PART II.

REGULATIONS FOR CONDUCTING THE EXAMINATION OF MASTERS, MATES AND ENGINEERS.

The examination of masters, mates, and engineers, will be conducted at Tokei on the 1st and 3rd Tuesdays in each month. Examinations may also be held at other places should the necessity for so doing arise, in which case thirty days public notice of the same shall be given.

Should an applicant wish to be examined on any other day than the above mentioned he may on applicaton to the shipping office, and on the payment of an additional fee of five *yen*, be examined on any intermediate day, to be named by the examiners, but in case of such a candidate failing to pass his examination no part of the additional fee will be returned.

Applicants must give their names at the shipping office at least one day previous to the examination. Authentic and satisfactory testimonials of character, and of sobriety, experience, ability, and general good conduct will be required of all applicants, and without producing them no person will be examined.

The fee for examination must be paid to the Shipping Officer, at the place and time of making the application. The fees are as follows :—

For a Certificate of Competency in accordance with Rule 1.

Master	15 *Yen.*
Master if possessing a First Mate's Certificate of competency	10 ,,
First Mate	10 ,,
First Mate if possessing a Second Mate's Certificate of competency	5 ,,
Second Mate	5 ,,
First Engineer	15 ,,
First Engineer if possessing a Second Engineer's Certificate of competency ...	10 ,,
Second Engineer	10 ,,

One-half the fee paid will be returned to any candidate failing to pass his examination, in accordance with Rule 1.

For a Certificate of Competency in accordance with Rule 2.

Master	5 *Yen.*
First Engineer	5 ,,

In the case of any candidate failing in his examination in accordance with Rule 2 or 3, no part of the fee paid will be returned.

For a Temporary Certificate in accordance with Rule 3.

	Yen Sen
Master	7 50
First Mate	5 00
Second Mate	2 50
First Engineer	7 50
Second Engineer...	5 00

If in accordance with Rule 1 an applicant is examined for a higher grade and fails, but passes an examination for a lower grade, he may receive a certificate accordingly, but no part of the fee will be returned.

If a candidate for a master's or mate's certificate fails three times to pass his examination in navigation, he will not be allowed to undergo another examination, until after a lapse of three months from the date of his last failure, but should he fail in seamanship he will not be examined till after such time as he shall have served six months on board a sea-going vessel actively employed, dating from his last failure.

If a candidate for an engineer's certificate fails in working out the examination papers, he may present himself for re-examination whenever he thinks he has acquired sufficient knowledge to enable him to pass; but if he fails in the practical part of the examination, he may not present himself for re-examination until the expiration of three months from the date of his last failure.

All candidates for a master's or mate's certificate will be allowed to work out the various problems according to the methods and the tables they have been accustomed to use, and for this purpose they will for the present be required to bring their own books; they will be allowed five hours, viz., from 10 a.m. to 3 p.m., to perform the work when examined according to Rule 1, and two hours when examined according to Rule 2 or 3, at the expiration of which time, if they have not finished, they will be declared to have failed.

The examination of candidates for a first or second engineer's certificate, will be directed especially to the points hereafter mentioned, and to the duties and business of an engineer generally. If a candidate passes the *viva voce* examination creditably he will be given a set of questions to work out; he will be allowed to work out these questions according to the method he is accustomed to use; and when examined according to Rule 1 will be allowed five hours, viz., from 10 a.m. to 3 p.m., to perform the work, and two hours when examined according to Rule 2 or 3.

Candidates will be required to appear at the examination room punctually at the time appointed. In the event of any candidate being discovered copying from another, or affording any assistance, or giving any information to another, or communicating in any way with another during the time of examination, he will subject himself to a failure.

No candidate will be allowed to work out his questions on a slate, or on waste paper, or to leave the room until he has given up the paper on which he is engaged.

If at the expiration of the time allowed a candidate for a master's or mate's certificate has worked out correctly the whole of the questions set him, he will be declared to have passed.

Candidates for a master's or mate's certificate will be expected it bring their answers to all problems within, or not to exceed a margin of, one mile of position from a correct result.

If a candidate for an engineer's certificate at the expiration of the time allowed has not worked out the whole of the questions set him, but if the result of the *viva voce* examination taken in connection with the answers to such of the questions as he has worked out, (so that the number of questions worked out correctly are in no case less than two-thirds of the whole) are sufficient to satisfy the examiner that the applicant is competent to take charge of engines of a size in accordance with the grade for which he is being examined, he will be declared to have passed.

In all other than the before mentioned cases a candidate will be declared to have failed.

RULE 1.

QUALIFICATIONS REQUISITE TO ENABLE A CANDIDATE TO OBTAIN A CERTIFICATE OF COMPETENCY.

A Second Mate must be 18 years of age, and must have been four years at sea; or he must have attended the Imperial Naval Acadamy, or Mitsu Bishi Company's or other training ship for a period of two years, and be able to prove by a satisfactory certificate that he passed creditable examinations in navigation and seamanship during that time; and also he must have served three years at sea.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

In Navigation.—He must write a legible hand and understand the first four rules of arithmetic, also decimals and the use of logarithims; he must be able to keep a log, and to work a days work complete, including the bearings and distance to any given position by Mercator's and middle latitude sailing; to correct the sun's declination for longitude, and to find his latitude by a meridian altitude of the sun; also to observe and calculate the amplitude of the sun, and find the error of the compass therefrom. He must understand the use of the sextant, and be able to observe with it and read off the arc.

In Seamanship.—He must give satisfactory answers as to the rigging of ships, the taking in and making sail, stowing of holds, etc.; must understand the measurement of the log-line, glass, and lead-line; be conversant with the rule of the road, as regards both steamers and sailing vessels, and the lights and fog signals carried by them; and be able to make and read signals by the Commercial Code.

A First Mate must be nineteen years of age, and have served the time at sea required for a second mate; and in addition he must have served one year as second mate.

In Navigation.—In addition to the qualifications required for a second mate, he must understand plane trigonometry; must be able to observe azimuths and compute the variation; to lay off the place of the ship on the chart, from bearings and by latitude and longitude; and to find the time of high water from the known time of full and change; also to compare chronometers and keep their rates, and find the longitude from them from an observation of the sun; to work the latitude by single altitude of the sun off the meridian; and to be able to use and adjust the sextant.

In Seamanship.—In addition to what is required for a second mate, he must know how to moor and unmoor, to keep a clear anchor, and to carry out an anchor; a more extensive knowledge of seamanship will also be required, as to shifting large spars and sails; getting in and out masts and heavy weights; managing a ship in stormy weather; casting ship on a lee shore &c. He must also be acquainted with the leading lights in the Japan and China Seas.

A Master must be twenty-one years of age and have served the time at sea required for a first mate, and in addition he must have served one year as first mate.

In addition to the qualifications required for a first mate, he must be able to determine the latitude by a star, and to find the error of, and rate his chronometers by artificial horizon sights. He will be questioned as to the nature of attraction of the ship's iron upon the compass, and must understand how to find and apply the deviation, both from observations of the sun and from bearings of a distant object. He will be examined in so much of the law of tides and currents as is necessary to enable him to shape a course, and to compare his soundings with the depths marked on the chart; also as to his resources in case of his ship becoming disabled, and for the preservation of the lives of those on board in the case of wreck. He must be acquainted with the law of storms, and have a general knowledge of the coast of Japan.

A second engineer must be twenty-one years of age. He must have been employed not less than three years on the making or repairing of engines, and have been one year at sea in the engine room; or he must have served four years at sea in the engine room of a sea-going steam vessel being of or above fifty nominal horse power.

(1).—He must be able to give a description of boilers, and the methods of staying them, together with the use and the management of the different valves, cocks, pipes and connections.

(2).—He must understand how to correct defects from accident, decay, &c., and the means of repairing such defects.

(3).—He must understand the use of the barometer, thermometer, hydrometer and salinometer.

(4).—He must state the causes, effects and usual remedies for incrustation and corrosion.

(5).—He must be able to state how a temporary or permanent repair could be effected in case of derangement of a part of the machinery, or total break down.

(6).—He must write a legible hand, and understand the first four rules of arithmetic and decimals.

(7).—He must be able to pass a creditable examination as to the various constructions of paddle and screw engines in general use; as to the details of the different working parts external and internal, with the use of each part.

A First Engineer must be 22 years of age. In addition to the requirements and qualifications necessary for a second engineer, he must also have served for a period of at least one year as second engineer of a sea-going steam vessel, actively employed, and of or above fifty nominal horse-power; also,

(1) He must be able to make rough working drawings of the different parts of the engines and boilers.

(2) He must be able to take off and calculate indicator diagrams.

(3) He must be able to calculate safety valve pressures, and the strength of the boiler.

(4) He must be able to state the general proportions borne by the principal parts of the machinery to each other.

(5) He must be able to explain the method of testing and altering the setting of the slide valves, and of testing the fairness of the paddle and screw shafts, and of adjusting them.

(6).—His knowledge of arithmetic must include the mensuration of superficies and solids, and the extraction of the square root.

RULE 2.

Certificates of Competency may also be granted to masters and first engineers as follows; that is to say,

1st.—To any person who prior to the 1st day of the 1st month of the 10th year of Meiji, has served a period of four years as master of any sea going vessel of over 400 tons register, without his undergoing the whole of the examination for that grade, provided only that the Naimusho shall consider his character and past experience to be of such a nature as to warrant the granting him such certificate; but such an applicant shall always be examined as to the nature of the attraction of the ship's iron upon the compass, and how to determine and apply the deviation; he must also be able to find the error of, and to rate his chronometers by artificial horizon sights, and be acquainted with the law of storms, and have a good general knowledge of the coast of Japan; and he may also be examined on such other subjects pertaining to the examination for that grade as considered necessary.

2nd.—To any person who prior to the 1st day of the 1st month of the 10th year of Meiji has served a period of four years as first engineer of any sea-going steam vessel of or above 200 nominal horse power, without his undergoing the whole of the examination for that grade, provided only that his character and past experience be of such a nature as to warrant the granting him such certificate; but such a candidate shall always be examined concerning surface condensation, superheating, and the working of steam expansively; and his knowledge of arithmetic must include the mensuration of superficies and solids, and the extraction of the square root; he may also be examined on such other subjects pertaining to the examination for that grade as considered necessary.

RULE 3.

Temporary Certificates will be granted (in accordance with Section 2 (b) of the General Regulations); as follows:-

(1).—Master. A Temporary Certificate as master will, subject to the conditions hereafter mentioned, be granted to any person who prior to the 1st day of the 1st month of the 1st year of Meiji has served a period of one year as master of a vessel of foreign form of construction, and of or above 100 tons register; or has served the same period as first lieutenant in His Imperial Majesty's Navy.

(2).—First Mate. A Temporary Certificate as first mate will, subject to the conditions hereafter mentioned, be granted to any person who prior to the 1st day of the 1st month of the 10th year of Meiji has served for a period of one year as first mate of a vessel of foreign form of construction, and of or above 100 tons register; or has served the same period as second lieutenant in His Imperial Majesty's Navy.

(3)—Second Mate. A Temporary Certificate as second mate will, subject to the conditions hereafter mentioned, be granted to any person who prior to the 1st day of the 1st month of the 10th year of Meiji has served for a period of one year as second mate of a vessel of foreign form of construction, and of or above 100 tons register; or has served the same period as third lieutenant in His Imperial Majesty's Navy.

(4).—First and Second Engineers. A Temporary Certificate as first or second engineer as the case may be, will, subject to the conditions hereafter mentioned, be granted to any person who prior to the 1st day of the 1st month of the 10th year of Meiji has served for a period of one year, in the capacity for which he wishes to obtain a certificate, on board a sea-going steam vessel actively employed, and of or above fifty nominal horse-power.

All applicants for a temporary certificate must, in addition to the foregoing requirements, be of the age, and have served the number of years at sea in accordance with Rule 1.

Candidates for a master's, first or second mate's temporary certificate will be required to work out one problem pertaining to the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

examination of the grade for which they require a certificate, and must possess the necessary knowledge of the coast of Japan in accordance with Rule 1.

Candidates for a first engineer's temporary certificate shall be examined in accordance with article 7, and for a second engineer's temporary certificate in accordance with article 6, Rule 1, of the examination for the respective grades.

Grievances.

Kokai Shimpo.

If we cast our eyes upon the present condition of this country we see that the nation is gradually becoming weaker, that the distance between the mind of the Government and that of the people is gradually increasing, that the precious metals are being drained from us, and that no prospect exists of any intermission of this unfavorable symptom.

Japan is situated at the extreme east of the world, and was closed to all external access until about twenty years ago when some American men of war appeared off Uraga, and from that time treaties were entered into with various nations of the West and our ports were opened to trade with foreigners. This may be considered the time when civilization began to be diffused in our country, increasing thereby the happiness of the people.

But, naturally enough, none among the foreigners who came to Japan did so with any purpose of enriching the country. They came to make their own fortunes and thereby to promote the power and influence of the countries to which they belonged. This is exactly what the Japanese should have done. But even although we went through a civil war which overturned everything, the mind of the Government is not at one with that of the people, the power of the nation is decreasing, and it seems as if the fall of the Government was inevitable—a result which would bring about the destruction of the nation and the ultimate enslavement of our people by foreigners.

Now as we are among the units which compose the Japanese nation, we cannot keep silence in view of such evils as seem impending over us, and we will therefore enumerate what seem to be the dangers threatening us, peradventure by any means our words may prove a warning against the coming catastrophe.

Some three years ago when the Corean Question was under discussion in the Cabinet, a division of opinion arose, and certain men, such as Saigo the elder, Soyeshima, Goto, Itagaki and others, in whom the people had great confidence, resigned their offices. This is what I shall call the first sign.

The above events caused great sorrow and indignation among patriotic spirits and a great number of officers and men of the Imperial Body Guard showed a strong inclination to leave the Imperial service and join the seceders. The Emperor, feeling anxious about the condition of affairs, commanded these officers and men to remain tranquil and to continue in his service; yet without effect. Now when men deliberately prefer to follow seceders from the Government, and thus disobey the commands of the Mikado, who is powerless to compel obedience to such commands, a Government cannot be considered very substantial: and this we regard as a second sign.

After this event there was great uneasiness and commotion throughout the country, and in January 1874 an attempt was made upon the life of Mr. Iwakura in Tokiô. This was immediately followed by the insurrection in Saga, headed by Yeto Shimpei, who lost his life in it. Yet had he carried on the rebellion for another month or two longer, it is impossible to say how it might have resulted: and this may be called the third sign.

Althought the Saga insurrection was quelled, the excitement of the people was like the overflowing of a river and defied the power of the Government to restrain it. For this reason few of the leaders of the rebellion were punished; indeed, they and their followers were treated with marked leniency. Even this, however, failed to restore their loyalty to the Government, and for this reason the expedition to Formosa was determined on, in which, after spending much money and many lives, we became entangled in a quarrel with China, which was ultimately adjusted by the friendly offices of Sir Thomas Wade, the British Minister at Peking, and the payment by China of a small compensation. When this unsatisfactory result was reported here, though there was not much said openly, great indignatian was felt against the Government: and this may be regarded at the fourth Sign.

The Island of Saghalin formed an important northern boundary to us, and was colonized at the expense of much treasure and many lives; but it was ceded last year to Russia, and although the act was called an exchange, it was but nominally so, for the Kuriles which we accepted in its stead are worth but a fraction of it, if indeed they are worth any thing at all. This may be called a fifth sign.

Freedom of opinion is the foundation of civilization, and it is here that the stagnant spirit of the people requires more vitality. Since the newspapers began to discuss the acts of the Government and the officials, no small amount of good has been done. But at the end of May last year the Press and Libel-laws were issued, and these have prevented all really free expression of opinion. The words in one of the clauses "whether a statement be intrinsically true or false" are not only obnoxious but unjust.† This clause was inserted in order that the officials may act as they please, and for this reason men of learning are continually writing against these laws, careless of such imprisonment or fine as may be imposed on them. Many writers have been punished since last year, yet the number of articles held to violate this clause of the law has not in the least decreased. It is even on the increase, and this must be regarded as the sixth sign.

If we examine into the present condition of affairs, we find that the numbers of those who are in opposition to the Government are greatly increasing, and though there are many shades of difference in their opinion, they all agree in the main, and are all animated with indignation against the Government. Since January last many who have expressed these views have been arrested, some of them for attempting to assassinate some of the higher officials, and others charged with attempts to stir up rebellion, and this shows that there is a growing alienation between the minds of the people and the Government, and that each is departing from the other. This may be regarded as the seventh sign.

The orders of the Government for a change in the Land-tax have caused no slight distress among the people. Many have brought complaints to the local authorities, while others have actually raised the standard of rebellion and attacked the authorities with bamboo spears. This has been done in the Awomori and Wakayama *kuni*. Now taxes should be levied equally in all parts of the country, and are to be regarded solely as due to the Government for protection afforded to the people. And for this reason in civilized countries the Government cannot levy one penny more than is agreed to by the representatives of the people. In Japan, however, no representative institutions exist, nor have the *kuadzoku* and *shizoku* ceased to receive large pensions, and thus the Government levies heavy taxes, causing great indignation and distress among the people. This may be regarded as the eighth sign.

Mr. Sawada, the editor of the *Chôgo Shimbun*, having published in his newspaper an article written by Mr. Kusama, a correspondent, was found guilty of a violation of the 13th Article of the Press-laws and sentenced to one year's imprisonment, while Mr. Kusama, the writer of the article was found guilty of a violation of the 12th Article of the Press-laws and sentenced to imprisonment for two months and a fine of ten *yen*. If we look into the Press-laws we see that a publisher of any incriminated writing is deemed as the principal and a writer as accessory. But these laws contain no provision by which two persons committing the same offence can be punished as guilty of a violation of different laws.

Again: The *Hiôron Shimbun*, published, in an abridged form, an article which was a translation (from a foreign work) by Mr. Mitzukuri, and which had been published in another journal called the *Bankoku Sôwa*. For this act, Mr. Seki, then the editor of the *Hiôron Shimbun*, was sentenced to imprisonment for one year and a half for a violation of the 13th Article of the Press-laws. Moreover, three other writers for the *Hiôron Shimbun* were visited with lighter punishments for the same offence. But Mr. Kusama, the original translator of the article and editor of the *Bankoku Sôwa*, and the original publisher, was not punished in any way. All this must have been caused by the mistakes or the partiality of the officials, and though this matter has not been very fully exposed by the native papers, it has been amply and soundly dealt with by the *Japan Mail*. Be it the one or the other, there can be no doubt that the laws have been administered with great recklessness, and when laws are thus administered there is little prospect of a country enjoying tranquillity. This may be deemed the ninth sign.

Want of Publicity.

Kinji Hiôron.

It is commonly said that obscurantism, or doing things in secret, is the special vice of oriental governments, but our own opinion is that this is due not so much to these governments, as to the voluntary ignorance of the people. Now, Notification No. 45 of the

† Japanese writers would do well to look into the English law of Libel on this section of the subject.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Daijôkuan announcing that the *Chihokuan Kuaigi* (meeting of Local Officials) will not be held this year in consequence of the journey of the Mikado northward, together with the rules for the conduct of the business of the *Guaimusho* were published in the *Osaka Nippo*, while they did not make their appearance in any of the Tôkiô newspapers. We have recently heard that Mr. Watanabe, the *Gonchiji* of the Osaka *Fu*, was censured by the Government for having sent the Notification to the newspaper for publication, from which it may be inferred that the document was only sent to the various local officers, and was not intended for publication in the newspapers for the information of the people generally. But here an objection at once arises. Be it the fault of the Government or the people, it is at all events a bad custom that the doings of the Government should be kept from the people, for this only tends to widen the distance which already separates them and to diminish the spirit of patriotism.

The Emperor, desirous that none of the bad customs of oriental governments should exist in Japan, decreed, or his accession to the throne, five constitutional articles, to the effect that the administration of the government should be in accordance with the will of the people; and again last year His Majesty issued a proclamation that it was his gracious intention to convert the present form of government into a limited monarchy. This proves His Majesty's desire that these customs should exist no longer in Japan.

What, then, is the reason why the Notification above alluded to and the rules for the conduct of the *Guaimusho* are withheld from the public?

At the opening of the *Chihokuan Kuaigi* last year His Majesty thus addressed the various local officials assembled: "You are to act as the representatives of the people," and as no rule was made regarding the time of year when the Assembly should meet, we think it the duty of the Government to announce to the people openly why the Assembly does not meet and why it has been postponed.

Again: Why were not the Constitution and the Rules for the conduct of the business of the *Guaimusho* made known to the people? Our relations with foreign nations are matters of no slight importance. We cannot see the smallest reason why the rules by which they are guided should be withheld from the public, and we were extremely pleased to see them published in the *Osaka Nippo*. Yet the Government intended to keep these secret, for it censured the *Gonchiji* of the Osaka *Fu* for having sent them to the newspapers.

Now there must be some reason for all this, and we apprehend it to be that although Japan seems to have advanced in civilization, yet the advance has been made by the Government only, and not by the people. At all events the people are not considered so far enlightened that the Government should feel it necessary to make its notifications known to all. For this reason we are not disposed to blame the Government for the omission. It is the people who are culpable for not having made more progress.*

REVIEW.†

IT must be confessed that our Dictionaries of Japanese are still much below the standard of similar European compilations. Far from bearing a comparison with such works as Liddell and Scott's Greek Lexicon or Littré's French Dictionary, they are, we fear, inferior in accuracy and completeness even to most of the ordinary school and pocket dictionaries with which we are familiar. There are many reasons why this should be so. One is, of course, the recent date of our knowledge of Japan and its language. Instead of the ample materials prepared by his predecessors which an European lexicographer has ready to his hand, the compiler of a Japanese Dictionary must rely on a very few works, and those too written by scholars who had still greater difficulties to struggle with than himself. The aid from Japanese sources is also scanty. There is no native work which is at all fitted to serve as the basis for a Japanese-English or an English-Japanese Dictionary, and though valuable materials are not altogether wanting, in native works, their diffuse or fragmentary character deprives them of much of their usefulness. To these difficulties must be added a still more serious one, arising from the dissimilarity between Japanese manners, civilization and modes of thought, and those of Europe. There are comparatively few cases in which a French or German equivalent cannot be found for an English word or *vice versâ*, but the number of English words for which it is impossible to discover an adequate Japanese rendering, and of Japanese words which have no proper English equivalent is enormous. As the civilization of Japan is made more and more to approach that of Europe, the language will doubtless undergo a corresponding change, but in the meantime this difficulty exists in all its force, and as a consequence, we must be satisfied with Dictionaries which can only be approximately accurate or complete.

It would therefore be unfair to judge the new English Japanese Dictionary which has just been published by Mr. Satow, Japanese Secretary to H. B. M.'s Legation, and Mr. Ishibashi, of the Japanese Foreign Office, by the same standard which we should apply to a Dictionary of a European language. If it is a distinct advance on previous works of the same kind, and if it approaches as as nearly to accuracy and completeness as circumstances at present admit, it is all that can reasonably be expected.

The English-Japanese part of Dr. Hepburn's Dictionary has hitherto been justly recognized as much the best work of its kind, and even if it must now give place to a younger rival, the leading position of the Japanese-English part of his work is not likely soon to be disturbed. A comparison of the English-Japanese part with Messrs. Satow and Ishibashi's dictionary shows that the latter is in many respects a very considerable improvement on its predecessor. It excludes all words not used in speaking, while in Dr. Hepburn written and colloquial words and forms are placed side by side without distinction. Messrs. Satow and Ishibashi have also taken care to distinguish between the different meanings of the English words for which Japanese equivalents are given, a most important point which is only occasionally attended to by Dr. Hepburn. There is also an advance in general accuracy, and our own experience tells us that the numerous phrases illustrative of the various modes of translating the more common English words will be very acceptable to the student.

The following examples have been taken at random for the purpose of comparing the two works.

HEPBURN.	SATOW & ISHIBASHI.
Nail, *n.* Kugi, tsume, aikugi. *To hit the* —, hoshi ni ataru.	Nail, n. (of the body) *tsume;* (tack) *bô* (c); (brad) *kugi;* double-pointed —, *ai-kugi;* to cut the —s, *tsume wo toru*, 1; to hit the — on the head, *hoshi ni ataru*, 1.

Name, *n.* Na, namaye, mei, nanori, miyô-moku, miyômon. *Come in the—of,* . . . no keni wo motte kitaru. *Bad* —, omei. *Another* —, kaye-na.	Name, n. *na:* restricted to persons) *namae: seimei* (c); family —, *môji* (c); to give one's —, *na wo iu*, 1; to call — s, *waru-kuchi wo iu*, 1; in the — of, *ni kawatte;* general —, *sômiô* (c).
Name, *t. v.* Na wo tsukeru, nanoru, nadzukeru, shô suru, gosu. *To call names*, nonoshiru. *Suiting the* —, na ni shi ô.	Name, t.v. *ni) na wo tsŭkeru*, 2; *nadzŭkeru*, 2; (to mention by name) *nazasu*, 1.

The differences in these two columns speak for themselves. Dr. Hepburn gives *kugi* and *tsume* for 'nail' without any intimation that one is a nail used by carpenters, the other a finger or toe-nail. A careful student would no doubt turn to the Japanese-English part where the precise meaning of each word is duly noted, but many will not think of doing so, and at any rate it is far better to save the student this needless trouble, as has been done in the new dictionary.

'To hit the nail' should of course be 'to hit the nail on the head' as Messrs. Satow and Ishibashi have it.

'Double-pointed' in the new Dictionary hardly brings out the meaning of *aikugi*, which is 'a nail pointed at both ends.'

* [The irony here is unmistakeable.—ED. *J. W. M.*]

† English-Japanese Dictionary, Satow and Ishibashi. London, Trübner & Co., Yokohama, Lane Crawford & Co.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Both Dictionaries give *kugi wo uchi-tsukeru* as the equivalent of the verb 'to nail.' This means 'to drive nails into,' 'to stud with nails.' The common meaning of 'to nail' viz 'to fasten with nails' would be *kugi de uchi-tsukeru*, which is not given in either Dictionary.

Under the word 'naked' Dr. Hepburn gives *ratei* and *meihaku naru*, neither of which would be used in speaking, but without any hint that they are written forms. *Ratai* is more correct than *ratei*, and *meihaku* which means *clear, distinct*, could only be used as a somewhat loose translation of 'naked' in the metaphorical phrase 'the naked truth.' Messrs. Satow and Ishibashi's treatment of this word is a considerable improvement on Dr. Hepburn's, but we are rather sceptical about the meaning given for *hadashi*, which we believe means simply 'barefoot.' *Tabi-hadashi* is the Japanese for 'without clogs, etc,' or as we might say 'in one's stockings.'

Abstract nouns are comparatively little used in Japanese, and in the new Dictionary, the word 'nakedness' is wisely omitted. The Japanese for it would be *hadaka na koto* if it were used at all. Of the two words given by Dr. Hepburn, one means simply 'naked,' and we were greatly puzzled to imagine how the other could mean 'nakedness' until it struck us that it might be intended as an equivalent for an Old Testament use of the word.

The word 'name' is by no means an easy one to do justice to. Dr. Hepburn gives a heterogeneous collection of words for it, which must be extremely perplexing to a young student. *Na* is a name generally, *namae* a man's name; *mei* is not a name at all, but 'an inscription'; *nanori* is the second of the two names of a Japanese, *myōji-mokū* is rather 'designation' than name, and *mi̇̄mon* is 'a good or bad name,' reputation. In Messrs. Satow and Ishibashi's Dictionary, four words are given for name, and the meaning of each is properly distinguished. There seems, however, to be no good reason why *mi̇̄mon* and *nanori* should have been omitted.

Enough has been now said to show that although there is still room for improvement in Messrs. Satow and Ishibashi's Dictionary, it is in point of arrangement and accuracy a considerable advance on its predecessor. It ought to be added that the words of Chinese origin have throughout been distinguished from native Japanese words, and that the conjugations of all the verbs have also been noted.

On one point we are sorry to have to record our emphatic dissent from Messrs. Satow and Ishibashi. In their preface it is stated that *e*, *i* and *o* in syllables terminated by a consonant are pronounced respectively like *e* in *pen*, *i* in *pin*, and *o* in *on*. We are much mistaken if these sounds are not entirely foreign to the Japanese language. In such phrases as *motte koi*, both *o*'s are surely pronounced exactly alike, and the *o* of *motte* is not pronounced like the *o* of the English word *on* as the rule would make it. The very examples quoted in the note will be sufficient to convince most people that the pronunciation described is quite imaginary. In *bekkō*, tortoise-shell, *bek* is not pronounced like the English word 'beck' but like 'bake' only shorter and quicker, and *ten*, heaven, is surely not pronounced like the English word of the same spelling!

We have felt it our duty to point out some defects in the Dictionary now published, but they do not seriously impair its usefulness, and we have no hesitation in giving it a hearty welcome, and in recommending it strongly to our readers. In spite of its imperfections, it is considerably the best work of its kind. It is compiled on excellent principles, and such faults as it has are faults of detail which can be easily remedied in a second edition. Till this appears, or the present dictionary is superseded by a more perfect work, which does not seem probable, Messrs. Satow and Ishibashi's Dictionary must remain the indispensable vademecum of every one who wishes to make himself acquainted with the spoken language of Japan.

REVIEW.*

VARIOUS recipes have been given by wise men for dealing with fools, and others for dealing with knaves; but we do not remember a single one which instructs mankind how to deal with a combination of both. We must therefore devise one for ourselves. First, however, we must show shortly how and why the task has devolved upon us, and our readers will then see how far our diagnosis of the case with which we have to deal is correct, and our method of treating it effectual.

On the 15th of April last we reviewed an anonymously written book entitled "*The World:—Whence cometh it; or what certain Physicists are saying.*" It was as poor a book as we have seen for a long time, for it showed a profound ignorance of the special question with which it attempted to deal, and lavished a great deal of needless abuse and brought unproven charges against men of high scientific eminence, for not holding the extremely narrow views of the author upon a question which admits of so wide a difference of opinion as the question of Evolution. For instance: Reference was made in the book to Dr. Bastian's experiments upon spontaneous generation, and the writer declared that because Dr. Bastian maintains this theory he does not believe in the existence of the Deity. This is a mere inference, be it remarked, and is not justified, so far as the evidence goes, by one word quoted from Dr. Bastian's works. In denouncing the the odious spirit which this charge reveals, we wrote as follows:—

> Man may measure the gravity of infractions of the various commandments in the Decalogue by their effects upon society. But we have not the slightest certainty that the Deity does so, and, for all we know, there may be as much sin, using a theological term, in bearing false witness, as in breaking any of the other commandments.

Now our readers will be so good as to observe the words above reprinted from our review. To the meanest conceiveable intelligence we should have thought that they were susceptible of but one construction, viz., that though man estimates various crimes according to their effects upon society, and thus punishes one more lightly than another—theft, for example, more lightly than murder—we do not know but that the Deity may regard all transgressions against his laws in the same light, and therefore that the bearing of false witness may, in his sight, be as bad as theft or murder. Our words, as they stand, can possibly bear no other meaning. Now for our anonymous assailant, whose ridiculous letter will be found elsewhere, occupying, we regret to say, space which we should have been far better pleased to devote to more worthy purposes. He says—"*Man* (says the reviewer—meaning the *Japan Mail*) *may measure the gravity of infractions of the various commandments in the Decalogue by their effects upon society, but we have not the slightest certainty that the Deity does so*," &c., &c. Our readers will now be so good as to compare the two passages. From our own the inference is quite plain. From that just now given, a different inference may be drawn, viz, that sin may not be sin in the eye of the Deity—an inference, in other words, which we should think it utterly monstrous to make, but which has been imputed to us by the author of this letter. The means resorted to for accomplishing this graceful act are the removal of the full stop from the end of the first part of the sentence, the substitution of a comma for it, the running of the first into the second sentence, and the taking away of the explanatory context. The merest child requires no telling that words placed between inverted commas should be the *ipsissima verba* of a quoted writer. A man who does this kind of thing in the secular world, for the purpose of making and justifying odious charges, is looked upon as a knave. The author of the letter before us has yet to show cause why the term should not be applied to him, because—as we presume—he belongs to the 'religious world.'

Having gone so far, he beats about to show—so far as we can understand him—that God, being inflexibly just, must regard sin as sin whatever its magnitude—precisely the hypothesis assumed in our own review and expressed with all needful clearness. We have really no wish to use more hard words, and do not care to say what a man

* Is the Decalogue a Myth? Yokohama, Wetmore & Co.

must be who writes in this careless manner on the gravest of all subjects. But David would certainly under the same circumstances have called him a fool.

Of the charity and sense of propriety of the author we form an equally low estimate. What business has he to write in this manner? "It is, we fear, useless to ask the reviewer to look into his Bible for what appears to him a doubtful question," &c. It is idle and would be shameful to boast on such a subject, but we will engage to say that we know our Bible at least as well as he, and meanwhile we have never used it as a cloak from under which to make anonymous or base attacks upon any one.

We are abundantly reproached within the small limits of this letter for arrogance, self-conceit, faith in human reason, boasted wisdom and so forth. Charges more idle, uncalled-for and impertinent never were put on paper. We say most unaffectedly that among the most constantly oppressive problems, we would even say sorrows, presented by human life, few are more oppressive than the boundlessness of knowledge, the infinite complexity of Nature, the wholly insignificant and relative quality of such insight as one man is able to acquire into her operations, and the certainty that vast as are the total accumulated stores of knowledge in the world, the wisest, still more the average, man, must die acknowledging the truth of the saying of the old Greek, "All I know is that I know nothing." If this be self-conceit, we as little know the meaning of the term as the grounds on which it is applied to us.

In view of our strong objection to take the smallest notice of any personal attack on us, we feel some difficulty in justifying ourselves for paying any attention to this wretched effusion. But it so far differs from the bulk of the anonymous impertinences with which part of the Yokohama press teems, that it has been insidiously sent round the settlement in the form of a pamphlet—a mode of attack which really justifies special punishment, and entirely of a piece with the falsification with which the writer set out. We know of no narrative or allegory which represents angels of light in a domino and mask, furtively dropping libellous half-penny tracts in the sacred name of Religion.

We strongly recommend the sly and silly person who has issued this bad letter to try to improve both his polemical ethics and his understanding. The first are abundantly crooked and shameful; the other he is perhaps not so much responsible for, but for the sake of humanity he might have grace enough to hide it. We shall take no pains to track him. But if any specially base and mean action occurs in this settlement, the author of which contrives to elude detection, and which shows the union of low cunning with an ignorance almost equally shameful, we shall unhesitatingly attribute it to the writer of the pamphlet "*Is the Decalogue a Myth!?*"

THE DECALOGUE A MYTH?!

YOKOHAMA, *May*, 1876.

(To the Readers of the "Japan Mail.")

READER,

FOR the sake of simple testimony, if nothing else, we feel duty bound to offer our opinion on a sentence in a Review in one of last month's issues (April 15th)* of the "Japan Mail."

"*Man*," say the reviewer, "*may measure the gravity of infractions of the various commandments in the Decalogue by their effects upon society, but we have not the slightest certainty that the Deity does so*," etc. etc.

Is it possible that any English-speaking man can be so ignorant of the letter of Scripture as not to know how full of proofs it is, showing how the Deity dealt with and measured sin in all generations? What are '*infractions*,' but *trespasses* and *sins*, of which the Deity has said and still says, "*Cursed is he that continueth not in all things written in the book of the law to do them?*" If the reviewer is one of those who treat the Bible as *fable* or *fiction*, in this improved nineteenth century, why not leave the Decalogue of the Pentateuch alone? In it only do we, (who unhesitatingly accept the truths of Revelation,) find out God's estimate of sin; and, later on, in the atonement, we see God proving that when he established, as an inflexible law, the burning utterances of Sinai, he was not speaking at random when he pronounced over it, that the "*soul which transgresseth it shall die*." We are at the antipodes as to the reviewer's idea of revealed truth. We see from opposite stand-points. It is pitiable to see him on the one hand speak of Revelation as if he held it in contempt, yet betraying uneasiness about it, so much so as to be incapable of letting it alone. The Deity, to *such*, is indeed what he *is* to such, "a hard master, reaping where he has not sown." He must have *just* weights and *just* measures. Would that the ill-at-ease reviewer would submit his proud reasoning,—plead insolvency,—then he would find that *He* who must to him be just could also be his justifier. Every infraction has and always will be as dishonouring as it is grieving to God, whatever the "*effect upon society*" may be.

It is, we fear, useless to ask the reviewer to look into his Bible for what appears to him a doubtful question, for only there do we get it satisfactorily answered. But all have not *faith*, and *revealed truth* is the sphere of faith, without which mere human reasoning is as a vessel at sea without a rudder,—a rushlight in a storm.

We are convinced that nothing short of *perfect obedience* can satisfy the requirements of both law and Lawgiver. To doubt this, in the face of our conviction and experience, would be impossible, as well as the multitudinous proofs we have from Scripture. It were robbing God of his attributes of *truth* and *justice*, and giving unreserved license to sin. Without the moral law we might also admit that God winks at sin, but the manifestations given in the life and death of incarnate Deity are too consummate and crowning to leave us room for any other opinion but the belief we have of the requirements of the Decalogue, for they echo forever that God is holy and inflexibly just, and he who is not just in his sight must suffer. "*He will by no means clear the guilty.*"

It is true Christ satisfied the claims of the law, and appeased the wrath of God, but it was *that the righteousness* (or justification) of the law might be fulfilled in us, (Rom. viii. 4.) not that we might think ourselves exempt from its requirements. We (who believe) are a new creation in Christ; that we may fulfill the law this new creation, which could thus empower us, could not be brought about until Christ became its foundation, by a life of obedience and by his death. God would have us look to Calvary to find out what *His* estimate of the gravity of the "various infractions of the commandments" is. The question was really settled there, and thither must we, in our short-sightedness, resort for the solution of all that now mystifies us.

Bacon says that "a little philosophy takes a man away from his religious belief, more profound philosophy brings him back to it again." This may be true as regards religion in form, but nothing short of the philosophy of the Atonement can bring back the *heart* of man to God. We read that the highest names both in physical and philosophical research have bowed to the necessity of Divine revelation; and it was after they retired from the chambers of their imagery, and renounced the "Deity" of their own creating, and accepted the Bible in its peerless form—searched and believed it, that the scales fell from their eyes, and for the first time they saw that it contained the treasures of true wisdom and knowledge. Newton was none the less a philosopher because a Christian, and *vice versa*, the light of Truth made him "*learnedly wise*,"† so that he never became entangled in the network of his own speculations, and what is more commendable, he did not lead others into it. Pascal, again, sacrificed his brilliant mathematical powers in order to give himself more wholly to the service of God. And so would our reviewer, if he would allow the light of *truth* to show him how much his boasted knowledge is worth. Of one thing we feel certain, that he would never again tamper with the holy commandments, as he would with a human science, but stand with breathless, reverential awe before that majestic and lofty reflector (the Law) of Him who is *Wisdom*, *Goodness* and *Truth*.

As regards the reviewer's opinion that "society is improving" we shall only say that such is the syren song of thousands. The true Christian cannot say that there is real progress or improvement anywhere where God is not loved and feared. Short of this, every step made toward what men of *genius* and *virtue* would lay down their lives to prosecute, are snares and delusions, to lead them astray from God. We do not mean to imply that their error lies in their laying themselves out to answer the questions, What? and How? which the human mind is continually putting in regard to all that remains a mystery to it, but in the fact of their being engaged in them with a wrong spirit; they are not setting God before them, and the punishment of this has always been, "*given up to their own heart's device*," a judgment which, while engrossed in their pursuits, they can have no idea of.

We cannot close our letter without expressing our regret for taking up so much of the reader's time. We hope he will see that he have the welfare of questioners at heart, as well as the honor and glory of Him who still says, "I am the Way, the Truth and the Life,—follow me!" We are as ignorant of who *Tu-Quoque* (and his book) is, as we are of who the reviewer is. Indeed we do not feel anxious to know who they are; that is not our work. But to refute error in books that bear the stamp of death (*i. e.* such as set aside the authority of God's revealed truth,) is simply "doing evil that good may come," or in other words, taking poison in order to find its antidote. It is quite possible Tu-Quoque may have taken this view of it ere now. Suffice it therefore to say that the words of Him who "spake as never man spake" were of deep import to the ears of his disciples, "LET THEM ALONE!" And it was the conduct of the ill-at-ease, proud, selfconceited, self-deceived Rabbis and lawyers of those early days that elicited the injunction. We have no doubt that Tu-Quoque's chief aim was to lead the unwary away from the meshes of error. This we commend, and at the same time venture to remind him that the command, "*Follow me*, (deal with men as I dealt with them,) and I will make you fishers of *men*," is as needful for us to give heed to nowadays, as when it first fell from the lips of *infinite* WISDOM.

"*They deceive themselves who expect to convert either infidels or sinners by any other means than those employed by Jesus and his dis-*

ciples, since God has reserved to himself alone the power of changing hearts." ‡

Believe me,

Your well wisher,

A SECULAR.

P. S. The *quotation* at the commencement of this letter is not *altogether* intelligible to us, but it will be seen that we have only dealt with what seems clear. It is patent to any *reader* and *lover* of divine Truth, who reads it, that it savours of infidelity. Infidelity is but departure from the truth as *God holds it.* So every other form of error, whether *reputed, religious*, openly hostile, or in contempt of the law of God.

HISTORY OF THE TOKUGAWA DYNASTY.

CHAPTER I.

(Continued.)

In the 11th month Okubo Tadatoshi engaged the Harizaki insurgents at Adzukizawa, and, with the assistance of Iyeyasu, who had hastened to his aid, routed them with great slaughter.

Midzuno Tadashige followed in pursuit, and by his taunts compelled their commander Hachiya Tadatsugu to turn round and show fight. On perceiving himself, however, singled out for attack by Iyeyasu, who spurred his horse towards him, the insurgent leader fled in dismay. Kakehi Masashige betrayed a similar want of spirit. He challenged Hiraiwa Chikayoshi and advanced to meet him, but finding himself opposed to Iyeyasu, who rushed upon him with a terrible cry, lost heart and sought safety in flight.

Tadatoshi meanwhile had marched against Harizaki, upon which the insurgents adopted the tactics of dividing their forces, forming a camp at the temple of Miyôgoku and attacking him in front and in the rear at the same moment, thus cutting off his retreat. Hachiya Sadatsugu was the son-in-law of Tadatoshi and could not conceal his embarrassment at finding himself opposed to his wife's father. Tadatoshi observing him riding wildly over the moor on the verge of which the temple stands, divined the cause of his agitation and avoided an engagement.

A series of skirmishes took place between Iyeyasu and the insurgents but without any definite result. Nobunaga who had entered Mino, and was occupied with the campaign he had undertaken against Saitô, could render no assistance. The situation of Iyeyasu was thus a sufficiently critical one, a circumstance of which Imagawa Ujizane, who had given himself up to dissipation and debauchery, fortunately could not avail himself.

On the 3rd of the 12th month of the 7th year of Yeiroku (A.D. 1564) the Sasaki insurgents fired the villages of Oka and Ohira. Upon perceiving the smoke rising from the burning villages Iyeyasu, curtly dismissing Midsuno Nobumoto, who at that very moment had arrived to proffer the usual new-year congratulations, mounted his horse and rode off at a gallop in the direction of Sasaki. Nobumoto, whose feelings did not allow of his abandoning his lord at such a juncture, gathered his men together and followed. At Adzuki-zaka they come in sight of the enemy. Iyeyasu without drawing rein cut his way into their camp, and his followers vied with the retainers of Nobumoto in the valour with which they compelled the insurgents to retreat.

On the 11th day the Toro, Harizaki and Nodera malcontents united their forces and marched against Wada. Tadatoshi and Tadatsugu (or Tadayo) defended the place, to the rescue of which Iyeyasu hastened, followed at a short interval by some thirty horsemen. He was singled out by Watanabe Moritsuna, but his assailant was struck down by an arrow from the bow of Naitô Masanari, who, although a nephew of the insurgent captain, exclaimed that at such a crisis he could not remember his relationship. A rush was now made and Iyeyasu was surrounded by the enemy, when Tsuchiya Nagayoshi, a man in the opposite ranks, moved by his former chief's peril, turned to his comrade crying that the priests had induced him to take up arms against his lord, but that he would liever go to hell than stand by idle when his liege was in danger of his life, and pressing forwards met his death in defending our hero against the assailants who thronged round him. Night was now falling and both sides withdrew from the contest. At this period firearms had come into general use and Iyeyasu was more than once hit by musket-shots, two bullets dropping from his person as he took off his armour.

On the 13th of the 2nd month the Sasaki insurgents, some 300 in number, putting themselves under the leadership of Yada Sakujiuro, marched against Okazaki, Yada heading the attack with conspicuous bravery. Iyeyasu ordered his matchlock men to take special aim at the insurgent leader, and the latter fell struck by a musket-ball in the thick of the fight, upon which his men fled in the utmost disorder. The rebels never rallied from this disaster and lost ground daily. Hachiya Tadatsugu now proffered his submission to Okubo Tadatoshi and besought him to intercede for him with Iyeyasu. Tadatoshi accordingly went to Okazaki and pleaded the suppliant's cause so well that a full pardon was vouchsafed him, a like grace being at the same time promised to Moritsuna. Tadatoshi indeed begged for their lives as a personal boon in return for the devotion and valour with which he and his followers had served Iyeyasu since the preceding year. Moritsuna was consequently ordered to present himself, accompanied by his retainers, at Wada, where they appeared on the 28th day, and after swearing allegiance were furnished with a written pardon. The remainder of the insurgents gradually gave in their submission with the exception of Masanobu, who despite the attempts that were made to persuade him to surrender, obstinately refused to yield. He, with four others of the same kidney and the priestly ringleaders, were compelled to fly the country, while Yoshiakira and Yoshitora, seeing how matters stood, sought safety in the West. Thus was effected the complete pacification of Western Mikawa.

In the 3rd month troops were sent into Eastern Mikawa, and in the 4th, Ogasawara Yasumoto, Makino Sadanari and Toda Shigesada, with the men of Hadsu, Ushikubo and Niregi respectively, laid down their arms. In the same year the *mura* of Yoshida, Tawara, Goyu and Terabe were occupied. The submission of the three *mura* of Nagashino, Tsukide and Dammine followed, and many of the leaders of Eastern Mikawa, unable to tolerate any longer the feeble and vacillating conduct of Ujizane, went over to Iyeyasu, whose authority thus became acknowledged by the entire province. In the 3rd month of the 8th year (A.D. 1565) Mikawa was divided into three governments, which were bestowed upon Honda Shigetsugu (Sakuzayemon), Kôriki Kiyonaga (Yozayemon) and Amano Yasukage, commonly styled the three *Bugiyô* (governors) of Mikawa. All three were able men, and while Kiyonaga was famed for his clemency and Shigetsugu for his strictness, Yasukage was lauded for the perfection of his justice. Popular song celebrated the first as a Buddha in gentleness, the second as a demon in energy and the third as being neither over clement with the one nor over strict with the other.

In the 9th year (A. D. 1566) an Imperial rescript raised Iyeyasu to the lower division of the inferior 5th rank, and invested him with the dignity of Lord of Mikawa. In the same year Iyeyasu changed his name, adopting that of Iye after his remote ancestor, Yoshiiye.

In the 5th month of the 10th year (A.D. 1567) Ota Nobunaga affianced his daughter to the heir of Iyeyasu, and Takeda Shingen, dazzled by the glory of the conqueror of Mikawa, sent his general Yamagata Masatoyo to assist in the reduction of Ujizane to submission. The river Ohoi was then fixed upon as the boundary between the territories of Iyeyasu and Takeda, who courted the friendship of his powerful neighbour.

In the 1st month of the 11th year (A.D. 1568) Iyeyasu was advanced by an Imperial rescript to the dignity of Sakiyô Dai-in. In the 3rd month Tôtomi was occupied and Kunô attacked, the lord of which, Kunô Muneyoshi, was, after some discussion, induced to surrender. Matsushita, Futamata and Takayabu also submitted. Harikawa was next reduced and Utsugawa occupied while Mitsuke was fortified. In the 9th month Matsudaira Nobukadsu was ordered to join Nobunaga, and the combined forces attacked and defeated Sasagi Shotei in Omi. Nobukadsu displayed the utmost valour upon this expedition, showing himself in the forefront at every encounter with the enemy.

‡ St. Frances de Sales.

* The reader is requested to correct the following erratum in the last number.

At the end of the preface, for *Shingen* read *Shigen*. Throughout for *Uchizane* read *Ujizane*.

Original from UNIVERSITY OF CALIFORNIA

In the 10th month Iyeyasu himself led his troops into Tôtomi and overthrew Iigaya Osakabe. The district of Hikuma had previously been occupied by his forces, and he now erected a castle there to overawe the surrounding country. He then summoned the castles of Mafushi and Takatenjin and both surrendered.

Meanwhile Takeda Shingen had penetrated into Suruga, and compelled Ujizane to seek safety in Tôtomi, where he was hospitably received by Asaina Yasuyoshi, commandant of the castle of Kakegawa. Iyeyasu upon this laid seige to the castle, which, however, was so well defended by its position, and so well provided with stores, that the capture of it promised to be no easy matter, and Iyeyasu found himself obliged to retire upon Mitsuke where he encamped.

In the 1st month of the 12th year (A.D. 1569) Iyeyasu prepared to make a second attack upon the castle of Kakegawa, and with that object moved his troops to Hikuma. At the same time he sent word of his operations to Shingen, assuring the latter that he felt certain of taking the castle, and inquiring his views as to the treaty by which the Ohoi river had been established as the boundary between their respective territories. The reply was that the treaty should in every event be maintained, whereupon Iyeyasu at once broke up his camp and marched against Kakegawa. The besieged made frequent sallies with varying success, but Ujizane at last came to see that he could not hope to hold the place and made overtures of peace through Ishikawa Iyenari and Sakai Masachika. These were favourably received by Iyeyasu who allowed Ujizane to seek the hospitality of his wife's grandfather at Odawara, Hôjô Ujiyasu, giving him a guard as far as Tokura in Idsu. The command of Kakegawa was then bestowed upon Ishikawa Iyenari. The province of Mikawa had been previously divided into two portions and Ishikawa Iyenari and Sakai Tadatsugu—both of whom were made Hatagashira—were charged with the direction of military affairs in Eastern and Western Mikawa respectively. Upon the command of Kakegawa being conferred upon Ishikawa, his nephew, Katsumasa, was also made Hataga-hira. With Iyenari were joined Okubo Tadayo, Osuga Yasutaka and Matsudaira Tadatsugu, while the general administration of Eastern Mikawa was left in the hands of Honda Tadakatsu, Torii Tadamoto and Sakakibara Yasumasa.

In the 1st month of the 1st year of Genki (A.D. 1570) Tôtomi was reduced to submission, upon which Hikuma was selected as the seat of government and its name changed to Hamamatsu; the residence of Nobuyasu, the heir of Iyeyasu, at Okazaki being maintained.

Oda Nobunaga sends Envoys to congratulate Iyeyasu upon the pacification of Mikawa and Tôtomi and requests assistance against Asakura Yoshikage.

In the 2nd month Nobunaga conveyed his congratulations to Iyeyasu upon the final reduction of the two provinces to submission, and at the same time implored assistance against Osakura Yoshikage. Iyeyasu answered the request in person, joining Nobunaga with a large force[1] in Yechizen. The castles of Tedsutsu and Kanagasaki fell before their arms. Asai Nagamasa now came to the aid of Yoshikage, and the two leaders endeavoured to surround Nobunaga with their combined forces but he perceived his danger and avoided it by a timely retreat.

In the 5th month Iyeyasu returned to Okazaki, and in the 6th Nobunaga entered Omi and threatened Nagamasa. Here he was joined by Iyeyasu, whereupon Nagamasa entreated Yoshikage to send him assistance. The latter, accordingly, ordered his relative Kagetake to march to his brother-leader's aid. Twenty thousand men were collected and encamped at Osakiyama. Nobunaga had with him thirty-five thousand men who with the contingent led by Iyeyasu—five thousand strong—entrenched themselves at Tatsuhana. One night, Nobunaga, seeing the flare of a beacon on Osakiyama concluded that the enemy intended to make an attack at the break of day, and ordered the necessary preparations to be made to receive him. Dividing his forces into three corps he undertook, with the consent of Iyeyasu, to repel the attack of Nagamasa. The next morning Nagamasa advancing from the East, and Kagetake from the West, reached the Ane river. Nobunaga repeated his desire to engage Nagamasa, against whom he had a special grudge as a disloyal vassal, leaving the other hostile leader to be dealt with by Iyeyasu, who, accepting the arrangement, marched westwards and gave battle to Kagetake. The fight lasted for some time without any decisive result, and Iyeyasu, getting impatient, threw out troops right and left, and closing upon the enemy drove them back with great loss. He then hastened along the river bank to the assistance of Nobunaga, whom he observed to be hard pressed by Nagamasa, and, engaging the latter, completely defeated him, pursuing the flying foe as far as the ramparts of Osaki. Nobunaga was filled with admiration at this exploit, and saluted Iyeyasu as the Pillar of Valour (*lit.* Mainbeam of the Warrior-gate or Foremost among Samurai) while the barons of the eastern provinces, overawed by the victor's successes, proffered their submission and throughout the Kaidô acknowledged his supremacy.

In the 1st month of the 2nd year of Genki (A.D. 1571) Iyeyasu was advanced by Imperial rescription to the inferior 5th rank and appointed a *jijiu* (lord in waiting).

Some time previously the relations between Iyeyasu and the government of Kai (Shingen's country) had assumed an unfriendly tone which became embittered under the following circumstances. Ujimasa, a member of the Hôjô family, upon the death of his father Ujiyasu had made overtures of peace to Takeda Shingen. The latter, however, refused to enter into any negotiations unless the hospitality hitherto extended to Ujizane by the Hôjô family were withdrawn. On becoming aware of this condition Ujizane fled in terror to Iyeyasu whom he persuaded to seek the alliance of Uyesugi Kenshin whose friendship he enjoyed. The proposals of Iyeyasu were accepted and a double attack was concerted between the new allies upon Shingen.

Iyeyasu and Shingen resort to arms and a great battle is fought at Mikata ahara.

Upon news of this arrangement reaching him the latter broke off all intercourse with the Mikawa Chief and marching troops into Tôtomi occupied that province. He next retraced his steps and penetrating into Western Mikawa reduced its strong places, while his general, Akiyama Haruchika, acting by his orders entered Eastern Mikawa and overran that portion of the province. The close of the 4th month saw most of the castles in Mikawa in his hands, and the people abandoning Iyeyasu gave in their submission to the victor. He next prepared to attack Okazaki, upon news of which intention reaching Iyeyasu, the latter sent troops into Mikawa and brought back his rebellious vassals to their obedience. He then took up a position at Yoshida, whereupon Shingen did not venture further to molest him and withdrew his forces. Nobunaga, meanwhile, who greatly dreaded the power of Shingen, and feared the result of the struggle in which Iyeyasu had involved himself, did not dare to march to his assistance but sent a messenger to him with the advice to avoid the attack which the enemy would surely make upon Hamamatsu, by abandoning that place. Iyeyasu dismissed the messenger with courtesy, and turning to one of his officers observed that he might as well break his sword if he abandoned Hamamatsu, which would be a death blow to his military career, and that he was not in the least degree afraid of Shingen. In the 1st month of the 3rd year of Genki (A.D. 1572) Iyeyasu occupied Suruga, and in the 3rd month Uyesugi entered Shinano, affording by this diversion an indirect aid to his ally. In the 10th month, Shingen, trusting that the heavy snows in the northern province would prevent the allies from effecting a junction of their forces, assembled a large body of troops and took the field against Iyeyasu, many of whose retainers, forgetful of their allegiance, joined the enemy, who, thus reinforced, pressed upon Hamamatsu. Yamagata Masakage and Akiyama Haruhika, two of Shingen's generals, meanwhile made a movement in the direction of Utsuyama in the district of Ide, upon news of which reaching Iyeyasu the latter ordered Matsudaira Kiyoyoshi to check their advance, and yielding, after repeated remonstrances, to the counsels of

[1] Lit. ten thousand men. The author's figures are frequently quite untrustworthy; he does not, indeed, in all probability, intend them to be taken as other than vague indications of numbers which he feels himself compelled by the dignity of history to signify, in many instances, by thousands, when, at the most, hundreds only are meant.

Original from UNIVERSITY OF CALIFORNIA

his principal officers, requested assistance from Nobunaga, who, accordingly, sent Sakuma Nobemori, Takikawa Kadsumasa and Hirate Hanshu to his aid.

For a month or so both sides remained inactive. In the 12th month Shingen after disposing his forces, which were very considerable, for active service, advanced to Mikatagahara where he encamped, and proceeded to set fire to the outworks of the Castle of Hamamatsu. This exploit aroused the wrath of Iyeyasu, and made him eager to fight. Nobumori, however, plucking him by his robe endeavoured to restrain his impetuosity, representing Shingen as an experienced general not to be engaged with lightly, but Iyeyasu answered that to allow the town to be taken without letting fly an arrow in its defence was but a cowardly policy, and reminded his adviser of the ridicule incurred by Ujiyasu when besieged in Odawara by Shingen, through lacking the courage to make a single sally. The other leaders, however, insisted upon the arguments of Nobumori, and Iyeyasu was obliged to restrain his ardour. On the 22nd day Shingen feigned a retreat, upon which Iyeyasu put his forces in motion and about sunset reached Mikatagahara, where he encamped. Distributing his troops in nine corps, he ordered Torii Tadahiro to reconnoitre the enemy's position. That officer reported that Shingen had wheeled round, and was in full march upon them with his numerous forces in battle array and counselled his commander to keep within his lines without venturing upon an engagement. Another officer, Moritsuna, was then ordered to make a second reconnaissance and upon his return gave similar advice, Iyeyasu, however, rejected these counsels and ordered Okubo Tadaské and Shibata Yasutada to prepare for battle. Moritsuna again represented the risk he was incurring, but Iyeyasu, refusing to listen to him, hastened to the front, and directed Ishikawa Kadzumasa, Sakakibara Yasumasa and Honda Tadakatsu to engage Oyamada Masayuki, while he himself fell upon Sakai Tadatsugu and Yamagata Masatoyo whom he put to flight, pursuing them for some distance. The victor, however, by a sudden movement was taken in flank by Katsuyori and Baba Ujikatsu, whom Masayuki and Masatoyo turned back to assist. Takeda Nobutoyo with the other hostile leaders followed up the attack, and Shingen advancing with the remainder of his forces, drums beating and in as perfect order as the hilly nature of the ground permitted, completed the rout of the Mikawa chief, many of whose principal officers fell upon the field fighting bravely to the last. Nobumori took to flight, Hanshu was slain, while Kadzumasa and Matsudaira Iyetada continued the struggle but without staying the progress of the enemy. Iyeyasu, maddened by his defeat, threw himself upon the foe with such troops as he could rally to his aid and affronted death over and over again in his determination not to seek safety in flight.

Natsume Masayoshi, who had been left at Hamamatsu, on hearing of his leader's peril hastened to his assistance, and after some vain expostulation found himself obliged to seize his chief's bridle and force him from the field, goading his horse to its utmost speed with the point of a spear. Having thus—with the assistance of Kuroyanagi Takeshige whom to had called to his aid—effected his master's escape, he rode straight into the enemy's camp and there met his death.

Iyeyasu, meanwhile, made his way to the castle of Hamamatsu, which he reached about nightfall, and ordering the gate to be thrown wide open caused a fire to be kindled in a brasier set in the gateway, thus inviting his pursuers Ujikatsu, Masatoyo and other of the hostile leaders to force their way into the place. Dreading an ambush, however, the enemy did not venture upon an attack and the next day Shingen retired upon Giyôbu.

(To be Continued.)

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society was held in the *Jio Gakko*, Yedo, on the 14th June 1876, Rev Prof. Syle in the chair which was afterwards taken by Rev. D. Veeder and finally by Sir H. S. Parkes, Vice-President.

The reading of the Minutes of last Meeting was omitted—a copy not being at hand.

The Secretary submitted (in accordance with the Council's Resolution of 6th Oct. 1875) a list of proposed office-bearers for the coming year. This list containing the names of more officers than the rules of the Society contemplated, the following resolution was submitted as an amendment, according to Rule 29.

Resolved to amend Rule 10, by substituting the words "Ten Councillors" for "Five Councillors;" and "Two Recording Secretaries" for "One Recording Secretary."

A Committee of ordinary members was thereupon appointed, in conjunction with the Council, to report on the proposed amendment at the next General Meeting; the members of the Committee being Dr. Veeder, Dr. Eldridge, Mr. Wilkin, Professor Grigsby and Mr. Dallas.

The corresponding Secretary reported having received communications from the President of the Organizing Committee of the International Congress of Orientalists, Professor Grigorieff, inviting the Society to send a delegate to the Congress to be held on the 1st of September, at St. Petersburg, under the auspices of the Russian Government. Professor Summers stated that H. E. the Russian Minister had expressed his readiness to forward any objects of interest for exhibition on that occasion, if sent to him not later than the 5th of July: whereupon,

Professor Summers moved and Professor Perry seconded the resolution "That Ernest M. Satow Esq. be requested and authorized to represent the Society at the approaching Oriental Congress at St. Petersburg" Carried unanimously.

Professor Syle mentioned that Mr. H. Pryer, a member of the Society, was about to visit the interior as a naturalist, and suggested that a sum of money might be placed in his hands for the purpose of procuring specimens &c. for the Society's Museum. Whereupon it was moved by Mr. Dallas, seconded by Mr. Grigsby and carried:—

"That this Meeting recommend to the Council Mr. Pryer's journey as a praise-worthy object for assistance, provided that the Council consider that the Society has funds in hand to devote to that purpose."

Mr. Poate's paper on Cotton in Japan was then read. Sir Harry Parkes observed that it dealt with a very practical subject; that if Japan could grow cotton enough for its own consumption it would be satisfactory; if sufficient for export so much the better; but he was afraid that this could not be done. Japan being a mountainous country it might be too cold except in the flat tracts of land. Moreover Japanese cotton was of a short staple, though fine, and was not in request in Europe. The yield was very uncertain, and the farmers could not rely on their crops. Whenever there was a poor crop in this country Japan had to import raw cotton to a great extent from China. The value of the import in 1873 was $146,569; in 1874 $1,155,076, and in 1875 $255,690. Besides this a deficient crop necessitated extended purchases of English yarn.

Prof. Atkinson asked Mr. Poate whether he had any information respecting the botanical characters of the cotton plant first introduced. He (Prof. A.) had been told that the Japanese called the cotton plant first imported, but which was afterwards lost, "tree cotton" on account of its size; whilst that at present cultivated was known as "grass cotton." If this were known it might afford a clue to the country from which the first supply was obtained.

Mr. Poate stated that the yield in Japan was small, about half that of America, which reached 250 to 300 lbs. per acre. Dr. Veeder thought the introduction of American cotton, with good husbandry, into Japan was worth trying. In the Slave States, before the war, the ground was exhausted by cotton cultivation, and the desire to extend its cultivation by slave labour in the Free States was one of the causes of the American Civil War.

Professor Marshall then read his paper, "Notes of a journey from Yedo to Kiôto *viâ* Asama-yama, the Hoku-rokudô, and Lake Biwa," which was well illustrated by diagrams and maps. Some of the celebrated Kaga porcelain was exhibited also. Sir Harry Parkes said that such an itinerary would be of great use. He believed that few foreign travellers, if any, had preceded Mr. Marshall on the Hoku-rokudô, and his, at least, was the first account which had been received of that route. He could, from his own experience, testify to the beauty of much of the country described in the paper and to the accuracy of the statements of Professor Marshall, who had done good service in recording his observations for the benefit of the Society. He knew of no more interesting trip than that to Asama-yama. Dr. Veeder stated that Asama-yama was sometimes visible from elevated points in Yedo.

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, June 19, 1876.

DLOSSMAN *vs.* CAPTAIN WADE, Master of the British ship *Forward Ho.*

Charge: assault.

Accused denied the charge.

Dlossman, sworn: I was discharged from the *Forward Ho* about ten days ago, I was a sailmaker on board. When we were off the Cape the captain found fault with some sail-making of mine, and while I was down on my hands and knees at my work he kicked me in the face with his boot.

To Captain Wade: The sail I was working on is not spoilt, at least not anything worth speaking of.

Joseph Ordinary, sworn: I am an A. B. on board the *Forward Ho.*

To Captain Wade: I heard an argument between you and the plaintiff. You said he had spoilt the sail, and you pushed him off the poop with your foot.

To Court: Plaintiff's face was bleeding, but I do not know if it was from falling on the deck or from the captain's foot.

Captain Wade: Plaintiff shipped with me as a sailmaker: he said he had been for years in a London sail-loft. He spoilt several sails for me, the last sail worth $300, and when I told him to leave the poop, where he was working, he would not go, so I pushed him off.

Charge dismissed.

Friday, 23rd June 1876.

Joseph Peters, a seaman without employment, was charged with assault. When asked about his nationality he said that he was born in Madeira, his mother having been an English woman, his father a Portuguese. He lives at No, 114. Sent before the Portuguese Consul General.

Thomas Meldrum was charged with vagrancy.

Police Constable Toms, sworn: Last night about 1 o'clock, prisoner was brought to the station by a Japanese policeman, who stated that he had found him asleep in the street. Prisoner was sober. Prisoner has no known means of livelihood, he has for some time been knocking about the *sake* houses in Honmura.

Police Serjeant Loxton, sworn: This the third time prisoner has been brought to the station in the night. I know him as a loafer.

Sentenced to six week's imprisonment without hard labour. After the expiration of the term of imprisonment to be deported if security for subsistence be not forthcoming.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

Saturday, June 17th, 1876.

THE PEOPLE OF THE UNITED STATES *in re* KATE MILLER *vs.* FRANK DUCLOT.

Charge: Assault and battery.

Prisoner pleaded not guilty.

Kate Miller, sworn: I am the wife of Mr. W. Miller and reside at No. 114. Yesterday morning at 8 o'clock the prisoner, Duclot, came to my house to enquire for some clothing belonging to an officer of one of the steamers. I told him I had nothing belonging to the officer, that he had received all that there was. Duclot had already sent a Japanese woman on the same errand, and I told him not to send her any more. He said he would send her as often as he pleased. I told him if he did I would see the Consul. He said he had given the woman instructions to break my head the next time I put her out her out of the compound. He used most filthy language, and told the woman to come up on the verandah and strike me. She took up stones and threw at me. I then sent for a police officer; when he arrived Duclot had already raised his stick at me. I took the stick from his hands and called to Mr. Nickel for help. The woman then threw more stones and I struck her with the stick. Prisoner then knocked me down and beat me with a stick, tore my hair, and dragged me by it along the verandah. He said the next time he came to my house he would kill me. He would not permit the policeman to touch him, but said he was the master of the house. My husband was absent. Then he took the woman with him and left, and I went to the Consulate and made a complaint.

Charles Nickel, sworn: I am a stevedore. I was present at Mr. Miller's house yesterday morning when prisoner came there. I went there to see Captain Miller. Prisoner came and knocked at the door; Mrs. Miller got up and went to the door to see who it was. Then she called me to come and asked prisoner if he would repeat certian words he had used to her, which he did. He said: "If I send a chit by a woman you ought to respect her as you would any anybody else." Mrs. Miller said she would not, and told him not to send her again, and that he must not come himself again either, and she told him to leave. He said he would not. She then sent for a policeman. I saw the Japanese woman, but I saw no stones thrown. Prisoner used insulting language to Mrs. Millier, I don't remember the words, Mrs. Miller tried to push prisoner out of the door, and I tried to persuade him to go, but he would not. He raised a Malacca cane, and caught Mrs. Miller by the hair of her head, and dragged her along the verandah. The policeman came and tried to take him away, but he would not be touched; then the policeman went for assistance, and the prisoner left.

Cross-examined by prisoner: You brought the stick with you, and Mrs. Miller took it away. You told Mrs. Miller, you knew all about her while you were in the house before.

Omera Chujiama, a Japanese police officer, cautioned to speak the truth: I was on duty yesterday morning near No. 114, and was called by a servant of that house. When I went there, I saw prisoner striking Mrs. Miller with his stick. I was requested by Mrs. Miller to take prisoner to the police station. I told her I could not take him away alone, but would get assistance. When I came back, prisoner had gone. He was pulling Mrs. Miller along the verandah by her hair.

Francis O. Duclot, duly sworn: On the 2nd May I went to attend on Captain Miller, husband of complainant, by Dr. Eldridge's order. I attended on him until the 10th, when he went to the hospital on account of his wife's abusive language. After taking him to the hospital, I came back to Mrs. Miller, and told her that her husband was all right. She said I was the cause of putting him in the hospital, and my services were no more wanted. I said she was mistaken, I had already spent $3 out of my own pocket. I went to the husband, and he requested me to carry on his business, which I did. The night before last I sent two Japanese women to Mrs. Miller with a chit about some clothing belonging to an officer in a steamer. The girls came back and said Mrs. Miller had torn the chit up and beaten them. I went next morning and knocked at the door; a Japanese servant answered it. I asked for Mr. Miller, she told me Mr. Miller was in the police station and had slept there all night; she said I could see Mrs. Miller. I said all right, and was invited to Mrs. Miller's bedroom; she was in bed. I told her I came for the officer's clothing, and she said she had none, he had received all his clothing. I then bid her good morning. She told me never to send a Japanese girl again, at the same time stigmatising her by an approbious epithet. An altercation arose, when Mrs. Miller jumped out of bed and came running after me, and took the stick out of my hand and commenced beating me. I seized hold of her by her hair. Mr. Nickel was in the back room and she called him, and he asked me to let her alone. I said, I wanted to let her alone and go away, if she would let me. A policeman was there and took no notice of her.

Found guilty of the charge, and sentenced to pay $10 fine or ten days' imprisonment.

Original from UNIVERSITY OF CALIFORNIA

IN THE FRENCH CONSULAR COURT.

Before EMILE KEAETZER, Esq., Acting Consul, and Messrs. G. BLAKEWAY and A. F. NEGRE, Assessors.

Friday, 23rd June, 1876.

SIMONET *vs.* PEQUIGNOT & Co.

Mr. Simonet, a merchant established in Blois, France, had, in May 1875, obtained a verdict by arbitration in the French Consular Court, Yokohama, ordering the firm of Pequignot & Co., Yokohama, to pay him francs 12,943 with costs and 8 per cent. annual interest from date of judgment. As Messrs. Pequignot & Co. have not complied with this order the case was again brought before the Consular tribunal in order to obtain an execution.

Mr. F. V. Dickins appeared for plaintiff; Mr. A. Pequignot, with Mr. C. Michel as his adviser, for defendants.

Mr. Dickins stated that his client, in conformity with the arbitration verdict rendered in his favour on the 5th May, 1875, but hitherto unfulfilled by defendants, claimed $2,041.43 with costs, and interest until paid. He added that he had ascertained that the landed properties of Messrs. Pequignot and Co. were mortgaged, and that in this mortgage carriages and horses were included. If the Court should be of opinion that such mortgage was lawful, then the estate of defendants' would not cover his claim. He had proposed to defendants to pay by monthly instalments of $50, *plus* interest, during the summer months, and $40, *plus* interest, during the winter months.

Mr. Michel said that plaintiff had already once obtained a verdict in his favour, and it was therefore superfluous to bring the case again into Court, as two different judgements could not be given in the same case. He asked that the case be dismissed and plaintiff ordered to pay costs.

Mr. Pequignot on being asked by the Court if he had any proposal to make, declared himself willing to pay the debt in monthly instalments of $63, *plus* interest.

Mr. Dickins declared himself willing to accept $75 monthly during the six months, May to October, and $50 monthly during the other six months; this payment to include interest.

The Court then ordered the arbitration judgment to be carried out in the manner proposed by Mr. Dickins, and defendants to pay costs.

IN THE PORTUGUESE CONSULAR GENERAL COURT.

Before J. J. KEswick, Esq., Acting Consul General.

June 23, 1876.

Joseph Peters, a seaman without employment, was charged with assault.

Police constable Toms deposed that last night, about 1 o'clock, he was called to a house on lot No. 114, where the prisoner had broken the door and window. He was drunk, and cursed the woman who lived in the house. Witness took prisoner in charge, and brought him to the station.

A Japanese woman appeared, and stated that prisoner had last night broken into her house on No. 114, beaten her, and cut off her hair. She assessed the damages at $1.50.

Prisoner acknowledged to have been drunk.

Sentenced to pay a fine of $5, damages $1.50, and costs.

REUTER'S TELEGRAMS.

London, 6th June, 1876.—The Ex-Sultan of Turkey, Abdul Aziz, has committed suicide.

London, 2nd June.—Japan Silks: Stock, 4,400 Bales; Deliveries for May, 680 Bales.

TELEGRAMS.

(Straits Times Extra.)

London, 15th May, 1876.—The Conference at Berlin has terminated successfully, the credit thereof being due to Russia.

Russia scouts the idea of a military occupancy of the Insurgent Provinces, and its views, embodied in a memorandum, were read on Saturday last, by Prince Gortschakoff in presence of the English, French and Italian Ambassadors, who have referred the matter to their respective Governments.

London, 15th May.—Lord Northbrook has arrived at Brindisi.

The Czar has gone to Ems.

London, 16th May.—Telegrams from Salonica state 54 arrests have been made there.

London, 16th May.—Mr. Ryland's motion regretting the increased National Expenditure has been rejected in the House of Commons by 263 against 175 votes.

London, 16th May.—France and Italy have notified their adhesion to Prince Gortschakoff's memorandum, which is based on Count Andrassy's scheme, and moreover requires guarantees from the Porte that the reforms therein promulgated will be duly carried out.

Aden, 17th May.—The P. & O. *Peshawur*, with the outward mails of the 5th instant, left here for Bombay at 2 o'clock this afternoon. The B.I. Company's steamer *Canara* and the same Company's steamer *Java* left here yesterday, the former outward, and the latter homeward bound.

London, 17th May.—Replying to Lord Selborne, in the House of Lords last evening.

The Marquis of Salisbury promised to submit the petition addressed to Lord Lytton, from Sirdar Narain Singh begging that he might be allowed to return to the Punjaub, as he felt assured that the new Viceroy would be glad to perform an act of grace at the present moment.

Constantinople, 17th May.—The dismissal of the Grand Vizier, Mahmoud was brought about by hostile commotion among the softas; the several Embassies, fearing an outbreak, had adopted measures of defence; the excitement, however, has abated.

Of the 54 arrest made in Salonica 6 culprits have been executed.

The enquiry, into the conduct of the others, is proceeding.

Calcutta 14th May.—A rumour says that a tour is arranged for the Prince of Wales in Australia in 1878.

Mr. Saunders, Commissioner of Mysore, is to be created a Knight of the Star of India.

London, 18th May.—The Queen to-day held an investiture of the Order of the Bath at Windsor Castle at which Sir Bartle Frere was invested with the Grand Cross of the Bath.

Her Majesty also conferred the dignity of Knight Commander of the Bath upon Lord Suffield.

OBITUARY.—Colonel Meadows Taylor.

The British Squadron in the Mediterranean has been ordered to proceed to Besika Bay; and the German Baltic Squadron proceeds thither next week.

Paris 19th May.—The National Assembly has rejected M. Respail's Amnesty motion.

London, 20th May.—The banquet given in honour of the Prince of Wales' return from India by the Corporation of the City of London came off last evening at the Guildhall and was a most brilliant affair. Covers were laid for 500 guests.

His Royal Highness, in replying to the toast of the evening, said that he looked back to his visit to India with the greatest gratification, and although his stay in that country was unhappily only a short one had gathered much valuable knowledge; his reception by all classes had been of the kindest and most hospitable description, and his own feelings were that he could not sufficiently thank the native princes and peoples of India for the manner of his reception. Indeed the kindness of the reception had left a lasting impression on his memory, and he felt sure it was a sign that the Indian Empire was not disloyal to the Queen. In concluding his speech His Royal Highness made a complimentary allusion to the native troops.

The guests at the splendid Ball which followed, in a grand pavilion specially erected in the Guildhall yard, numbered 5,000.

London, 20th May.—Her Majesty the Queen has left Windsor Castle, and proceeded to Balmoral.

Nienza, 20th May.—The German and French Consuls, who were murdered in the Mosque at Salonica were buried with much pomp at that town yesterday.

Alexandria, 19th May.—The troopship *Himalaya* has passed through the Suez Canal, homeward bound.

London, May 22nd.—Replying in the House of Commons this evening to the question of Mr. Maurice Brooks, Mr. Disraeli declined to recommend an Amnesty towards the Fenians.

A lively discussion followed.

The Troopship *Orontes* has arrived home.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

London, May 22nd.—England has refused to allow Mr. Rivers Wilson to take office in the Egyptian Ministry (Finance) unless he quits the English Civil service.

Vienne, May 22nd.—Count Andrassy has returned from Berlin, and in a speech delivered at Pesth yesterday he alluded hopefully to the prospects of peace, and said he was convinced thot the pacific intentions of the Northern Powers made it clearly manifest that England would join the agreement made at the Berlin Conference.

Paris, 23rd May.—The nomination of M. Pierrepont as French Minister to the Court of Saint James's was confirmed in the Senate to-date.

London, 24th May.—Further details, dated May 9th, received by mail, regarding the Salonica murders stated that the *emeute* began in consequence of a young Christian girl wishing to become a Mahommedan. The originators of the disturbance fled to adjacent mountains.

Three French, one English, and two Italian, besides German and Austrian, war vessels have been ordered to proceed to the Gulf of Salonica. A Turkish frigate with a new Governor has also been sent to Salonica from Constantinople.

Samfet Pacha has been appointed Minister of Justice at Constantinople, and Dejevdet Pacha appointed Governor of Syria.

Aden, 24th May.—The P. & O. steamer *Travancore*, with the outward Mails of 12th instant, left for Bombay at 6 o'clock this evening.

Moscow, 24th May.—General Kaufmann passed through here yesterday. He is returning to his post as Governor of Khokand.

Alexandria, 25th May.—An important decree affecting the Diara bondholders has been decided by the tribunal consolidating the Daira bands as invalid against foreigners.

London, May 25.—There was a semi-panic on the Stock Exchange to-day, caused by the general anxiety on account of Eastern affairs.

The Ports refuses, though unofficially, to take cognizance of Prince Gortschakoff's Memorandum read at Berlin, and will reject it unless it be modified.

Mr. Rivers Wilson leaves London to-day to take up his post in the Egyptian Ministry of Finance.

Her Majesty's steam corvette *Challenger* has arrived at Spithead from a two years' cruise on particular service.

Obituary.—General Sir G. Bowles, G. C. B. and Mr. Henry Kingsley.

London, May 26th.—The *Times* this morning published a statement to the effect that England reiterated its refusal to join in the terms as read at the Berlin Conference. England declares that the Memorandum in which the Three Powers join, though professing to maintain the principles of Count Andrassy's Note, departs from its conventions, and the demands being unreasonable, show that the Powers are no longer impartial mediators.

France has proposed a conference of the Guaranteeing Powers at Washington.

Washington, May 25th.—The report of the Committee of Enquiry into the conduct of General Schenck, acquits him of the charge of fraud, but strongly censures his conduct.

Calcutta, 27th May.—A meeting consisting entirely of natives, was held to-day in the Town Hall, under the auspices of the India League, Professor Bannerjee presiding.

It was resolved to present an address of congratulation to the Queen on her assumption of the title of Empress of India.

London, 27th May.—The steam yacht *Pandora*, Captain Allen Young, sailed from Portsmouth to-day for the purpose of communicating with the depots of the Polar ships, the *Alert* and the *Discovery*, at the enterance to Smith's Sound.

London, 27th May.—A panic was caused on the Stock Exchange to-day by the intelligence that Foreign fleets were assembled in Besika Bay, near the entrance to the Dardanelles.

London, 27th May.—The King and Crown Prince of Hanover are gazetted, the former a General, and the latter a Colonel of the English army.

London, 27th May.—Gainsborough's celebrated picture of the Duchess of Devonshire, which was lately sold for 10,100 guineas has been sold (query—stolen?) from the place where it was being exhibited.

London, 27th May.—Her Majesty's ironclad *Sultan* sailed from Portsmouth to-day, for the Mediterranean, in command of His Royal Highness the Duke of Edinburgh.

London, May 27.—In the House of Commons, last evening, replying to a question of Mr. Ernest Noel, Mr. James Lowther, the under Secretary of the Colonial Office, admitted that Governor Jervois had departed from his previous non-intervention policy; and he promised, on an early day, to explain the policy of the Government in respect to the settlements of Malacca.

Vienna, May 27.—The Insurgents now demand the independence of Bosnia and Herzegovina.

Rangoon, May 27.—The British escort, with Grosvenor's party arrived at Bhamo on 21st, all well. They encountered no trouble of any kind, either in Chinese or Burmese territory, on in the tract occupied by the hill tribes. Grosvenor's party, with the escort, leave for Mandalay on the 25th.

(Straits Times Extra.)

Galle, 29th May.—The debate in the House of Lords on the Queen's Proclamation resolved itself into a rhetorical duel between Lord Selborne and the Lord Chancellor.

Different questions regarding the use of the imperial title have been asked in the House of Commons by Mr. Osborne Morgan and Sir Henry James.

The Colonies are free to adopt or to refrain from using the title of Empress.

Latest accounts state that Turkish troops have gained a substantial victory over the insurgents.

A Conference of the three Imperial Chancellors supporting the Austrian note, will be held at Berlin.

Prince Bismark's proposal to transfer the Prussian railways to the empire was supported in the Diet by a decisive majority.

The amnesty agitation continues in France. The Government is generally condemned.

Sir George Balfour has called for papers with the view of establishing a thoroughly reciprocal free trade between the Colonies and the United Kingdom.

An enquiry into the loss of the *Strathmore* by the Board of Trade, has commenced.

The king of Dahomey has been fined £6,000 for outrages on British subjects. He refuses to pay, but is allowed time to June.

London, May 29th.—The general anxiety on account of Eastern affairs is unallayed. Insurers at Lloyds are asking war risks.

Three more ironclads have been ordered to the Mediterranean, making the number of the British Squadron ten.

Paris, May 29th.—*Kilt* is the winner of the French Derby, which was run yesterday.

London, 30th May.—The announcement that the Sultan has been dethroned, was to-day officially made. His nephew, the heir presumptive, Murad Effendi, has been proclaimed Sultan in his stead.

Lord Northbrook arrived in London yesterday.

The vote of £60,000 to meet the expenses of the Prince of Wales' visit to India will not be exceeded.

London, 31st May.—The revolution in Turkey is regarded unfavourably everywhere.

New York, 30th May.—Telegrams from Quebec state that a great fire has broken out there, and is still raging.

Obituary.—Sir William Weir Hogg, Baronet.

London, 31st May.—The deposition of the Sultan was peaceably effected by the Ministers.

Abdul Aziz is now a prisoner.

There are rejoicings at Pera.

The London Press considers that the dethronement of the Sultan favours a peaceful solution of the Turkish difficulty.

Aden, 31st May.—The P. & O. steamer *Indus*, with the outward English mails of the 19th instant, sailed for Bombay at ten this morning.

London, 31st May.—The Derby race was run to-day. The following is the result :—

Mineral Colt.....1
Forerunner.....2
Julius Cæsar.....3

London, 31st May.—There has been a debate in the House of Lords in reference to the affairs in Perak.

Lord Carnarvon lengthily quoting from Sir Andrew Clarke's despatches censures Governor Jervois' departure from the policy indicated therein, instead of confining his functions to the Resident's advice.

Lord Carnarvon has promised to explain his future policy later.

Further details are wanting in respect to the cause of the dethronement of the Sultan.

London, 1st June.—The deposition of the Sultan of Turkey, on the 29th ultimo, was brought about this way.

The Ministers of State, after vainly soliciting for reforms, in order to replenish the war treasury from the privy purse, determined on the Sultan's deposition.

The Palace was thereupon beset by troops, and the heir presumptive, Mourad Effendi, was proclaimed Sultan at the War Office, before all the Ministers, the Scheik-ul-Islam being spokesman.

Suleiman Pasha having intimated to Abdulaziz Khan that the nation had deposed him, conveyed him, together with his family and household, including 53 boats-full of women to the old Seraglio.

The heir presumptive, Mourad Effendi, immediately occupied the Dolma-baghtche Palace, and his manifesto is hourly expected.

The Christian Patriarchs have paid homage to him. England, France, and Italy have recognized the revolution.

The change is considered anti-Russian, but a rumour of the recall of General Ignatieff, the Russian Ambassador, is unconfirmed.

The Northern Powers intended to have presented a memorandum on the 30th ultimo, but this has now been postponed.

A MILLIONAIRE FUNERAL.

(Saturday Review.)

In recent years there has been a marked disposition in this country to curtail as far as possible the decorative pomp and ceremony which have become associated with funerals; but in the United States the opposite tendency seems to prevail. The New York papers are full of what are called "the final tributes to the earthly remains of the Great Merchant," and the arrangements of the funeral are of course described in language of becoming magnificence. The Great Merchant, it is needless to say, is Mr. Stewart, late dry goods warehouseman of New York. He is reputed to have left twenty millions of dollars, and such a dazzling accumulation has naturally attracted abundant worshippers. No doubt most of those who thus bow down before the golden calf are inspired by a more or less conscious hope that somehow or other they may attain to a share of similar greatness; but there is also a sense in which the awe and admiration of the multitude for mere wealth is perfectly disinterested. There is something in the idea of a vast heap of money which excites minds otherwise dull and stagnant. There are potentialities about immense wealth which stimulate the imagination, and in any case it is felt that the general circle of humanity is ennobled by having a tremendously rich man in the family, even though no legacies are expected. There is a reflected enjoyment and elation in thinking that one man at least has this command of money, and in allowing the imagination, as it were, to handle the coin. The school of philosophers who are always preaching about the greatness of common things will now be delighted to find a dry goods business surrounded by a halo of romance.

As far as we can gather, Mr. Stewart seems to have been a very respectable man, who made his money by his steady business habits and devotion to his shop. We can readily believe that, in so far as greatness can be associated with a dry goods store, Mr. Stewart was a great man of his kind. But it is evident that, in the popular view of the matter, his greatness consisted in his fortune rather than in his personal character; and in all probability, if he had been less opulent, he would never have been heard of beyond the range of his customers. At the same time, there is no doubt a great deal of the dry goods element up and down the world, and it is only natural that it should make the most of itself. This has been done at New York by giving Mr. Stewart a public funeral, for a touching and picturesque account of which we are indebted to the *New York Herald*. "It is probable," we are told, "that no private citizen of New York ever before had paid him at his funeral such a spontaneous tribute to his memory as was yesterday displayed by the people of the metropolis to the remains of Alexander T. Stewart." Before the funeral the body lay in state in the "marble palace" of which Mr. Stewart had formerly been the proprietor. "The dead merchant," we read, "was attired in a simple walking-dress suit, much like what he was wont to wear in life, consisting of a black frock coat, a vest cut low, with black doe-skin trousers, a white evening tie, the shirt-bosom bearing three plain pearl buttons on its snowy surface." A touch of art was, however, added to the embellishment of the corpse. "The face of the deceased looked very natural, having a slight pink tinge." And so poor Mr. Stewart, with his white tie and dress shirt, and looking all the more ghastly for the dab of rouge, was exposed to public view. The coffin was of course not an ordinary coffin, but one of the new patent "preservers" which have supplemented the ordinary ice coffins. Perhaps, however, we ought to apologize for using such a term as coffin. It appears that this word is considered on the side other of the Atlantic too prosaic and vulgar a term to be used on grand occasions, and a coffin is therefore called a "casket." In the present instance, the casket appear to have been of the most gorgeous description. It was of oak, completely covered with the finest black Lyons velvet, and trimmed with the heaviest gold fringe bullion and gold tassels. The interior was lined with white tufted satin, trimmed with white silk, and the lid was lined with white satin in the form of "gathered sun rays," these rays being richly studded with gold. The pillow was also of satin, and the handles of plated gold: the screws were all gold, and the knobs were of silver washed with gold. Altogether, the arrangements seem to have been such as must have been highly refreshing to the mind of a successful linendraper. The casket was placed on "a massive, oblong mound of flowers three feet high, covered with moss, in which white roses and japonicas were thickly studded"; and the reporter assures us that "those who have not seen the interior of this vast and noble hall can form no idea of its palatial magnificence," but "briefly it may be said that the surroundings were a fit setting for the casket and the banked masses of gorgeous and odorous flowers." At the head of the bier stood a floral 'cross over six feet in height, surmounted by a crown of violets, and "surrounding the casket were broken columns, harps, and anchors." An immense crowd surrounded the house, and for several hours "there streamed around the casket representatives of every profession and social rank in the metropolis, among whom were notabilities and celebrities of fashion, mercantile life, art, science, and wealth." "Hundreds of ladies who had received invitations came too late, and were forced to remain outside of the mansion." After the friends of the family and those especially invited had taken a last look at the deceased, the clerks of the store, two by two, marched past the casket, followed by five hundred women and girls employed by the firm. Of the hearse we learn only that it was a very handsome one, and of course bran new. The church in which the service was read was also decorated with flowers and foliage, and, when the procession moved into the churchyard, "the casket, held high in the air, with its golden handles and bullion fringes glittering in the open day, formed a focus to which every eye was turned." The widow of the deceased naturally enjoyed a good deal of the reporter's attention. At first, "broken with grief, she sat in an upper *salon*"; then Judge Hilton was seen escorting her "bowed figure" from the house: and it is thought necessary to state that in the churchyard Mrs. Stewart "seemed deeply moved." And so an admiring public paid its tribute of respect to "the greatest business man the country has ever seen."

Mr, Stewart's peculiar position might perhaps account for any exceptional display at his funeral; but it would appear that the system of exhibiting dead bodies to a curious mob tends to encourage a taste for fantastic ceremonial. On the same day that Stewart was buried there was another remarkable funeral in New York, which at any other time would probably have attracted more attention. Mrs. Roxcellanah H. Keyser was the inmate of a fine "brown house" in East Fifty-Seventh Street, and was reported to be worth much money. Tradition said that her husband —for she was a widow—had been buried in his wedding-garments, and attended to his grave by seventy carriages; and Mrs. Keyser had decided to be similarly honoured. Accordingly, she had a hearse and six black horses, "the vehicle of death being as handsome as any in the city, and the horses elegantly caparisoned with velvet and rich trappings"; and behind came four four-horse car-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

riages, and seventy-two two-horse carriages, so that Mrs. Keyser decidedly had an advantage over her husband. The body was laid out in state in the deceased's house, where the religious service was performed. "The casket was of oak, with a gold plate and gold-mounted silver handles," covered with a black velvet pall trimmed with heavy bullion fringe and tassels. The casket and fittings, however, seem to have been quite thrown into the shade by the deceased lady herself, who, we are told, "was robed in a very rich white satin bridal costume, trailed along which were wreaths of fragrant flowers." "The casket itself was was lined with white satin, and floral emblems were scattered in profusion about the place where the remains were laid." A cross of flowers seven feet high stood at one end of the coffin, and "there were also anchors and a lyre." It is said that several hundreds of "well-dressed people" availed themselves of the opportunity of amusing themselves with this pretty sight. When the privileged visitors had passed through the room where the body lay, the mob outside thrust aside the barricades and swarmed into the house. The cost of the display is estimated at 8,000 dollars, the casket alone costing nearly 2,000 dollars, and the flowers being equal to "a fortune for a poor family." On the whole, this affair seems to have gone a little beyond the taste of New York, for the *Herald* remarks that "the scene somehow seemed robbed of solemnity, and appeared more like a marriage than a funeral." As far as we are aware, there are as yet no indications of a similar mania among ourselves; indeed the symptoms are happily rather the other way; but, considering the passion for public display and excitement which has been so strikingly displayed in recent years, it is hard to say how far the gratification of vulgar ostentation may ultimately be carried.

We gather that, though the contemplation of Mr. Stewart's prodigious fortune has excited great enthusiasm among his fellow-citizens, his will has caused some disappointment. In this document, says the *New York Herald*, Mr. Stewart "appears in the light of one who hesitated till the opportunity was gone." "He dreamed over magnificent schemes for the benefit of the city—public charities doubtless of a very practical nature—but he could not decide, and life passed away ere he could determine how to act, or to decide which of the many schemes was most to his satisfaction"; and now "all that grand opportunity, all the luxury of doing good on a scale not often offered, is bequeathed to the millionaire's wife as a holy duty, with his whole fortune as the means to carry out his wishes." We have here, perhaps, the moral of these great fortunes. A vast accumulation of money is cherished for its own sake, as a monument of success and power. The possessor prefers to brood in imagination over the possibilities which are brought within his reach by his command of almost boundless wealth rather than sink it in doubtful experiments. A great fortune is great only when intact; when spent it changes its character, for it is tied down to particular uses. It remains to be seen whether Mrs. Stewart and her trustee, Judge Hilton, will have the courage to disperse the great accumulation which has been left at their disposal.

Shipping Intelligence.

ARRIVALS.

June 19, *Shalio Maru*, Japanese steamer, Wynn, 600, from Osaka and Kobe, June 17, General, to Mitsu Bishi Co.

June 21, *Tibre* French steamer, de Girard, 1,600, from Hongkong, June 14, Mails and General, to M. M. Co.

June 21, *Gordon Castle*, British steamer, Jones, 1,312, from Shanghai, June 19. Ballast, to Adamson Bell & Co.

June 21, *Cathaya*, British ship, Matthews, 790, from Nagasaki, June 9, Coal, to P. M. S. S. Co.

June 22, *Nevada*, American steamer, Williams. 2 145, from Shanghai and ports, June 14, Mails and General, to M. B. Co.

June 22, *Alaska*, American steamer, Dearborn, 4,011, from Hongkong, Mails and General, to P. M. S. S. Co.

June 24, *Yantic*, American sloop of war, Captain F. W. Dickens, 900, from Nagasaki, via Kobe, June 21.

June 24. *Osaka*, British barque, R. Low, 527, from Sydney, May 15, Coals, to Cornes & Co.

June 24, *Malacca*, British steamer, Smith, 1,685, from Hongkong, June 18, Mails and General, to P. & O. Co.

DEPARTURES.

June 19 *Mathilde* German barque, Dau, 221, for China, Ballast, despatched by Captain

June 19. *Kwôrio Maru*, Japanese steamer, Toritani, 480, for Corea, viâ Island Sea, despatched by Government.

June 19, *Tokai Maru*, Japanese steamer, Ward, 645, for Osaka and Kobe, Mails and General, despatched by M. B. Co.

June 21, *Sunda*, British steamer, Lee, 1,685, for Hongkong, Mails and General, despatched by P. & O. Co.

June 21, *Tokio Maru*, Japanese steamer Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Steamship *Tibre* from Hongkong.—M. Stronn and wife, Messrs. Serapis, Ohno, Greey, Sueda, Miss Rains, Mr. Gray, M. Coubais and 1 child.

Per Steamship *Tokio Maru* for Shanghai and ports.—Mr. A. E. Salter, Count Zichy and servant, Count Zichy Jr, Baron D'Anethan, Messrs. Norres, Johnne, Gregory, Morris, P. Barucca, A. Michel, Monset, Laplace, Laurent, Mrs. Mitchell, and 36 Japanese in the cabin.

Per Steamship *Alaska* from Hongkong.—Lieut. Ludwick, Messrs. Godsall, Mickley, Morgan, Fowler, Andrews, Mrs. Stone, Mrs. Jordan, son and daughter.

Per Steamship *Nevada* from Shanghai and ports.—For Yokohama: Miss L Mason, Mr and Mrs. Cargill, Miss Cargill, Mr. and Mrs. Westerville, Miss Westerville, Mr. and Mrs. Davideon, Mrs. M. Eldridge, Messrs. J. L. Remington, C. J. Fritz, Geo. McVain, Mourilyan, Chapsal, Watashi, Van Eisendecker, Captain Walker, Captain Shannon, and 15 Japanese in the cabin: 1 European, 306 Japanese and 10 Chinese in the steerage. For America: Miss Chalmers, Mrs. Blethen and 6 children; E. H. Hill, Captain Low, U S N; 1 European, and 3 Chinese in the steerage.

Per Steamship *Malacca* from Hongkong.—Lieut Wade, Messrs. J. Elleston, Patterson, Tanaka, M'Donald, Wood and Horsfield. Steerage: 4 Chinese and 23 Japanese.

CARGO.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market for *Cotton Fabrics* and *Yarns* has, since our last, continued extremely dull and prices have further declined. The demand for *Yarns* is very small, and no concession of prices on the part of holders seems sufficient to induce buyers to operate. *Grey Shirtings* continue nearly unsaleable at quotations which are nominal. Some small sales of *T. Cloths* 7 lbs. are reported. *White Shirtings, Drills* and *Velvets* are neglected, while quotations for *Turkey Reds* and *Victoria Lawns* are weaker. For *Taffachelass* there is no enquiry.

Grey Shirtings :—						
7 lbs.	38½ yds.	39 in.	per pce.	$1.80	to	$2.15
8 lbs.	38½ yds.	44 in.	„	2 10	to	2.45
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	2.12½	to	2.47½
9 lbs.	38½ „	44 in.	„	2 35	to	2 75
T. Cloth 7lbs.	24 „	32 in.	„	1 65	to	1.85
„ 6lbs.	24 „	32 in.	„	1.25	to	1.40

White Shirtings:—

Multicolored „ ...	30 yds.	30 in...	0.32	to	0.35
Cloth, all wool plain or fancy...	48 in. to 52 in...		0.80	to	1 20
Presidents	54 in. to 56 in...		0.60	to	0.70
Pilots	54 in. to 56 in...		0.40	to	0.45
Union	54 in. to 56 in...		0.40	to	0.65
Blankets, scarlet & green 7 to 8 lbs....		per lb...	0.40	to	0.41

Sugar.—*Formosa* kinds are dull ; transactions have been small since our last, and we have no arrivals to report. Prices for *China Sugars* have declined, although stocks are but moderate.

Sugar :—Formosa in bag		per picul....	2 90	to	3 00
in Basket		„ ...	2 85	to	2.95
China No. 1 Ping fah		„ ...	7 45		
„ No. 2 Ching-pak		„ ...	6 20	to	6 70
„ No. 3 Ke-pak		„ ...	5 50	to	5 90
„ No. 4 Kook-fah...		„ ...	4 80	to	5 30
China No. 5 Kong-fun		per picul ...	4 20	to	4.70
„ No. 6 E-pak		„ ...	3 20	to	3 60
Swatow		„ ...	2.30	to	2.40
Daitong		„ ...	2 00	to	2.40
Japan Rice		„ ...	2.20		
Kerosene Oil		per case ...	2.20	to	2.30

Kerosene Oil.—Quotations are quite nominal though they have been forced lower, and we hear of no transactions by importers.

EXPORTS.

Silk.—Since our last the old stock, which was chiefly composed of Hamatsuki sorts, has been disposed of at from $420 to $440; a few bales of filature Silks have fetched from $550 to $580, and a large parcel of Oshiu has been sold and delivered in Tôkiô at prices which have not transpired. The first arrivals of New Silk were 25 bales on the 18th instant, and 75 on the 22nd; they were bought at once at $455 in the first and at $480 in the second instance.

Altogether settlements are 275 bales, and there is no stock left in the market. The export from Shanghai for 1876-1877 is now expected to be from 55 to 60,000 bales against 70,106 for 1875-1876, and the latest advices from home leave no doubt of the European crop being considerably less than last year. Under these circumstances, the opening of the new season has been attended here with a more than usually eager competition among buyers and a rapid rise in prices.

The shipments of the fortnight are 193 bales, making the total export to this date 13,368 bales against 11,918 bales last year for the corresponding period.

During the last six years the first arrivals of new Silk have reached this market between the 18th and 28th of June. They consist, as is well known, of Bushiu and Joshiu Hanks, the produce of bivoltini and annual cocoons, more or less good, more or less mixed, and may seldom be classed higher than Medium or No. 2½. The subjoined are the prices paid for such Silk at the opening of the following seasons :—

	Exchange @ 6 m/s.		$	*In London.*	*In Lyons.*
1876-77.....	3/11	4.95	455 to 480	16/3 to 17/1	45 to 47
1875-76.....	4 2½	5.32	360 to 380	14/2 to 14/10	39 to 41
1874-75.....	4/3	5.42	440 to 460	17/1 to 17/10	48 to 50
1873-74.....	4/6½	5.82	580 to 600	23/7 to 24/6	66 to 68
1872-73.....	4/8½	6.00	680 to 700	28/4 to 29/2	79 to 81
1871-72.....	4/5½	5.60	580 to 600	23/1 to 23/11	64 to 66

The crop is generally reported by the native dealers to be abundant and good. The evidence adduced, as far as quality is concerned, by the first supplies of new Silk confirms that report.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—Business during the closing week has been steady and dealers are holding with rather more confidence. Settlements amount to 5,800 piculs, purchases being fairly divided amongst all classes.

To-day's rates close as under, "Fine" and "Choice" grades being only in moderate supply.

Common	$12.00 to 14 00	Fine	$26 00 to 31 00
Good Common	15.00 to 18 00	Finest	33 00 to 37 00
Medium	19 00 to 21.00	Choice	4 .00 & upwards
Good Medium	22.00 to 25 00		[nominal.

The steamer *Gordon Castle* has been laid on for New York, viâ Kobe, Amoy and Suez Canal, and is rapidly completing her allotted space for this port at £4 per ton of 40 cubic feet. The *Monte Rosa* is advertised for San Francisco, taking freight to Eastern States and Canada overland, on through Bills of Lading, @ 2¾ cents per pound gross. The *Sir Lancelot* is also advertised for New York, should sufficient inducement offer.

EXCHANGE AND BULLION.

Exchange.—Sterling-rates have declined about one per cent. during the past week, with a moderate business doing, principally in Private Paper.

With the fall in exchange *Gold Yen* have advanced and are again being bought for export, but the supply is very limited.

Rates close as follows :—

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 27.] YOKOHAMA, SATURDAY, JULY 1, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Mr. Makoshi, editor of the *Sōmō Zasshi*, has been sentenced to three years' imprisonment as the author of two articles published in his paper, one of which under the heading 'The Law of Libel' will be found in our issue of the 10th ulto.; the other entitled 'Liberty and the Rights of Man' will be found in our issue of to-day.* Looking at the first article from an European point of view, it is as harmless a production as can well be imagined to come from a man who thinks that administrative reform is required by the country. But inasmuch as it criticises adversely a law of the Empire, it comes under that clause of the Press-laws which forbids such criticism—the clause to which we have so often drawn attention. The second article is the production of an honest and brave man, animated with an ardent love of liberty, detesting the absolute form of government under which he lives, longing to defeat and sweep away the corruption and oppression which inherently cling to all such forms of government, *but utterly out of harmony with his surroundings*, and ignorant of the true methods of dealing with the disease for which he prescribes. That his article is incendiary and seditious cannot for a moment be denied, and, in view of the political condition of this country and its antecedents, it must be admitted that he has justly incurred the penalty of the law. Until the legislative power has been transferred from the hands of the body which now holds it in this country to other hands, this body is the only source of law, and the laws it ordains must be obeyed. Anarchy is the only alternative. But the situation which has made this event possible is deplorable and dangerous in a high degree. Neither the Press-laws, nor the too severe administration of them, are responsible for it. It proceeds, in our opinion, from the radical fact that a Press, in the sense in which the European nations understand the term, is absolutely incompatible with the form of government at present existing in Japan.

If we may venture to refer to the opinions expressed in these columns long ago on the subject of the Press and the Press-laws in this country, we would ask our readers to remember the many occasions on which we have said that a free Press in Japan was an anachronism in itself—an illogical inversion of the true order of development, pregnant with danger to the Empire. The time has come when events are abundantly illustrating this position, and the most serious attention of the Government is demanded to them. It is not at all a question of granting unrestricted liberty of the Press: it is a question of a wider basis to the source of legislative power—that is, if the feeling exhibited by the Press is at all representative of the feeling of the Empire, a question which the Government alone can answer satisfactorily.

A translation published elsewhere, entitled Japan and Corea, from the *Nichi Nichi Shimbun*, deserves attention. It is amusing for foreign nations to be told that they have "wasted years of labour" on opening Corea, and are jealous of Japan for having gained the start of them. But we must remember that the writer is a Japanese, and a little national conceit is characteristic and far from unpardonable. More *posé* will come with a better recognised position. It may gravely be doubted, however, whether foreign nations will "press emulously forward to Corea." In real truth they are somewhat astonished that two countries should lie so close as do Japan and Corea, and yet know so little of each other. France and England could tell a very different tale. It may be presumed that the consciousness of the manner in which the Japanese behaved to the Dutch at Nagasaki reconciled them to the derogatory treatment which their people received from the Coreans at Fusan, though, judging from the translations we published shortly after the return of the Embassy from Corea, the traders there found some consolation for the humiliations to which they were submitted by spoiling the people of the land in a manner which reflects more credit on their ingenuity than their morals. In the latter part of his article the writer is frank enough, and, judging from the analogies presented by the recent history of the relations between Japan and the western nations, argues that probably Corea has not been opened after all, and that something of the same reaction as occurred here may occur there. He justifies the manner in which the English at Kagoshima, and the Allies at Shimonoseki, dealt with that reaction; he admits that the Coreans, in making their late treaty yielded only to force; and that the effect of the Envoy's visit to Japan may have no better effect than the early Japanese embassies to Europe. It is sufficiently certain that the Corean Envoy went off in something of a hurry last week, alleging sickness—which must have had as little real foundation as the melancholy of the *Blighted Being*—as an excuse for not visiting the Yokoska Docks and the Mint.

After the unanimous chorus of unfavourable criticism with which the performance of Wednesday evening at the Gaiety Theatre was greeted, it seems like slaying the slain to revert to it. Perhaps the best thing to do would be to bundle the memories of the evening into their coffin, pour quick-lime on them, and get them out of the way. But we should perhaps hardly be excused for omitting the few words suggested and demanded by a very exceptional case, and therefore it may be well to point out two or three of its more striking features before finally disposing of it.

Anything which comes from Mr. Tom Taylor's pen bears a *cachet* entitling it to marked respect. But we venture to think that *The Blighted Being* is far from a happy effort. There is, of course, something in the nature of farce in bringing a character on the stage whose physical robustness entirely belies the extravagant melancholy of his disposition or accidental condition, and who floats in a sea of sorrows

* We find too late to alter the text of the above) that the articles headed "Official Oppression" and "Liberty of Opinion" in our issue of the 17th ultimo, and that headed "Desperation" in our issue of to-day, are among the incriminated writings for which Mr. Makoshi has been condemned.

Original from UNIVERSITY OF CALIFORNIA

with a special buoyancy owing to his very size. But it is next to impossible for any actor with a keen sense of the humorous or ludicrous—and Mr. Spurgeon possesses both abundantly—to avoid being so amused in his inner soul with the incongruity of his position as not to betray now and then the amusement it affords him. And, accordingly, Mr. Spurgeon here and there disclosed the true nature of the feelings he endeavored to cloke, and positively—to use the language of The Jabberwock—"chortled in his joy," though but for a moment. Mr. N. Lee, as *Cumming*, the waiter, acquitted himself well, and made a point or two by the fidelity he displayed towards his mistress, and the conviction he showed that deep-rooted sorrow could be plucked from the brain by the help of a hot "muffing"—a cate which undoubtedly presents a shield against some of the more overwhelming sorrows incidental to human life. Mr. Pirie lent a new and not unamusing feature to the character of *The O'Rafferty* by covering the rich brogue of Tipperary with a coating of unequivocal Scotch, and smothering the irrepressible humour of the Irishman under such poor concessions to exuberance as Calvinism permits of. His 'make-up' hardly showed a true perception of the character he impersonated, and no good reason from the fitness of things—at least so far as we know—can be adduced for wearing whiskers so ill proportioned to each other that the calculation of his centre of gravity afforded a problem far too oppressive to permit of entire attention to his histrionic efforts. Miss Matthews as *Susan Spanker*—always a favourite with the public—was a little below her average level on this occasion. She expressed unbounded satisfaction at the return of her brother *Ned Spanker* (Mr. Rewerb), but conveyed so little of the impression of it by her gesture that her sisterly affection appeared rather a limp affair. Mr. Rewerb looked his part well and played it sturdily enough. But the piece fell flat, and all the king's horses and all the king's men could do nothing for it.

Lending a Hand took a fresh departure and a further dive. None but the exceptionally gifted could form an idea of the utterly vapid, pointless and silly nature of the piece. How it got upon the stage or could have remained there ten minutes, or how it got off the stage and could have been revived, are problems which suggest some perplexing reflections upon the large tolerance of the English nation—or perhaps some less complimentary conclusions. Why was it given? What inscrutable reason could be adduced for the selection of such a piece? Why run into the very jaws of death—and such death? Are they to be buried in Christian burial, who wilfully seek their own salvation? Is any countenance to be given to folk to hang and drown themselves? Mr. Toddles really has a very useful vein in him which has often been worked with good effect for the Gaiety Theatre. But he had to stand up on Wednesday evening to a part and, we must add, a partner, appalling to the very boldest. He did it without flinching, and his courage deserves an immortal wreath. But he had none of the reward of Curtius. He saved no Rome, and averted no judgment. Of *Flashpan* (Mr. Augustus von Roup) it is not easy write without trenching upon forbidden domains of our vocabulary. But there are limits to the want of respect for an audience which, if overstepped, are apt to produce something of similar excess in the critic, and Mr. Von Roup by disregarding the one has rather courted the other. Perhaps, however, the management ought in justice rather to bear the blame than the actor. It certainly deserves impeachment, and there must be something wrong when a whole audience leaves a theatre not so much fatigued as displeased—we would use no harder term. In view of the conditions under which Miss Sprightly played the *rôle* of *Lydia*, it would be most unjust to blame her for the absence of sensibilities which would resent the blandishments of *Flashpan* as odious and insufferable. But a more critical management might have stepped in to protect the public, and should have done so.

It is far from pleasant to have to write thus, and we would willingly have shirked the task. But were it possible to collect the opinion of the house and distil it into the space we have occupied, there would assuredly be some sharper words and reflections than any we have used and made. In the name of the public we hope to be spared any repetition of the task.

Thanks to the courtesy of Admiral Veron, a portion of the fine band of the *Atalante* occupied the orchestra and lent an unusual, better, perhaps, unprecedented, *éclat* to the evening. The house is indeed over small for a brass band, but the musical performance was admirable in every respect.

A third session of the International Congress of Orientalists is to be held at St. Petersburg this year commencing on the 1st. September and lasting ten days. The session will be chiefly devoted to subjects pertaining to Russian Asia, which will occupy four sittings. The first will embrace eastern and western Siberia; Central Asia within Russian boundaries, comprising the independent principalities of Ouzbekistan; the Caucasus (with the Crimea and other districts of European Russia inhabited by Asiatic populations), and Transcaucasia, (Georgia and ancient Armenia). The three following sittings will embrace the remainder of Asia divided into three sections; 1st. Eastern Turkestan, Thibet, Mongolia with Manchuria and Corea, China Proper and Japan; 2nd. India within and beyond the Ganges, Afghanistan, Persia and the Indo-Chinese Archipelago; 3rd. Turkey, comprising Arabia and Eygpt. The geography, ethnography, language, history, literature &c, of these countries will form the subjects of treatment. A series of questions has been drawn up by the Council of the Congress touching the historical monuments of the various streams of population which Siberia has discharged during the past 2000 years into Central Asia, and enquiring into the causes why the increase of population and these great emigrations have ceased since the conquest of Siberia by Russia; touching the religions of the various pagan tribes in Northern Asia; the objects aimed at by the various codes of law given by the founders of the nomadic monarchies of Central Asia; the origin and value of the word Mongol as used by Jenghis Khan; the proofs chiefly relied on to substantiate the generally received opinion that the Turkish manuscripts in the Ouigour character found in the various libraries of Europe, were really written in the language of the Ouigours; touching the annual festivals of eastern and western Turkestan noted in the Chinese official records down to a certain date; the extent of our knowledge of the Soghdian written character; what were the causes which produced in the eleventh century the cessation of that trade between the Mohammedan peoples of eastern and southern Europe, which had flourished from the seventh to the tenth century, &c., &c. Persons desirous of sending objects to be exhibited at the session must do so at their own expense; books or scientific works, or the expense attending the transmission of them, will be cared for by the Congress. Baron Rosen, H. I. M.'s Secretary of Legation, is the channel through whom contributions to the Congress, of whatever form, may be made from this country. It will be seen from the above rude outline of the programme that the Orientalists have an abundance of work on hand. We shall not pretend to estimate the value of their labours in London in 1874. They were subjected to much searching and some uncomplimentary criticism, but the continued efforts of the Association can hardly fail to throw light upon the interesting and important subjects some of which we have just enumerated.

We learn from the *Chôya Shimbun* that a large crowd of people assembled as early as half-past eleven on the morning of the 28th instant, in order to witness the meeting of editors and others connected with the Press, which had been convened at the temple dedicated to the goddess Kuannon at Asakusa, at 2.30 p.m. on that day. "Now," says the Editor of the *Chôya*, "some people think the members of the Press "only wished to supplicate the gods for pardon of their sins, "others say they were actuated by the more worldly motive "of exciting sympathy and thus increasing the circulation of "their journals. There are others who think the meeting "was held for the purpose of intercession on behalf of "those writers for the Press who are now languishing in pri- "son, while others again, think the assembly was held in "commemoration of the editors and writers who have died "since newspapers were first established in Japan. Even we "ourselves are unable to state the precise reason for the con-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"vocation but think it was caused by the uneasy emotions "of our hearts, for when strong emotions move men, they "naturally turn to religion for consolation. Be it Shintô, "Buddhist, Mahommedan or Christian, it matters not in the "least, but as the majority of our contemporaries decided in "favour of the Buddhist religion, we assembled at a Buddhist "temple. But this is no reason why we should be called "upon to account for the emotion which stirred our hearts. "*Our* hearts were affected and our's only!"

The advance of positive knowledge in this country is doing its legitimate work in the destruction of the superstitions by which the people have been deluded and the priests benefited. The heads of the different Buddhist and Shintô Sects have recently been summoned to the Tôkiô *Fu* and told that they are not to interpose the use of prayers and charms between the sick and the physician. It will be time for these when the physician has pronounced the case hopeless. Not the less does it seem important that some high form of faith should step in just at this point, and show that though immutable law reigns, a Lawgiver has ordained that it should do so.

A suggestion made elsewhere by a correspondent deserves the serious consideration and warm support of all who are interested in the advance of the study of the Japanese language by foreigners. It is this:—That steps be taken by those competent to pronounce opinions on the subject, to agree upon a system of transliteration from the Japanese *kana* to the Roman character, in order to determine and fix the value of the *kana* sounds for the use of all who may in future have to labour in this field. At present there are many methods, and much arbitrary and even capricious use is made of them. The consensus of the half dozen, or, at most, dozen, of men competent to assist in this work is all that is required to place a new and valuable educational tool in the hands both of foreigners and Japanese.

From the "Japan Mail Daily Advertiser."

Monday, 26th.

Three Japanese men-of-war left the anchorage yesterday morning for Awomori, there to await the embarkation of H. M. the Mikado and suite on their return to the capital.

From the *Hôchi Shimbun.*

Some nineteen persons have recently been appointed by the Tôkiô *Fu* to assemble and discuss Municipal matters on behalf of the people.

From the same.

Mr. Inouye, *Gaikwan* of the *Genrô-In*, will start for Europe on the 25th instant on Government business.

From the *Nichi Nichi Shimbun.*

It is rumoured that the officials of the *Ôkurashô* and the *Naimushô* will, after the commencement of next month, be obliged to dress in foreign style.

The *Chôya Shimbun* states it is rumoured that the business of Mr. Inouye in Europe is to raise a loan for the Government, in order to enable it to carry out the proposed measure of issuing saleable bonds to the *kuadzoku* and *shidzoku* in lieu of their pensions.

From the *Hiôron Shimbun.*

It is rumoured that Mr. Inouye has received a considerable amount of money from the Government, over and above his salary and travelling expences.

[The *Hiôron* does not explain or suggest for what purpose this sum of money has been entrusted to Mr. Inouye.]

Tuesday, 27th.

From the *Nichi Nichi Shimbun.*

The fire, which recently destroyed about 120 houses at Kakegawa on the 10th instant, was caused by kerosene oil. It appears that a man named Kamekichi and his wife were opening a tin of kerosene by the light of a candle, when they contrived by some means to bring the flame of the latter in contact with the oil, which immediately exploded and set fire to the house with a result as above stated. The clothes of the unfortunate couple were also set fire to, and they only extinguished the flames by rushing into a neighbouring pond, but both were so badly burnt that they died the next day.

From the same.

Ten pupils of the *Kaisei-Gakkô* left Japan by the *Alaska* on the 25th instant, in order to complete their studies in Europe, eight proceeding to England and two to France for this purpose.

From the same.

The question, whether or not appeal can be allowed in criminal cases, will be fully discussed at the *Genrô-In* on the 27th instant.

From the *Naniwa Shimbun.*

Rain having recently fallen after a long and distressing drought in the neighbourhood of Ôsaka and Kobe, the farmers of the district observed the 19th instant as a day of thanksgiving and rejoicing.

From the *Akébono Shimbun.*

It is said that the examination which law students have to undergo, in order to be obtain a license to practise in the Courts, is so severe that it is very doubtful if the officials of the Judicial Department could themselves correctly answer the questions put.

From the *Hôchi Shimbun.*

Mr. Miyamoto, *Daijô* of the *Gwaimushô*, with several other officials, will proceed to Corea on Government business early next month.

From the same.

The thief who lately stole about 5,000 *yen* from the First National Bank has been arrested and most of the stolen property recovered. He turns out to have been one of the Bank's *employés*.

From the same.

The *Kawabiraki*, or opening of the *Sumida-gawa*, will take place on the seventh of next month at *Ryogoku-bashi*, with the customary display of fireworks.

From the *Hiôron Shimbun.*

It is reported that a large number of *shidzoku* from the provinces of Satsuma and Tosa recently assembled at Nagasaki, but the reason for their so doing has not yet transpired.

Wednesday, 28th.

The men-of-war in harbour have dressed ship to-day, being the anniversary of the Queen's coronation.

By kind permission of Captain Colomb and the Officers the band of H. M. S. *Audacious* will, weather permitting, play in the Bluff Gardens this evening at 5 o'clock.

As the *Audacious* is under orders to leave this port in a few days, we much regret to say that this will probably be the last chance we shall have, for at least some time, of enjoying the performance of this excellent band, and therefore cannot let the opportunity pass without expressing to Captain Colomb and the Officers of the *Audacious*, how much the community is indebted to them for their kindness.

There will be no issue of native newspapers to-day, either at Tôkiô or Yokohama, as those connected with them assemble at Asakusa to celebrate the anniversary of the promulgation of the Press-laws. It is believed that this day will also be observed as a day of humiliation by many of the provincial papers.

The *Chôya Shimbun* says that at Fujita-mura, in Fukushima *ken*, there lives a fish-dealer, who, in order to carry on his business, is in the habit of leaving his home very early every morning, returning about two o'clock in the afternoon. A few days ago the man, who, moreover, is blind of the right eye, left his house as usual, but his wife was surprised when he returned at noon instead of two o'clock, and still more so when he voraciously devoured all the raw fish he could lay hands on and next proceeded to smash and upset everything within his reach. To her still greater astonishment she also observed that her husband's blindness had been trans-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ferred from the right eye to the left. After gratifying this unusual love of destruction the man retired to sleep upstairs. At two o'clock, as was his custom, the rightful husband appeared, in his sane mind and the right eye blind as before. As soon as the wife could recover from her bewilderment she made enquiries of her husband which led to an explanation. The result was that the couple crept up-stairs and killed the intruder, who turned out to be an old fox. The editor of the *Chôya* says that false stories of this kind are rife among the people, who should guard themselves against believing such, but spoils his caution by adding that the person who related the above story to him avowed that he was an eye-witness of the occurrence.

From the *Hiôron Shimbun*.

It is rumoured that the Government has recently taken 200,000 *yen* from the reserve of 20,000,000 *yen* which is kept in the Treasury as a reserve against the issue of paper money, and used that sum for some purpose which is not made public.

From the same.

We hear the rumour that, at the end of last month, a certain American Official of high rank, when visiting Mr. Ôkubo, the Minister of Finance, at his residence, became so enraged during a discussion which took place, that he took up a kerosene lamp from a table in the room and threw it at the Minister.

[We are not concerned with the truth or probability of the above extract, our object being merely to give it as published by the *Hiôron*.—ED. *J.M.D.A.*]

From the *Chôya Shimbun*.

Mr. Sakai, the editor of the *Akébono Shimbun*, and Mr. Makita, the editor of the *Hôchi Shimbun*, have been summoned to the *Saibansho* of Tôkiô *Fu* at the suit of Mr. Fujimura, *Rei* of the Yamanashi *Ken*, to answer for certain articles which they have published, and which are deemed to be libellous.

From the same.

It is reported that officials throughout the Empire will shortly be compelled to adopt the foreign style of dress, and all males to abandon the native style of *coiffure*.

From the *Nichi Nichi Shimbun*.

The usual official vacation during the hot weather will commence on the 17th of next month.

From the *Hôchi Shimbun*.

Permission to construct Railways, Telegraphs and Lighthouses, and to work mines, must, for the future, be obtained from the *Kobusho*, or Department of Public Works.

Thursday, 29th.

From the *Eiri Shimbun*.

The Japanese teachers and priests are zealous in trying to spread knowledge and religion among the people, but find that foreigners surpass them in zeal. There is a certain French lady living at Tzukiji, Tôkiô, who educates about one hundred Japanese pupils, and what is more, teaches, boards and clothes, free of expense, all those children whose parents are too poor to bear the cost themselves.

From the same.

The *Kwadzoku* and *Shidzoku* pension bonds are already looked upon as a marketable security by the Nagoya merchants, and are there quoted at 50 to 59 *yen*.

From the *Hôchi Shimbun*.

We hear that the judges at the Tôkiô *Saibansho* very much dislike trying editors and others who are accused of infraction of the Press-laws, so much so that when any such case is set down for hearing, they draw lots among themselves for the chance of escaping the detested duty.

From the *Akébono Shimbun*.

Many of the widows and children of those who fell in the late Saga rebellion are now reduced to great poverty, so that the *Rei* of Mitzuma *Ken* has applied to his superiors at Tôkiô for authority to afford them some special relief.

Friday, 30th.

On the morning of the 21st instant the Imperial party left Fukushima on a visit to the silver mines of Handa, and thoroughly inspected all the workings, which are carried out on the foreign method. His Majesty returned to Fukushima and stayed there until the morning of the 22nd instant, when a start was made through pouring rain for Shirakawa, at which place the Imperial party arrived late in the afternoon, having stopped for refreshment on the way at Koüri and Fujita.

The Mikado left Shirakawa the next morning, stopped at Kanagase for the mid-day meal and arrived at Iwanuma during the afternoon, where Mr. Okubo, the Minister for Home Affairs, was waiting to meet His Majesty.

The M. M. steamer *Tanais*, with mails on board to the 21st May, left Hongkong yesterday evening at 7 o'clock.

From the *Hôchi Shimbun*.

The man belonging to the Japanese man-of-war *Unyô-kan*, who recently, at Kobe, deliberately fired at a foreigner during a fire, has been sentenced to 40 blows and 30 days' imprisonment with hard labour.

From the same.

On the 27th instant the Minister of Foreign Affairs, and the Vice-Minister of the Navy Department, entertained the British Minister and Vice-Admiral Ryder at the Rikiu Palace, Shiba, Tôkiô.

From the *Chôya Shimbun*.

Many of the lower class officials have, it is said, applied to the Government for a loan of 5 *yen*, to enable them to purchase the foreign style clothes which they are now ordered to wear.

Saturday, 1st.

From the *Akébono Shimbun*.

On the evening of the 21st instant, when the inhabitants of Shiraishi were making preparations to illuminate the town on the occasion of the Mikado's visit, a godown belonging to a large temple there was entered after dark in order to obtain certain lanterns and other things which were required for the purpose, but a light having been carelessly left in the godown it caught fire, and the flames communicating to the contiguous temple, it was entirely destroyed.

From the *Hochi Shimbun*.

Mr. Makoshi, editor of the *Sômô Zashi*, was, on the 28th instant, sentenced to three years imprisonment for having publish an article in his journal against the Law of Libel, and another on Liberty and the Rights of Man.

From the same.

The officials of the Tôkiô *Fu* are said to be making secret enquiry as to the progress of Christianity in the capital.

From the *Mainichi Shimbun*.

It is rumoured that the water rate, which is objectionable to the native residents of Yokohama, will no longer be levied.

From the *Chôya Shimbun*.

Another newspaper, called the *Hôkoku Zasshi*, will shortly be published in Tôkiô.

From the same.

Soon after the proclamation forbidding the wearing of swords was issued, the *samurai* of Kagoshima *Ken* made application to the *Ken Rei* that the Satsuma clan should be specially exempted from the edict. The *samurai* of Kumamoto *Ken* (Higo) wear clubs in lieu of swords, while those of Kochi *Ken* (Tosa) evade the order by carrying their swords in their hands.

THE MERCANTILE STEAM SERVICE.

UNDER the title 'The Mercantile Steam Service,' we published in the issues of last and the previous week the General Regulations made by the Japanese Government, and issued under the hand of the PRIME MINISTER, for the engagement and examination of Masters, Mates, and Engineers of vessels of foreign form of construction. It is due to no want of appreciation of this important and very necessary measure that the few comments it seems to suggest have been delayed until to-day.

Among many minor causes of loss, anxiety and embarrassment to this Government, arising out of the rapid transition from an old to a new condition of existence, few have been more irritating in their consequences than the necessity for engaging hastily foreign assistants for the various departments which demanded such help. These have been made an abundant source of mirth in times past; but it is in no such spirit that the question deserves to be approached. This country is neither rich nor forward enough to be able to make any more mistakes in this direction, and now that a mercantile steam service has been organized, the credit of the Government and the nation, the safety of passengers, and the interests of trade in all its branches, demand that the service shall be placed under such regulations as shall convert it from a very rude and imperfect to a well organized and efficient one. Such an instrument is provided in the document to which reference has been made. We do not propose to recapitulate its provisions, nor does there appear to be any need for doing so. But it is minute and comprehensive, and seems to embrace all the points presented by the conditions and necessities of such a service. The whole mercantile marine of the country is in process of transformation. In Yezo it has actually been forbidden to build vessels on the old junk-model, and the coasts of these more southern islands will gradually witness the displacement of the old forms of sea-going vessels by those of European build. The reason is obvious. The junk cannot beat. With the wind free it may sail as well as the foreign-built vessel, but on less propitious days it can practically do nothing. Hence a loss of time altogether ruinous when compared with the rapid movements of its rival. To give some idea of the difference between the two, it may be stated that a junk plying between Matsumai and Shimonoseki can only make one voyage there and back in a year. A foreign-built vessel can easily make four or five trips in the same time, and when a comparison is made between the risk of loss, the length of voyage, involving as it does interest of money, higher freight, deterioration of cargo, &c, on one side, and the same risks in a voyage only a fourth or fifth of the length on the other, some idea may be formed of the superior advantage of employing foreign-built vessels.

One of the first, most certain, and most obvious effects of the new Regulations will be to raise the whole standard of the mercantile marine service—a point greatly to be desired. It will sift the men already in the service, and test all applicants for admission to it. The incompetent will be weeded out, and hereafter excluded from entering. The competent will remain with the greater feeling of self-respect that they are in creditable company.

It is well, however, that the Japanese should be made aware of, and accept the fact, that they must be prepared to pay higher rates for better men. They have too often proceeded on the principle of offering a certain wage, and taking what that rate of remuneration would bring them irrespective of its quality. But good men are worth their price all the world over, and to offer less than the market rate for them is to attract and secure bad men—a thoroughly unsound and, in the long run, losing system. Rubbish is rubbish, and will remain so until the end of time.

But it is not enough to have a code of regulations. The task is to make it work, and this is where the great trouble falls in the application of new systems. It matters little whether the question be one of a political constitution, a code of laws, or such a scheme of general regulations as that under consideration. The spirit which draws up these instruments must preside in the application and working of them, else they are so much waste paper. They are merely tool-making machines, and will make bad tools unless the conditions of their performances are understood and obeyed.

It is to be hoped that the effect of these Regulations will soon be made manifest in the only really large mercantile marine association at present existing in this country—we allude to the Mitsu Bishi Company. All are interested in, and will be gratified to hear of its success. It has the Government at its back, and an increasingly profitable business. But it has yet to learn to comply with conditions imposed by foreign ideas of trade. Regularity, punctuality and certainty are among the first of these conditions, and something must even be risked to attain these and produce confidence that they can be relied upon. We regret to observe that there has been more or less irregularity in the departure of some of their steamers—we refer particularly to those on the Inland Sea and China line. This is a capital error and cannot too soon be corrected. If steamers are run regularly, the trade which supports and is fostered by them assumes a corresponding regularity. The changes in the date of departure of the steamers just referred to arise from the competition started by the P. & O. Company. But the true policy to pursue under these circumstances is to fix a stated and regular day of departure, and oppose the P. & O. with another steamer. There is nothing which foreigners accustomed to the regularity of their own systems of communication dislike and resent so much as the irregularity on which we now comment. They consider—and quite justly so—that they acquire rights when regular lines of communication are opened and announced. They make their own arrangements on the tacit assumption of clear obligations on the other side, and if these are unfulfilled, they have a just cause for complaint. The error, too, as before said, is a cardinal one in respect of the reputation and interests of the Company itself, and cannot too soon be repaired with the determination that it shall never occur again.

We trust the new Regulations will work, and that their issue will mark a fresh departure in the history of the mercantile marine of the Empire. But, as we have said before, they will not work of themselves. They must be worked.

Last Wednesday a number of Japanese connected with the Kobe Sunday Schools of the American Mission had a picnic in a valley just beyond the Nonobiki Waterfalls. There were rather more women than men and very few children. Rain threatened during the day but did not interfere with the proceedings, and all appeared to enjoy themselves very much. We do not know exactly what the party altogether numbered, but there were about seventy-five jinrikisha, a large proportion of which carried double.—*Hiogo News.*

SPIRIT OF THE JAPANESE PRESS.

Liberty and the Rights of Man.

(Shinbun Zasshi.)

I have heard that Messrs. Kiba and Hatano are about to present a memorial to the *Genrō-In* against the Press and Libel laws; that they are of opinion that those laws deprive the people of free speech and of their rights; and that they not only prevent the diffusion of useful knowledge among the people but obstruct the progress of civilization. For these reasons, these gentlemen argue that the laws above named should be abolished, and if their memorial should not be approved of, they would do and say whatever they deemed right in the very face of those laws, for they loathed life under such an obnoxious tyranny, and would rather possess their souls in freedom after death than live in this world bowed down by such oppression.

Now these must be men animated by the most ardent love of their country, and caring nothing for their lives, and they are determined to do their duty towards their fellow countrymen by procuring for them their rightful liberties.

For a long time past, I myself have thought that those laws were obnoxious in the extreme, and therefore I am most happy to think that these gentlemen are about to present such a memorial to the Government. Although I am a man possessed of but slight knowledge, I intend to join with Messrs. Kiba and Hitano, and though my life should be the forfeit of my act, I hope to accomplish my duty towards the people.

In the critical circumstances under which we now live, the people must exhibit some zeal to acquire their liberties, and pay no heed to their lives, those who act otherwise being unworthy to be called the benefactors of the nation. Even the bees and ants are animated with the instincts which bid them protect their habitations. The man who has not a kindred feeling for his country is inferior even to these insects.

The ignorant and slavish do not know the purpose for which laws are enacted. They cast away the precious rights given equally to every man by Heaven, and think that their principal duty is to obey the orders of the Government whether just or otherwise.

In order to prove that this is an erroneous view, I will explain why it is necessary to obey the laws, and why men are justified in refusing obedience to bad laws; and again, that when the government forces unjust laws upon the people and deprives them of the precious rights they have received from Heaven, they must struggle for their liberties and necessarily overthrow such a government.

There is a settled law by which Heaven rules the universe. It rewards the good with happiness, and punishes the bad with misery. The reason for this is that it prevents men from doing wrong and encourages the good, so that peace and happiness may prevail among men. For this reason, if men disobey the laws of nature, and act unrighteously and commit such deeds as murder, &c., happiness would cease to exist. Obedience to these laws is the condition on which peace and happiness can be enjoyed.

Now laws made by the power of man have the same ends for their object. When society increases and men are numerous enough to form a nation, they constitute a government for the purpose of carrying out what is fundamentally the will of Heaven, that is, to prevent evil and encourage good and protect the rights of the people, thereby securing peace and happiness among them. For this reason people must obey the laws of their nation, as otherwise no happiness would be obtainable. The duty of the people decidedly is to obey the laws of the country in which they live.

But governments are often composed of tyranical and unjust officials, desirous of indulging their own selfishness, and who enforce unjust laws upon the people and deprive them of the precious rights received by them from Heaven, taking from them the freedom of speech and action and dealing generally unjustly with them.

Must the people then obey the unjust laws issued by such a government? Obedience under such circumstances is fatal to the happiness which laws are intended to promote. If a law is clearly prejudicial to the happiness of a people, must men still pay obedience to it? Suppose a Government should order people to kill and steal from each other as much as they pleased, must the people indulge in these enormities? And again, conceding that no government would enforce such proceedings as the above, have not the people the right of disobeying laws which deprive them of their rights? Can such laws indeed justly be termed laws?

It may be said that the people have entrusted the legislative power to the government, so that they must obey whatever it ordains, and have no further reason for concerning themselves with the laws. But although such legislative power has been entrusted to the government, it does not include the power to make bad laws, and the enactment of such laws arises solely from the abuse of power by the government—a power entrusted to it for the good of the people. Let us suppose that the officials may be represented by a clerk and the people by a master, and that the former has been entrusted by the latter with the power of carrying on his business. Let us suppose that he makes all kinds of mistakes in discharging his duty and incurs such heavy losses that he brings the house to the brink of ruin. Would the master look up to him and say nothing? If so, he must be a great fool, for a man with the least sense would instantly severely rebuke or send him about his business.

And, therefore, if a government enforces unjust laws which obstruct the happiness of the people, the people are quite at liberty and have an ample right to disobey them.

Now the Newspaper-Press-laws and the Law of Libel act partially towards men of bad reputations and punish those who are straightforward in their arguments. Moreover, they deprive men unjustly of their rights and liberties, and cannot therefore be called just laws. They are not in accordance with the laws of nature which tend to promote happiness among men, and therefore obedience to them obstructs the acquisition of happiness and deprives men of their rights and liberties. And we, the people, have not only the right to disobey such laws, but to argue against the government so as to procure their repeal. This we must do with all zeal, not heeding government prosecution, careless of our lives, and bent only on having the obnoxious laws abolished in order to secure happiness to the people in general.

Many men seem to believe that the Government is a kind of divine being, and obey all its orders of whatever nature, careless of what suffering and misery they may entail. This misery and suffering they are willing to think is sent from Heaven and cannot be prevented or mended by any efforts of man.

Now, as I have said before, the Government is as the clerk doing the business of his master, the people, and thus the power entrusted to it is really the power of the nation, and is nothing divine and intangible by man. The people need not be in the least backward in blaming the Government for the wrongs it may commit, or has committed, in order to prevent the repetition of these.

But when the people argue for the abolition of abuses arising from maladministration and find that instead of obtaining redress they are only subjected to further injustice and limitless oppression, to fines, persecution and imprisonment, and when the misery caused by this extends throughout the nation, people must bring their complaints before Heaven, rush to arms in rebellion and overthrow such a corrupt government, establishing a new or better order of things in their place, and securing an administration of greater justice. This is the most precious right the people possess, and the use of it is sanctioned by the profoundest sense of justice.

In the American Declaration of Independence it is said "We hold these truths as self-evident that all men are created equal; that they are endowed by their Creator with certain inalienable rights ..... that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it and to institute a new government, laying its foundations on such principles and organizing its powers in such forms, as shall seem to them most likely to effect their safety and happiness,"

Though centuries should pass away the truth of these words never can be disputed, and this clearly proves that a tyrannical Government composed of corrupt officials, acting haughtily and with great selfishness at the same time, carrying on cruel oppression of the people and thus depriving them of the rights they have inherited from Heaven, is not an institution which protects the people, but a cause of misery and suffering to them.

Heaven has endowed man with body, mind and soul and with liberty to use them, and it is the will of Heaven that happiness should be diffused among men, between whom, in the eyes of the Creator, there is no difference. He does not honour and love rulers and contemn the people as degraded; he does not love the one and despise the other, and has not decreed that the officials shall be haughty and the people oppressed. If governments like this are permitted to exist, the people cannot be said to have discharged their duty towards posterity. No; the people would then have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

failed to do their duty, precisely as the officials have failed when they oppress the people.

If a country is to rise in the scale of civilization and its people are to enjoy liberty, they must go through dangers and hardships. The civilization and liberty enjoyed by the people of Europe and America did not fly to them naturally. Both in England and in France there existed in former days bad rulers and corrupt officials, who oppressed the people with unjust laws and deprived them of their rights and liberties. But, with an astonishing courage, the people of both these countries opposed their tyrannical governments. They stood unshaken in defence of their rights, though many were imprisoned and others were burned at the stake. After all their dangers and sufferings they obtained their object, which was the rights and liberties they now enjoy. At the time of the American revolution the colonists were governed with great oppression by the King of England, who, seeing their flourishing state, passed the the Stamp Act and sought to impose it upon them. This resembled the putting of wood upon fire, and aroused a burning indignation which was further inflamed by a speech from Patrick Henry concluding with these words:—"Give me liberty or death." The king sought to subdue this spirit with fire and sword, but failed in the attempt, for the Americans defended themselves with great valour against the British troops, and after some ten years of struggle, suffering and trial, stood before the world an independent nation.

If we now glance back at the history of Japan prior to the civil war, we see that the oppression of the Tokugawa Government was resisted in various parts of the country, and some of the insurrectionists were beheaded, other were banished to islands many miles distant from the main land and others imprisoned. But all this was unheeded, and the end ultimately attained. Since the revolution, however, the minds of the people seem to have become weakened, and no longer possess the fortitude necessary to enable them to meet great trials. It is true that the Press is showing signs of growing strength, but the writers so far have been careful of their lives. They permit themselves to be entangled in no more severe troubles than fines or imprisonments.

It is idle to suppose that the civilization of the country or the liberties of the people can be acquired without zeal. Why do the Japanese remain so slavish and indolent? Let us imagine any attempt made in America to pass these Press and libel laws. It would meet with the fate of the attempt to pass the Stamp Act. Why should the Japanese obey unjust laws? Why should they not oppose them utterly? I will imitate Patrick Henry and ask when will these laws cease to exist? I care not for my life so that they be abolished.

Ye people, grow zealous!

SAWAI NAWORZUGU,
Atagoshita chō, Tōkiō.

DECAPITATION.
(Shinri Zasshi.)

When Government officials enact unjust laws and try to force the people to obey them against their will, what then must the latter do? A sage has said that to resist the orders of bad officials is in accordance with the will of Heaven, and these words teach us that it is wrong to obey the orders of bad officials. And not only is this in accordance with reason, but every man has two duties to perform, one towards his contemporaries, the other towards posterity duties which cannot be performed if the orders of bad officials are to be obeyed. This again proves that it is wrong to obey bad officials. What then must the people do? Had they better assemble in large numbers and make an attack on the Government, and destroy those bad officials by force of arms? Or had they better urge straight-forward arguments against such laws and, if need be, lose their lives in procuring their abolition?

The people have the liberty of acting in either way they may choose. But I fear that an open attack on the Government would bring great misery upon the people, nor do I think a course involving martyrdom is the most advisable for any man to take. Martyrdom involves the sacrifice of a man's life for the purpose of doing his duty towards Heaven, or obtaining freedom for his fellow creatures by forcing the rulers to repent of the wrongs they have committed, and thus compelling them to concede liberty to the people and their descendants. This martyrdom does not involve the misery of other people and would appear to be a good step for a man to take. But it is ineffectual, as its results do not reach these bad officials, nor has it much effect either upon one's contemporaries or upon posterity.

For this reason we must seek some other step for the people to take, better than the course above mentioned. And this step is that a man should go secretly with a sword or pistol and assassinate such officials; for an attempted assassination, though it may fail of its purpose, always produces an effect.

Reader, imagine yourself a corrupt official. Which would have the greater effect upon you, the sorrow produced in your heart by seeing a man sacrifice his life to make you repent, or the fear of an attempt on your own life? It is needless to say that the dread of losing your own life would have the greater effect, and it is for this reason that I have said that the attempt to assassinate bad officials, even though it prove abortive, cannot fail to produce a greater result than martyrdom.

Now I have determined that if the oppression of the Government officials increases in forcing the Press and Libel-laws upon the people, to play the part played of old by Yojo and Keiga.*

MORIYA KANJO,
No. 5, Ichome Agoshita chō, Tōkiō.

JAPAN AND COREA.
(Nichi Nichi Shimbun, June 22nd, 1876.)

The Corean envoy, Kin-ki-shu, and his suite, having embarked on board the *Kwansio Maru* on the 15th instant, sailed from Yokohama and they are now on their homeward voyage. The day on which the answer of the Japanese Government is to be presented to that of Corea is near at hand, nor can that on which Miyamoto, the Daijō of Foreign Affairs, proceeds to Corea, bearing the credentials of a commissioner, be far distant. By the coming, too, of the time for opening the new ports in Corea and commencing the new trade in accordance with the Kōkwa treaty, the Corean Government is for the first time forced to recognize the trouble attendant upon foreign intercourse, and even our Government can hardly avoid some increase to its troubles on this account. What will be the nature of these troubles? The different countries of Europe and America, displeased with the start which we, undeterred by the many years of labour which they had wasted in (endeavouring to effect) the opening of Corea, have succeeded in obtaining of them, will, sooner or later, press emulously to that country, nor should we wonder if, when the time comes for foreign countries to request from the Coreans the conclusion of a treaty and the opening of trade, they asked the mediation of our Government to assist them towards that end, while on the other hand it is impossible to say beforehand that the Corean Government will not, in its dislike to foreign intercourse, beg us to act as their mediators in refusing to grant the above request. Let the right be on whichever of these two sides it may, it is needless to say that we cannot entertain the silly idea of uniting ourselves with Corea and looking upon European and American countries as our enemies, but we are nevertheless entirely unable to approve of the plan of joining with those countries in showering cannon balls upon Corea. In such a juncture as this, if foreign countries should refuse our friendly assistance, nothing would be left for us but to adopt a position of neutrality. And, again, we cannot now say that Corea may not, in its obstinacy, look upon hostile and neutral countries as being one and the same, and conceive, in consequence, the desire of driving us off along with Europeans and Americans. Looking now at what was the condition of our own country ten years ago, and seeing how prevalent the *Jōi* spirit then was in both the west and south and the determination that existed to sweep out of the country not alone the English, French, and Americans, with whom friendly relations had just been opened, but also the Dutch with whom these relations were of old standing, we cannot guarantee that some such spirit may not now be felt by Corea. We must, therefore, now give our attention both to the present and future aspect of our relations with that country, and provide beforehand against the infliction of trouble at a future day on both it and ourselves.

Shallow writers, who take pride in empty show, will certainly say that our two envoys, Kuroda and Inouye, in their negotiations at Kōkwa, fully explained with all eloquence both the advantages and disadvantages of the Treaty to the Coreans, and that, by doing so, they succeeded in opening Corea without having had recourse to arms. But such sentiments betray the greatest want of thought. Is the conclusion of the treaty with us by the Coreans to be ascribed to their having formed a proper appreciation of the advantages, or disadvantages, that attended their opening up of their country to, or their keeping it closed against us, or is it not rather owing to their wish to obtain a temporary peace in their dread of military force? If we glance back so far as the years 1854 and 1855 and consider what was our own case then, we can readily understand this. And, referring to thirty-four years ago, when the opium war

in China came to an end, we remember that King William II of Holland, doubting the wisdom of the policy of strictly maintaining Japan as a closed country, kindly sent an envoy of high rank on board a man-of-war to Nagasaki, with letters under his own hand to the Bakufu to that effect; but the latter entirely disregarded them, beyond annulling the proclamation which ordered the driving of foreigners out of the country. That proclamation ran as follows:—"Although in the two orders issued after the cessation of "the disturbances in the North* in the periods "Bunkwa" (1804 to "1818) and "Bunsei" (1818-1830) respectively, it was commanded "that as soon as black vessels (*i.e.* foreign vessels) were descried "they were to be driven off, hence-forward, when such vessels are "seen, the object of their visit is to be inquired into and, if they "have any business which requires attention, they should be "directed to proceed to Nagasaki. If they are in distress, they "are to be assisted with firewood, water, and provisions, "and they are then to be sent to Nagasaki as before. So long "as they do not commit any hostilities their expulsion is to be de-"ferred." The sudden assent given by the councils of the Tycoon's Government to the request of the American Envoy Perry, when, accompanied by four men-of-war, he came to Uraga in the year 1854, is not to be ascribed to their appreciation of the advantages or disadvantages attendant upon opening up or keeping closed the the country, but to nothing more than to their dread that they should not be able to resist him, and their wish to obtain a short respite from the persecutions of the men-of-war that accompanied him. With the exception of such intelligent men as Mito, Abé, Midzuno, Iwase, and Kawaji, there was hardly a single person who recognized the ills attendant upon the closing of the country, and this is the case as regards Corea at the present moment. There may be two or three members of the Government of that country who recognize the disadvantage of keeping their country closed to foreign intercourse, but the great bulk of the Corean officials concluded the Kokwa Treaty, not from any capacity of appreciating the advantages of trade, but merely owing to their having given way to the representations of the two commissions and to their dread of the force which accompanied them.

Although, however, the conclusion of the treaty of friendship by the Corean Government is thus to be ascribed to their desire for peace, the country having once been opened, as the consequence of this friendship, the same beneficial results will occur both to those who concluded the treaty through their appreciation of the advantages of doing so, and to those who only yielded to force. Their motives will be the only distinction between them. Will not, however, the people of the country in general, dissatisfied with their government for having concluded a treaty through a vacillating dread of force, all urge that the country should be kept closed by force, just as was the case with our own country about the year 1860? In that case it will be clear that the Treaty of Kokwa was not one decided upon by the country generally, but that it originated entirely from the desire of the government for peace. Since, therefore, the old conservative spirit has not been in the smallest degree eradicated from the minds of the people in general, we must take care to estimate beforehand what the future of our intercourse with that country will be.

Superficial writers on this subject place great hopes in the envoy, and have apparently decided that on his return, he will, by reporting on the state of development which he has observed to characterize our country, be able to effect a complete reform in his own. Although we, too, partake of these hopes, still, if we step aside and consider the former state of Japan, we cannot but entertain doubts as to his doing so. If we look at the influence exercised on the Tycoon's government and on the Japanese people by the embassies which were despatched to America and Europe in the years 1860 and 1862, on their return to Japan, we shall find a trustworthy precedent on which to base our conclusions in the present instance. The envoys who were despatched in the above years were Oguri, Takenouchi, Katsu and Shibata, all eminent members of the Tycoon's government, and to them were attached Fukuzawa, Mitsutsuri, and Hida. They learned clearly the advantage of opening the country and the benefits of civilization, notwithstanding which they were unable, on their return to Japan, to affect in the smallest degree the temporizing policy that had hitherto prevailed, or to overthrow the spirit of seclusion which existed amongst the people in general, and the reason why they could not do so was, not only that they were deficient in popularity, but that the opinions of the people of the country in general could not be overthrown by those of two or three persons. When Kagosima was attacked by the English fleet and Shimonoseki by that of the allies, there were probably some among the numerous *samurai* of both the Satsuma and Chôshiu *hans* who recognized the inexpediency of keeping the country closed, and the hostilites which ensued can be ascribed to no other reason than the inability (as in the case of the embassies to Europe) of those few persons to overcome the opinions of the majority of the *han*. When Kin-ki-shu and his suite return to Corea, we doubt not that they will, in like manner, fail to impress their opinions on their countrymen, and we cannot therefore place any great faith in the results that will attend the visit of this embassy to Japan.

When Iyeyasu was on the point of death, he called his son Hidatada and inquired of him what would become of Japan when he (Iyeyasu) died. The son answered that there would be great trouble, and Iyeyasu thereupon said that it was well that the son should come to the throne anticipating such trouble. In like manner it is well that we should now anticipate the trouble which our intercourse with Corea may bring upon us.

* The raids of the Russian Cossack Chowstoff.

The National Finances.

(Hôchi Shimbun.)

It is rumoured that the sum of 200,000 *yen* of the 20,000,000 *yen* reserved as security against the paper money afloat, has recently been taken out of the Treasury and used by the Government for some purposes yet unknown.

Paper money floats here practically at par with specie, for the reason that the people have confidence in the Government and would at any time give their specie for notes if so required. When the Government issues paper for the purpose of increasing the circulation of money, the people accept it on a par with specie, and no small distress would ensue were the confidence destroyed which causes them to do so. If we look to the present state of the country, we see that specie is constantly being drained away, and that the supply issued from the Mint does not keep pace with the demand.

Thus the paper and the specie have begun to alter in their relation to each other. It is true that the Government has forbidden the publication of the price of gold in the newspapers, but this has not the slightest effect upon its value, and the price has fluctuated just as it did before the prohibition was put in force.

I hear that there are 100,000,000 of *yen* of paper money afloat in this country, and that the security for this is 20,000,000 *yen* (in the precious metals), and if this is really true there is no cause for wonder that the paper shows a tendency to fall. Moreover, 200,000 of this reserve fund is said to have been spent already, which leads us to believe that the paper will still further decline in value, and that there is but a small store of coin to represent the paper issue afloat.

We are at a dangerous crisis in our financial affairs, and the destruction of the Government and much misery seem hanging over our heads.

Ye officials who have charge of this affair, what do ye intend to do?

The Same.

(Kinji Hôron.)

We have before us various newspapers published in different parts of the country, and there is not one of them which does not represent the people as in deep distress from the pressure of poverty, and, moreover, this is just the time when money collected from the people as taxes is coming into the hands of the officials to accumulate in the capital. The old *satsu*, which are being withdrawn, are being replaced with new ones in various parts of the country. In order to show the poverty of the country I will state that there are about 500 villages in the Fukushima *ken*, and there were five villages among these 500 which did not possess a single *satsu*. Again, a certain official was travelling through a village in the Owake *ken*, and tried for convenience sake to get three *isshu satsu* there (a total of about 9d), but found it an impossibility.

As all the taxes collected are accumulated in the capital, we should naturally be led to suppose that Tôkiô must be in a state of prosperity. But it is not so. Failures and bankrupteies are of daily occurrence there, and go in whatever direction we may we see houses for sale.

If we examine into the reasons for all this, we see that just after the revolution which abolished the *Han* there were 400,000,000 of *yen* in the country. But after the drain which has been going on so long there are only about 150,000,000 *yen* in the country, of which 100,000,000 are in paper and 50,000,000 in specie, and of the latter about 20,000,000 are kept in the Treasury as a reserve against the paper money and the remaining 30,000,000 are

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in the hands of the wealthy. For these reasons there are only 100,000,000 *yen* in paper money afloat among the people and if we divide this amount by the sum of the population, viz.: 35,000,000, we find that each person possesses about 3 *yen*. But as there are many wealthy persons who possess a good store of money, the quantity actually circulating among the people is very small. But even of this a great deal is now going into the hands of the Government as taxes, so that I even wonder how any of this small amount of money finds its way about.

Some of those who write on this subject say that it is all owing to the Government not being able to fix such a tariff as it pleases. Others attribute it to the continual fluctuations in the price of silver and gold, while others again say that it is due to the excess of our imports over the exports, and all these arguments are often met with the question "Why not make more paper-money?"

But I am of opinion that it would be wrong to increase the amount of paper-money afloat, for the people have already begun to lose confidence in the power of government to meet it, and thus it is impossible to say what misfortune any such policy might bring upon us. Although I am able to see the evil which this might entail on us, I confess myself unable to indicate the true remedy for this state of affairs. I would therefore ask the learned what they think the proper course to adopt in order to avoid the impending catastrophe.

HISTORY OF THE TOKUGAWA DYNASTY.

Chapter 1.

(Continued.)

In the 1st month of the 1st year of Tenshô (A.D. 1573) the Shôgun Ashikaga Yoshiaki sent envoys to Giyôbu, inviting Shingen to put an end to the war and make peace with Iyeyasu. Shingen, however, refused, and marching into Mikawa laid siege to Noda. In the 2nd month he fell ill and withdrew his forces and in the 4th month died at Hiradani in Shinano where he had just arrived. His last directions were that his death should be kept secret. He was succeeded by his son Katsuyori who immediately assumed the command.

Decline of the military strength of the Takeda clan after the death of Shingen. His successor disputes with Iyeyasu the possession of Nagashino.

In the 5th month Iyeyasu occupied Suruga, and in the 6th month erected a castle at Moriyama in Tôtomi, thus providing against an attack from Futamata. In the 7th month he presented himself before Nagashino and burnt the outworks of the castle. He then built a fort at Kumayama which he made the limit of his operations.

In the 8th month Katsuyori marched against Kumayama and sent troops to the relief of Nagashino. Iyeyasu turning round, gave battle, and forced the Kai leaders to take refuge in the mountains. He then endeavoured to draw them into the plain by a feigned retreat but the enemy did not venture to quit their position, and Iyeyasu finally resumed the siege of Nagashino, which, in the 9th month fell to his arms. In the 10th month Katsuyori ordered his leaders to surprise Hamamatsu, but the governor, Honda Shigetsugu, supported by his principal officers, headed a successful sally and drove them back. Iyeyasu who was hastening to the relief of the place was thus enabled to retrace his steps, while Katsuyori, who had encamped at Mitsuke, retired upon finding his designs thwarted.

In the 1st month of the 2nd year (A.D. 1574) Iyeyasu was advanced by an Imperial rescript to the upper division of the higher 5th rank. In the 3rd month he put the castle of Nagashino in a state of repair, and had regained all the territory he had lost. In the 5th month Katsuyori took the field with a large force and reduced the castle of Noda and Takatenjin, to provide against an attack from which last named place Iyeyasu in the 5th month erected a castle at Mabushiwo.

In the 3rd year (A.D. 1575) the command of the castle of Nagashino was entrusted to Okudaira Nobumasa, whom Matsudaira Kagetada, Iyetada, and Chikatoshi were ordered to assist in the event of his being attacked by Katsuyori. The latter in the 5th month appeared before the place at the head of twenty thousand men. Fighting went on day and night and the situation of the besieged was fast becoming desperate. On the 14th day Nobumasa called a council of war, and after representing that for want of provisions he could hold out only for a few days longer, demanded a volunteer who should make his way through the enemy's lines and carry a message to Iyeyasu asking for assistance. Torii Katsutaka presented himself and undertook the task. Slipping out under cover of the night he eluded the enemy and reached the camp of Iyeyasu, whom he informed of the situation. Iyeyasu explained to him that Nobunaga was already on the march from Gifu, and adding that he himself had decided to hasten to the assistance of Nobumasa in person, desired Katsutaka to remain with him and follow in his suite. This the messenger declined to do and without further delay set out on his way back. On nearing the enemy's lines, however, his movements excited suspicion and he was arrested and brought before Katsuyori who offered to allow him to make known to the garrison the advance of Nobunaga and Iyeyasu. Katsutaka accepted the offer and approaching the ramparts cried in a loud voice that within three days a hundred thousand men would come to the rescue from Gifu and Hamamatsu. Hardly were the words out of his mouth when he was despatched. On the 18th day Nobunaga halted at Shikaraki in Tôtomi, and divided his army, numbering fifty thousand men, into fifteen corps. Iyeyasu, with twenty thousand men, encamped at Takamatsu. Baba Ujikatsu, one of the Kai leaders, perceiving how greatly the enemy had increased his strength, counselled Katsuyori to avoid an engagement, in which advice he was supported by the other leaders who strenuously recommended a retreat. Atobe Chôk'wan and Nagasaka Katsusuke, however, sought to ingratiate themselves with Katsuyori by expressing a different opinion. To turn tail, they exclaimed, the moment the enemy's standards came in sight would be disgraceful; they ought rather to avail themselves of the opportunity Heaven had afforded them of destroying at one blow both Nobunaga and Iyeyasu. Katsuyori, delighted to find his own sentiments thus shared, at once disposed his forces for an attack upon Nagashino. Assigning the important position of Tobinosu-yama to Takeda Nobuzane, he himself led thirteen thousand men across the Taki marsh-land and arranged them in thirteen divisions.

Naruse Masakadsu, meanwhile, to whom the different standards of the enemy were well known, had been summoned to the presence of Iyeyasu, who desired him to say whom the standards with the left and right wings and with the centre respectively represented. The reply was that the standard of the left wing was that of Yamagata Masakage, that of the right wing the pennon of Baba Ujikatsu, and that of the centre the banner of Katsuyori himself. Upon this Tadatsugu, who was standing by, suggested the following stratagem. A division was to set fire to the defences of Tobinosu, while an attack was to be made simultaneously in the rear which would draw the besiegers to that quarter. The assault in front meanwhile was to be urged under cover of the smoke, and could not fail of success against the enemy distracted by the rear attack. The plan was at once made known to Nobunaga, who highly approved of it, although in his anxiety to prevent its getting wind he appeared to reject it, while he secretly got together five thousand men to carry it out. Iyeyasu sent Honda Hirotaka, Matsudaira Koretada, Sugenuma Sadamitsu and Okudaira Sadayoshi with three thousand men to assist in the enterprise. At dawn of the 21st Tadatsugu marched up to the defences of Tobinosu, set them on fire, and delivering a furious assault upon the enemy amid the roar of drums and the shouts of the assailants, drove them from their position. In this attack Nobuzane was slain. Okudaira Nobumasa meanwhile, availing himself of the confusion, pierced the besiegers lines and compelled them to abandon their position. Thus was the siege of Nagashino raised. Tadatsugu and Nobumasa then joined their forces and caused the whole of the enemy's works to be burnt to the ground. Nobunaga was now eager to engage the main body, but Okubo Tadasuke and his brother Tadayo pointed out to him that he was, as it were, their guest, and that they could not therefore, without incurring disgrace, allow him to fight their battles.

A body of matchlockmen were then moved forward, and battle declared. The enemy's left wing answered

Digitized by Google UNIVERSITY OF CALIFORNIA Original from

the challenge by a charge of three thousand cavalry which resulted, however, in a repulse. The enemy's centre next advanced and was met by the brothers Ôkubo, who flew to the front and fought with the utmost bravery in the thickest of the battle. Their valour excited the admiration of Nobunaga who acknowledged that many a bold retainer followed the banner of Iyeyasu.

Masakage, rallying the remains of his command, wheeled round, and under cover of a hot fire from the right wing led them against Nobunaga. Iyeyasu at once sent a horseman to his brother-leader, begging him to order his whole force to open fire without delay, while he himself would head a flank attack with the spear. On this determination becoming known to the troops their spirits rose high. Ujikatsu now joined in the attack; and the bullets flew in tens of thousands, while amid the roar and flash of firearms the ground became heaped with corpses. Honda Tadakatsu, Matsudaira Tadamasa, Torii Mototada and Sakakibara Yasumasa had meanwhile arrived upon the scene, and with levelled spear fell upon the flank of Ujikatsu. The last named commander, turning round, beckoned to the centre to come to his aid, and the quivering of Katsuyori's banner soon showed that his troops were in movement. Nobunaga, seeing this, sent Takikawa Kadzmasa in advance to the assistance of Honda, and followed with his whole corps amid the roar of drums and the shouts of his men. The hills trembled with the clamour. The Kai forces were defeated with great loss and the first among the enemy's leaders to take to flight were Chôk'wan and Katsusuke. The battle raged from the hour of the Hare (6 a.m.) to the hour of the Horse (about noon) and eight and fifty separate engagements at the least took place between the opposing hosts. Takeda lost ten thousand men, amongst whom were almost all his hereditary leaders and most valiant captains. Kai never recovered from this blow; for some years an intermitting struggle was maintained but she was never again able to achieve any success of importance.

In the 5th year (A.D. 1577) Iyeyasu was raised by Imperial rescript to the lower division of the inferior 4th rank, and, in addition, invested with the dignity of Ukonye-goshôjô.

In the 4th month of the 7th year (A.D. 1579) a third son, Nagamaru, was born to Iyeyasu at Hamamatsu. The real name of the child, whose mother was a daughter of the house of Saigo, was Hidetada. Doi Toshikatsu was appointed his Governor *(Kinji)*.

The eldest son, Nobuyasu, manifested, as he grew older, a violent and unruly disposition, and more than once went so far as to slay those about him in his passion. Sakai Tadatsugu and Okubo Tadayo frequently remonstrated with him, but without effect.

Nobuyasu, under an unjust accusation, is put to death.

His mother Sekiguchi-shi, allowing her jealous disposition to manifest itself, was banished to Okazaki, where she was known as the Dowager Lady Tsukiyama. The wife of Nobuyasu, a daughter of Nobunaga, was likewise of a jealous character, and was in addition childless, pretexts of which her mother-in-law availed herself to procure her being dismissed from her husband's household. The Lady Tsukiyama meanwhile fell ill at Okazaki and called in a doctor from Kai, by name Genkei, whom she admitted to an improper intimacy. One crime led to another, and the guilty pair began to harbour designs against Iyeyasu, the nature of which was imparted to the Takeda house.

The wife of Nobuyasu, while smarting with rage at her, dismissal, became cognisant of these nefarious transactions and informed her father by letter of their nature, at the same time submitting a paper containing twelve distinct charges against her husband. Nobunaga showed this to Sakai Tadatsugu, whom he had called to Adsuchi, and inquired if the charges were true. Tadatsugu replied that they were true, upon which Nobunaga fell into a violent rage and brought the whole matter to the notice of Iyeyasu. In such a crisis it was necessary that a decided course of action should be adopted without delay, and Iyeyasu at once proceeded to Okazaki, where he arrived on the 3rd day of the 8th month, and immediately ordered his son to betake himself to Hamamatsu, there to await his further pleasure. Nobuyasu, however, remained at Okazaki, and on the 5th day endeavoured to plead his cause in person, but his father refused to listen to him. His governor, Hiraiwa Chikayoshi, now interceded for him, representing his ability and courage and deprecating any hasty condemnation which would assuredly be repented of afterwards. 'Take your servant's head' he exclaimed at last 'and let that appease the wrath of Nobunaga; will not such a proof of the boy's innocence suffice to remove all doubt of it from his father-in-law's mind!' Iyeyasu, with tears in his eyes, replied that to grant his request would only be to lose a faithful servant without saving Nobuyasu; a result which would cause him the greatest pain. Shortly afterwards, Nobuyasu was sent under a guard, and in charge of Sakai Tadatsugu, to Horiye, from which place he was removed after a time to Futamata. Sekiguchi-shi was next put to death, but Nobunaga was still unsatisfied, and on the 15th day of the 9th month Hattori Masanari was charged with the execution of Nobuyasu, then twenty one years of age, and Nagamaru became the heir of Iyeyasu.

In the 1st month of the 8th year Iyeyasu was raised by Imperial rescript to the upper division of the inferior 4th rank.

Previously to these events the Hôjô chief had detached himself from the Kai party and had shown some anxiety to secure the goodwill of Iyeyasu, with which view he made overtures of peace to Nobunaga that resulted finally in the three powers swearing a mutual friendship. No sooner was the treaty concluded than Iyeyasu, with the approval of Nobunaga, raised a considerable force, and took the field against the Kai partisans. In the first month of the tenth year (A.D. 1582) Kisoyoshimasa, a vassal of the Takeda house, threw off his allegiance and opened communication with Nobunaga, requesting that in the event of a struggle with the Kai leaders he might be allowed to fight in the front rank against them. Nobunaga was overjoyed to this piece of good fortune, and communicated his plan of operations to his new ally.

In the 2nd month Ota Nobutada was ordered to enter Shinano in advance of the main body which Nobunaga retained under his command. Meanwhile, Iyeyasu, at the head of thirty five thousand men, penetrated into Suruga, and took up a position at Makino. Thence he sent detachments to attack the castles of Tôme, Mariko, Mochifune and Kunô, and having reduced these strongholds marched to Yejiri, where he halted. The dread of his arms preceded him and no one thought of anything but surrender or flight. He next advanced to Ichikawa whence he made an incursion into Kai, the chief town of which, Kofu, had fallen to Nobutada, to whom, also, most of the castles in Shinano had surrendered. Hôjô Ujimasa now approached the frontier of Kai with thirty thousand men, and Katsuyori found himself compelled to retire, hardly knowing where to be take himself; finally collecting the remains of his army he assembled a force at Temmoku-san, where he was attacked by Nobunaga and met his death in the fight. About the same time the Takeda clan suffered a complete defeat at the hands of the Mikawa chief, and Nobunaga, on news of this success reaching him, at once marched his men to Namiai.

Nobutada took the head of Katsuyori and placed it in a casket, which he presented to his father Nobunaga, who on raising the lid and beholding the head of his foe loaded it with abuse. The casket was passed on, and reaching the camp of Iyeyasu, was brought to him. He immediately descended from his seat, his countenance expressing the sympathy he felt for a brave enemy, and reverently saluted the trophy.

Nobunaga, putting Iyeyasu in complete possession of Suruga, now returned with his force to Owari, after having been magnificently entertained by his ally.

Iyeyasu goes to Owari.

On the 9th of the 5th month Iyeyasu left Suruga on a visit to Adsuchi. By command of Nobunaga the roads were kept clear and the bridges put into proper repair, while Akechi Mitsuhide was charged with the due reception and entertainment of the illustrious guest. Tents were pitched on the shores of a lake, and the rarest curiosities and most costly furniture and utensils were procured from the capital for the delectation and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

comfort of the visitor, whom no exertions were spared to receive with due magnificence. At this juncture a messenger arrived from Hashiba Hideyoshi, who was in Bichiu, demanding assistance against Môri Terumoto, with whom the relations of Hideyoshi had for some time been of a precarious nature. Nobunaga accordingly ordered Ikeda Nobuteru and his son Koresuke, together with Mitsuhide, to hasten to the aid of Hideyoshi, and transferred the duty of entertaining Iyeyasu from Mitsuhide to another of his vassals, which so enraged the former, that before starting for Bichiu, he threw all the costly articles he had procured from Kiyôto into the lake.

Iyeyasu, on his arrival at Adsuchi, was entertained by Nobunaga in person. On one occasion the latter, taking his guest by the hand, led him to the summit of one of the palace towers and bidding him look round, exclaimed, "Everything is now tranquil at Kiyôto, what is there to hinder you from visiting the capital—I would ere long follow you." On the 21st day Iyeyasu took his departure, escorted by a small body of troops, and passing through Kiyôto, proceeded by Ozaka to Sakaifu, which he reached on the 29th day. On the same day Nobunaga arrived at Kiyôto, and lodged at the Honno temple. On the 2nd day of the 6th month Iyeyasu quitted Sakaifu with the intention of returning to Kiyôto and sent on Honda Todakatsu in advance.

Akechi Mitsuhide surprises Nobunaga, and putting him to death prepares to encounter Iyeyasu.

Honda on reaching Hirakata was met by a wealthy merchant of Kiyôto, Chôya Harunobu by name, who in full war panoply, rode hastily up to him, and pointing backwards asked if he did not perceive a cloud of smoke hovering over the capital, adding that Akechi Mitsuhide had incited the retainers of Nobunaga to rise against their master and put him to death. Struck with consternation, Tadakatsu wheeled his horse round and rode back to Sakaifu with the tidings. Iyeyasu at once summoned Harunobu to his presence, and demanded a detailed account of the affair, while his principal officers crowded round his horse's head in utter bewilderment at the unexpected misfortune. Their chief, however, soon came to a decision, exclaiming that he must lose no time in avenging the death of Nobunaga, and declaring that nothing less than the extermination of the assassins would satisfy him. His followers, raising their whips, were on the point of galloping forth when Tadakatsu restrained their impetuosity, pointing out that Mitsuhide, having successfully accomplished his design, had doubtless collected his forces and taken up a strong position; that to attack him in that irregular manner would simply end in their delivering themselves into his hands as prisoners and becoming the laughing stock of the country, and that the wiser plan would be to return home and in cool blood endeavour to devise some mode of achieving a complete vengeance.

The counsels of Tadakatsu prevailed. On the 3rd day the banks of the Kidsugawa were reached, and Iyeyasu, with the leaders who accompanied him, crossed the stream in two boats they found there, and, which on attaining the further shore, Tadakatsu scuttled with his spear in order to prevent pursuit. Mitsuhide, on hearing of the flight of Iyeyasu, sent out troops in every direction in the hope of intercepting him, but the latter got safely to Iya and thence made his way into Ise, where he took ship at Shiroko no ura and arrived at Ohama, in Mikawa, on the 7th. Assembling his vassals on the 8th he declared his intention of exterminating the partisans of Mitsuhide.

(To be Continued.)

Letters from Peking and Tientsin say that the greater part of the crops have been destroyed by drought, and the distressfull state of the miserable population of Chihli is aggravated by a plague of locusts which are devouring the few cultivated fields near the river banks. The fruit harvest of the province will also fail. In many parts of the country there are no stocks of food left from past years. We are pained to have to say we fear matters are now past remedy and a famine cannot be averted.—*Shanghai Courier.*

ON COTTON IN JAPAN.

By T. P. Poate, Esq.

Read before the Asiatic Society of Japan, on the 14th June, 1876.

Rich as Japan is in plants, there is perhaps not one to which she owes more than to that which produces cotton-wool, or to use the native name, *Wata.* The seeds yield an excellent oil; the cake left after expression forms a manure for the rice fields; the raw wool is used to line the winter clothes and bedding of all classes, and fabrics woven from it are worn by far the larger part of the nation. Greatly as it is now esteemed, widely as it is cultivated, the cotton plant is not a native of Japan, it is a stranger, introduced, it is true, in early times, but not successfully acclimatised till a comparatively recent period. A native of India, its growth long remained confined to that peninsula. Even the rapid spread of Buddhism, together with the flow of pilgrims from China to the holy places of India failed to make its value known; and no devout worshipper, no zealous priest appears to have carried with him the seeds of the textile plant. Cotton was destined to owe its conquest, its position in Higher Asia to persecution, the fruitful source of so many evils. After centuries of prosperity the Buddhist faith gradually decayed throughout India, and its votaries suffered terrible persecution. Some fled to the mountains, others sought in foreign lands the free exercise of their faith denied to them in their own. The exiles brought with them the seeds which they were accustomed to sow on the plains of the Ganges. They were received kindly by their co-religionists both in China and Japan, and both the countries were amply repaid. Singularly enough cotton reached Japan first. China did not receive it till nearly a century and a half later. The following account is taken from an old and scarce book called *Wajishi.*

"In the 18th year of Yenriyaku, in the reign of "Kuwanmu Tenno, the 50th ruler of Japan, a dark com-"plexioned foreigner landed on the shore of Mikawa, a "province in this island. He came alone in a small boat "which contained a few packages. He was rather tall, had "slightly reddish hair and enormous ears. The stranger "was received kindly by the natives, but as he spoke some "foreign language wholly unlike either the Japanese or "Chinese tongues, conversation had to be carried on by "means of signs. He hired a temple at Kawara, and "lived there for several months.

"He at length began to speak Japanese and told the "people whence he came. Unfortunately his tale has not "been preserved; but he told them that he came from India "and that the packages he had brought with him contained "the seeds of a plant which would yield a material nearly "equal to silk, and, to a devout Buddhist, much more "estimable, as having been used by Shakya himself. He "paid his rent with seed, and not long afterwards got a "house built, the cost of which was defrayed in the same "manner. In the 10th year of Yenriyaku (800 A. D.) "the seed was sown; it took kindly to its new country, "and throve apace. Before many years had elapsed it was "widely cultivated. The Hindoo lived to a good old age, "and is recorded as having been very kind to the poor and "a man of great piety."

Cotton had now apparently taken possession of a new land, but after a time the civil commotions and constant strife of the contending parties, caused its cultivation to be neglected and, at the close of the 12th century, the cultivation appears to have been finally abandoned. Centuries were yet to elapse before the second and successful introduction was to be made. On this occasion too, it came as the reward of hospitality. The account I give is also taken from the *Wajishi.* "In the epoch (?) Bunroku (at the "close of the 16th century) a large foreign ship, sup-"posed to have been bound to the Philippines, driven a "long way out of her course and much damaged by a "storm, anchored off the coast of Boshiu near Yokohama, "to refit. The Daimio of the district treated them with "the utmost kindness and caused every assistance to be "given them. After a stay of several months they pre-"pared to set sail, but before doing so the captain presented "the daimio with a number of curious and valuable things;

"among them was a bag of cotton seed. Sowings were made; "the crop was good, and the fabrics woven from the wool "became the fashion. Fabulous prices were paid. 1lb of "the yarn sold for 100 *yen*; and as a matter of course "the culture of such a profitable plant spread with the "greatest rapidity." With increased production the price fell, and the use of cotton fabrics spread to the middle and lower orders: among the upper silk asserted its old supremacy, but King Cotton reigned, and still reigns, over the lower.

The species cultivated in Japan is that known as *Gossypium Herbaceum*. It is a dwarfish plant rarely exceeding two feet in height. Though in point of fact a perennial, yearly sowings are made. The seed-time varies from March to June, according to the locality. The usual time in this province is May. Cotton is here what may be called a secondary crop. It is very generally planted between the rows of barley. The seeds are soaked for a night in water, and then dropped into holes an inch deep, at a short distance from each other. When the plant reaches a certain height it is pollarded to obtain better yield. The flower, which appears in July, is deciduous, has yellow petals and a purple centre. The small pod left when the flower falls gradually increases in size and bursts in September. The pods are somewhat smaller than those yielded by the plant in China, but to make up for this the cotton is of a better quality. The average yield is about 40 lbs av. per *tan* or 120 lbs per acre, rather less than half the crop given by the American plant. As soon as the pods burst they are plucked, and, if the weather be fine, exposed to the sun to dry; if not, they are dried by artificial heat. The wool is separated from the seeds by means of the primitive roller (Japanese *rokuro*) used in India. It consists of two small wooden rollers which revolve in opposite directions, and easily throw off the hard smooth seeds. Cotton gins are now being introduced and the *rokuro* will soon become a rarity. In the cotton producing districts of Japan, the seed not required for the next year is sent to the oil factories. One bushel is said to yield a gallon of oil, the cake left is, as I have already stated, used as a manure. The raw cotton is packed in bales and sent to the merchants; it is however full of knobs and impurities and requires to be carded before it can used, even as a lining. Except in a few factories possessing European machinery, this operation is performed by hand. In certain quarters of the town the twanging of bows may be heard from morning to night; the sound proceeds from a room at the back or above a store, full of cotton bales. The process is carried on in a room with a smooth wooden floor. In each corner is a long flexible bamboo, not unlike a fishing-rod. Attached to the top is a piece of cord which supports the bow. The bow consists of a straight piece of wood, about 3½ feet long, with two transverse pieces at the end; to these the bow string is fastened. The operator places a handful of raw cotton on the floor, grasps the bow with his left hand and pulls the string sharply with an instrument called the *watauchi*, resembling two inverted cones; the upper perfectly smooth but furnished at the end with a projecting ring, the other roughly turned to make it more easily held. The vibration of the string scatters the wool and effectually frees it from knobs and impurities. The carded wool is placed on a piece of oiled paper, rolled to obtain a uniform sheet and then weighed out into parcels of 10 *momme* each. A good workman will card from 20 to 40 lbs. a day.

By far the greater part of the cloth used in Japan is still woven in the old-fashioned looms, but factories, with all the modern improvements, are gradually being established in various parts of the country, and bid fair in the course of a few years to entirely supplant them. The largest factory in Japan is that at Kagoshima, established in 1866. It is worked by water-power and affords constant employment to three hundred hands. The only one rivalling this in size is that at Sakai, but there are a great many smaller ones. There is one at Ōji near Tōkiō. It is the property of Mr. Kajima, but only turns out yarn.

The culture of cotton, though on the increase, does not by any means keep pace with the requirements of the country, and many thousand bales are annually imported. Japan, at one time, produced enough for her own use, and had a surplus for exportation: but with the exception of the last year of the cotton famine when it attained 10,000,000 lbs., the export has never been large, and has for several years entirely ceased.

Why has the special production fallen off? And will Japan, or can she, ever become a large exporter of cotton? The first query is easily answered; the second will demand careful thought. When the Southern States were put down, the supply of long stapled cotton, always the favourite, was resumed; the price and the demand for the short stapled greatly diminished; and the culture ceased to pay as well as it had done. Again, the improved system of railroads in Hindostan has enabled the peasant to bring his cotton to the market at a much less cost than heretofore. Can Japan ever become, to any extent, an exporter of cotton?

I approach this subject with diffidence, but I think that, granting certain things, it is not only probable, but wellnigh certain. The first thing to be done is to improve the roads, for cotton is too bulky an article to be profitably conveyed any great distance. The second, is to introduce the American species, *G. Barbadense*. This has been done both in India and Egypt, in both cases with complete success; and though the improvident fellahs have neglected the plant and no longer produce any quantity worth mentioning of the better class, India sends yearly larger quantities to Great Britain and the other European countries, and will, in all probability, become the chief source of the cotton supply of the future. The United States yearly consume more cotton, and have in consequence less to export. At present, if I mistake not, one half the crop is required for home use, and in the near future, improbable as it has seemed, and may still seem to some, the export will be comparatively small. Japan is a long way from Europe, and it will be long before she can hope to compete in European markets with Indian and Egyptian cotton, but she has a market at her door—China; a market whose requirements are large—one which ought to be her own, but is now supplied from India.

I know it may be urged that the American cotton has already been introduced and that the results have not been at all satisfactory. Granted, but I would refer to the history of its introduction to India. A number of men were brought over from the "States," sowings were made in the American way, in a variety of localities, and the results were almost all unsatisfactory. The experiment was renewed in a different manner; parcels of the seed were entrusted to the natives, planted by them, and the results are known to the whole world. Let the same experiment be made in Japan, and I feel confident that we may look for a similar result. The cost of the essay which I advocate need be but trifling, and its results, if successful, would repay the outlay a thousand fold. Granting that in some of the more northern districts, in which the hardy *G. H.* flourishes, the more delicate *G. B.* might fail; still a hybrid could be obtained uniting the good qualities of both. I may mention in conclusion, that the oil-cake, now used for manure, forms excellent cattle food, and that the oil itself when refined is nearly equal to olive oil. It is in fact so much like it that it is largely used to adulterate salad oil, and it is a well known fact, in commercial circles, that few parcels of salad oil are free from its presence.

Since completing my essay I have been favoured by Mr. Nishimura of the Y. G. Gakko, with an extract from a poem on "Cotton," written by Kinugasa Iyeyoshi, the *Nai Daijin*. It is taken from an old book called the *Shin-sen Rokugiyo*.

"*Shiki-shima-no-yamato-ni-arawu-kara-bito-no-uye-teshi-wata-no-tane-watage-niki.*"*

The cotton seed that was planted by the foreigner and not by the natives has died away.

* See article in *Japan Weekly Mail*, May 20, 1876, p. 441 for more facts.

The M. B. Co.'s steamer *Hiroshima Maru* left Shanghai yesterday, the 29th instant, and is expected here on Thursday next, the 6th instant, to connect with the O. & O. Co.'s steamer *Belgic*, advertised to leave for San Francisco on or about the 10th proximo.

Correspondence.

MESSRS. SATOW AND ISHIBASHI'S ENGLISH-JAPANESE DICTIONARY.

To the Editor of the "Japan Weekly Mail."

Tokio, June 29th, 1876.

Sir.—In your review of the newly published "English-Japanese Dictionary" by Messrs. Satow and Ishibashi, you have found it necessary "to record your emphatic dissent" from the directions laid down in the preface of the said dictionary, for the pronunciation of the vowels *e*, *i* and *o* when followed by a consonant, viz: that they are pronounced respectively as *e* in *pen*, *i* in *pin* and *o* in *on*. You have here touched on a delicate subject, and one on which great difference of opinion exists, viz: the one embodied in the question: "How should the Japanese *kana* characters best be rendered in their transliteration into Roman letters."

The system of transliteration followed by Dr. Hepburn in the first edition of his dictionary varies from the one adopted in the second (for instance in the rendering of the character ツ). Aston's transliteration again differs from Hepburn's on certain points (he writes *mizunichi* where the latter has *miyōnichi*). Satow, author of the "Kuaiwa Hen" is not only at variance with both of the former (for instance in transliterating ス and ヌ), but even in some places disagrees with Satow, the author of the new dictionary, (in the use of e, é and ë. Hoffmann's system again is entirely different from any of the above. French authors follow a transliteration based upon the pronunciation of their own language; and every one of the minor works on the Japanese language possesses one or more features peculiar to itself (for instance Baba's Japanese Grammar, in which ツ and フ are rendered as *tu* and *ti*!). In fact, there are not two scholars, great or small, who agree *thoroughly* on this point, and I, though one of the smallest—but following the example set by the greater ones—could therefore not be expected to concur entirely with either yourself or Messrs. Satow and Ishibashi; and though it can with equal certainty be surmised that my opinion will not be endorsed by *anybody*, still I cannot refrain from advancing it.

Beginning with you, Sir, I think you have failed to prove, that the pronunciation of the *e*, *i* and *o* is not —I will not say exactly—but best defined in the way adopted by Messrs. S. & I.

The *o* sound in *mon*, *motte*, etc., differs so slightly from the *o* of the English word *on*, that it is by far the best plan to direct the student, as a rule, to pronounce it so, and then leave it to himself by practise to acquire the slight difference that *may* exist.

You mention, that *bek* in *bekko* is not pronounced as the English *beck*; but Satow and Ishibashi nowhere say that it should be pronounced so. (I object to your Reviewer's insetion of the *e*.) The rule given by them is, that *e* before a consonant is pronounced as *e* in *pen*, and a foot note mentions that *beck* in *bekko* must be considered as a syllable terminated by a consonant, which can only mean that the *e* in *bekko* is pronounced as *e* in *pen* (and not as *e* in *beck*, which to my ears sounds shorter). Certainly, the rule of the dictionary on this point is more correct, and easier to understand, than your direction to pronounce it as *bake* "only a little shorter and quicker."

Further on you say, that *ten*, heaven, is certainly not pronounced as the English word *ten*. Certainly not! Nor do Messrs. Satow and Ishibashi say so. In the foot-note above mentioned it is stated that: "cases as *ten* require no explanation," *i.e. as far as the e sound goes;* for on the next page it is distinctly said, that the final *n* is not pronounced as in English, but as the final *n* of French, thus it is clearly meant, that the *e* in *ten*, heaven, is pronounced as *e* in *pen*, or in other words, that its first part *te* is pronounced as the *te* in *ten*, while the *n* is like the *n* in the French *bien*—and no better explanation could, I believe, have been given.

Turning to the transliteration used by Messrs Satow and Ishibashi, it is, as far as I can judge, the best system of all hitherto adopted,—but as said above, to agree *thoroughly* with them would not be *comme il faut*, and I shall therefore proceed to mention the merits and shortcomings I find it to possess.

It is a decided advantage to a system of transliteration, that the student by seeing the transliterated form of a word can conclude how it is written in *kana*, and in this respect the system of Messrs S. & I. has the merit of rendering ヅ by *dzu*, and ズ by *zu*, while Dr. Hepburn writes them both *dzu*. But, on the other hand, there is a character that in the new dictionary is rendered in a manner from which I feel inclined, like you, to record my emphatic dissent: the ヒ is as a rule given as *hi;* in four words, however, (and as far as I can see in no more) it is written *shi*, viz: *shito*, man; *shitori*, one person; *shitotsu*, one; and *shitoye-ni*, earnestly. What reason can be adduced for this? The ヒ is certainly often pronounced as *shi*, but not more so in the four words quoted than in scores of others. One will frequently hear distinctly *shi* fire, *shiru* noon, *shidari* left, and so on. Would it not then have been more consistent—should even the authors' experience be, that the four words quoted are perhaps more frequently pronounced *shi*—always to have written *hi* for ヒ ?†

Another point on which I find the dictionary wanting in system is in the transliteration of the characters エ, ヱ and ～ (the latter only in cases where it is pronounced like one of the former). It is very difficult to establish a system, that would show in the transliteration which of the three above *kana* characters is used; for this reason, that it is not always easy to decide if one or the other should be employed. It would, therefore, be necessary to write エ and ヱ *e*, and ～ *ye*,—or perhaps write them all *ye*, as Dr. Hepburn does. On this point Messrs. Satow and Ishibashi seem to follow no system whatever, and this is decidedly objectionable. Of numerous instances I will quote the following:—

Of words, in which エ appears, they write:

moyeru, to flame	but	*oboeru*, to learn
kiyeru to grow cold	,,	*kieru*, to go out (as fire)
yen, Japanese dollar	,,	*en*, affinity
iye, no	,,	*eigo*†, English

Of words containing ヱ they spell

yeye, cause	but	*chie*, ability
rinye, transmigration	,,	*ekiu*, drawing

and finally of words with ～

uye, top	but	*mae*, front
sogeru, to annex	,,	*kaeru*, to return

I now come to my main object in writing on this matter, which is to propose to all authors and scholars who take an interest in the subject, that they would arrange a meeting, or meetings—for one would not suffice—on which, after mature consideration, a system should be agreed upon and recognized as *the* system. It is evident that this would be an immense boon to the science, and not only make the use of grammars, dictionaries, etc., that may be published in future, easier to the student, but also tend to improve the pronunciation generally of Japanese words. The present chaos in which some people pronounce the vowels with the sounds peculiar to the English language, while others pronounce them with their open Italian sound, gives rise to ridiculous mistakes. As an instance I may mention the town name generally written *Hiogo* (pronounced with the Italian sound of *i*). How frequently is this not pronounced *Haiogo* by people, who take the *hi* to be similar to the one in "*to hide*." I have further seen the word *written* in this way by a person who had heard it pronounced, without knowing how it was spelled, and who perhaps had some notion of the system of transliteration used by Dr. Hepburn and others. Had this name in its new form *Haiogo* been laid before an Englishman, who was ignorant of any such

---

* This attempt to distinguish between ヒ *hi* and ヒ *shi* remind me—*stat comparatione*—of an explanation I once heard given of the word ヒト viz:

hito means "a he" *i.e.* a man.
shito ,, "a she" i.e. a woman.

† To show the difficulty in establishing a system for transliterating these characters, I may mention that Mr. Satow in his "Kuaiwa Hen" writes *hieru*, and *yeigo*.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

system, he would undoubtedly have pronounced it *Heogo*, and next time he had occasion to write it, have spelled it *Hayogo* or goodness knows how!

Really, it is time that something should be done in the matter, and I would earnestly recommend the above proposal to all concerned, especially to "the leading men" —for without them, of course, no satisfactory result could possibly be arrived at.

Allow me, before closing my letter, to draw the attention to an error I have found in the new Dictionary. The ***starboard side*** of a ship is in Japanese called *omo-kaji*, and the *port side tori-kaji*, as the Dictionary quite correctly has it. The English expression "***to starboard the helm***" is in itself a very insignificant and to non-sailors perplexing term: the helm is, according to Webster, "an instrument consisting of a rudder and a tiller," but it is evident that by starboarding the tiller (i.e. the part of the helm within the ship), the rudder (i.e. the part of the helm outside of the ship) will be ported, and it is consequently impossible for the uninitiated to conclude which position the *rudder* is brought into by "starboarding the *helm*." In practise, however, this expression only means "to starboard the tiller of the helm," that is, to turn the head of the ship *to port*; and in the same way "porting the helm" turns the ship to starboard. The Japanese terms are, however, not formed on this principle: when they want the ship to ***turn to port***, they ***say*** port and vice versa,—just as in English you command soldiers "Right wheel" when they are wanted to turn to the right. Therefore, though ***starboard*** is ***omo-kaji, to starboard the helm*** must be ***tori-kaji wo suru.***

The dictionary of Messrs. Satow and Ishibashi, as well as Dr. Hepburn's, having for these expressions got translations exactly opposite to the right ones, I give below what Messrs. Satow and Ishibashi say on the subject, and what it would have been correct to say.

Satow and Ishibashi's Dictionary.	Corrected expressions.
Helm, n. *kaji*: port the —, *tori kaji*; starboard the—, *omo-kaji*.	Helm, n. *kaji*; to port the—, *omo-kaji wo suru*: to starbord —, *tori-kaji wo suru.*
Port, n. ..... (left side of a ship) *tori-kaji.*	Port, n. .....(left side of a ship), *tori-kaji.*
	Port, t.v. To—the helm, *omo-kaji wo suru.* Port the helm! *omo-kaji.*
Starboard, n. *omo-kaji.*	Starboard, n. *omo-kaji.*
	Starboard, t.v. To—the helm, *tori-kaji wo suru.* Starboard the helm! *tori-kaji.*

Of other mistakes I have found none but printer's errata, which, notwithstanding the long list of corrections accompanying the book, are not a few. Thus, on Page 11, I find:

Col 1, line—17	motaseru 1	for	motaseru	2
,, ,, —15	uchitsukeru	for	uchi-tsukeru	2
,, ,, — 8	nage-tsukeru 1	for	nage-tsukeru	2
Col 2, ,, —17	agile n.	for	agile	adj.

However, these mistakes can hardly mislead an attentive student, and upon the whole great praise is due to the authors for the practical way the dictionary is arranged; and I for one am extremely grateful to them for their valuable addition to the scanty means we at present possess of acquiring a knowledge of the Japanese language.

I remain, Dear Sir,
Yours faithfully
WILLIAM BRAMSEN.

To the Editor of the "Japan Weekly Mail."

Yedo, 27th June, 1876.

Sir,—When your Reviewer of Messrs. Satow and Ishibashi's Dictionary says that the *e* in "bekko" approaches the first sound of *a* (in "bake") more nearly than the second sound of *e* (as in "beck"), and that the *e* in "ten" (heaven) is not pronounced like the *e* in "ten" (the numeral), he ought also to tell us whether he has studied English in Scotland or Japanese at Nagasaki.

If the second sound of *e*, as well as the fourth of *o* (as in "on"), and the second of *i* (as in "pin"), are "entirely foreign to the Japanese language," how would your Reviewer dispose of such words as, "beri," "yen," "arimasenu," "onna," "dzubon," "kon," "piri," "minu," "hin," &c.

No one example can illustrate *all* the sounds of a Japanese vowel, varying as they do with its position or concomitants, but it appears to me that Mr. Satow's fault of omission pales completely before your Reviewer's crime of commission.

I am, Sir,
Your obedient Servant,
F. B.

"EVERY MAN IN HIS HUMOUR."

To the Editor of the "Japan Weekly Mail."

Sir.—I am an elderly gentleman, studious and lonely in my habits, of a retiring disposition, and somewhat quick, but not ungenerous, in my temper. My enemies I am told are pleased to sum me up as *old* and *irritable*. Old, forsooth, because of certain corrugations in my forehead—produced, I'd have them understand, by meditation. It's like their malice to say I never read a book, and even slumber over my evening paper. I admit a thread or two of silver amongst the gold upon my head,—but what of that? And if the locks upon my temples do show an unseasonable attenuation,—a mere overzealous pruning of Time's scissors so to speak—an all too hasty garnering before the Autumn, —am I to suffer by such reckless husbandry, and be put down as *old* and *irritable*? And here I dispose of their second epithet by denying at once and for ever that there is any truth in it. I do not deny, however, that I detest to be contradicted, and if I have my way in everything I ask for nothing more. Is this unreasonable? Is this irritability? It occurs to me that possibly you may consider this an unnecessarily lengthy description of myself,—a portrait pre-Raphaelistic in its minuteness and attention to detail in fact. To such objection I would reply that it is a necessary preamble to my story, an introduction which cannot be dispensed with, if my case is to be rightly comprehended. Besides, Sir! I claim a right to tell my story in mine own way, and am indisposed to abate one jot of that freedom of speech which my forefathers fought for and obtained.

I am, as you will remember to have read early in this my statement, addicted to study and of sedentary habits. I spend much of my time in my arm-chair, and rarely, if ever, take the air further than is implied in a change from room to room, or from a perpendicular position to a horizontal one. Warned by certain premonitory symptoms that such a course of life might end in an apoplexy, I lately sought advice, and have been recommended walking exercise as an indispensible aid to convalescence. To this I readily assented, but on proceeding to carry out the recommendation I have discovered that it is impossible. Yes, Sir! I find that I, a freeborn subject of Great Britain, must either submit to be trundled about in an unsightly and uncomfortable vehicle, or remain a prisoner, threatened with apoplexy, in my own house! And all because I am afflicted with a constitutional aversion to resistance, which, in a man less undeniably valiant than myself, might perhaps be accounted—timidity. To be brief, I am a victim to the ferocity of *jinriki* men. My residence is so situated that the only two exits which it commands are occupied by these ill-regulated, evil-looking, tattooed and painted mendicants. Do I desire to turn by the right hand down the hill, I am, as soon as seen, hailed and gesticulated at. Am I inclined to explore the neighbourhood upon my left? Scarce a hundred yards from my own gate I am surrounded by vociferating belligerents disputing for my person, and before I have time to remonstrate I find myself robbed of my walk, and being whirled away by two noisy and unsavoury fellows, who, I am persuaded, from their boisterous laughter when they pass a rival "stand," are making merry at my expense the whole time of my forced ride. But, Sir! what hurts me most, and to this I would bespeak your particular attention, is a vile habit which I have seen my tormentors pursue of late when my unfortunate person is perceived by them. This is neither more nor less than a drawing of lots, by which I become the property, for the time being, of the savage who draws the longest one, without the smallest regard

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to my wishes or convenience in the matter? Is your able pen powerless to shelter me from this daily recurring assault and battery, and, if not, can you rest contented in inaction whilst the unseemly practise of rattling for an elderly gentleman inclined to corpulence, and threatened with an apoplexy,—as if he were an anti-macassar or other piece of fancy work—is being carried on almost before your very eyes?

I am, Sir,

Yours faithfully,

MOROSUS.

THE EUROPEAN GAMUT.

To the Editor of the "Japan Weekly Mail."

Kiyoto, 23rd June, 1876.

Sir,—In a somewhat recent issue of your paper the statement was made that Japan had introduced the western gamut of music.* On her own soil and in foreign lands she has many friends, and they hail with joy every advancing step she takes in any of the useful arts or sciences. When a little while since she called for master artists from Italy to teach her youth painting, this was a glad surprise to many—a beautiful advance to a beautiful art. And now when she calls for the system of music as taught by what are called the western nations, a system of music based on the true laws of sound—that joy is greatly intensified. I presume every foreigner who is a lover of music visiting these shores—says, the Japanese ought to be a musical people,—the land a musical land. In her climate, which rivals Italian skies, they see much of which to make such a people. And so in the natural scenery of the country and so in the sweet singing birds that abound in almost all parts; but such a land she is not. None such come but to weep over the poor music that is everywhere heard, whether made by an instrument or by the voice. But since the fact is stated, she possesses now that which, if properly used and taught, would make her such a land of music as her friends feel she should be, permit me through your paper to say a word to those who have this art in keeping. And what we would say is simply this; let this art be given to the *masses*—the *millions*. It should not be pavilioned and curtained in royal palaces or given to the few favored ones only,—it ought to be given to the whole nation. Music is not like painting. This art but a few have the ability to use—as well as the time. But the gift of music is more universal, it is more like the gift of speech—for all. And it has been said he who can *talk* can *sing*, since the voice, it is said, modulates itself through the *scale* in ordinary conversation. A gift then so universal should be universally cultivated, and all helps a nation asks for from a superior one in this line should be for the whole people.

To reach the mass with the system of music now introduced need not be regarded as a very difficult matter. One way it could be done would be by expecting teachers of English in the schools to teach also music. But this might not always be practicable—and better way would be to have "Normal Schools" or "Conservatories of Music" established in different parts of the kingdom—to train up *native* teachers. These when qualified should go out into all parts of the kingdom, to every city, town, village, school district, school house, and teach. By some such simple plan the masses would be reached, and the nation started in the right track to become masters of music.

It should not be objected to that the Japanese have no "ear" for music. That the adult ear is painfully obtuse to the finer or correct sounds of music, is true. And this is so, I believe, because all the training the ear and tongue gets from infancy up is in and among and by the most unmusical of sounds both by the voice and instrument. But could children be taken and taught, we should, I apprehend, see here what is seen in our own native lands, adults, male and female, singing correctly, singing sweetly. The ear of a child here is by the Creator attuned to sounds as correctly as any other children, and if they could be taught they would be as sweet singers. During the past winter I have taught a class of native boys,—some young men—vocal music. At first, I need not say to one who knows what correct sounds are, what a pain it was to sing the simple scale with that class. But I "conquered my prejudices" and in time conquered the obtuseness of their ears. That class now, considering the not very long time I have been with them, and the dullness of their ears, sings very well. From my own experience I can say, *there is hope for Japan.* I would urge therefore, that as now the western art of music, which is the *true* art, has been introduced, let it be given to the nation at large. And Japan in a generation or two will greet all coming from the lands of true song with something better than we now hear, to say the least. I would suggest, too, that the western art of *writing* music, its stave, *name* of notes, character, time, *all* be taken in just indeed as the reading of English is taken in the *Roman* letter, the *form* of page, &c. And this should be so, because then the whole range of European music would be thrown open to pupils, the old masters and the present masters and the new ones. To materially change the mode of writing would at once shut out the pupil from the grand masters of the art. And a sad thing would this be for the aspiring pupil.

Again would I repeat it, as now the true art of music is introduced into Japan, let it be given to the whole people—not to the few, that this nation may become a truly musical nation. Already she is leading the oriental nations in the introduction and use of most of the sciences—that of arms, of law, of medicine, chemistry, natural philosophy, geology, painting, commerce. Let her take up the culture of music and among all these nations she will be the Queen,—the Italy of song.

Yours,

Respectfully,

E. T. DOANE.

* Our correspondent is wrong in this; but it is practically true.

Law Report.

IN H. B. M.'S CONSULAR COURT.

Before R. Robertson, Esq., Consul.

Monday, June 26, 1876.

W. Allan *vs.* Thomas Matthews, master of the British ship *Cathaya*.

This was a charge of assault.

Defendant admitted the charge, but pleaded provocation.

W. Allan, seaman on board the *Cathaya*, sworn: On the 23rd inst. I asked the captain for my discharge, and he told me that he would see about it. On Saturday I again spoke to him about my discharge. The captain then asked me, "Who are you?" I told him I was no dog, when the captain struck me. This happened between 7 and 8 in the morning. I had some conversation with the captain about the food and other matters on board. He struck me with his fist in the face. There were several more men on the poop when it happened, and I asked them to be my witnesses.

Samuel Tuggett, sworn: I am an able seaman on board the *Cathaya*. I saw the captain strike Allan last Saturday morning. The captain and Allan were speaking together, but I did not hear what they were talking about.

Frederick Wellrom, sworn: Last Saturday morning I saw the agent of the ship, the captain, and Allan together on the poop. Allan was telling the agent about the treatment he had received from the captain, and about his wish to be discharged, and the captain struck him.

The sailmaker gave similar evidence; he added that the captain, before he struck Allan, had ordered him twice to leave the poop. The blow was only a slap with the flat of the hand.

Defendant said that the plaintiff was impertinent in his arguments, pointed his finger at him and told him that he was not master of the ship; defendant repeatedly ordered him off the poop, and at last gave him a slap.

Ordered to pay costs of the summons.

W. Allan, seaman on board the British ship *Cathaya*, was charged with being absent without leave.

Thomas Mathews, master of the *Cathaya*, stated that Allan obtained leave last Saturday to go ashore to see the Consul; he returned and again went ashore the same evening, against the express orders of the mate. He only returned on board this morning. There may have been other men absent without leave, but they have, in such case, returned on board the next morning in time to turn to work.

Accused said that it was already dark when he went ashore on

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Saturday evening, and that he returned on board this morning before work was commenced.

Sentenced to 48 hours' imprisonment.

Tuesday, June 27th, 1876.

James Buckle was charged with being drunk and incapable.

Prisoner admitted the charge.

Police Constable Mansbridge, sworn: Prisoner was brought drunk to the station last night about one o'clock. He is a discharged seaman.

Sentenced to pay costs, or in default of payment 24 hours' imprisonment.

Wednesday, 28th June, 1876.

R. CONNER *vs* JOHN POPHAM, Master of the British barque *Armanella*.

This was a claim for $28 for pilotage.

Richard Connor, sworn: On the 26th instant I met defendant at Domoney's and offered my services as pilot. The same day at 2 p.m., at Mr. Martin's office, defendant asked me if I would take his ship out next morning, and I agreed to do so at $2 a foot. Later on Cook told me he was going to take the ship out.

To defendant: I did not go on board because I heard you had engaged another pilot.

To Court: It was at 4 p.m. that Cook told me he had been engaged to take the *Armanella* out. Mr. Martin told me at 7 p.m. he had engaged Cook. I was to have been on board at 5 the next morning.

John Popham, master of the *Armanella*, sworn: I told plaintiff at Domoney's that Christian would take me out, but saw Cook at Captain Black's at 4.30 p.m., and engaged him. I was with Captain Black in the evening, when plaintiff came and remonstrated with me.

To Court: I distinctly told plaintiff at Mr. Martin's that if Cook or Christian came, one of them would take me out. Cook came yesterday morning. Christian told me that Cook was a partner of his.

Verdict for defendant.

Thursday, 28th June, 1876.

REGINA *vs.* HENRICK WEYEMIN, ship's carpenter on board the British ship *Cathaya*.

Accused, who was charged with refusal of duty, pleaded guilty to the charge, but stated that as he was carpenter on board he did not think keeping watch was his duty.

Cautioned and ordered to pay costs of summons.

Friday, 30th June, 1876.

REGINA *vs.* JOSEPH O'NEIL and GEORGE STANLEY KIRBY.

Charge: Vagrancy.

H. Pagden, sworn: Joseph O'Neil came to me and begged for meat for his sick companion Kirby. I found out afterwards that Kirby was not sick. About four nights ago O'Neil begged of me, asking me to give him money. Kirby met me in the street some two months ago and said he was starving. I gave him $1 and told him to come and work for me the next day. He would not come to work. The two could have had work at any time latterly, but they will not work.

George Wickers, sworn: I have been annoyed by these men several times. They live close to me and are always fighting. O'Neil has begged of me. I have bought bread for him, and my Japanese servant has given him beef and tea. Kirby is a most intolerable nuisance.

Sergeant Loxton, sworn: I know these two men to be loafers. They have been loafing for months. I know that O'Neil has begged. Neither of them has any visible means of livelihood.

Accused could give no satisfactory account of themselves.

Sentenced to one month's imprisonment, on the expiration of their term of imprisonment to be called upon to find security for future good behaviour, failing this to be deported.

NAKAJIMA SAISUKI *vs.* W. P. MITCHELL.

This was a claim for $2,700 paid by plaintiff to defendant on a kerosene oil contract and now reclaimed by plaintiff, who alleged that the contract had been broken by defendant. Plaintiff also claimed damages for breach of contract.

Mr. G. Ness appeared for plaintiff, Mr. Montague Kirkwood for defendant.

Mr. Ness opened the case by stating that on the 14th of May last Mr. Mitchell called on plaintiff in Tōkiō and proposed to him a contract for kerosene; two days after plaintiff came to Yokohama and entered into a contract with defendant for 15,000 cases kerosene at $2.67½ to be delivered on the 22nd May, against a payment of 20 per cent of the purchase money and a security from the Prince of Sawa for the rest. Plaintiff paid $700 bargain money. When plaintiff called upon defendant for delivery, defendant stated his inability to deliver the whole lot, but offered to deliver 2,000 cases. Plaintiff agreed to pay $2,000 and take delivery of the 2,000 cases on the 25th May. The plaintiff paid the amount, and defendant sent him to the Hatoba to take delivery; but plaintiff had no sooner got possession of about 100 cases, before a Mr. Stone, from No. 28, came and claimed the kerosene as his property. Mr. Mitchell was sent for, and after some conversation with the gentleman from No. 28, proposed that plaintiff should give him a guarantee for the payment of the remainder of the $30,000. Disgusted at defendant's tergiversations, plaintiff went and lodged his complaint at the Consulate. Defendant had thus either sold goods which he knew did not belong to him, or he had received money on a bargain which he was unable to carry through. In reply to proposals to arrange the matter amicably, defendant insisted upon retaining $700 out of the money paid into his hands. In addition to the $2,700 paid, Mr. Ness stated that he must claim damages, which will bring his claim to $6,500. He now called plaintiff.

Nakajima Saisuki, who was cautioned, deposed: On the 14th of May last, Mr. Mitchell, accompanied by an interpreter, came to my place at Tōkiō. We entered into a provisional contract (paper produced); this is the contract. On the 16th of the same month I came to Yokohama, went to Mr. Mitchell's place, No. 95, and, accompanied by him, I went to inspect the kerosene about which I had entered into a provisional contract on the 14th. Mr. Mitchell's interpreter, Totska, went with us; but that interpreter is not now in Mr. Mitchell's employ. We went on board ship, and saw the kerosene. The captain said there were 20,000 cases. I had contracted for 15,000 cases. Next time I saw Mr. Mitchell was on the 20th May.

Mr. Kirkwood here demanded that the rest of plaintiff's witnesses should leave the Court room.

This was done, and Mr. Ness then insisted that defendant and his witnesses should also leave the Court room. Defendant and his witnesses thereupon withdrew.

Nakajima Saisuke continued: On the 20th of May I entered into a final contract with Mr. Mitchell (paper produced). This is the contract. On making the contract I paid Mr. Mitchell $700, and received his receipt. This is the receipt. On the 22nd of May I went to No. 95 to receive my goods, agreeably to contract. I was accompanied by Furokawa and another Japanese. I saw Mr. Mitchell, and his interpreter Totska. I asked for my goods. Defendant answered that I could not get them to-day, but must wait until the morrow. Next day, the 23rd of May, defendant's interpreter (Totska) came to my hotel, and told me that as there were so many goods on board, the kerosene could not be all delivered at once; he asked me to take delivery in two lots. I said this was not according to our contract; but at last I consented, and gave a written document to that effect. (Paper produced.) This is the document. (The court interpreter stated the substance of the document was that plaintiff would, on the day stated, receive the kerosene in two lots.) I said that I wished to have half of the quantity that same day, but Totska requested me to take 2,000 cases that were being landed on the hatoba. I was fully prepared, on the 22nd and 23rd of May, to carry out my contract by paying the money and delivering the guarantee of Sawa, which would be sent to me as soon as I telegraphed for it. On the 24th I went to the hatoba, and saw there 200 cases kerosene, but there should have been 5,500 more, as I was to take delivery in two lots. Totska came to the hatoba. I told him his master had again broken the contract, and I went with him and Furokawa to No. 98 on the Bluff, where I had a long conversation with Mr. Mitchell about this breach of contract. Mr. Mitchell said that the balance of the first half would certainly be landed the next day, but added that the duties had to be paid that same day, and asked for an advance of $2,000. A document was then drawn up at Mr. Mitchell's place, to serve as an additional agreement between us. I was to receive 2,000 cases of oil the next day, and to pay $2,000. I was at that time fully prepared to carry out the original contract, and told Mr. Mitchell so. On the next day, the 25th, I went again with Furokawa, Mano, Matsumi, and Kawamura, to the hatoba. I there met Mr. Mitchell, his interpreter, Totska, and another Japanese whose name I do not know. Mr. Mitchell said: "Here are the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

2,000 cases; now pay the $2,000." I inspected the cases, and found 100 cases injured; I told Mr. Mitchell so, and he said he would replace them, but he did not do so. I paid Mr. Mitchell by a cheque, delivered into his own hands. He went away with Furokawa, and when he came back he handed me my receipt. (Paper produced.) This is the receipt. He then said he would leave Totska to complete the delivery, and left. He said distinctly that I could now take delivery of these 2,000 cases.

Adjourned until 1.30 p.m.

The case was resumed at 2.30 p.m.

Examination of plaintiff, Nakajima Saisuke, by Mr. Ness continued: I then commenced to take delivery, but when we had got about 100 cases on board, a foreigner from No. 28 came and said the goods were his. I replied that I had bought them from Mr. Mitchell at No. 95. I do not know the foreigner's name; he was accompanied by a Japanese interpreter, and he said himself that he belonged to No. 28. I told him I had nothing to do with him. He went away and shortly afterwards he came back with Mr. Mitchell, who now asked me for Prince Sawa's guarantee, which, however, I refused, as not being provided for in the contract. Mitchell said he himself was perfectly satisfied to let the cases go, but that the gentleman from No. 28 was his partner, and he was unwilling that the cases should be delivered without Sawa's guarantee. I answered that this was a breach of contract, and asked him to return me my $2,000. I had never before known the gentleman from No. 28, nor had any transactions with him. I then went to make my report in the British Consulate, but at the gate of the Consulate Mr. Mitchell's interpreter caught me, and asked me not to say anything in the Consulate as the matter should be amicably arranged. I yielded to his entreaties and went back to my hotel, where I waited for proposals from Mr. Mitchell, but as none came, I sent Matsae Hiyata to Mitchell's place to make enquiries. Totska had promised that the $2,000 should be immediately returned, but as yet they have not been returned, nor have I since got delivery of the 2,000 cases of kerosene. Mr. Mitchell has in all received $2,700 from me under this contract. I have received no goods from him. On the 26th of May Totska came to my hotel, and told me that Mr. Mitchell had resolved to return the $2,700 and cancel the whole contract, and he asked me to come to Mr. Mitchell's house. I went there at once and saw Mr. Mitchell, who told me that he had gone last night to see Prince Sawa, and that the Prince had told him that he was not prepared to be my guarantee. I answered that that was impossible because I had an express agreement with Prince Sawa that he should be my guarantee. Mr. Mitchell accused me of breach of contract, but I replied that, on the contrary, the breach was on his part. I had already made a contract with a man named Mano to sell him the whole lot of 15,000 cases, and in case of failure to fulfil the contract I should forfeit to him 5 per cent. on the contract price. (Paper produced). This is my contract with Mano.

Mr. Ness here read a translation of the contract to the effect that plaintiff sold 15,000 cases kerosene at $2.65, received $2,000 bargain money, and bound himself to deliver the kerosene within 5 days. Mr. Ness also read a translation of a subsequent letter to Mano in which plaintiff asks for respite with the delivery as some trouble has arisen between himself and Mr. Mitchell, and in case the contract should be cancelled he promises to pay to Mr. Mano the damages he may receive from Mr. Mitchell.

Examination continued: In order to satisfy Mano for the moment I have had to buy 2,000 cases of kerosene. If I do not fulfil the contract Mano will claim from me 5 per cent. on $39,750. If I had gone into the market to buy 15,000 cases of kerosene in order to fulfil my contract, I should have had to pay a high price for the oil, and I do not even think I could have found the quantity in Tokio.

To Court: I delivered 2,000 cases on the 8th of this month to Mano.

This concluded the evidence of plaintiff.

Mr. Ness now read three letters from himself to defendant, dated respectively 13th May, 1st and 6th June, the last letter informing defendant that he (Mr. Ness) was in possession of the 20 per cent. and Sawa's promissory note, and claiming fulfilment of the contract or he should take proceedings. Mr. Ness further read two letters to himself from defendant, the last dated 5th June, in which he offers to restore plaintiff his money after deducting about $800 for losses and expenses; if this offer be not accepted, he shall hold plaintiff responsible for breach of contract, and liable to pay $5,000 on that account.

Cross-examined by Mr. Kirkwood: I have known Sawa for several years, and Saito since March last year. The other members of my establishment have long known Saito; he was formerly a *yakunin*. Saito held Sawa's power of attorney in this kerosene transaction. Saito was to receive a commission on the transaction, but its exact amount was not mentioned. Sawa was to have a share in my business. Furokawa is an old acquaintance of mine; he is not my agent; he was formerly employed in my shop. I have only once trusted him with my seal, namely, on the 23rd May, at No. 98, on the Bluff. I have never authorised him to write letters in my name. Furokawa would have received a commission on the oil transaction; the amount of commission would depend on his exertions. I have not paid any money whatsoever to have this transaction carried out. It was Furokawa who first suggested the idea of getting Sawa's guarantee. On the 14th May, Mitchell, Totska and Furokawa came to my shop in Sakurada. On the 18th May, after I had been in Yokohama on the 16th and seen the goods for myself, I went to Saito as Sawa's attorney, to get Sawa's guarantee. I had already written a letter to Saito, not of importance, only telling him I was going to Yokohama. Sawa, in return for his guarantee, was to hold the title deeds of my house: the title deeds were deposited with Saburo on the 26th of May. I had received a document from Saito as representative of Sawa, stating that the guarantee would be forthcoming. This document I received on the 17th in answer to a letter I had written to Saito; it was brought to me by Furukawa, whom I had sent to Saito's house to call for it. The provisional contract was signed at my house at Sakurada on the 14th May, in the presence of myself, Mitchell, Totska and Furokawa. The final contract was signed at No. 95, Yokohama, on the 20th May. Between the 14th and the 20th no other contract was signed. Between the 16th and the 20th I did not see Mr. Mitchell. I then saw him at No. 98 on the Bluff, in the presence of Totska, Kawamura, Furokawa, and Matsae. The contract was drawn up by Mr. Mitchell before me; it was interrupted to me by Totska, and Totska and Kawamura drew up the Japanese copy. I next saw Mr. Mitchell on the 22nd. I had the money ready to pay on receipt of the kerosene. Sawa's guarantee was not to be handed over until I saw the kerosene was there. The arrangement for the guarantee were completed (paper produced). This is a letter, dated the 23rd May, about receiving the kerosene in two lots; it is written and signed by Furokawa, but the seal is mine. I had given my seal to Furokawa for that purpose. Furokawa has put my seal to no other letter It was windy weather on the 22nd; on the 23rd I went to the hatoba, about 2 p.m., to receive my kerosene. I did not meet Mr. Mitchell there. Furokawa was with me: the 2,000 cases were landed late on that day. I did not take delivery of the 2,000 on that day, because it was a breach of contract to offer them to me: my original contract was to receive 15,000 cases. I did not see Mr. Mitchell that day. I went back to my hotel. I sent Furokawa to No. 98 on the Bluff, to enquire about the matter. That was about 6 p.m. By my authority and at defendant's request Furokawa then wrote at No. 98 on the Bluff, the letter agreeing to take the kerosene in two lots. No more letters were written by Furokawa in my name on that date (Letter produced). This letter is in Furokawa's handwriting; my name is signed to it; it is dated the 23rd May.

Mr. Kirkwood read a translation of this document which is a promise to pay $2,000 next day at 9 a.m. and in return to receive 2,000 cases kerosene oil.

Cross-examination continued: I instructed Furokawa to write that letter. Next day, on the 24th May, at 9 a.m. Totska came to my hotel and asked for the $2,000. I answered him that it was not in accordance with the contract, as I saw no preparation for landing the rest of the 15,000 cases. I did not ask defendant to wait until the next day for the money. I had made arrangements with Mano to let me have the $2,000 as soon as I asked for them. Mano had not written to me that he could not pay me $8,000 on our contract but only $2,000. On the 24th no mention was made on either side of the guarantee. I did not send any one to Mr. Mitchell on the 25th to tell him I was ready to take delivery. After having received the $2,000, and after I had taken delivery of about 100 cases, then Mr. Mitchell, on the hatoba, asked for the guarantee through his interpreter Totska. The arrangements with Sawa about the guarantee were completed before the 25th. My title deeds had been deposited with Saburo as security for Sawa. On receipt of a telegram from plaintiff that the goods were ready to be duly delivered, Sawa's guarantee was ready to be handed over. The price of kerosene oil in Yokohama on the 25th was from over $2.28 to $2.30 per case. I heard that some oil was sold by auction on the 27th. I had already agreed to sell my oil to Mano at $2.65 per case. I never told Mr Mitchell that Sawa's note was a negotiable paper; I did not consider it in the light of a commercial paper.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr. Kirkwood, in reply to the Court, declared that he considered it quite proved by the evidence of this witness that the guarantee of Sawa was not forthcoming, and would never come because plaintiff could not satisfy him with sufficient security.

Mr. Ness said that he should place Sawa in the witness box to-morrow.

Adjourned until to-morrow at 10 a.m.

Saturday, July 1, 1876.

This case, which was adjourned yesterday was continued to-day, when

Mr. Kirkwood brought up the question of his client having yesterday been ordered out of court during the examination of plaintiff; and, after some argument, His Honour declared that, all things considered, and especially Rule 73 in the Law of Procedure for China, he thought Mr. Mitchell should be allowed to remain in court.

Mr. Mitchell in consequence entered the court.

Mr. Ness continued his examination of Nakajima Saisuke.

Mr. Kirkwood objected that the examination of this witness had been finished yesterday. Objection overruled.

Nakajima Saisuke: The reason why I did not buy kerosene in the market to fulfil my contract with Mano was, that there was no other place where I could get kerosene partly for cash, partly on credit.

Mr. Ness next called.

Nobutane, the Prince of Sawa: I have no occupation; my rank is noble. Previously to the 20th May, I had promised Nakajima that I would give him the guarantee mentioned in his contract with Mr. Mitchell. That guarantee I have always since been willing to give (paper produced). This is my signature.

Mr. Ness explained that the document was Prince Sawa's guarantee, which he, Mr. Ness, had offered to defendant's counsel on the 8th June, together with a cheque for $5,325, if defendant would fulfil the contract.

Cross-examined by Mr. Kirkwood: I think it was in the beginning of April last that this kerosene business was first mentioned to me by Kawamura. I appointed Saito as my agent and gave him my power of attorney. In return for my guarantee, I was to received the title deeds of Nakajima's land and houses. These documents I received on the 20th May. I had instructed Saito to inquire into the matter, and after he had reported to me, I was to satisfy myself that everything was right, and put my seal to the guarantee. I satisfied myself about the matter on the 28th or 29th May. I put my seal to the guarantee on the day it is dated, viz: June 8th. I received a telegram about this business; the date I have forgotten, but it was before the 29th May. Nakajima was to let me know when my seal to the guarantee was wanted. Mitchell came and saw me, and I told him that as soon as I got word from Nakajima that my guarantee was wanted, it would be forthcoming. About the beginning of May, or the end of April, I personally told Nakajima that I would give the guarantee. I am a nobleman. A Japanese nobleman never receives rewards, and it is not my habit to receive commission for doing a man a service.

Mr. Ness next called

Matsae Hiyata: I am a *shidzoku*. I was in Mr. Mitchell's office in the month of May. I do not remember the date. I had nothing to do with the oil contract. I saw that a certain document was drawn up and signed, but I did not examine the document. Nakajima paid $700 on that occasion to Mr. Mitchell. Two days later I went with Nakajima, Furokawa, and Kawamura to Mr. Mitchell's place; I saw Mr. Mitchell and Totska, the interpreter, there. Nakajima said he had gone there to see about a contract. The particulars of the conversation I do not remember. There was a great deal of conversation. (Paper about receiving oil in two lots exhibited.) That document I saw written. As far as I understood the conversation, Mr. Mitchell proposed to give delivery in four lots, and Nakajima protested against this, saying that his contract gave him delivery in one lot, but at last consented to take delivery in two lots. I do not remember the date when I went there again. Nakajima then said that he wanted delivery according to the terms of the contract. That would be 15,000 cases. Mr. Mitchell objected that Sawa's guarantee had not yet been produced. This was at my next visit after the day the last-named document had been signed. I went to the hatoba with Nakajima, Kawamura, Furokawa, and several other Japanese. We went to receive 2,000 cases of kerosene oil which had been landed. I heard some conversation between Mr. Mitchell and Nakajima. Mr. Mitchell asked Nakajima for Sawa's guarantee, and Nakajima replied that the guarantee would be given as soon as 15,000 cases were landed. I saw 2,000 *yen* in Japanese *satsu* paid by Nakajima to Mr. Mitchell, on the hatoba. It was after this that Mr. Mitchell asked for the guarantee. Mr. Mitchell went away, and came back a second time. During his absence, Nakajima was making arrangements with the men taking delivery of the oil. Totska was also there: he inspected the cases, and counted them. I do not know who gave leave to take delivery. Totska saw Nakajima's men put the cases on board, and made no objection until about 100 cases had been put on board. A foreigner came there, but for what object I do not know. He had some conversation with Mr. Mitchell. I do not know if he was there before Mr. Mitchell went away. I do not know whether it was before or after his conversation with this foreigner that Mr. Mitchell asked for Sawa's guarantee. (Paper exhibited, being Nakajima's promise to pay $2,000 the next day, on receipt of 2,000 cases.) I have seen that document before. It was in virtue of that agreement that I went to the hatoba with Nakajima. The $2,000 were paid on the hatoba by Nakajima, and the 2,000 cases were then on the hatoba ready for delivery. In the course of delivery Totska interfered, and stopped further proceedings. I do not remember if the foreigner was there when the delivery was stopped. Nakajima re-claimed his $2,000; to the best of my recollection Mr. Mitchell answered that that money must be paid to No. 28. If the foreigner was from No. 28 I do not know, nor do I know if the foreigner said anything with regard to the kerosene. Before this took place on the hatoba I was almost every day at Mr. Mitchell's place. After leaving the hatoba on the 25th May, Nakajima went to the British Consulate to lodge a complaint. He did not lodge any complaint because it was after business hours at the Consulate. I did not hear that day any further conversation between Nakajima and any of Mr. Mitchell's people. Totska returned to Nakajima's hotel on the 27th; between the 25th and the 27th I did not see Totska.

Cross-examined by Mr. Kirkwood: About the 10th of last month I first saw Totska, and after that I saw him almost every day up till the 27th. I do not know when I first went to Mr. Mitchell's place on the Bund. Sometimes I have been there as often as twice or thrice in a day. I was present there when a contract was drawn up in English. The date I do not remember. Whether it was only a temporary contract or not I could not say. I do not recollect that a temporary contract was there destroyed at the same time that a final contract was signed.

Mr. Kirkwood here wanted to ask the witness if Nakajima, at the time the contract was signed, had said that Sawa's guarantee was a negotiable paper. To this cross-question Mr. Ness objected, and it was disallowed by the Court.

Cross-examination continued: Furokawa, Kawamura, and I were present when the contract was signed.

Mr. Kirkwood here put the same question as just disallowed, and on Mr. Ness's objection it was again disallowed.

Cross-examination continued: I do not remember when I again saw Mr. Mitchell, but very likely I saw him the next day as I went to his place almost every day. I did not go to the hatoba on the 23rd May, only on the 25th. Nakajima did not tell me how he was going to pay for the oil. I never heard Nakajima mention his contract with Mano, but I know he received $2,000 on the hatoba on the 25th. There were three or four Japanese merchants on the hatoba, who paid the money to Nakajima, and who seemed to have come to receive the oil. I do not know that Nakajima had frequently sent to Tokio or any where else to obtain money. There is no agreement about any commission being paid to me. After the completion of the business, I might have received a present.

Mr. Ness next called

Furokawa Gikei, who was cautioned, and said: I remember seeing Mr. Mitchell last month about an oil contract; I saw him for the first time about the 8th of May. (Paper exhibited, being provisional contract.) That contract I know; it was made on the 14th of May, at Nakajima's house, between Nakajima and Mr. Mitchell. Two days after I went to Yokohama in company with Nakajima, Kawamura, and Matsae. We came to inspect the kerosene that had been spoken of on the 14th. Totska guided us. (Paper produced, being final contract.) I was present when that contract was made; it was made on the 20th May; bargain money was paid on that occasion. The next time I saw Mr. Mitchell was on the 22nd; I was in company with the same three persons as just mentioned. We went to receive the oil, as per contract. Nakajima asked for the oil, and Mr. Mitchell said he would deliver it; but it was not delivered on that day. I saw Mr. Mitchell several times on that day, as Nakajima kept on dunning him for the oil. Mr. Mitchell wanted Na-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

kajima to take delivery in two lots, as it was impossible to land all in one day. But Nakajima replied that this was not according to contract, and that he wished to take delivery of the whole the next day. It was at last agreed that the kerosene should be delivered in two lots the next day. On the next day we went back to Mr. Mitchell, and as he required a document, Nakajima asked him to write the document himself, which he did. He then said to Nakajima that in the course of the day up to 7,000 or 8,000 cases would be landed, and the balance the next day. Mr. Mitchell at that time said nothing about the guarantee. About 5 o'clock that same afternoon a message came to Nakajima, at his hotel, that 2,000 cases were landed, and asking him to take delivery. Nakajima said, "This is not according to contract; I ought to receive to-day at least 7,500 cases." But the messenger insisted that he should take delivery of these 2,000 cases that day, and 5,500 would certainly be landed the next. Nakajima then went to the hatoba, and then Mr. Mitchell asked him for $2,000. Nakajima refused as he was bound to no payment until he should take delivery of 1,500 cases. Eventually a document was drawn up in which Nakajima promised to pay $2,000 the next morning. (Paper exhibited.) This is the document. On the 24th about 9 a.m. Mr. Mitchell and Totska came to the hotel and asked for the $2,000. Nakajima said that he would not pay until the other 5,500 cases were landed. Mr. Mitchell promised that they should be landed next day. Mr. Mitchell then asked for a new agreement to pay $2,000 the next day, and this was signed by Nakajima. On the afternoon of the 25th we went to the hatoba, where only 2,000 cases had, as yet, been landed. Nakajima then paid $2,000 to Mr. Mitchell, I saw the money paid. I accompanied Mr. Mitchell to a Japanese bank. We returned to the hatoba, where Mr. Mitchell gave his receipt and told Nakajima that he could now take delivery of the 2,000 cases, and he would leave Totska to see to the delivery. Then Mr. Mitchell went away. Nakajima had got delivery of about 100 cases when a foreigner interfered with the delivery; against this Nakajima protested, but the foreigner said Mr. Mitchell had no right to dispose of the goods, that the goods were his. Nakajima was stopped from taking delivery. Mr. Mitchell now reappeared at the hatoba and asked for Sawa's guarantee for the balance of the price of the 2,000 cases after deducting $2,700. Nakajima referred Mr. Mitchell to their contract and refused Mr. Mitchell's request. He said that in this case Mr. Mitchell should return him his money, and then they could make a new contract.

Adjourned until Monday at 10 a.m.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before A. SCHAFFER, Esq., Acting Consul, President, and Messrs. J. PELTZER and E. HAGENS, Assessors.

Wednesday, 28th June, 1876.

TH. W. HOLM *vs.* H. W. HORSTHOLZ & Co.

This was a claim for $241.07 due on two promissory notes originally issued for $250.

Plaintiff appeared personally, defendants were represented by Mr. H. Elfen.

Defendants pleaded non indebtedness. They admitted the two promissory notes, overdue since July last year, but they stated that plaintiff had in the meantime incurred a book debt at their store to the amount of over $400, of which $250 were liquidated against the two promissory notes, and $150 covered by a promissory note issued by plaintiff to defendants. The reason why the two promissory notes for $250 were yet in plaintiff's possession was that when plaintiff was asked for them he pretended not to be able to find them. Plaintiff's note to defendants for $150 was by them transferred to Messrs. Lane, Crawford & Co., who had it collected from plaintiff. In order to meet it plaintiff had to borrow the amount from a widow, Mrs. Walker, at a monthly interest of 4 per cent., which plaintiff would certainly not have done if he had been the creditor of defendants for $250 secured by promissory notes. In proof of this assertion Mr. Elfen produced two promissory notes, signed by plaintiff in favour of Mrs. Walker, respectively for $150 and $200, the first issued on the 10th July, 1875, the latter on the 8th of last month, and he explained that the latter of these notes had been issued to replace the former one, together with interest due thereon; the former, which was now in pieces pasted together, had been torn up in the shop of Mr. Druse, the baker, whose name is on the latter note as security for the debt. He demanded that the case against defendants be dismissed; that plaintiff be ordered to pay costs, deliver up to defendants their two promissory notes, and be made responsible for the injury done to defendants by his false statements. He further asked that Mr. Wiegand and Mrs. Walker should be called to give their evidence.

Plaintiff acknowledged his signature on the two promissory notes, dated respectively 10th July, 1875, and 8th May, 1876, and now produced by defendants; but explained that the money, for which they had been issued, was not for himself, but for Mr. Druse. He contended that the two promissory notes, issued in his own favour by defendants, were still due, and denied that they had been liquidated by his personal debts to defendants; those debts he had paid separately. In support of his case, he wished to call Mr. Druse as a witness.

The Court adjourned until Monday, the 10th July next, at 10 a.m., when the witnesses will be examined.

THE PHILADELPHIA EXHIBITION.

(The Nation.)

After the din and turmoil of last week, things are rapidly settling down to regularity. The daily newspapers of New York, Philadelphia, and other cities have given such full accounts of all that took place immediately before and during the opening exercises of Wednesday, that it will not be worth while to recapitulate even the most prominent features. Suffer me, however, to communicate one or two facts which will enable the judicious reader to discriminate in his reading.

The opening exercises, although on a large scale, were not in strictness imposing. They were lacking in ease and precision. Outside of the grounds the order, it is true, was as good as could be expected in view of the immense throng of carriages, cars, and pedestrians that blocked up all the avenues of approach, But inside the grounds the guards seemed at times at a loss to know what to do. The platforms, being insufficient for the accommodation of the guests, were crowded, and furthermore were not constructed so as to give a really good amphitheatrical view. As to the press-platform in particular, nothing could have been more unfortunate. The reporters were huddled together in the lowest section of all, where they could see and hear literally nothing. Some of the glowing descriptions by these gentlemen were drawn, I fear, chiefly from imagination. The ground between Memorial Hall and the Main Building, where not occupied by the staging, was in anything but good condition. The contrast between Vienna and Philadelphia in this respect was greatly in favor of the former. Despite the agony, one might say, with which the preparations were urged in the twenty-four hours preceding the opening of the Vienna Exhibition, the tidiness of all the approaches to the Great Rotunda on the eventful morning was admirable. Of the speakers last Wednesday, only Bishop Simpson and Gen. Hawley were audible; but then that mattered little, since all the speeches were printed and distributed an hour before delivery. With regard to the music, a discrimination must be made. The instrumental parts rendered by string instruments were too weak for the open air. Many of the piano notes of Wagner's march in particular barely reached the speakers' platform opposite. But the vocal parts were very effective. The rendering of Lanier's cantata was exquisite, and Whitney's bass solo deserves to the full all the praise that has been heaped upon it. It was well-nigh incredible that a single human voice could make itself heard over the vast area with such distinctness. Removing myself purposely to a distance of several hundred feet during the *encore*, I lost none but a few of the very lowest notes. The general conclusion which one may draw from the exercises is this, that no open-air ceremonies can be made so impressive as those held indoors. The eye is to much distracted by distant and incongruous objects; there is a want of unity and symmetry. Certain it is that the exercises at Vienna, although the number of guests did not exceed twenty-five thousand, left upon the mind of the observer a definite impression of well-ordered harmony of artistic method and grouping, which one missed at Philadelphia. Much may be said about "the surging masses" under the "blue canopy of heaven," yet twenty thousand of the elite, dressed in full concert costume, and seated composedly under a vast rotunda which is itself a triumph of human ingenuity, present a for more effective tableau.

It is perhaps not too soon to attempt to give a sketch of the actual condition of the Exhibition. A good deal remains to be done, but nothing that will alter essential features. The Main Building is in very good order, although there are several ugly gaps that one might wish to see filled. Among the leading exhibitors, France and Germany seem to be the most backward. The American and English departments are quite complete. In

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

strolling down the central aisle last Saturday morning, I was struck with the great beauty of many of the American show-cases. They are not only expensive in material and workmanship, but are in excellent taste. The most brilliant is perhaps that of the Meriden Company. For general beauty of arrangement, the stand occupied jointly by Starr & Marcus and by Tiffany is remarkable. The display by the Philadelphia manufacturers of gas-fixtures is also handsome. Comparing the present exhibition with that of Vienna, one must confess that in certain branches the English and French have not done themselves justice. For instance, the English display of porcelain, majolica, and faience is meagre. The objects are good, some few, perhaps, of the highest order, but there is nothing like the lavish profusion which took one by surprise at Vienna. There, Minton, the Royal Worcester Works, and the Wedgwood Works had each large independent exhibitions. Here, Minton and the Worcester Works are compressed—with the Coalbrookdale Works—into one comparatively small stand. Of the great French bronze manufacturers, the greatest—Barbédienne—is not even represented, and the others send only very small quantities and not their choicest and newest styles. Then, the great Christofle house is conspicuous by its absence. Elkington's display is good, but inferior in quality and quantity to that made by him three years ago. There is also a painful dearth of cloisonné, repoussé, jewelry, precious stones, and cameos. The best specimens of filigree are to be seen in the Norwegian gallery. The Italian collection is not yet in order, but it may be doubted if Italy has sent her best, or even her second-best, mosaics and carvings. Some of the English furniture is attractive, but neither it not the French will compare with previous displays; and unless my rapid survey has been too rapid for accuracy, no one of the skilful French *décorateurs* of parlors and bedrooms is represented. The German collection is very backward, but is evidently going to be made up of articles useful rather than ornamental. Owing to the slackness of French and English competition, the Berlin porcelain, which was completely overshadowed at Vienna, assumes here a good deal of prominence. Switzerland makes a display that is well worth study. It is not striking, either for its magnitude or for its brilliancy, but is planned to give a fair idea of the industry of the country. Austria is better represented than I expected to find her, after the financial troubles of 1873. Count Harrach and Lobmeyer have very good and, under the circumstances, large displays of Bohemian glass. In uncolored glass, James Green of London takes the lead. The Austrian collection of amber, meerschaum, leather goods, etc., is fine, although, of course, not so overwhelming in quantity as it was three years ago. Turkey and Russia are still represented by vacant spaces. The Japanese have all their goods out; their collection is about as large as on any former occasion, but gives the average of their productions rather than the very choicest. One will find here very fine specimens of lacquered ware and carvings, but will look in vain for such rare bronzes and curious idols as were irretrievably lost on their way home from Vienna. China has a very large exhibition, and, in certain branches, a very fine one. The English colonies are still backward. India exhibits nothing comparable to the celebrated pavilion at Vienna. The Egyptian collection is large, but not so diversified and not so artistically arranged. Without stopping to write of our own immense collections, or of the Dutch, Danish, Swedish, and Brazilian, I may say that the general appearance of the Main Building is very pleasing. The colors of the decoration harmonize sufficiently with the motley contents, the light is strong but not excessive, and the temperature is grateful. I do not apprehend that any part of the building will be found uncomfortable even at midsummer. The solid flooring is immensely superior for locomotion to the open planks at Vienna.

In all that concerns England and America, the Machinery Hall is well in hand. Germany and France, especially the former, have still much to do. By reason of the height and breadth of the building, the clatter of the machinery is not so distracting as might be expected. The building is kept remarkably clean, and free from any unpleasant odor of oil. To give some idea of the perfection of the arrangements, I may state that the *Herald* has been printing every morning since the opening ten to fifteen thousand copies on its Bullock press. The plates are stereotyped in New York and sent to Philadelphia by the early mail-trains. The great sight in the building is of course the Corliss engine. Nothing could surpass the grace with which the giant does his work. It is to me the highest embodiment of man's power, and I could stand by the hour watching it. Seldom if ever does one have the opportunity of seeing an engine of such magnitude from top to bottom. Every part of the machinery except the lower rim of the fly-wheel is exposed to view, and nothing is to be heard but the sharp click of the cut-offs and a slight concussion of air made by the beat of the spokes of the fly-wheel. By standing very close to the fly-wheel one can detect the faintest rumble; but this is not caused by the engine itself, but by the running-gear below, which is still a trifle stiff. The watch-making machinery from Waltham seems to divide popular attention with the sewing-machines, of which there seems to be no end. Some of the heavier machinery for cutting iron and for cotton and wool spinning is apparently not in running order, probably because the exhibitors have not seen fit to make their connections with the shafting. But to do justice to Machinery Hall would require a special letter written by an expert. I can only say in a general way that it contains every variety of labor-saving appliance, and is in itself an attractive building.

Horticultural Hall does not altogether meet expectations. Whether the plants have been forced too rapidly, or whether the heat has been too dry, I cannot ascertain. The plants do not look hardy, and many of them are decidedly drooping. It is evident that a great conservatory cannot be improvised in a few months. Probably, in a year from now the collection will be much finer than at present. As it is, the visitor will not find any very rare exotics, nothing beyond the better-known varieties of ferns, lemon-trees, cactuses, and palms.

In the case of every great exhibition it is instructive to observe how predictions are flatly contradicted by results. Any one who should have ventured to assert two months ago that Agricultural Hall would be an agreeable building would have been laughed at. But now that it is complete and much of its contents in order, all agree in pronouncing it one of the chief attractions of the Exhibition. To my mind, it is not to be surpassed by anything save the very choicest collections in the Main Building and by some of the picture galleries. In the first place, the site is highly picturesque and the architecture is imposing. Viewed from Horticultural Hall, the tall peaked arches are nestled very cosily among the trees. Inside, the visitor is impressed with the boldness of the design and its effectiveness, and has some difficulty in persuading himself that the arches are in truth of wood and the whole a mere shell erected in haste for a temporary purpose. The light is good, and there is the freest circulation of air. I doubt if any other building of like nature and magnitude was ever constructed at such a moderate expense and with such complete success. As for the contents themselves, they are as diversified as the building is unique. The display of wines and spirits is far below that of Vienna, but in cereals, tobacco, spices, and articles of domestic consumption it is very rich, and the quantity of agricultural machinery is lavish even to recklessness. There seems to be no limit to the ploughs, hoes, shovels and mowers, threshing-machines, and their kind. One cannot fail to be struck with the superiority of the American machines. During the hot summer months this building will be frequented, I venture to predict, by those who prefer coolness and quiet to the more showy displays in the Main Building or to the rattle of machinery.

The collection of pictures in Memorial Hall and the Art Annex I leave, with your permission, to some more competent hand. I have barely touched upon the principal buildings, and cannot enter the others. The Shoe and Leather Annex, the Government Building, and the Carriage Annex are ready, and offer a very inviting array. The same may be said of the Women's Pavilion and half-a-dozen other small buildings. The state of the grounds is at once satisfactory and unsatisfactory. The turf and the trees have profited by the recent rains and are in a thriving condition. The foliage is somewhat backward, in accordance with the general season, but promises to be most abundant next month. The view from the plateau of Horticultural Hall, both east and west, is already superb. But this cannot be said of the walks. The managers seem to have been strangely remiss in the matter. They have had a spring of unexampled mildness in which to work, yet they have done apparently little since March. In some few quarters, it is true, where the building is not yet over, the walks will have to wait. But there seems to be no excuse for the interminable trains of dirt-carts that cut up Belmont Avenue when there is a railroad track by the side and gravel-cars to be had for the hiring. And then the state of the ground about Agricultural Hall is disgraceful. Here, at least, the work of building is over, yet there is not a single comfortable way of approach. So long as the sun shines and dry winds prevail, one can walk over the grass and earth without discomfort; but three hour's rain—and this happened on three days of last week—suffices to surround the building with a broad belt of hopeless and uncompromising mud. For this, I repeat, no excuse can be found. There are other places where the need of good walks is also felt, but not on so large a scale. By

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

trebling the present force of workmen, it would be quite possible to put things in order in a week. There is one other serious want, namely, of covered walks. The large buildings to the north are widely apart, on the periphery of a large circle as it were. In case of a sudden shower, such as came up last Friday afternoon, one unprovided with umbrella or waterproof will scarcely be able to reach the exit gates from this quarter without a severe drenching. At Vienna, it will be remembered, there were broad lattice-ways, covered overhead, leading from the Main Building to the Southern Gate, and it was always possible to reach the Main Building in one way or another by passing through detached buildings that made an almost unbroken line.

ARRIVALS.

June 25, *Nettie Merryman*, American barque, Masters, from Shinagawa, Rice.

June 28, *Chili Maru*, Japanese steamer, Drummond, 800, from Osaka and Kobe, General, to M. B. Co.

June 28, *Modeste*, H. M. corvette, Captain A. Buller, C.B., 1940, 14 guns, from Hongkong, June 15.

June 29, *Midge*, H. M. gun-boat, Captain Salmon, 660, from Kobe, June 24.

June 29, *Great Republic*, American steamer, Cobb, 3,883, from San Francisco, June 1, Mails and General, to P. M. S. S. Co.

June 29, *Genkai Maru*, Japanese steamer, Connor, 1,917, from Shanghai and ports, June 21, Mails and General, to M. B. Co.

June 29, *Willhelm Honneyer*, German barque, Holtz, 572, from Shanghai, June 11, Ballast, to Walsh, Hall & Co.

June 29, *Etta Loring*, American barque, Loring, 716, from Newcastle, N.S.W. May 16, Coal, to Smith, Baker & Co.

DEPARTURES.

June 24, *Shalio Maru*, Japanese steamer, Wynn, 480, for Osaka and Kobe, General, despatched by M. B. Co.

June 25, *Alaska*, American steamer, Dearborn, 4,011, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

June 26, *Tamaura Maru*, Japanese steamer, Nye, 500, for Hakodate and Niigata, General, despatched by M. B. Co.

June 28, *Menzaleh*, French steamer, Pasqualini, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.

June 29, *Armanella*, British barque, Popham, 903, for Oregon, Ballast, despatched by Captain.

June 29, *Kinshiu Maru*, Japanese steamer, Christensen, 520, for Osaka and Kobe, General, despatched by M. B. Co.

June 29, *Banner*, American schooner, Lennard, 33, for Kurile Island, Ballast, despatched by Captain.

June 30, *Great Republic*, American steamer, Cobb, 3,883, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

June 30, *Audacious*, British ironclad, Captain P. Colomb, 3,774, for Shanghai.

June 30, *Vigilant*, British despatch boat, Captain H. D. Ryder, 830, for Shanghai.

June 30, *Dwarf*, British gun-boat, Captain Hon. E. Dawson, 660, for Hongkong.

June 30, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. Co.

July 1, *Meiji Maru*, Japanese steamer, Peters, 685, for Awomori, Stores, despatched by Light-house Department.

July 1, *Hiogo Maru*, Japanese steamer, Vroom, 670, for Hakodate, General, despatched by M. B. Co.

July 1, *Gordon Castle*, British steamer, Jones, 1,312, for Kobe, General, despatched by Adamson Bell & Co.

PASSENGERS.

Per Steamship *Alaska* for San Francisco.—Hongkong to San Francisco: Mrs J. W. Jordan and 2 children, Mrs. L. Stone, Leiut. Ludwick and servant, Messrs. E. A. Fowler, J. P. Mickley, U.S.A. D. L. Morgan. Yokohama to New York: Miss Mason, Messrs. L. H. Junghaus, A. Wolff, S. Fernie, N. W. Holt and wife, E. A. Nevill, K. Inouye wife and daughter, Mrs. Hawes and 2 children, and 2 Japanese in the cabin. Yokohama to Liverpool: 9 Japanese in the cabin. Yokohama to Paris: 4 Japanese in the cabin. Yokohama to San Francisco: 10 in the Steerage. Shanghai to New York: Mr. G. E. Hill, Miss A. B. Chalmers, Mrs Blethen and 6 Children, Capt. W. W. Low, U.S.N. Yokohama to San Francisco: 2 in the Steerage.

Per Steamship *Tamaura Maru* for Hakodate and Niigata.—Mr. and Mrs. Troup, for Niigata.

Per Steamship *Menzaleh* for Hongkong.—Mr. and Mrs. Farman, Messrs. Brun, French and Daniel Reid,

Per *Genkai Maru*, from Shanghai and ports.—Mr. and Mrs. Edgill, Mrs. J. C. Williams, A. Evans, Clark, E. C. Kirby, Mrs. Bannerman, Dr. Tripler, Figdor, Voyron, Fitz Henry, W. Wood, Bonnat and 6 Japanese in the cabin. Steerage: 304 Japanese, 13 Chinese, 3 Europeans.

Per Steamship *Great Republic*, from San Francisco.—For Yokohama: H. Asano, Ed. McDonald, Mr. and Mrs. H. Simmons, Mr. and Mrs. O. W. Lindholm, C. Kikawa, H. Hiraska, G. Branchi, J. F. Sutton, Mrs W. J. Thompson and 2 children, W.S. Clark, Wm. Wheeler, Mrs. Frank Dunn, Count A de Pourtales Gorgin and wife, K. O. Fukasawa, Mr. and Mrs. H. V. Love, O. O. Gilbert, D. P. Penhallow, and 10 in steerage. For Hongkong: Mr. and Mrs. R. H. Pye, Miss Faulkner, and 233 in steerage.

Per Steamship *Nevada* for Shanghai and ports:—Mr. and Mrs. H. Victor Love, Mr. and Mrs. Lindholm, Messrs. E. H. Hunter, Evans and servant, McDonald, U.S.N., C. Boudon, Branchi, Cahil, McBain, W. Robertson, Revd J. T. Gulick, Salle, Paulen and servant, J. Wood, Gilbert, M. M. Costa, N. R. Usher, Diack and servant, Fabre, Koning, Stewart, Frith, and 22 Japanese in the cabin.

Per Steamship *Gordon Castle* for Kobe.—Mrs. Kirkwood, and Mr. Middleton.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—After a long spell of utter dullness a brisk demand has sprung up in our market for *Cotton Fabrics* and *Yarns*, which now closes firm at prices, in some instances, showing an advance on last quotations. In *Yarns* a moderately good business has been done, and especially have good 28/32 spinnings recovered part of their lost ground. *Grey Shirtings* are no longer quite neglected, as dealers show signs of more attention to this article, and the continued decline in prices seems to be arrested. In other articles we do not note any particular change, but altogether buyers show more disposition to operate.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	$1.80	to	$2.15
8 lbs.	38½ yds.	44 in.	„	2.10	to	2.45
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	2.10	to	2.47½
9 lbs.	38½ „	44 in.	„	2.35	to	2.75
T. Cloth 7lbs.	24 „	32 in.	„	1.65	to	1.80
„ 6lbs.	24 „	32 in.	„	1.25	to	1.40

White Shirtings:—						
60 to 64 reed 40 yds. 35 in. nom.			per pce.	2.20	to	2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.			per lb.	0.75	to	1.00
Black Velvets				7.75	to	8.50
English Drills 15 lbs. 40 yds, 30 in.				3.00	to	3.15
Taffachelass	12 yds, 43 in.		*nom.*	2.10	to	2.20

Yarns.—

No. 16 to 24	per picul	$30.50	to	33.50		
No. 28 to 32	per picul	$33.00	to	38.50		
No. 38 to 42	per picul	$39.00	to	43.00	nom	
Reverse Twist 16-24	„	33.00				

Woollens.—There have been scarcely any transactions during the past week, and prices, therefore, remain nominally the same.

Plain Orleans	40—42 yds. 32 in.	6.50	to	7.50		
Figured Orleans	29—30 yds. 31 in.	4.75	to	5.25		
Shimagoro	30 yds. 30 in.	5.25	to	5.75		
Italian Cloth	—30 yds. 32 in.	0.25	to	0.33		
Camlet Cords	29—30 yds. 32 in.	6.25	to	7.25		
Camlets Asstd.	56—58 yds. 31 in.	18.50	to	19.00		
Lastings, Japan	22—30 yds. 32 in.	13.00	to	14.50		
Plain Mousseline de Laine	—30 yds. 30 in.	0.18	to	0.20		
Figured Mousseline de Laine	30 yds. 30 in.	0.25	to	0.28		
Multicolored „	30 yds. 30 in.	0.32	to	0.35		
Cloth, all wool plain or fancy	48 in. to 52 in.	0.80	to	1.20		
Presidents	54 in. to 56 in.	0.60	to	0.70		
Pilots	54 in. to 56 in.	0.40	to	0.45		
Union	54 in. to 56 in.	0.40	to	0.65		
Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.40	to	0.41		

Sugar.—Since the 24th ultimo the market for *Formosa* kinds has steadily advanced, and sales of about 29,000 piculs are reported at $3.20 to $3.55. Stocks are estimated at 55,000 piculs. *China* kinds have also advanced in price, though stocks are small. The market for both kinds closes firm at quotations given.

Sugar:—Formosa in bag	per picul	3.50	to	3.60		
in Basket	„	3.40	to	3.50		
China No. 1 Ping fah	„ (nom.)	7.45				
„ No. 2 Ching-pak	„	6.40	to	6.90		
„ No. 3 Ke-pak	„	5.80	to	6.20		
„ No. 4 Kook-fah	„	5.00	to	5.50		
China No. 5 Kong-fun	per picul	4.40	to	5.00		
„ No. 6 E-pak	„	3.40	to	4.00		
Swatow	„	2.60	to	3.20		
Daitong	„	2.90	to	3.00		
Japan Rice	„	2.20				
Kerosene Oil	per case	2.45				

Kerosene Oil has advanced to $2.45, but we have no arrivals or transactions in first hands to report.

EXPORTS.

Silk.—Since the 24th ultimo, some 125 bales of new Joshiu and Bushiu Hanks have been received from the country, and distributed among a number of buyers at a uniform price of $535, equal to 18/10 and fr. 52. A few bales only fetched $545 and the market closes firm. The quality of those 125 bales is reported to range from No. 2 to 3½.

The Hank quotations dated 26th June are 17/6 for good all round, and fr. 50 for best Hanks.

Tea.—Prices during the closing week shew a decided tendency to advance and some grades have already made similar progress.

The continued short supply of "Fine" and "Choice" grades must, in a great measure, be attributed to the endeavours of native tea-men to distribute transactions of these over the entire season, and thus obtain a better average result. But they should bear in mind that Teas picked early and hurriedly, and likewise imperfectly prepared, will not, in September, offer the same inducements for purchasers to operate which they do at the present time. Such, unfortunately, is the too general character of most fine parcels of "first pickings" which have hitherto been shewn.

To-day our prices rule as under.

Common	$12.00	to	14.00			
Good Common	15.00	to	18.00			
Medium	19.00	to	22.00			
Good Medium	23.00	to	26.00			
Fine	$27.00	to	32.00			
Finest	34.00	to	39.00			
Choice	42.00	& upwards	[nominal.			

Settlements for the week amout to 4,700 piculs and stocks are light, consisting of about 6,000 piculs.

The steamer *Gordon Castle* leaves to-day for Kobe and Amoy, from which latter port she is promised prompt despatch; and considering this steamer's well known speed, her arrival at New York may be looked for simultaneously with, if not before, the *Oxfordshire*, which left this on the 15th inst.

EXCHANGE AND BULLION.

Exchange.—Sterling rates have steadily declined during the past week, though with a fair business doing. Credits having been placed at 3/10½ for 6 m/s.

Gold Yen are very scarce, and only to the bought in small lots.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 10⅜d.		
„ Bank Bills on demand	3s. 9⅞d.	to	½
„ Private 6 months' sight	3s. 10½d.	to	¾
On Paris—Bank 6 months' sight	4.88		
„ Private 6 ms. sight	4.92½		
On Hongkong—Bank sight	Par	to	¼ % disct.
„ Private 10 days' sight	1	„	„

On Shanghai—Bank sight	74½
„ Private 10 days sight	75
On New York—Bank Bills on demand	92½
„ 30 days sight Private	94½
On San Francisco—Bank Bills on demand	93
„ 30d. sight Private	95
Kinsatz	398
Gold Yen	380

MISCELLANEOUS.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

BROADWELL'S

BREECH LOADING ORDNANCE COMPANY, CARLSRUHE.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 28.] YOKOHAMA, SATURDAY, JULY 8, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its efflux ion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 2nd inst., at No. 89, Yokohama, the wife of JAMES EDWARDS, of a son.

Notes of the Week.

The following was published by the *Nichi Nichi Shimbun*, on the 6th instant.

[NOTIFICATION No. 98.]

Should any duly registered newspaper, or magazine, publish any matter which may be deemed to interfere with, or have a tendency to destroy the peace of the nation, the further publication of such newspaper, or magazine, will be suspended at the discretion of the *Naimusho*.

The above information is hereby made public.

(Signed) SANJÔ SANEYOSHI,
Daijô Daijin.

The judgment pronounced by H. B. M. Consul in the case of Nakajima Saisuke *v.* W. P. Mitchell does not appear to us to satisfy the conditions of the plaint. The suit was brought to recover $2,700, bargain-money paid by the plaintiff to the defendant, and a further amount for breach of contract. The judgment orders the defendant to pay back the bargain-money, but it says nothing about the breach of contract. Now it is clear that the contract was broken by one party or the other, and as the defendant has to repay the bargain-money, the presumption of course is that he was the offender. It was open to the Consul to make the damages nominal, and we think the judgment fairly represents the justice due to the case. But ought it not to have said specifically something in respect of the damages claimed, so as to declare which of the two parties actually broke the contract?

Laymen are quite willing to believe lawyers when they claim that law is a science. It has its axioms, definitions, theorems, &c. It is classified knowledge which may be applied to the demands and the regulation of human affairs. But they will cease to allow this claim if every other question which a lawyer asks a witness is objected to, and is open to the objection. A recent trial before H. B. M. Consul shows so much of this that we feel bound to protest against it on behalf of all concerned, and not least on behalf of the newspapers. It is bad enough to have the time of public officers and private persons wasted, a perpetual wrangle going on during a whole case, and the papers filled up with this kind of matter. But worse than this, it wounds the dignity of the Law and the Law-courts, and this is a thoroughly bad thing. Every member of a profession is to some extent entrusted with a share of the respect which it ought to hold in the eyes of society, and proceedings which have a tendency to detract from this are greatly to be deprecated. It is quite right that a lawyer should fight his client's case thoroughly. But he surely need not subject himself to constant protests against blows, of which we will use no harsher word than to say that they are disallowed by the rules of fair fighting.

A translation which will be found elsewhere under the heading "An Art-treasure," shows that any enterprising tourist may direct his steps towards Sendai with the prospect, if he go the right way about it, of seeing some cherished family relics which possess much historical interest. The rosaries and pictures here referred to as still in possession of the representatives of the former prince of Sendai, are mentioned in a foot note on p. 695 of Léon Pagés's *Histoire de la Religion Chrétienne au Japon depuis* 1598 *jusqu'à* 1651. The second portrait spoken of in our translation is probably that of Paul V. who occupied the papal throne at the time of Hashikura Rokuzaimon's mission to Rome. Should any tourist ever visit the province of Sendai and find an opportunity of inspecting these relics—we speak more particularly of the portraits—we are sure that a description of them would have great interest for many students of history both here and elsewhere.

An account will be found elsewhere among our translations, of the attempts which have been made in this country to introduce a system of artificial fertilization of cereals attributed to Mr. Hooibrinks, a native of Holland. The process consists in steeping a fringe made of woollen yarn in a solution of honey and water, stretching it between two bamboos, and passing it over the young plants so as to touch and lightly to sweep them. The theory presumably is that the pollen of the male plant may be thus more perfectly distributed, and, by thus producing a more general fertilization, increase the productive power of the field. The account referred to would seem to justify this view, for it says that where there was no free current of wind (which would tend to distribute the pollen) the process was successful, but was useless where the air circulated freely. The probabilities are that the process has some slight foundation in fact, but is practically useless and unprofitable. We do not know the value of Mr. Hooibrinks' authority. But the chances are that he must be placed in the category of the von Gumpachs, who think that the earth is a prolate spheroid, or the "Parallaxes" or Fitzgeralds who will persist that it is a plane and not a sphere, and that the souls of mankind are eternally endangered by the rejection of this theory. All these men live and die in the immovable belief that Newton and Darwin are hopelessly wrong, and that the astronomers and naturalists know it, but cannot afford to dispel delusions out of which they derive so much solid advantage.

The 4th July suggests and demands so much, that the difficulty of not writing about it is far greater than that of saying something which might be not wholly without value on the subject. An American, writing in America, and for Americans, might say much that would be acceptable and valuable on the centenary of the birth of his nation. Or an Englishman, writing in England, and for Englishmen, might say

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

much on the same subject which would be valuable to those whom he addressed, and, if not wholly acceptable to those of whom it was written, would at least seem the fair and appropriate outcome of the occasion, looking at it from an alien but friendly, sincere, and straightforward point of view. But to write on the subject here with any satisfaction, advantage or acceptability, for a mixed community of Englishmen, Americans and foreigners of all nationalities, we hold to be entirely impossible. At all events we must be excused for refusing to attempt the task. We have always thought the world far more interested in the success of the American experiment than in any other ever tried, and it is yet wholly impossible to say whether the results attending it will prove the example or warning of mankind. However limited the powers or influence of any given writer, devotion to truth and to the greatest of all experimental sciences, the science of government, demand that if he touches the condition and prospects of America at all, he shall, according to such light as he possesses, say that which he believes to be true, and which is in harmony, so far as we know them, with the principles of that noble science. Believing, as we firmly do, that America has utterly departed from these true principles, that no possible good can arise from our pointing out how or why she has done so, and that it will be shewn, whether by her own sons or by alien writers, with incomparably greater ability than any we could bring to bear on the subject, and under circumstances which will make their teaching of high practical value, we must decline to do more than add our own humble voice to the chorus of congratulation which the nation will receive upon the anniversary of its birthday, and to express the warmest hope that its future may be alike worthy of the great men who laid the foundations of its power, and the splendid possibilities of its position.

The death of Madame Dudevant, reported by last mail, may handly be passed over in silence, though we have no skill to weave any wreath worthy to be placed on her tomb. If something of the narrowness of English taste forces us to turn from many scenes which she has painted with little credit to herself or advantage to the world, we must still bow with admiration before the genius which inspired, and the fascinations which subdued many of the leading Frenchmen of her age. Gifted with a glowing and brilliant eloquence, with an imagination and sensibilities keenly alive to the beauties of nature, and with a daring spirit of speculation, which, however dangerous, extorts the constant enthusiasm of her reader, Madame Dudevant has been a great name in the literary history of this century. No lover of music can ever forget his debt of gratitude to her for Consuelo; no lover of nature or admirer of the glories of medieval Italy, for the *Lettres Venetiennes*. So fleeting is the fame of all but the greatest names in letters, that it is impossible to say whether George Sand's works will be read fifty years hence. But that if they are read, they will be greatly admired, is as certain as that the rich and rare prerogative of genius will always assert its ascendancy, and extort the homage which mankind so gratefully pays to it.

We must prepare such of our readers as are interested in the translation of the History of the Tokugawa Dynasty, the early part of which has already appeared in these columns, for an occasional break in the narrative. Such a break occurs this week. The work comes out rather tardily from the Japanese Press, and hence the fact to which attention is now drawn.

The *Chôya Shimbun* has a rather timid and feeble article against the new Press notification, while the *Nichi Nichi* appears to support it. Both articles have reached us too late for insertion this week, and must stand over until next Saturday.

The O. & O. steamer *Belgic* arrived from Hongkong this afternoon, and will leave for San Francisco on Tuesday, the 11th instant, at day-light.

We are indebted to the courtesy of the Agent of the P. & O. S. N. Co. at this port for the following return of Silk shipped during the past season.

From the "Japan Mail Daily Advertiser."

Monday, 3rd.

Without a few words of further explanation the two first 'Notes of the Week' in the last number of the *Japan Weekly Mail* are open to some misconstruction which it is most important to avoid on such a subject as that which they treat. We desire to add therefore: That our approval of the punishment awarded to Mr. Makoshi in no way implies approval of the clause in the Press-law which forbids criticism of the laws of the Empire—a clause which we regard as hateful and tyrannical; nor, in the commendation bestowed on his love of liberty, did we intend for one moment to suggest that any circumstances whatever could justify the odious crime of political assassination. In the concluding sentence of the second note, we would be understood as saying that the extent of the information possessed by the Government would enable it, and it alone, to infer how far the condition of free thought now fermenting in the capital is representative or exceptional. We had no intention of saying that the Government would necessarily make the due concessions to this free thought.

From the *Chôya Shimbun.*

A corrugated iron drill-shed is to be erected on the parade ground at Toyama, Tôkiô.

From the *Mainichi Shimbun.*

H. I. M. S. *Asama Kan* will leave this port on the 3rd instant, for the purpose of surveying the coast of Corea.

From the same.

The *Saifu Shimbun*, which has not made its appearance for some time past, was republished yesterday, a fact which will greatly rejoice the hearts of three of its editors who are now undergoing imprisonment for too free an expression of their opinions in its columns.

From the same.

Mr. Nakayama, editor of the *Hiôron Shimbun*, underwent an examination at the Tôkiô *Saibansho* on the 30th ultimo, on account of certain articles published in numbers 100 to 103 of its issue, and pending the result of his trial has been remitted to jail.

From the same.

Since the *Kencho* has been removed from Odawara that town has become very dull and scarcely any business is now done there.

The *Meiji Maru*, having been specially fitted up to accommodate the Mikado and his suite, left for Awomori on Saturday last, at which port His Majesty will embark and return to to the capital.

From the *Osaka Nippo.*

The famous *Tenjin-bashi* (the longest in that city of bridges) will be reconstructed of iron.

From the *Nichi Nichi Shimbun.*

It is said that towards the end of April last the Russian Government handed the Japanese Minister at St. Petersburg the sum of *yen* 74,691.41, being the value of public buildings, etc., which the Japanese Government had erected on the Island of Sagahlien previously to its being handed over.

From the *Kôfu Shimbun.*

Although silk-worms are reported to be doing well in Ôshiu they are but thriving badly in Kôshu, as the mulberry

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

trees have failed to a some extent this season. Formerly a horse-load of mulberry leaves cost but 50 *sen*, but this year the price has risen to 3 *yen*.

Tuesday, 4th.

We learn from the *Mainichi Shimbun* that a priest, who visited the Chiba *Ken*, made the inhabitants of that district believe that a terrible epidemic was about to rage amongst them to which numbers would fall victims, but prescribed rice broth as a preventative, which the people have since been assiduously devouring.

The *Mainichi* merely gives the above statement, but omits to state why the priest in question thus imposed on the silly credulity of the people, or what induced them to place reliance on the still more silly statements of the priest.

From the *Saifu Shimbun*.

A Japanese lecturer of some note, Kintensai by name, lately became a convert to Christianity, and now earnestly, ably and frequently preaches that doctrine to crowded audiences at various public lecture halls in Tôkiô, although on such occasions a small admission fee is charged. He exposes the fallacies of the Shintô and Buddhist religions so forcibly, that the priests of those sects, who have been to hear him, are quite unable to reply to his arguments or to contend for their own belief.

From the *Nichi Nichi Shimbun*.

The Prime Minister and some of the *Sangi* were yesterday present at an examination of the pupils of the *Kaisei Gakko*.

From the same.

The annual horse-racing at Kudan, Tôkiô, will commence to-day.

The *Chôya Shimbun* says that the *Rei* of Miyage *Ken* has ordered that all roads over which the Mikado will pass are at once to be put in thorough repair by the *Kencho*, but that the residents must eventually refund the cost of so doing; and further that any dilapidated houses are to be immediately pulled down by workmen employed by the *Kencho*, so that His Majesty may not be offended by the appearance of poverty or any unsightly objects. Furthermore, all house-holders must decorate their houses with flags and lanterns. All this necessitates an outlay which the poor inhabitants can by no means afford, and the Mikado's visit, instead of conferring a benefit on the people, entails unlooked for misery on them. Surely His Majesty cannot be cognisant of this state of things, as his progress from Tôkiô has been distinguished by a kindly care and consideration for all his subjects from the highest to the lowest, and it is therefore to be hoped that the unwelcome zeal of the Miyage *Ken-Rei* may be checked.

In support of the statement made by the *Chôya*, the *Saifû Shimbun* says that fifteen wretched houses have already been pulled down in the above *Ken* by order of the *Rei*, the occupants of which are reduced to the greatest distress in consequence.

The Mikado arrived at Sendai at 10 30 a.m. on the 24th instant, where the troops in garrison where drawn up to receive him. Soon after reaching his hotel, His Majesty received the Governors of the neighbouring *kens*, and subsequently visited the *Kencho*. On the 25th His Majesty proceeded to the *Saibansho* and afterwards inspected a school where the English language is taught by an English and an American teacher. On the 26th His Majesty inspected the barracks, reviewed the troops, and paid a visit to the Supreme Court. On the 27th the Mikado made a trip to Matsushima, the scenery of which is celebrated throughout Japan, and returned to Sendai the same evening. On the 28th His Majesty visited Tomiyama and Shiwo, stayed for the night at the latter place, and returned again to Sendai on the 29th instant, after visiting several places of interest in the neighbourhood.

Wednesday, 5th.

A telegram is said to have arrived yesterday reporting "War in Europe imminent." It is a somewhat remarkable fact that at least one telegram of this kind arrives every year about the time of the opening of the silk market, and if a slight fall in price occurs in consequence, extensive operations are immediately entered into. We have not the slightest doubt that the news of yesterday, if sent at all, has been sent with this object, and neither give it, nor recommend our readers to give it, the smallest credence.

The *Nagoya maru* will not leave Shanghai until the 6th instant, but is yet expected to arrive here on Thursday, the 13th instant, according to schedule time.

From the *Hôchi Shimbun*.

About two thousand workmen, employed at the Government Arsenal at Koishikawa, all appeared lately with their hair cut in foreign style, and it is rumoured that in a few days they will, by order of the Government, dress themselves in foreign style clothes.

We learn from the *Chôya Shimbun* that the *Shakujo*, or staff surmounted with metal rings, which was used by the priest of the temple of Kuannon, Asakusa, during the celebration of the special service which was attended by members of the Press on the 28th instant, is a most valued relic. It is reported to have been used by Shaka himself, and was, until A. D. 780, carefully preserved at a Buddhist temple in China, at the time when Denjio Daishi, the founder of the Tendai Sect of Buddhists, was ordered by the reigning sovereign, Kanmu Tenno, to visit China and make himself properly acquainted with the tenets of the Sect.

The *Shakujo* was brought over to Japan by Denjio Daishi and has since been kept in the temple at Asakusa, being looked upon as the most precious relic the Sect possesses, and which, hitherto, has only been used on most special occasions or exhibited but to a chosen few.

From the *Nichi Nichi Shimbun*.

The subsidies, which for a long time back have been granted to many of the temples in Kiôto and the environs, are to be gradually abolished.

From the *Mainichi Shimbun*.

It is rumoured that offences against the Press-laws will no longer be punished by imprisonment, but by fines alone.

The *Kôji Shimbun*, in one of its recent issues, published certain municipal regulations in *kana*, so that they could be read and understood by the people, and the result was some 10,000 copies of the paper containing them were sold. This certainly ought to be a useful lesson to all newspaper proprietors throughout the country.

Thursday, 6th.

Sir Thomas Wade arrived in Shanghai, from Peking, on the 25th ultimo, and the *Shanghai Courier* says:—

It is a significant fact that the British Minister has brought down three boat loads of the Legation archives, and that the Library is to follow, to be deposited here for safety. It is evident from this that Shanghai will be held *coûte qui coûte*.

From the *Nichi Nichi Shimbun*.

Representatives of the people of the Kumamoto *Ken* were recently elected, and will meet about the middle of the month for the discussion of public affairs.

From the *Hôchi Shimbun*.

It is said that many officials belonging to the various Government Departments were present on the 28th instant at Asakusa, when the assembly of newspaper editors and writers took place, in order to privately watch proceedings.

From the same.

Mr. Yamada Sei-ichiro, one of the editors of the *Kôkai Shimpo*, was arrested in the street by the police on the 3rd instant, on a charge of infraction of the Press-laws, and after undergoing preliminary examination at the police station was remanded to the *Saibansho* prison.

From the *Chôya Shimbun*.

Seven officials of the *Naimusho* have been appointed by the Government as Commissioners to proceed to Loochoo on special business.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

From the same.

The entertainments called *Nô* are now in great fashion among the nobility of the capital.

From the *Akébono Shimbun.*

While the Mikado was at Sendai a resident of that town illuminated his house in honour of His Majesty with a lantern bearing the Imperial crest, and though his intentions were perfectly loyal, thereby broke the law and was fined in consequence.

Friday, 7th.

From the *Hochi Shimbun.*

On the 4th instant some officials of the *Okurasho*, and others belonging to the National Bank, went to the Oriental Bank to receive some 100,000 dollars in silver, and the people are making various conjectures as to the use which will be made of this money.

From the same.

As the rainy season has now commenced, it is rumoured that the opening of the *Sumida-gawa* will be postponed until the 15th instant.

From the same.

We hear that some Chinamen are making a dishonest livelihood by filing the edges of our gold and silver coins.

Saturday, 8th.

The *Monte Rosa* left for San Francisco yesterday with 5,246 packages of Tea for New York and 997 for Boston.

The P. & O. steamer *Sunda*, with English Mails on board to 26th May, may be expected to arrive some time to-day.

From the *Hôchi Shimbun.*

The Tokio *Fu* has issued a notification to the effect that, as there are rumours current that a certain epidemic, resembling cholera, is prevalant in the capital, information should be given to the *Fucho* immediately the symptoms show themselves, so that active measures may be at once taken to prevent the disease from spreading among the people.

From the same.

The cash deposit which the Government has hitherto kept at the National Banks has been returned to the *Okurasho*, where special accommodation for its reception has been provided.

From the *Hôchi Shimbun.*

A notification has been issued by the Minister of Justice stating that the following clause is to be added into the Rules for the employment of Counsel in Judicial Courts in Japan.

"It is only when Japanese subjects are defendants in a case, and foreigners the plaintiffs, that Japanese may have the assistance of foreign lawyers to act on their behalf."

From the same.

The country about Kiôto is suffering from unusual drought, so much so that the people can scarcely procure enough water for drinking purposes. In the province of Ugo there has been, strange to say, but a very slight rain-fall this year, and the inhabitants have been somewhat distressed in consequence.

From the *Mainichi Shimbun.*

The *Kôrio Maru*, the vessel in which the Corean Embassy returned to their country, arrived at Shinagawa from Corea on the 5th instant.

While at Sendai the Mikado visited the former *Daimio's* residence, which had originally been presented by Hideyoshi to Date Masamune, *Daimio* of Sendai. The Imperial party left Sendai on the 30th ultimo at noon, being escorted out of the town by a large number of the garrison troops, and arrived at Yoshioka late in the afternoon, where His Majesty stayed for the night. At 7 o'clock on the 1st instant the Mikado left Yoshioka, and arrived at Furukawa shortly before noon, where the Imperial party halted until 8 o'clock the next morning, when they made a start for Tzukitate, which they reached about 2. p.m.

We have received from the British Postmaster a new Table of Postal Rates accompanied by the following notification, which explains the alterations made.

Post Office, Yokohama, 6. July, 1876.

SIR.—I have the honour to hand you herewith a Table of the Rates of Postage now in force, and to call your attention to the following alterations:

Decreases. The reduced rates notified under date of the 12th instant, viz., 2 cents less on both letters and newspapers to and through the United Kingdom, viâ Brindisi, (the Book rate by this route being assimilated to that viâ Marseilles), a lower charge to Portugal viâ Southampton, and a considerable reduction of the Local Rates. There is also a reduced charge to Brazil.

It most be borne in mind, however, that the Local Rates by *Contract Packet* remain unaltered, except by a slight modification as to Books.

Increases. The quarter-ounce scale is abolished, hence the rates to the Continent, &c., by French Packet are doubled, but for half-ounce letters. The rates to Turkey and Greece by the same packet are also increased, whilst the Postage to Zanzibar, Mauritius, Natal, the Cape, Ascension, and St. Helena is adjusted to the Australian Tariff, which is slightly higher for letters, but more advantageous for Books and Patterns,

I have the honour to be, Sir,
Your most obedient Servant,
F. G. MACHADO,
Postmaster.

Very early on Monday Morning—about 2 or 3 o'clock—fire was discovered in the hold of the Japanese schooner *Yayoi-maru*, better known perhaps to some of our readers as formerly the *Brewster* of San Francisco, which was lying at Temposan, loaded with ice, fish and fish oil, consigned, we understand, from Hakodate to the order of a foreign merchant. Signals of distress being observed after daylight from on board the *Tokai-maru*, an engineer was despatched to ascertain what was the matter. Afterwards there arrived Captain Gorlach, part of the crew of the *Sumida-maru* and part of the crew of the *Shinagawa-maru*. The Captain of the schooner being sick in hospital at Osaka, Captain Gorlach took charge of the ship, and as there are no appliances of use in such an emergency anywhere near Temposan and there was a strong Easterly wind blowing, it was decided to run to Kobe. Two pumps were got to work, sail was made and the ship was beached close to the Kobe Iron Works at Ohno between 12 and 1 o'clock. Assistance having been requested from the U.S.S. *Tennessee*, a party of forty men was sent, and as soon as the news spread a great number of Japanese firemen were in attendance, with the Japanese Shand and Mason engine. The schooner was scuttled, by 6 o'clock all signs of active fire had disappeared and the tide of Monday night would in two or three hours more effectually put an end to any chance of further danger from that source. The ship it is said belongs to Goto of Osaka, and it was not considered probable that she would be found to have suffered any material injury, except to her decks, though whatever there may be left of the dried fish will probably have acquired an additional flavor which the consignees did not expect.—*Hiogo News.*

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday 2nd July, 1876.

Passengers, Parcels, &c.	$5,706.34
Merchandise, &c.	$ 465.54
Total.	$6,171.88

Miles Open 18.

THE LAST PRESS NOTIFICATION.

THE enormous scandal of having some thirty editors of newspapers locked up in prison, whatever the circumstances which have led to it, has become so evident to the Government, that a notification has been issued by the Prime Minister providing that the publication of any matter calculated to disturb the peace of the nation shall be punished by the suspension of the offending newspaper for a period which is to be determined by the discretion of the *Naimushô*. This is, of course, some improvement on the law as previously administered, inasmuch as it gets rid of the scandal of imprisonment. But it leaves the Government with the power of depriving any man of his means of livelihood without any judgment being pronounced against him in a court of law. It places the power of deciding what may be or may not be published in this Empire, in the hands of some one or more subordinate officials—for it is obvious that the Minister of the Home Department cannot do more than give general directions on the subject—according to whose views, or even personal feelings, the proprietors of newspapers and writers for the Press may at any moment be deprived of their means of subsistence. This is, of course, despotism, pure and simple, and so far is almost worse than the previous position in which the offenders against the Press-laws were proceeded against in the law-courts; though, as we have just said, it will prevent the public scandal of imprisoning men, in the wholesale manner we have witnessed during the past two years, for the expression of their opinions. Now if we are at all right in the views we have so often expressed on this subject, it is the political situation, more than the Cabinet—*quâ* Cabinet—which is responsible for this despotic decree. The glaring absurdity of the idea of a free Press under a despotic form of government is now abundantly visible. The more obvious laws of the physical world are so impressed on us through our senses that it is difficult to use them in illustration of the utterly false relations which have been brought about by the growth of this new power in Japan. But if we could imagine a few ingenious artists placing the capital of a Corinthian column upon a bamboo set on (not even in) the ground, and expecting it to remain in that position, we may form some idea of the absurdity of establishing a free Press in a country under the form of government at present existing in Japan. The slighest shock of earthquake, the least unusual vibration or the smallest breath of wind, must bring the whole affair to the earth. On what foundations does a free Press rest? First on the liberties of the people won from their rulers. Is there a trace of these liberties in this country? Next, on laws administered by judges who have nothing to fear from the displeasure of the Crown. Is there any trace of the existence of such a body of men? Next, on juries called on to pronounce whether any incriminated writing is or is not calculated to produce the effects attributed to it by the public prosecutor or officer proceeding against the accused writer. It is useless to ask whether there is any trace of such an institution in Japan. And yet foreigners are found who think a free Press possible in this country! It is not what may be the every day working of institutions which tests them. The question is what strain they will bear when it comes to the pinch. A Press which exists on sufferance is not a Press in any intelligible sense of the word, and no popular institution can exist in an absolutely governed country except on sufferance. What security or guarantee can a Press have here for its freedom? So soon as it gives any trouble or causes any annoyance, a notification comes out from the Council of State, representing the deliberations of some dozen of men, which does for it what a vivisector does for the animal into whose brain he inserts an instrument which at one deprives the creature of the power of motion. A free Press in a free country flourishes under the shadow of law—flourishes because the laws have been made by those who have the power to guard, and the strongest interest in guarding, the liberty of the Press as the guarantee of their own liberties. But it is the last fruit of those previously won liberties, and can never precede them without producing the impression and the consequences of an inverted order.

We venture to think that two fallacies lie at the root of the arguments by which we have been usually opposed on this subject. The first is that liberties are ever given to their subjects by governments which are not afraid to withhold them. The second is that potential rights, which it is quite just to struggle for, are actual rights until they have been conceded as such.

All history seems to us to show than the process by which liberty is obtained is one of struggle, and that, if obtained in any other way, it would not and could not possess consistency enough to enable it to stand in the day of trial. Like unpuddled clay, which will not hold water, it could not fulfil the purposes to which it is put. On neither side are there the sentiments necessary to its vigorous existence: no sufficient fear of the consequences of withdrawing it is felt by the rulers; none of the passion necessary to make the guarding of it the first of all duties can be felt by those who possess it. Under such circumstances liberty can only be a feeble, flaccid sentiment, instead of a possession all the more passionately prized because dearly won. It appears to us that no impartial historian can justly blame rulers for withholding power from their subjects until they feel a reasonable assurance—the expression is admitted as well in law as in political philosophy—that they will use it wisely; and this assurance can only be arrived at by forming a correct judgment as to how far such power as has already been granted has been used for the good of the entire community, and what probability there is that further extensions of it will be similarly used. Neither the ardent desire for liberty characteristic of youth, nor the tendency to conservatism so much more common as life advances, embodies anything more than the views and sentiments natural to each age. Government is not an exact, but an experimental, science. Its real basis is expediency; its only test success.

In regard to the second argument: Rights which cannot be insisted upon appear to us only metaphysical entities, and are as though they were not. All that can be said for them is that they are potentially rights, and that it is just to struggle for them. But their birth and translation into actuality must come from the exertions and travail of those who claim them. They are not born until conceded, and are never conceded except in obedience to the fears of those who no longer dare withhold them. Whether these fears arise from a patriotic apprehension of detriment to the state, or from the selfish desire to retain personal power or the rewards of office, matters nothing in respect of the concessions made. How purely accidental,—humanly speaking—are the circumstances which have determined the views of men on this great question of government! Fox, as a young man, had the strongest disposition to support the prerogatives of the Crown, and was only alienated from the Tory side by some personal discourtesy of the king. Yet is it possible to find argument more sound, rhetoric more lofty and impassioned, a love

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of freedom more ardent and pure, or constitutional principles more broad and in more perfect harmony with human nature and the genius of the people whose cause he espoused, than in his speeches and writings? PITT, on the other hand, was almost constitutionally inclined to republicanism. His whole genius and the mould of his character were of the republican type, and as the son of his father he might have addressed the people of England after CHATHAM'S death from the pedestal on which the passionate admiration of the people had placed him. Yet he was FOX'S great opponent. Will any one doubt the virtue and honesty of these two great men? Surely not.

What therefore has to be considered is this. Are the influences now at work upon the mind of the Japanese people, and is their general condition, such, that a government which is anxious to prove itself wise in the eyes of the world, and to be acceptable to the country, should make some important concessions to the desire for greater freedom which is more or less widely spread among all classes? The question must be removed from the metaphysical platform. It is not one of abstract rights and logical symmetrical propositions, whether of LOCKE, ROUSSEAU, FOX or any one else. It is this: What is it most wise and expedient to do in the face of a growing desire for freedom, a tendency to struggle for it, much political martyrdom encountered to obtain it, and a rapid infusion into the popular mind of the principles of popular government?

Now, let us look back to the history of the Press during the last two years—we can hardly take a better guide. Has it, on the whole, been such as to justify the reasonable expectation that concessions of liberty made to the people, whose organ the Press is, will be prudently and wisely used for the benefit of the community at large?

There can, in our opinion, be but one reply: It has been such. We have not failed to point out in these columns such excesses as the Press has been guilty of. We have been forced on one or two occasions to confess, and then with unaffected regret, that these excesses have justly met with punishment. But we trust that, with no uncertain voice, we have condemned the undue and unwise severity of the Government in the administration of the Press-laws, just as we defended the imposition of those necessary restraints. Had it been possible, it would have been far more acceptable to us to argue that these laws were unjust and inexpedient. Rightly or wrongly, however, we could not do so, and are persuaded that the perfect genuineness of our convictions has never been doubted by one fair mind in this community. But it is the duty of the Government now to sum up the evidence afforded by the proceedings of the Press during the past two years, and, no reasonable man can doubt that, on the whole, they have been extremely creditable to it. One or two of its latest manifestations, must, of course, be taken into account, and nothing can be said except in severe reprehension of them. Writers who threaten and advise assassination as a political weapon, must, whatever the provocation of antecedent repression, be severely dealt with. Yet, on the whole,—and this is how it must be judged—the attitude of the public writers has been highly creditable to them as a body. It was not for them to act as moderators and judges, balancing point against point in the question whether more freedom should not be granted them. It was their duty to argue and strike for liberty, and they have done it through dangers and humiliations and fines and imprisonments, with fair arguments adduced from history, without violence or intemperance of language, with an intelligent perception of the course of human affairs and the constitution of human nature. They have made a stand worthy of brave men defending a good cause. They have fought the battle of the people's liberties, and have earned a recognition of their cause and their efforts, which, if this Government is wise, it will make with as little delay as possible. They have afforded that evidence, without which no prudent government should move, and which no prudent government should disregard, that the nation has grown rapidly in the power of political thought, and is ripe for a further extension of the popular liberties.

We have said that the native Press has not been content to stand as judge and moderator in this question, but has taken the position natural and proper to it as the advocate of liberty. Can it be said that any foreign journal stands self-condemned for not having assumed the same attitude? We hardly think so. In view of the larger command of political philosophy which the foreigner enjoys through his intimacy with the history of the great progressive communities of Europe and America, we cannot persuade ourselves that any foreign journal would be justified in acting as the advocate of an unqualified freedom for a people who, three years ago, had hardly developed the smallest germs of political liberty. Granting all the splendour of the cause, which we do most freely, we cannot be persuaded that the liberties which have been gained by the European races through struggles which, in their turn, have modified the whole form and condition of the governments which have granted those liberties, could be conceded to an oriental people whose form of government has been affected by no such process, without the danger, we might safely say the certainty, of anarchy. It seems to us an axiomatic truth that before any such concessions can be made on a large scale, the modifying interaction of the two opposed forces or bodies must have taken place during a reasonably sufficient length of time. Yet what modification of the old machinery of government have we seen here? We put aside, of course, the substitution of the Mikadoate for the Shogúnate, which but very slightly affects the question. The only one of which we have any knowledge is the establishment of the *Genrô-In*—a body of 'Notables' to whom the edicts of the Council of State are referred. But what is this body? It consists of men appointed and paid by and holding office at the pleasure of the Government. It is said to be active, and certainly refused its sanction to a recent order of the Council of State increasing the severity of the Press-laws. But the power which created it could destroy it with a stroke of the pen, and, as before said, the test of institutions is the strain they can bear when real strain is put on them. It is absurd to suppose that the *Genrô-In* would survive any supposed political necessity for its abolition. It may be possibly hailed as the germ of a new political development, though we have a strong suspicion that it was created for the purpose of giving office to a number of men who, but for something of the kind, might have made themselves very troublesome to the Government. Be this, however, as it may, the attitude of the Press during the past two years, and the fact that the popular mind is largely dissatisfied with the present restrictions on the liberties of the people, conspire to demonstrate the necessity for devising some mode by which they can be more directly represented than by the Press, which must be considered rather the index than the organ of the popular will. So soon as the problem has been solved how this will should be expressed by a responsible body, some modification of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the Press-laws might be made with great advantage to the national polity. Affairs are wholly out of joint at this moment, and present to our eye an inverted order. To most students of history we think they must present the same appearance, and, if so, there is sufficient danger to excuse the length with which we have treated the subject on this occasion. It will be sufficient for the present if, in conclusion, we ask those who have given any attention to this important question, or to the treatment it has received in these columns, to interpret these remarks —if indeed they are worthy to suggest any reflection – by such light as may be thrown upon them by the many articles in which the same subject has been treated on former occasions.

SPIRIT OF THE JAPANESE PRESS.

A Dialogue.

("*Chôai Shinban*," July 2, 1876.)

A certain sage says, "Better that there should be no writings than "that all writings should be indiscriminately believed in." We on our part now say "Better that there should be no letters from "correspondents than that all such letters should be indiscriminately believed in." And we may add that the letters from correspondents which are least worthy of credit are those to which no name is attached. Some person has, within the last few days, sent us a letter of this latter class which we now publish, and to which we solicit our reader's attention. A newspaper should always diffuse true intelligence, and our reason for now publishing a thing entirely unworthy of credit, is, that it bears upon our public relations with foreign countries, and we therefore record it without regard to its reliability or not. Our public relations with foreign countries is a subject to which the people of this Empire must give all their thought and energy, and which they must not disregard for even a single day. While, therefore, we cannot credit such a document as this we nevertheless publish it, as we cannot say that it may not prove of advantage at a future day.

Memorandum of an interview between the Japanese Minister, Mori Arinori, and the Governor, Li Hung Chang, at the town of Paoting in China, on the 24th and 25th days of the 1st month in the year of Jimmu Tenno 2536.

Besides the two Ministers above mentioned, there were present at the interview Mr. Tei First Secretary of the Japanese Legation, Professor Ho Anin of the board of education, a very celebrated scholar we believe, and Hoan Uyerin, Interpreter for the English language.

Several complimentary remarks having been interchanged, and Li Hung Chang having inquired of Mori the particulars of the latter's travels in Europe and America, he answered: I have twice gone round the world; on the first occasion setting out towards the west and returning from the east, on the second doing the reverse, that is setting out towards the east and returning from the west. What afforded me most enjoyment during these travels were the loss of sight of land for several days and nights while on the broad ocean, the gazing only on the lofty heavens above and the waters that circled around me below, the relieving of my ears from the noise of the world's turmoil and strife and my eyes from the contemplation of its struggles, and the pleasant intercourse which I had with my fellow passengers, all contributing to render life just like a pleasant dream.

Li Hung Chang.—It certainly must have been very pleasant.

Mori.—Indeed it was, and even after I had landed, seeing all the sights that the world afforded made me feel as though still in the land of dreams. The minds of men, and the conditions in which the several countries were, differed. Some were ground down by absolutism and ruthlessly oppressed, and those in which I noticed that this was especially the case were Turkey, India, and China.

Li Hung Chang.—You have derived great experience from your wide observation of things, and you will, I dare say, have some very intelligent plan for the relief of those countries which you have mentioned, for rescuing them from the oppression from which they are suffering, for rousing their energies, and for retrieving their reputations. Kindly favor me with it.

Mori.—As you can see I am still but a youth, and, being so, is it likely that my ability is such as would enable me to comply with your request? My thought has never been more than to develop my talents by friendly intercourse with such celebrated men as Your Excellency, and by the instruction which I gain during such intercourse; and this is the only object of the interview which I have had the good fortune now to obtain with Your Excellency.

Li Hung Chang.—Pray don't disparage yourself. In your opinion, what is the comparative standard of civilization in Europe and Asia.

Mori.—I will venture to tell you my humble opinion on the subject. All honest writers on it allow that Asia has made great advances in civilization. Supposing, however, that the position which Asia holds be fixed at the third degree—taking the highest as ten—that of Europe cannot be placed lower than the seventh.

Li Hung Chang.—A very just comparison. Pray favor me with your views as to the best plan for promoting the advancement of my country.

Mori.—Your question is a very serious one to which I would not venture to give a reply. I have just come to this immense country and am as yet entirely unacquainted with its internal condition. For the promoting, however, the advancement of its prosperity, the first thing is to select those persons who by their abilities are best qualified to grapple with a subject so important. This will be plain to you. Unless, however, there are thirty more Li Hung Changs in China this work cannot be carried out.

Li Hung Chang.—(smiling) Why do you say that? There are a hundred Li Hung Changs in China.

Mori. There may be, but what use are they when they are not in their proper places in such offices as Governors of the eighteen provinces or Ministers of the Tsungli Yamên. In my humble opinion those young students who are now being taught in America will, when they arrive at manhood, obtain an influence similar to that which Your Excellency now possesses, and will advance high in office.

Li Hung Chang.—I quite agree with you. I brought about the despatch of those youths to Europe and I place great hopes in them for the future. You have received instruction in Europe. I beg that you will inform me what those branches of learning were which you studied.

Mori.—The period of my studies was of no great length, and I did not therefore study thoroughly any branch of learning. The reason, therefore, being that I was engaged in the discharge of public business in the same way as Your Excellency sees I am at present.

Li Hung Chang.—May I venture to inquire how old you are?

Mori.—Almost 32 years.

Li Hung Chang.—Wonderful are your talents for one so young. I am almost twice your age and the frosts of winter are already beginning to whiten my brow.

Mori.—As regards the advantages of the Treaty that has been concluded between our two countries, I am not yet acquainted with your views on the subject. Do think that it will tend greatly to the profit of both countries?

Li Hung Chang.—I certainly think it will. And especially if that clause in it, which stipulates that neither of the two countries shall assail or despoil any of the possessions or colonies of the other, be faithfully observed by both.

Mori.—Even when there is a written record of a thing troubles often arise out of some indistinct expression; and even in matters which differ as widely as black and white various renderings will be given, according to the views with which the readers may look upon them. For example, of the Treaty of Friendship which you have just mentioned, interpretations might be exactly opposed to each other.

Li Hung Chang.—How so? Such can hardly be. In China no going back on a Treaty that has been once concluded could possibly take place. That which we are now speaking of should be observed by both countries for ever.

Mori.—What is meant by "for ever."? I should entertain the strongest objections to such an observation of it.

Li Hung Chang.—I cannot understand your reasons for saying so. Do you mean that an inviolable treaty may be disregarded, and that there is no objection to its being broken when it may suit one of the parties to it to do so?

Mori.—Your question is a very strange one and would hardly be intelligible to a single Japanese. A Treaty is made after due deliberation between the two parties to it, but, still, it must be revised at some period or other to keep pace with the world's changes.

Li Hung Chang.—Even granting what you say, that which has been concluded between our two countries is absolutely perfect, and it should be observed by both, at least for a period of ten years from the date on which it was concluded.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mori.—It certainly should. But the treaty of which we are now speaking is not the absolute perfection you say it is, and Your Excellency will very speedily see this.

Li Hung Chang.—How so?

Mori.—The members of the Tsung-li Yamén have stated to me that Corea is a tributary to China, and is therefore one of the possessions mentioned in the Treaty.

Li Hung Chang.—It most certainly is. I am aware of the tenor of the correspondence that has passed between the Yamén and your Legation in respect to the Corean affairs, and I entirely agree with the views that were expressed by the members of the Yamén. Corea is tributary to China, and in accordance with the treaty concluded between our two countries, should be looked upon as such by you.

(To be continued.)

July 4, 1876.

We ought to continue our publication of the memo. of the interview between Mori and Li Hung Chang which we commenced yesterday. A certain gentleman has, however, requested us to defer doing so as he has certain views in respect to it, and we shall therefore wait a little, and when the views have been expressed shall continue our record. We beg our readers' indulgence.

The Artificial Fertilization of Cereals.

A certain Mr. Tzuda published a translation of a work by Herr Hooibrincks (or Hoibran?) which treated three important questions touching agriculture: one on the bending of the branches of trees in order to make them bear more fruit; one on making air-passages in the earth; and one on the fertilization of plants. The first two processes were not attempted (in this country), but the last was tried under the auspices of the Kangio-Rio or Department of Agriculture in the latter part of the year 1874. At that time the Department advised the farmers to resort to the process, which they did in various *ken*, and experiments were also made in the gardens of the Mikado's palace. It spread rapidly through various parts of the country, and became quite a mania among the people. The following is an article on the subject which appeared in January last in the *Chôya Shimbun*, and was one of the first which treated it.

"Mr. Tzuda went to Europe and there learned the process of a certain Mr. Hooibrinks, a Dutchman, of fertilizing plants artificially, and on his return the Japanese began to apply it in various parts of the country. I myself had great confidence in the process and advised many farmers to try the experiment. But the reports which reach me from various quarters are to the effect that the increase of the crops due to it does not repay the expense it entails; and that though useful in places where there is not a free current of air, it is utterly useless where the wind has free passage. I then began to doubt the profitableness of the process, and determined to acquaint myself with the results of the experiments which had been made in Europe and America. I therefore always questioned my foreign acquaintances about it when I had the opportunity. Some said that there were few places in Europe and America where the experiment had not been tried, and I was told that the Emperor Napoleon had full confidence in it and had ordered the French Department of Agriculture to try and report upon it, which was done for several successive years. But it was found impossible to ascertain with entire certainty whether it was profitable or not, and it was therefore abandoned in France. Others said that there are so many clever practical men in Europe and America that were the process of any real value we should have found it general long ago.

On thinking the matter over I am inclined to believe that the process does not pay for the labour it demands from the farmers. I do not judge it to be bad entirely from the results of my conversations with foreigners, for I am persuaded that judgment can only be pronounced after many experiments. But I would warn the farmers against trying it simply because they hear it favourably spoken of, as they may easily lose a great deal of precious time in doing so.

Naruto Yoshitami.
Shiba, Tokiô.

Hereupon a discussion on the question arose in the newspapers. Mr. Tzuda defended the practice and said that it had not been sufficiently experimented upon, while others urged that it was unprofitable.

Shortly after Mr. Naruto's article was published, a letter came from the Chiba *ken* to the Kangio-Rio stating that the experiment had not been successful there.

On the 14th of April last the *Nichi Nichi Shimbun* published the following notification from the Department of Agriculture headed "Notification against the process of Artificial Fertilization." "As it is only recently that the Hoibrinks system of artificial fertilization has been introduced into this country, it has not yet been possible to ascertain whether it is profitable or not. Experiments upon it were made in France from 1863-65 under the superintendence of Hoibrinks and others, and the details may be found in the official reports subsequently published by the Agricultural Department. Those who are studying agriculture or have formed the intention of applying the process, had better examine these records and judge for themselves whether or not it is profitable.

Kangio-Rio.

9th April, 9th year of Meiji.

It is generally believed that the Department was against the process, but could not directly advise its discontinuance because it had previously recommended the adoption of it. At all events the mania for it has passed away in the neighbourhood of the capital, and is disappearing in the provinces. A notification was lately issued by the *Kenrei* of the Chiba *ken* ordering the farmers under his jurisdiction to abandon it.

The Coming Power.—A Fable.

(Chôya Shimbun.)

Messrs. Popular Election and Government Appointment met on a bridge called People's Rights, in the Ehime *ken*. The former said "You beat me last year at the *Chihokuan Kwaigi*, and I have ever since been travelling about the country and found myself constantly foiled in carrying out my wishes by your influence. You are skilled in flattery and are petted by the officials of high rank. But the learned class and the wiser officials detest your tricks and prize my integrity. In spite of the power you now wield, it will not be long before I banish you from the country and make my own influence paramount. Your skilful flatteries may delude the people of this day; but, rely upon it, they will not do so with the coming generation."

Mr. Government Appointment replied:—"You do not understand how to deal with the times, and are always obstinately bent upon arguing for something you cannot gain. Since I beat you last year you have been like a boy who has lost his master, wandering about from place to place, and after a great deed of trouble you have gained a footing in this *ken*. For all that, you should give up your folly. You very likely laugh at me. But you do not know the power I possess in enabling men to enjoy all sorts of pleasure. It is a rare case for any one to love you, and even then he is called a fool for his pains. If an official, he loses his place and finds himself without the means of subsistence. Cease your brawling then, and learn to flatter like me. This is the true way to gain happiness."

Popular Election looked at him with a frown and said:—"You try to beguile me with sweet words and so get me into your clutches. But you shall not catch me thus. You boast of your wonderful powers, but you are ignorant of the real condition of the world, or you would know that so long as such as you find favour, no country can advance in power and enlightenment. It is only in barbarous or semi-civilized countries than you can be tolerated. Though you be loved now, the affection is not everlasting. My time has not yet come, and I have but a small footing as yet in this place. Yet, I repeat it, the day is not far distant when I shall beat you."

Hereupon Mr. Government Appointment went towards Osaka and returned to the capital by steamer.

Kumoi Roiichi.
Ehimé *ken*.

Great and Little Thieves.

(Chôya Shimbun.)

The Japanese (Government) are anxious to extinguish the whole race of small thieves, but pay no heed to the great ones. The morals of the lower classes are carefully legislated for, but no attention is paid to those of the higher officials. Now who are the great thieves referred to above? They are the men with high rank and large salaries, who have important duties to perform, but who evade all responsibility, think only of their own interests, and spend in luxury the money obtained from the sweat of the farmers' brows. They possess no active sympathy with the people, and pay no regard whatever to their petitions and complaints. Men of such morals and conduct can only be termed great thieves, and no rational man will dispute this. We do not believe that there are any such among the present officials, but should such a class arise and the people be unaware of the fact, one cannot tell what might happen. I write this, therefore, to warn the people.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Now the police keep strict watch in the towns and cities—in fact all over the country—and for this reason the smaller thieves are constantly being caught. But if there are any such thieves in office, can the police arrest them and the judges judge them? No: such officials have the power of appointing or dismissing the police, of rewarding or punishing them, and the people must thus carefully watch that such men do not obtain office.

The Government should take the greatest pains to appoint honest officials, for, if we look to the past, it is clear that the men who have risen in this country have always done so by flattering those above them, and have ever aimed at increasing the power of the Government and not that of the people. They have done this in order to please those above them, careless whether the Government eventually breaks down, or the people suffer terrible distress, so long as they can keep their high position. These are the men on whom more attention should be turned than on the smaller thieves.

An Art-Treasure.

(Nichi Nichi Shimbun.)

Among other curiosities shown to the Mikado in the Miyagi *ken* (Sendai) was a portrait of Hashikura Rokuzaimon, dressed as a European monk of the sixteenth century, with a slight touch of the Japanese costume inasmuch as he has a sword in his girdle. Besides this portrait there were two or three rosaries such as are used by Roman Catholics, and two crucifixes of copper. There was also a manuscript on leather, presumably in the Latin language, subscribed with the words DATE MASAMYNE, which probably represents Daté Masamune, the founder of the family of Daté, princes of Sendai. The records of this family show that Daté Masamune, having decided upon sending Hashikura Rokuzaimon, and Yokosawa Kenmotzu to Nanban (the name used by the Japanese to denote all foreign nations except China) for the purpose of obtaining some knowledge concerning the outer world, he made known his intentions to the Shôgun Hidetada (the Second Shôgun of the Tokugawa family) who was extremely pleased with the project and furnished the Prince with navigators and some of the productions of Japan as presents. The party headed by these two men set out from Tzuki-ura harbour in Sendai. After the lapse of eight years Hashikura returned, but Yokosawa and the others of the party had died on the voyage. Hashikura brought a message from and a portrait of the king of Nanban, and also a portrait of of himself. The latter was an extremely perfect likeness, and thus guaranteed the likeness of the king of Nanban. Indeed the two pictures were sent with this object, and excited in the mind of Masamune great admiration of the skill of the Nanbans. These messengers were originally sent to Nanban with the idea of reconnoitreing the country, against which Masamune intended leading an expedition. But it was found to be so very distant that the project was abandoned.

The *Nichi Nichi* thinks there is abundant reason for believing that the Nanban in this case was Rome.

The Press-Laws.

(Hôchi Shimbun.)

The following question was laid before the *Shihosho* by the *Saibansho* of Tokiô on the 8th March last.

"On enquiring recently as to the manner in which offenders against the Press- and Libel-laws should be treated, when found guilty of offences against other laws, we were favoured with the reply that they should be dealt with as offenders against both laws and punished separately for each offence.

Now when we reflect upon this subject we see that any one who is convicted of an offence against more than one Article of the Press- or Libel-laws, is punished as guilty of the heavier offence and acquitted in respect of the lighter. Again, an offender against more than one clause of the Criminal Law is punished as guilty of the violation of the heavier clause, and acquitted of the lighter. Fines may be regarded as exceptional cases; but it seems too hard that offenders of the above class should have to suffer both hard labour and imprisonment. As it therefore appears to us that if such offenders were punished as guilty of the heavier offence alone it would be more in accordance with the spirit in which the criminal law is usually administered in this country, we repeat our enquiry.

(Reply from the Shihosho, April 4th.)

"As the newspaper Press- and Libel-laws are exceptional in their nature, they cannot be brought into harmony with the administration of the Criminal Law of the country. You are therefore to consider the instructions previously given as binding."

Decay and Growth.

(Hôchi Shimbun.)

Although progress is the law of the world, yet we find that the capital of this Country has greatly declined since the Revolution, in spite of all its apparent improvement. The officials of the Tôkiô *Fu* are so greatly pressed with business that they complain that they cannot get away from work at the proper hour.

Vast numbers of students from all parts of the country have assembled in the capital for the purpose of obtaining posts under the Government: but they have not succeeded, and are living in great poverty in the poorest quarters of the town.

New merchants are continually starting in business, but as no fresh purchasers spring up they do not last long.

Many brick buildings have been and are now being constructed, and it is true that there was quite a rush for them at first. But most of them are now unoccupied, and it looks as if they would soon fall into decay.

Many books are now being published. But there are very few to buy them. Carriages and *jinrikishas* are being constructed but there is no one to drive in them.

Many wish to borrow money, but there is none to lend. The police are active, but the number of thieves is on the increase. Roads are being finely repaired, but the traffic on them is steadily decreasing.

The Uyeno Gardens have been beautifully laid out; but scarcely any one is ever to be seen in them.

Yet in these times which are so hard for every one else, the newspapers, though the writers are fined and imprisoned, are rapidly increasing in circulation, and Newspaper Companies becoming daily sounder and stronger.

BRITISH CONSULAR TRADE REPORT FOR HIÔGO AND ÔSAKA FOR 1875.

BRITISH CONSULATE,
Hiôgo, 12th June, 1879.

SIR,—I have the honor to transmit to you a Report on the Trade of the Ports of Hiôgo and Ôsaka for the year ending 31st December 1875, accompanied with the following Returns.

HIÔGO.

1.—Return of the Import Trade.
2.—Return of the Export Trade.
3.—Return of all Foreign Shipping entered and cleared.
4.—Return of all duties collected on Imports and Exports, and of Shipping dues.
5.—Return of the Import and Export of Treasure.
6.—Return of the Foreign Firms and Residents.

ÔSAKA.

7.—Return of the Import Trade.
8.—Return of the Export Trade.
9.—Return of the duties collected on Imports and Exports, and of Shipping dues.
10.—Return of the Import and Export of Treasure.
11.—Return of the Foreign Firms and Residents.
12.—Return of all Foreign Shipping entered and cleared.
13.—Statement showing the total of the Trade and Shipping of the Ports of Hiôgo and Ôsaka.

HIÔGO.

In comparing the Import and Export Trade of Hiôgo (exclusive of Treasure) for the year 1875 with the previous year, it will be seen that the Trade has diminished to the extent shown by the undermentioned comparative Table.

Imports.		Exports.	
In 1874.....	$6,030,239	In 1874.....	$4,956,724
In 1875.....	$5,354,917	In 1875.....	$2,813,102
Decrease	$ 675,322	Decrease. ...	$2,143,622

Therefore the Trade of Hiôgo in 1875 has, I regret to report, decreased, as compared with 1874, to the large amount of $2,818,944.

In proceeding to review the trade of this Port, I consider it necessary to remark that the figures quoted in the different articles of Imports and Exports, touched upon in this Report, are entirely taken from the statistics of the Hiôgo Chamber of Commerce, which have been courteous-

Original from UNIVERSITY OF CALIFORNIA

ly placed at my disposal, and consequently show, so far as Imports are concerned, the actual business carried on at this Port for the past year; whereas the figures shown in the various Tables of Imports and Exports, attached to this Report, have been compiled from the printed Returns furnished me by the Custom House, and accordingly it will be borne in mind that the Custom House Returns denote with tolerably reliable accuracy the quantity of goods actually imported into, and exported from this port for the past year. And as I considered that the information required in a Report of this kind is to ascertain the quantity and value of goods which have been brought into this port, and the quantity and value of goods which have been sent away, I have therefore taken the Custom House Returns as forming the basis upon which to compare the Trade of Hiôgo for the past year with that of 1874. As a matter, however, of interest, and to show the actual business done in this port and that of Ósaka in 1875, as compared in 1874, I append the following Table taken from the Statistics of Trade compiled by the Hiôgo and Ôsaka Chamber of Commerce.

The business done during the year 1875 is as follows:—

1875.		1874.	
Imports	$5,726,797	against Imports	$6,888,926
Exports	$3,092,405	„ Exports	$5,279,713
Total	$8,819,202	Total	$12,168,639

Shewing a decrease in the business of the ports of $3,349,437 as compared with 1874.

This considerable falling off has been caused by a diminution in both the quantity and value of the goods dealt in. The total result of the trade of the past year has, as may naturally be inferred, proved most disastrous, and the value of property has, in consequence, greatly depreciated.

Imports.

The total value of goods sold during the year 1875 amounts to $5,726,797, showing a decrease of $1,162,129, as compared with 1874. The falling off has been confined almost exclusively to Cotton Fabrics. Cotton Yarn shows a decrease in value of $200,000, Shirtings of $360,000, and Raw Cotton of $185,000;—in fact the deliveries of all descriptions of Cotton imports show a large falling off when compared with the previous year, while an increase in the the deliveries of Lustres, Cloth, Mousselines de Laine, China Figures and Flannels may be noted. The import of all other woollen manufactures has decreased. It is impossible, however, to ascertain with any correctness, from the sources of information within foreign reach, how far the figures quoted represent the value of the trade at these ports. The numerous steamers now running under the Japanese flag between Ósaka and Yedo doubtless bring down quantities of foreign goods, and it is possible, therefore, that the consumption of European Fabrics in this district may have equalled, if not exceeded, that of last year, notwithstanding the fact that a smaller quantity has actually passed through the hands of foreign merchants at this port. The falling off in the Imports is, in reality, not as large as it would appear.

I estimate that fully one-third of the Imports have been sold by Chinese who purchase goods at auction in Shanghai, and send them over as a remmittance against produce. As these goods are usually of inferior quality, and frequently slightly unsound, they have an injurious effect upon the value of direct importations from London. The falling off in these latter is very apparent as compared with former years.

The principal goods sold have been as follows:—

Grey Shirtings.—Deliveries are returned at 360,358 pieces, valued at $801,044 against 485,407 pieces in 1874, valued at $1,166,134. The trade in these goods is now almost exclusively in the hands of Chinese, who import from Shanghai (as above-mentioned) principally to place their agents in funds for the purchase of produce, and are therefore content to sell at cost. The bulk of the deliveries has consisted of common chop 8¼ lb., the value of which has ranged from $2.20 to $2.35 per piece. It is worthy of note that there is no competition in the purchase of Grey Shirtings, only one native firm of any importance buying, evidently by arrangement, and retailing to the smaller dealers.

Cotton Yarn.—Business in these goods has fallen to the insignificant quantity of 3,120 piculs, against 8,385 piculs in 1874. It is not to be supposed, however, that the entire consumption of foreign yarn is represented by these figures, as considerable quantities have been imported by Japanese from Yokohama. A similar combination seems to have been entered into by the Japanese in regard to this article, two firms only being in the market and distributing to the others.

Chintzes.—Total deliveries of all descriptions amounted to 41,409 pieces against 46,514 pieces in 1874, a large proportion of which, as in former years, consisted of importations from Shanghai by Chinese. The value of common qualities has remained steady at $1.70 to $2.00

Turkey Red Cambrics.—The quantity sold during the year was 54,080 pieces, valued at $125,017. The market has been in a declining state throughout, with the exception of a temporary advance in October.

Black Cotton Velvets show that 16,523 pieces, valued at $143,866 were sold during the year against 19,960 pieces and $182,422 in 1874. The demand for these goods has diminished notwithstanding a lower range of prices. Quotations were at their highest in January, and steadily decreased until the lowest point was reached in July; since then a slight improvement has taken place. A large quantity of inferior quality has been imported by Chinese and sold at low prices.

Victoria Lawns.—A marked decrease must be noted in the deliveries of these fabrics, which amount to only 44,608 pieces valued at $46,900 against 81,728 pieces and $81,755 in 1874. The highest price was reached in July, and the demand ceased after October, the goods being out of season during the winter. The enquiry has latterly been in favour of an inferior quality usually imported into China, to sell at 98 cents to $1 00 per piece.

Taffachelas.—This article has varied little from that of last year, deliveries being returned at 40,160 pieces and 42,820 in 1874. Prices have, however, been lower, and there has at times been great difficulty in effecting sales. The trade in these goods has scarcely been satisfactory of late years, in consequence of the frequent change of fashions.

Drills, White Shirtings, T. Cloths, Satins, Brocades, and *Dyed Shirtings* have been placed to a limited extent, all showing a decided falling off as compared to last year, whilst the prices obtained have been uniformly lower.

Mousselines de Laine.—The increasing business in these goods is one of the prominent features of the Import Trade, and speaks highly for the enterprise of the German Firms who continue, as heretofore, to be the sole importers. It is unfortunate, however, that English manufacturers cannot compete with French and German houses in the production of Mousselines de Laine, their value being one fifth (1-5th) of the total Imports. The reason of this is explained in the following extract of a letter from a Bradford manufacturer to a British Firm at this Port, which has been courteously placed at my disposal.

"It may be taken as conclusive that these goods cannot "be manufactured so cheaply in Yorkshire as to compete "with the French. The reason, however, is not the one "so generally alleged, relative to the climate of Lancashire "and Yorkshire not being favorable to the imparting of "that brilliancy of color found in Continental goods. We "would undertake to equal all French colours in all-wool "goods, and in mixed goods; the French themselves would "admit, and do admit, that they cannot compete with us. "Indeed, for the dying of mixed goods; English dyers "are engaged in all dye works in France of large im-"ports.

"The reason is, that the French have been accustomed "to make these goods for a long time, and they can "therefore reduce to a minimum the charges in all the "processes. This, however, would not prevent us from "making an earnest experiment were it not that, in order "to do it with any chance of success, we should require "ourselves or our manufacturers to lay out a very con-"siderable amount of capital. Even this we were pre-"pared to join another manufacturer in doing, but we "found that the difference in the wages of labor here and "in France, where the Mousselines are produced, was of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"itself an insuperable obstacle. The abundance of cheap, "docile, and intelligent labour in France, as compared "with the supply of the same commodity here, gives the "French an advantage which tells with prohibitory force "on an article whose price is so low and in which the "wages of labor constitute an important part." I am informed, however, that the obstacles which hitherto prevented their manufacture in England, namely, the cost of altering machinery to produce patterns, the taste for which might be of short duration, and the difficulty of securing the delicate shades of the different colours, which the climate was prejudicial to, has to a great measure been removed by the preference lately shown by the Japanese for plain goods, which doubtless could be manufactured in Yorkshire, etc., as successfully as on the continent. The deliveries amount for the period under review to 201,342 pieces, valued at $1,089,674 against 103,760 pieces valued at $654,200 in 1874, or an increase of nearly a hundred per cent. The great bulk of these deliveries consists of plain goods, the printed and figured fabrics apparently going out of favour to some extent, and the fickle taste of the Japanese rendering the importation unprofitable. Prices have ruled steadily throughout the year, the best demand existing from January to March, and from August to December. This article is the chief Import of this Port.

It will be noted that in the Custom House Returns appended to this Report no entry is made in the Import Table under the heading of Mousselines de Laine, notwithstanding that this woollen Fabric to the extent of upwards of a million dollars has been imported into Hiōgo during 1875. The explanation given at the Hiōgo Custom House to this extraordinary omission is that the quantity of Mousselines de Laine imported into this Port for the past year has been mixed with the various entries under Cotton and Woollen Manufactures, and this likewise applies to Lustres imported in 1875.

Lustres and Orleans.—Deliveries of these goods are likewise larger, being 98,344 pieces against 88,122 in 1874. The principal description dealt in has been plain Black Orleans, and although a larger business has been done, prices have had a downward tendency throughout the year. The trade in these articles is in the hands of English manufactures and the business transacted shows a gradual increase during the past few years.

Black Lastings show a clearance for the year of 7,320 pieces; prices have ruled lower throughout, especially towards the end of the year, when best quality was valued at $12.50. The highest quotation reached was $14.00 against $15.00 in 1874. The importation of these goods has been restricted owing to the unremunerative prices offered by native dealers.

Italian Cloth.—A falling off has to be noticed in this article, only 63,985 yards having been delivered in 1875 against 171,260 yards in the previous year; prices have generally been unsatisfactory.

Cloth.—Although deliveries are somewhat larger than in 1874, these are due entirely to forced sales of stock, as the importation of this article has almost entirely ceased in consequence of the heavy losses sustained. No demand whatever existed between February and September, but during the ensuing three months some enquiry showed itself at extremely low rates, which although leaving an actual loss of fifty per cent holders were forced to accept, or to await a market at the end of 1876. The stock is now reduced within more manageable compass, but consumers appear quite unable to pay a price approaching cost. The taste for foreign clothing seems to be declining and its use to be confined to the official class. Deliveries were made to the extent of 261,792 yards, showing an increase of 40,000 yards on last returns. The demand was confined almost exclusively to Black and Blue Presidents and Pilots, the former, however, having the larger share of attention,

Flannel.—Some demand has existed for this article, resulting in the delivery of 113,500 yards valued at $28,904. The description chiefly taken has been a low quality of assorted colours, at an average price of twenty five cents per yard. This material is now extensively used for making underclothing, superseding, in a great measure, the cotton singlets and drawers so generally worn since the introduction of European clothing.

Miscellaneous Woollens sold during the year comprised Camlets, Thibets, Fancies, Corded Orleans, Long Ells and other goods. $874,327 worth of these were delivered, against $953,232 in 1874.

Blankets.—The deliveries of these have fallen to 14,398 pairs against 31,000 pairs for 1874; the reasons assigned for this decline are the general depression of trade throughout Japan, and to all contracts for Army purposes being now made in Yedo, which has caused the demand in this district to decrease. The course of the market has been dull throughout the year, and prices have left a loss to importers.

Metals.—The quantity of Iron delivered is nearly equal to last year, say 41,423 piculs. The value is, however, considerably less, being $170,142 against $204,737. This may be accounted for partly by a general decline in value, and partly by the fact of the deliveries including a larger proportion of Pigs. Nail-Rods have, as usual, formed the bulk of the purchases, but Pig-Iron has also been imported in considerable quantity, and prices of all descriptions had declined seriously towards the end of the year. Of Lead, Steel, and other Metals, the quantity sold has been insignificant. Some of the Iron Mines in the Southern Provinces have lately been producing Iron of a superior description, of which large quantities have found purchasers in Osaka, and when better known will probably supercede to a great extent English Iron.

Sugar.—Deliveries have fallen off, being only 42,934 piculs against 55,500 piculs the previous year. A good demand for Formosa kinds existed in August, September and October, but large arrivals subsequently depressed the market, which is supplied principally by the native sugar produced in the district of Satsuma, of which considerable quantities are annually imported.

Cotton.—Total sales of China cotton amounted to 4,958 piculs against 17,460 piculs in 1874. In the month of November news arrived of a partial failure in the China crop, and some attention was in consequence directed to Japanese staple, resulting in the settlement of about 6,000 piculs at $19.00 to $23.00. The damage to the crops proved, however, to be much less serious than was at first supposed, and as the Shanghai market offered no favourable prospects at the above quotations, the greater part of the purchases still remain in the country. The native crop being also fairly up to the average, the Japanese found it unnecessary to draw their supplies, as in previous years, from China to the same extent, and consequently imports fell as above quoted.

Peas.—A large quantity, 37,664 piculs, has been imported from China during 1875.

Kerosine Oil.—The trade in this article is now assuming considerable importance, sales having increased to 73,872 cases during the year against 28,300 cases in 1874. Prices have, however, declined very materially, especially since the month of May, and at the close of the year were quoted at $2 30 to $2.50 per case, or $1 per case less than the average price during 1874. Complaints have recently been made that the Japanese occasionally purchase empty tins of Devoe's and other well-known brands, for the purpose of filling them with inferior oil of native manufacture, which is then disposed of as a genuine article. This practice is not only detrimental to trade, but fraught with considerable danger to the innocent consumer.

Rice.—In consequence of the high price of native grain a small quantity of Saigon rice was imported during the year, but the result was not satisfactory.

Sundry Imports—Amongst these, Dyes give a value of $61,375; Safflower of $163,020, and Sundries, including Machinery, Foreign Clothing, Medicine, and all articles imported and sold to Europeans, $874,327. This is, however, exclusive of machinery and materials imported for the Railway, Mint, and other Government works, the value of which is considerable. Arms have of late entirely disappeared from the list of Imports. The use of Foreign Clothing generally has likewise greatly decreased, and the prices obtained recently for such articles as Singlets, Drawers, etc., have been but a small percentage of invoice cost. Many goods formerly imported in large quantities, such as Army Boots and Shoes, Umbrellas, &c., &c., are now manufactured in Osaka.

Original from UNIVERSITY OF CALIFORNIA

EXPORTS.

The total value of Exports for 1875, exclusive of Treasure, is estimated at $3,092,405 against $5,751,155 for the previous years, showing the remarkable decrease of $2,658,750, so that the increase in value gained in in 1874 has been lost in 1875. This is attributable to a decline in the value of Tea, the entire suspension of the export of Rice, and a considerable falling off besides in the shipment of all miscellaneous produce.

Tea.—The total export for 1875 was 7,649,020 lbs. against 7,091,165 lbs. in 1874. Although the quantity was slightly in excess of the previous year, the value, in consequence of a decline in price, shows a deficiency of $856,921. Of the above quantity 10,050 lbs. were shipped to London, 16,200 lbs. to Canada, 6,139,030 lbs. to the United States direct, and 1,483,740 coastwise to Yokohama. It will thus be observed that the total direct foreign export was less than in 1874, but a large proportion of the Tea to Yokohama was prepared here for shipment, and included in the foreign export thence, merely for the convenience of the shippers, who obtain Consular invoices there. In addition to the Exports by foreigners, large quantities of Tea have been sent forward by native merchants to Yokohama for sale upon that market, no reliable statistics of which can be obtained. The actual product of the district is therefore very much larger than is shown by the export figures.

During the early part of the year business in the leaf was unusually dull in consequence of the unsatisfactory quality of the supply on offer and the extreme prices asked. The new crop made its appearance upon the market on 10th May, and the supply was at first limited, prices opening at an advance of $2. upon the rates previously ruling. Quotations, however, after the lapse of a few days, rapidly declined as arrivals increased, and with a temporary rally in June, September, and early in December, have tended downwards throughout the year, closing at a decline of $9 per picul upon those ruling at the same period in 1874. Choice Teas, however, have not shared in this depreciation, but have almost maintained their value throughout. Prices of Good Medium have ranged during the year as follows:—

Season 1874-5	January	per picul	$35 to $37
	February	„	$35 to $38
	March	„	$34 to $36
	April	„	None.
Season 1875-6	May	„	$35 to $38
	June	„	$33 to $36
	July	„	$32 to $33
	August	„	$31 to $32
	September	„	$31 to $32
	October	„	$29 to $31
	November	„	$28 to $30
	December	„	$27 to $29

The quality of the crop 1875-1876 was fully equal to that of the previous season, and the proportion of fine to other grades was again larger. The grades above fine, however, do not keep up the proportion to the entire production which they bore when the latter was smaller, and these Teas have therefore been comparatively scarce. This may be accounted for by the increasing cost of labour which prevents the dealers from subjecting the leaf to careful sorting when gathered.

The new plantations, within the limited area open to the investigation of foreigners, continue to increase, and there is every reason to expect a considerable augmentation of the export during 1876.

It is estimated that the crop in 1875 was larger by upwards of twenty per cent. than ever it was before, and there is no doubt that there is still a plentiful supply in the interior, but which, owing to the low rates offered by foreigners in sympathy with the continued adverse advices from America, holders are loath to put on the market.

The truth is, there is a struggle going on between China and Japan for the patronage (if I may call it so) of the United States. At present Japan teas are most in favour, but this came about by the former high prices that had to be paid for China green teas and the excessive adulteration they were subjected to.

Now, however, this is not the case, and green tea in China is as cheap as in Japan, and it remains to be seen what will be the end of the excessive supplies grown in this country. Within the last four years the Export from Japan has increased about one-third, the price in America is gradually declining, Teas being worth there about two-thirds of the amount they realized a few years ago.

The Japanese growers do not seem to comprehend that the depreciation in values is to be accounted for by the fact that supplies largely exceed the demand, and also that the deterioration in the quality has a great deal to do with it, and instead of paying more care to the cultivation of the plants and particularly to the preparing of the leaf, they content themselves with planting more trees, expecting by increasing the quantity to make up for depreciation in values; a fatal error, and one which they may regret by and by. Even now complaints are constantly received that Japan Teas are very inferior in make to what they were, the leaf being carelessly grown and picked. On the other hand the Chinese are, as is the characteristic of them, doing all they can to regain their footing, and many people are of opinion that Green Teas will in turn supplant Japans. This would be a serious blow to the country.

Rice.—This article, the export of which during 1874 represented a value of $796,390, is entirely absent from last year's statistics. The prohibition against foreign shipments imposed in August 1874 was removed in April 1875, but the extreme range to which prices attained towards the close of the year prevented exporters from taking advantage of the withdrawal of the restriction. Prices have since, however, had a downward tendency, and closed in December at $2.35 per picul, although still too high to admit of profitable operations.

Copper, Bronze, &c.—A gradual decline of these metals must be noticed during the last few years, the figures being 11,878 piculs in 1875, 17,532 piculs in 1874 and 24,428 piculs in 1873. The Japanese Government persistently refuses to allow the assistance of foreign capital in working the mines, and the production being in the hands of a few monopolists, unprovided with the necessary appliances, renders the cost so high as to shut them out of the European markets. With the exception, therefore, of a trifling shipment of 80 tons to London, the whole of the export has, within the past twelve months, been taken by India and China; prices of slab copper have risen gradually during this period from $22.25 per picul in January to $24.37 in December. There is no doubt that if this valuable metal were properly worked it could be produced at a price that would admit of its being largely exported to London, where its superior quality gives it a higher value than the best Chili bars.

Bronze ornaments have now become very scarce, and have almost disappeared from the list of exports, and the same remark applies to guns.

Tobacco.—Shipments of this leaf continue to fall off, having been only 5,416 piculs in 1875, against 9,649 piculs in 1874, 10,440 piculs in 1873, and 22,780 piculs in 1872. As mentioned in my last report, the growers will not take proper care in the sorting and drying of the leaf, in consequence of which neglect at least three fourths of the shipments arrive upon the London market in the state technically known as country damaged. This is the more to be regretted, as in consequence of its absorbent nature, Japan Tobacco, which otherwise possesses no good quality, is coming into favour in London for mixing purposes, and sound leaf has been sold as high as 8d or 9d per lb. In consequence, however, of the impossibility of obtaining it in proper condition the trade is year by year attracting less attention on this side. A partial failure of the crop tended no doubt to diminish the export in 1875, but there is no reason why the growth should not be largely increased, and very ordinary care in harvesting the crop would render it a most profitable one to the farmers; prices have been low throughout the year in consequence of the inferior quality on offer, some purchases being reported at under $4 per picul. Well cured leaf ought to being from $6 to $8 per picul, and if the stems are removed, even more.

Camphor.—This commodity has been exported to the extent of 7,804 piculs, of which 4,803 piculs were shipped to London. Prices have ruled steadily at between $11.50 and $13.00 per picul.

Curios.—Exports under this head have increased during

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the year to $175,050, of which $36,000 worth went to London, and $139,050 to the United States. Large quantities of inferior porcelain and lacquered ware are now being manufactured for export.

Fans.—The exportation of Fans has assumed such considerable proportions as to need some remarks.

The export of Fans from Hiôgo and Ôsaka in 1875 was about 3,000,000 valued at $90,000. This large increase, compared with former years, doubtless is due a good deal to the Centennial Exhibition in Philadelphia.

Almost all fans are shipped to the United States, there being but a limited sale for them in England, and I doubt if they have been very extensively tried in other countries.

The trade in America is in the hands of a few houses who have almost a monopoly, and the prices realized we presume are satisfactory to them. But it is a business which requires great experience, and one which, like the trade in curios, few people can compete in.

Ôsaka is the principal city for the manufacture of the "Ogi," or folding fan, which are those almost exclusively exported, all descriptions of the bamboo kind being made there, the figures, writing, &c., being executed in Kiyôto. The prices vary from 12 sen to 30 yen per 100, and even occasionally higher figures than this are given. The bulk, however, consists of the low costing goods. The Japanese, however, get their supplies for home consumption from Nagoya, and these are cheaper, although perhaps less endurable, than those made for export.

The superior Fans called "*Uchiwa*" are manufactured at Kiyôto, and are extensively used by the better classes of Japanese children, etc, while the inferior kind of the same description come from Fushimi and Tôkiô. The following extract from the *Hiôgo News* of 24th November 1875 regarding Japanese Fans and their manufacture may be interesting to quote.

"Like many other manufactures the principle of division of labour is carried out a long way by this branch "of industry. The bamboo ribs of the fans are made in "Ôsaka and Kiyôto by private people in their own houses "and combinations of the various notches cut in the lower part is left to one of the finishing workmen, who "forms the various patterns of the handles according to "plans prepared by the designer. In like manner the "designer gives out to the engravers the patterns that "his experience thinks will be saleable for the season "next ensuing, and, when the different blocks have been "cut, it still rests with him to say what colours are to be "used for each part of the design, and what different "sheets are to be used for the opposite sides of each fan. "In fact, according to our informant, this official holds, if "not the best paid, at any rate the most important, position "on the staff in ordinary: just now, however, his talents "are to a great extent thrown into the shade. Foreigners "have had fans made ornamented with flags, with pictures "of the exhibition, with advertisements, and with other "eccentric devices, and the only choice left is the choice "of colours. When the printed sheets which are to form "the two sides of the fans have been handed over to the "workman, in company with the sets of bamboo slips "which are to form the ribs, his first job is to fold the "two sheets which are to form the fans so that they "will retain the crease. This is done by putting "them between two pieces of heavily oiled paper "which are properly creased. The four are then "folded up together and placed under pressure. When "sufficient time has elapsed, the sheets are taken out "and the moulds used again,—the released sheets being "packed up for at least twenty four hours in their folds. "The next process is to take the ribs (which are temporarily arranged in order on a wire) and "set" them into "their places on one of the sheets after it has been spread "out on a block and pasted. A dash of paste then gives "the wood-work adhesive powers, and that part of the "process is finished by affixing the remaining piece of "paper. Three or four times the fan has to be folded up "and opened before the folds get into proper shape, and "by the time the fan is put by to dry it has received an "amount of handling that no foreign paper would endure. "In fact, on our mentioning that that was our opinion, "the workman said that foreign paper had been tried but "had been relinquished as unsuitable for the work, though "with great care they had been able to make some fans "with printed patterns which had been sent from America, "but they were invariably compelled to use one face of "Japanese paper. The qualities of native paper now "used are not nearly so good as those of which the old "fans were made, and in consequence the style of manufacture has had to be changed. Instead of first pasting "the two faces of the fan together, and then running in painted ribs, the ribs are square, and (as said before) pasted in "their places. The outside lacquered pieces and the fancy "work are all done in Ôsaka and Kiyôto, and some of the "designs in gold lacquer on bone are really artistic, "but the demand for the highly ornamented class of goods "is not sufficient to encourage the production of large "quantities of first class work. When the insides are dry "the rivetting of the pieces together (including the outer "covering) is rapidly done, and a dash of varnish quickly "finishes the fan. The highest priced fan that was ever "used in the days of seclusion from the outer world was "not more than *yen* 5.00. Since foreigners have been "here, however, some few have been made to order as "dear as $10.00 and 15.00 each. The general prices of "ordinary fans range from fifty *sen* per 100 to fifteen *yen* "per 100, though an extraordinary expensive fan is turned "out at fifty *yen* per hundred. The number of fans in "order for the exhibition amounted to over 800,000, and "they will cost about $50,000. The sale of fans in olden "times seldom exceeded 10,000 a year, for the whole "country, but there have been (independent of the Exhibition fans) nearly 3,000,000 exported from this place "and Yokohama during the past twelve months. The "Tôkiô fans surpass those made in this neighbourhood in "design and neatness of style, and also price."

It will be seen the above remarks refer only to the folding fan, the "*Ogi*."

Isinglass.—The trade in this article, which is exclusively in the hands of the Chinese, has increased from 2,286 piculs valued at $75,212 in 1874 to 6,238 piculs valued at 198,416 in 1875. The export has been entirely to Shanghai and Hongkong.

Seaweed.—This produce is likewise bought exclusively by Chinese, and has been exported to the extent of 30,821 piculs against 63,565 piculs in 1874. The falling off has been occasioned by the low prices ruling in the Shanghai market.

Vegetable Wax.—The export of this article has been somewhat stimulated by the low prices ruling, and amounted to 10,056 piculs against 7,410 piculs in 1874. Prices opened in January at $11.50, but although refiners asserted that lower rates would not induce production, a rapid decline took place, and the bulk of the purchases was made between $9 and $10 per picul, whilst in December the value had fallen to $8.50. The consumption in London has, however, greatly fallen off, within the last few years, owing to previous high cost of the article, which has induced buyers to substitute petroleum and other cheaper materials, and even the above low prices have not left a profit to shippers. Wax is now generally prepared in square cakes in place of the old saucers, by which a saving in freight is effected.

The remaining exports include 802 piculs of *Waste Silk* valued at $31,360,; 2,755 *Head of Cattle*, valued at $65,972, and a variety of Miscellaneous Articles dealt in by Chinese, the most important of which are *Mushrooms*, valued at $69,169, and *Biche de Mer*, valued at $30,150.

The serious falling off in the value of the foreign export trade of this district is a subject well worth the attention of the native Government, affecting as it does the revenue of the country as well as the prosperity of its inhabitants. The purchasing powers of the latter are already sensibly impaired, and unless some change for the better takes place will speedily be still further diminished. There is no reason why the production of copper, camphor, tobacco, wax and other articles, for which a ready market exists in Europe, should not, under favourable circumstances, be largely increased, and millions of acres of waste land be thus made to contribute to the wealth of the country.

Shipping and Navigation.—The movements of foreign vessels visiting this port during the year 1875 have been as follows:—

109 British vessels of 86,582 tons entered and cleared,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

showing a decrease of 24 vessels and 7,672 tons as compared with the previous year.

194 American vessels (including mail steamers) of 179,468 tons entered and cleared, being a slight decrease of 2 vessels and 1,005 tons against the year 1874.

24 German vessels of 5,460 tons entered and cleared, being a decrease of 20 vessels and 10,172 tons as compared with the past year.

2 French vessels of 520 tons also entered and cleared during the past year.

The total number of Foreign vessels that entered and cleared the port of Hiôgo in 1875 amounted to 335 vessels of 453,958 tons, being a decrease of 44 vessels and 18,682 tons against 1874. As in the past year, the American mail steamers, touching twice a week at this port, supplied the greater portion of the American tonnage. These steamers are now under the Japanese flag and run with commendable regularity. They are commanded and officered by foreigners.

3 British vessels sailed with cargoes for the United Kingdom direct.

1 British vessel cleared for New York with a cargo of Tea.

The decrease in Foreign Trade has very materially affected the quantity of tonnage that has passed through the port during the past twelve month. It should be noted, however, as partly accounting for the deficiency, that in the month of October the Pacific Mail Company sold the steamers with which, since 1868, they have been running the line between Yokohama and Shanghai, to a native company which goes under the name of the Mitsu Bishi Steam Navigation Company, and that these vessels, although still employed in the same Trade, being now under the Japanese flag, have since that date ceased to appear in the Returns of Tonnage. The number of vessels that have loaded for foreign ports has been small and freights have sustained a gradual decline. To New York the rate by sail has fallen from 55s. per ton of 40 cubic feet to 35s., and to London from 70s. per 50 feet to 50s. Coal freights from Nagasaki to Yokohama have been steady at $2 per ton.

Currency.

Number and Denomination of Coins struck at the Ôsaka Mint from February to December, 1875.

Gold—5 *yen*	175,030
Silver (900 standard)	
One *yen*	115,000
Trade Dollar	97,000
Subsidiary Silver	
20 *sen*	296,000
10 *sen*	8,977,000
5 *sen*	5,675,000
Copper	
2 *sen*	22,286,000
1 *sen*	29,814,000
½ *sen*	15,305,000
1 *rin*	3,038,000
Coins struck	85,778,000
Valued at	$3,151,073

Therefore in making allowance for the quantity of coins struck in the month of January, *nearly* 100,000,000 coins were struck at the Ôsaka Mint during the year 1875. The value of gold *yen* in February was quoted 3⅜ per cent. discount, and gradually increased until, in July, it had risen to about 1 per cent. discount, at which rate it stood with little variation until the close of the year. The change of the standard coin from silver to gold in Germany will most probably still further affect the value of gold *yen*, as doubtless large withdrawals will be made for shipment to Europe. Exchange on London has been very prejudicial throughout the year for suitable returns being made for Imports. For in January 6 months' sight drafts on London were procurable at 4s. 2¼d., but declined until, in July, only 4s. 1d. could be obtained, at about which rate exchange stood until the close of the year.

The remarks on the following three points may be of interest at the present monetary crisis.

1.—Regarding the low rate of exchange ruling in England.

2.—The marked scarcity of Japanese gold coin circulating in the country.

3.—The cause of the late falling off in the amount of gold coined at the Imperial Mint, Ôsaka.

1.—The low rate of exchange ruling between Japan and England is the effect felt here of the immense quantities of silver now produced by the mines of Nevada and California, and the late change from a silver to a gold currency adopted by the Government of Germany. The only large market for silver is the East:—India, the Straits, China, and Japan. As now silver is coming forward to this market in excess of what the market actually requires, the price of it, based on the value at home, naturally declines, hence the low rate of exchange ruling.

2.—Regarding the marked scarcity of Japanese gold in circulation, the silver supply of the world being in excess of the relative, or comparative, gold supply, the demand for gold is greater than the demand for silver. Gold and silver having in Japan a fixed value, (from Japan having a double standard) cheap silver, or its equivalent in produce, is imported into Japan, and paid for by produce and gold; the gold representing the balance of trade against the country. As Japan has had to pay foreign countries both for Imports and for the services of her foreign employés, considerably more than the value of what has been exported, a drain has been made on the gold in the country, and hence the scarcity of it as a circulating medium.

Contrary to the advice given to the Government at the commencement of the new coinage, Japan insisted upon having a "double standard," that is that both gold and silver are legal tenders, and bear to each other a fixed arbitrary value. The effect of this is simply what was foreseen by her advisers when recommending a single standard, that as silver became cheaper elsewhere, gold would flow out of the country, without letting the country have the relative advantage in value.

Had the standard of Japan been silver, and the coin of account and legal tender been the silver *yen*, this coin which has now been legalized in Singapore, in Canton, and in the Fuhkien province, would sooner or later, from its purity, good workmanship, and the fact of its characters being for the most part Chinese, have become the circulating coin of China. Gold in Japan being then subsidiary to silver, and a marketable commodity, would have been bought for its intrinsic worth, and would not have left the country, except for what it was worth in the circulating medium or legal tender of the country.

3.—Regarding now the cause of the late falling off in the amount of gold coined at the Mint.

For the first two or three years of the Mint the conversion of the old native gold currency, *Obangs*, *Nibukin*, &c., into gold *yen*, and the large importation of gold bars from San Francisco, gave considerable work and greatly swelled the returns of gold coined. Now, the conversion of the old into new coinage being nearly complete, and the total cessation of the import of gold from other countries, has made the Mint dependent on the supply of gold from the native mines, the output of which is comparatively small.

Railways.—The Railway in operation between Kôbé and Ôsaka, and the branch line from Ôsaka to Ajikawa, (together 22 miles) has continued to be worked with regularity and freedom from accident. During the year ending December 1875, 1,067,868 passengers were conveyed, paying fares amounting to *yen* 235,109. The sum received for Passengers' Luggage, Parcels etc. was *yen* 6,946 and for goods freight *yen* 9,800. The weight of goods carried was 116,171 piculs, and the total receipts for all kinds of traffic amounted to *yen* 251,855.

On the extension from Ôsaka to Kiyôto, about twenty seven miles in length, the Railway works are reported to be in a forward state. The line in its course has to cross several rivers of importance, one of which requires a bridge of iron 1,300 feet long, and another has had to be founded nearly 100 feet below the level of the Railway. There are other works said to be in proportion, but now generally in such an advanced condition that, as anticipated last year, it is fully expected the public opening from Ôsaka to Kiyôto may take place early in the ensuing autumn.

Beyond Kiyôto no works have as yet been commenced,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

but further surveys towards the interior have, it is understood, shown the ascertained practicability of the contemplated trunk line to Yedo, and of a connecting line from Niigata.

Mines.—The gold and silver mines at Ikuno, in the province of Tajima, situated about 60 miles from Kôbé, continue to be profitably worked. The value of the yield is now about $30,000 per month and the clear profits are estimated at 60 per cent of this amount. The mines find employment for a thousand native workmen who are superintended by a French chief engineer, who is assisted by nine French miners. It is expected that in four or five years' time copper of the finest quality, to the extent of some two tons per day, valued at about $700, will be obtained from these mines. The profitable exploration of the Ikuno mines under the superintendence of foreigners is a forcible example of what foreign enterprise could achieve in working the mineral wealth of Japan to the enrichment and general prosperity of the country. The blind policy so obstinately pursued by the Japanese Government, in prohibiting (with but one or two exceptions) the working of their gold, silver, copper, and other mines by foreigners, is greatly to be deplored, and tends considerably to the impoverishment of this fine country.

General Remarks.

The Recreation Ground situated on the eastern boundary of the Foreign Settlement was in August last (after several years of opposition by the Japanese Government) placed under the management of the Municipal Council for the use of both Foreigners and Japanese. It is now being tastefully laid out in walks, and a large space has been turfed over for a cricket field, with an adjoining croquet-lawn.

The building, etc, of the Japanese Paper Making Company, alluded to in my last Report, are fast progressing towards completion, and it is expected that the work of converting rags and other materials into pulp or "half stuff," for the use of paper manufacturers in Europe and America, will soon commence.

No public buildings of any consequence have been undertaken during the past year, excepting the new Japanese jail which is much larger and more substantial than the former small jail; the prisoners are, however, still crowded up, when occasion requires, it in a most unwholesome and repulsive manner. The pit into which dead criminals used to be thrown has been filled in, and they are now buried in the usual Japanese custom. All executions at present take place within the prison walls.

I may mention that two new cambers, or small harbours, have been constructed on the East and West of this Foreign Settlement, and of sufficient depth to allow cargo-boats to enter in at all states of the tide.

The British community at Hiôgo, exclusive of children, numbered 163 persons on the 31st December last, which is a decrease of 32 persons as compared with the number of British residents in 1874.

Ôsaka.

I regret to have to report that the trade of Ôsaka (so far as foreigners are concerned) has been gradually declining, and at present is most insignificant. The connection between the two ports of Hiôgo and Ôsaka by the Railway has greatly tended to centralize foreign trade at Hiôgo, and in consequence the foreign mercantile community of Ôsaka has almost entirely removed to this port. Notwithstanding the cessation of the foreign trade of Ôsaka the commercial activity of the natives appears to continue and to prosper, judging from the fact that Japanese steamers enter and clear from Ôsaka almost daily to and from the Inland sea, laden with Japanese produce, and from Yokohama with foreign goods, purchased by Japanese merchants on the spot and imported into Osaka.

As the foreign trade has now almost disappeared from Ôsaka I am unable to give a list of produce offered for sale, but will briefly state that the foreign trade of Ôsaka during the past year has amounted in imports from England and other countries to $605,510, showing an increase over that of 1874, but in exports the amounts show $566,537 in 1874 and only $225,021 in 1875.

Industries.

The Paper Mill alluded to in my last year's Report is now making paper of a light quality, and also packing paper, and is successfully worked.

The Sugar Refinery has stopped working, and has proved a losing undertaking.

The Glass Manufactory is doing fairly and is now making bottles, lamp-chimneys, and also lamps; but the making of window-glass has not yet been successful.

The Knitting Machines have proved of the greatest use to the Japanese in Osaka; they are now manufacturing drawers and singlets at such cheap rates, and of such fair quality, that foreign imported goods of these kinds can no longer compete with those made on the spot. These articles of Import can be said to be now lost to foreign enterprise.

Bleaching of Cotton is progressing most favorably and will seriously interfere with the sale of White Shirtings.

Hats and Caps, of silk and other material, are made in Ôsaka to a considerable extent, and at such low prices as to defy all Foreign competition.

Iron has been so largely imported into Ôsaka, and the price is so low, that the further importation of this metal can be only at a loss for some time to come.

Since the disastrous fire in Ôsaka in February 1875, by which 1,177 houses were destroyed, the streets in that locality, as well as in some others, have been widened, and many of the streets of Ôsaka now present a much better appearance than they did formerly.

Two new bridges are in course of construction; one of these leads from the Foreign Settlement to the city, and is made partly of iron and partly of wood.

A large building has been erected in the centre of Ôsaka, which is used as a High Court of Appeal, and is required to meet the wants of the new judicial system adopted by the Japanese Government, and which makes Ôsaka one of the High Courts of Appeal.

There is a mission of the Church of England in Ôsaka maintained by the Church Missionary Society, in connection with which a small chapel has been built for native services in the Foreign Settlement.

In conclusion I would draw attention to the fact that the number of British Residents in Ôsaka has diminished from 59 in 1874 to 24 in 1875, and of this latter number only about 8 are residents in the Foreign Settlement, the remainder being employed on the Railway works near Kiyôto, and at the Mint and Colleges.

I have the honor to be,
Sir,
Your most obedient, humble servant,
(Signed) A. A. ANNESLEY,
H. B. M.'s Acting-Consul for Hiôgo and Ôsaka.

To
Sir Harry S. Parkes, K.C.B.,
&c., &c., &c.,

I.—RETURN OF IMPORT TRADE OF HIOGO FOR THE YEAR ENDING 31ST DECEMBER, 1875.

YOKOHAMA RACE CLUB.

The half-yearly meeting of the Race Club was held yesterday afternoon in the rooms of the Chamber of Commerce, which had been kindly lent for the occasion.

Mr. Keswick was voted into the chair, and the members present were, Messrs. Abbott, Beato, Bennett, Brooke, Center, Cobden, Cope, Cruickshank, Dickins, D'Hanger, Dodds, Dunlop, Farley, Fitz-Henry, Fischer, Hay, Johnstone, Jones, Kingdon, A. Mitchell, Montgomery, Ness, Permewan, Pinn, Reimers, J. Robertson, Thurburn, J. Walter and A. Winstanley.

The Chairman said that the usual half-yearly meeting of the Club ought, in accordance with the rules, to have been held sooner, but had been unavoidably postponed until the present time. He trusted, however, that the meeting would accept business done at this meeting as being quite regular.

Mr. Ness said that in order to carry out fully the wish which the Chairman had expressed he would move: That this meeting be considered an extraordinary special meeting to consider and discuss any matter affecting the interests of the Club. Seconded by Mr. Farley and carried *nem. dis.*

The Chairman called attention to the advertisement convening the meeting, wherein it was stated that a proposal would be submitted to the members to alter Rule No. 2, so that the power of electing new members should be vested in the Club instead of in the Committee. This proposed change had, in his opinion, been rendered necessary by recent events which had occurred, more especially so as some members seemed, unfortunately, to be under the impression that the Committee had not quite acted up to their duty in the matter of recent elections; and he thought that if the members took the onus of elections on themselves, they would not only relieve the Committee of duties which were of a very invidious nature, but would be able to regulate the admission of new members to the Club without any appearance of undue partiality.

* Inclusive of sixteen British subjects employed on the Railway at the Mint, College, etc.

† Including children.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

He would therefore submit the proposed change of Rule No. 2 to the consideration of the meeting.

Mr. Winstanley proposed as an amendment: - "That eight members should be added to the present Committee, who should act as a balloting Committee of fifteen for the election of new members." Seconded by Mr. Toarlarm.

Some discussion then ensued, Messrs. Robertson, Kingdon and Dickens supporting Mr. Winstanley's amendment, when Mr. Bennett rose to propose: "That the power of electing members be vested in the Committee as at present." This was seconded by Mr. Abbott and supported by Mr. Ness, who thought any other method of electing new members would be found cumbersome and impracticable.

Mr. Bennett's amendment was eventually put to the Meeting and carried by a majority.

Mr. Ness then rose to propose:

> That non-members of the Club shall be permitted to use the outer course of the race ground during the non-training season, upon payment of a subscription of $10 annually, under rules to be drawn up by the Club for the management of the Course.

Mr. Ness explained that ten years ago, when the Japanese Government gave the course over for the purpose of raising the Race Club, who were then desirous of raising money, and in deference to an expressed wish that part of the course should be used for riding exercise, consented to non-members the privilege of using the outer course for that purpose for an annual payment of $10. This privilege had not been largely availed of, and of late had fallen into disuse, and he thought the Club might again offer this privilege to non-members, not as a conciliation to those who thought they were aggrieved, or who preferred to rely on the ambiguous method of petition to the Consular Board to attain their ends, but as being a privilege which the Club had the right to offer, and wished to offer in a friendly way to those who desired to avail themselves of it. He thought this was a course which would do away with any ill feeling, which he and every member must deprecate.

Mr. Kingdon thought the matter was now in the hands of the Consuls, who had declared that any one who had paid any part of the rent of the Course had a right to use it, and he therefore thought the Club would be acting foolishly to offer what they had no power to give.

The Chairman said he thought Mr. Kingdon was mistaken in this view of the case, and as it was a matter which concerned the Club only, did not think the members need consider the opinion of the Consular Board.

Mr. Dickens said he thought, on the contrary, that the matter should be enquired into. Although the Consular Board had no right to the property, they yet represented all nationalities, and it was only showing proper respect to consider the opinions the Board expressed. The question resolved itself into this: Are the members of the present Club sole proprietors of the Course, so as to be able to exclude any others from the use of it? As stated by Mr. Ness, the Race Course *was* given by the Japanese Government, but for the use of the whole community - not for this or that Club, but for *the* community; and it appeared to him a foolish thing not to recognize at once the error the Club had been under in excluding those from the use of the Course who had a clear right to it. He could not quite understand Mr. Ness' remarks, as he commenced by saying that he wished to conciliate no one, and finished off by a desire to avoid all asperities. He would therefore move as an amendment: -

> That the Club recognizes the right of the community, as such, to the enjoyment of the race course under such rules, not absolutely exclusive, as may be framed for the government of the course.

Much discussion then arose in which Messrs. Robertson, Fitz-Henry, D'Effanger, Pinn and Winstanley took part. Mr. Brooke said the question in dispute would shortly be decided in a Court of Law, and any determination which the members now came to might subsequently be of no effect.

Mr. Ness said that the decision of a Court of Law could not affect the action of the members. Possession gave a right to make rules, and besides the Club is a tenant of the Course by paying rent for it, and the members had a right to do as they liked. Their right had not been disputed and the Club rules must be binding on the members as long as they exist as a Club. Why should they not adopt a privilege which had formerly been abandoned, and renew this without further question, even although it might trespass on some cherished notions of right which certain people possessed?

Mr. Dickens did not deny that the members of the Club were tenants or had a right to make rules, but other persons had as good a right to become tenants by paying their quota if they wished to do so. His reasons for wishing to make the motion were to avoid disputes and to act fairly to all.

Mr. John Robertson said that Mr. Ness stated that it did not matter what the Consuls' opinion was, or what the result in a Court of Law might be, but as a civil action was pending, arising out of this disputed question, the Club ought to care. Who is to be liable for damages if the case goes against the Club? The Club cannot assume sole right to the course—the community subscribed towards it and the right rests with them.

Mr. Dickens' amendment found no seconder, so that Mr. Ness' proposal was put to the meeting and carried by a majority.

In reply to some remarks made by the Chairman Mr. Ness further proposed as a rider to the resolution which had been carried by the meeting: -

> That the requisite rules and regulations for the management of the Course be drawn up by the Committee and submitted to the Club for approval at a future meeting.

Seconded by Mr. Bennett and carried.

The Chairman then informed the Meeting that a certain Mr. Jaffray was bringing an action against the Committee for refusing to allow him access to the Course, which they were prepared to defend, and wished to know by a show of hands, if the members approved of their proceedings. The show of hands was in favour of the Committee's action in the matter.

After a vote of thanks to the Chairman, which was carried unanimously, the meeting separated.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—Your Reviewer of Messrs. Satow and Ishibashi's Dictionary hopes you will allow him to say a few words in reply to the criticisms on his work which appeared in your last week's issue.

He begs to assure F. B. that his English was not acquired in Scotland nor his Japanese at Nagasaki, though why that should make any difference he cannot imagine. On the contrary, in so far as his Japanese is concerned, he may say that he has drunk a fair share of the *suido no midzu*, and boasts himself a true *yedokko*, which last word no persuasions of F. B. or Mr. W. Bramsen, and not even the authority of Mr. Satow, will ever induce him to pronounce as if the middle syllable were the English word 'dock.' On the other hand, it is not likely that anything Your Reviewer can say will have much effect in convincing these gentlemen, as the question is so entirely one of accuracy of ear. Mr. Bramsen's ear tells him that '*tea*,' heaven, rhymes with 'pen,' and F. B. hears in the first syllable of *onna* the sound of the English word *on* (barring the difference in the *n* sound, about which there is no dispute), whereas to Y. R. these words have a somewhat different sound.

It is true that Mr. Satow, F. B., and Mr. W. Bramsen are by no means alone in the pronunciation which they defend. It is unfortunately only too common to hear the unoffending Japanese vowels jostled out of their places to make room for sounds dear to our British prejudices, much like the respectable Portuguese gentleman of the story, who was elbowed off the side-path in a street of Lisbon by a British tar, with the words 'Get out of my way, you ——— foreigner!'

A description of the prejudices referred to may suggest the origin of the erroneous (assuming that it is erroneous) pronunciation in question. Englishmen are accustomed to look upon *o* in *on* as the short sound of the long *o* in *more*, *e* in *met* or *pen*, as the short sound of *a* in *fate*, and *i* in *pin*, as the short sound of *i* in *machine*. In reality none of these notions is correct: *o* in *on* is the short sound of *a* in *all*, the true short sound of *o* as in *more*, being *o* as in the first syllable of *tobacco*; *e* in *pen* is the short sound of *a* in *care*, the short sound of *a* as in *fate*, being exemplified in the word *boss*; and *i* in *pin* is not the short sound of *i* in *machine*, but an allied sound which closely resembles it. These prejudices had probably their origin in the tendency which exists in English when shortening a vowel to modify its sound at the same time, as in 'throttle' from 'throat,' 'maintenance' from 'maintain,' 'mariner' from 'marine.' Now it appears to Y. R. that the practice of sometimes giving to the short Japanese vowels not their true short sounds, but the allied short sounds which

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

usually take their place in English, is directly traceable to the importation into Japanese of the tendency in English pronunciation which has just been described. Japanese is not the only language in which the same tendency has led to similar results. In adopting into English the French words *Paris*, '*estimable*,' '*capricieux*, *éloquent*. *épidémique*,' (even if the last word comes direct from the Greek the principle is the same), the very same changes have been made which it is now wished to introduce into our pronunciation of Japanese. In the Japanese words which here in Japan we occasionally mix with English this is right enough, but Your Reviewer has felt bound to protest against it when imported into our pronunciation in speaking Japanese.

Your Reviewer believes that a Japanese vowel vowel has only one sound; Messrs. Satow and Ishibashi give it two, and as F. B. blames the latter for not going far enough, and talks of *all* the sounds of a Japanese vowel, he must make out that there are at least three or four. His crime of commission must therefore appear to Y. R. proportionably heinous, and the list of words he has selected as examples of his system of pronunciation fully confirms this impression. F. B. will doubtless be interested to learn how Y. R. disposed of them. He submitted them without remark to a Japanese (a native of Yedo, for F. B.'s greater satisfaction) who knows the Roman character, asking him to read them aloud, with the result, to Y. R.'s ear at least, that they were in every instance pronounced as the latter has contended. With regard to *arimasenu*, it may be admitted that there is a vulgar pronunciation which countenances F. B.'s view, but then it should be spelt without the final *u*.

Mr. Bramsen is mistaken in supposing that Y. R. touched on the question of transliteration. Messrs. Satow and Ishibashi's transliteration appears to him to leave nothing to be desired, except perhaps in regard to the letter *y*, where, as Mr. Bramsen has pointed out, there is some irregularity, doubtless unintentional.

Your obedient Servant,

YOUR REVIEWER.

MESSRS. SATOW AND ISHIBASHI'S ENGLISH-JAPANESE DICTIONARY.

To the Editor of the "Japan Weekly Mail."

Tokio, July 3rd, 1876.

Dear Sir.—In my letter appearing in your last issue, the paragraph about the pronunciation of the word *bekkô* has, I fear, become indistinct by your printer having inserted an asterisk with a foot note that belonged somewhere else, and besides in one place printed *beck*, where it should have read *bek*. I would therefore beg shortly to repeat what I meant to say: Your reviewer states, that *bek* in *bekkô* is not pronounced as the English word *beck*, which sentence must lead the reader to believe that the dictionary gives this direction for its pronunciation. The dictionary, however, only says, that *bek* is a syllable terminated by a consonant and consequently its *e* pronounced as *e* in the English word *pen*; while your reviewer, by inserting the *e*, conveys to the reader the idea of a *shorter* sound of *e* than the one in *pen*.

I remain, Dear Sir,

Yours faithfully,

WILLIAM BRAMSEN.

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Monday, July 3, 1876.

Nakajima Saisuke *vs.* W. P. Mitchell.

This case, which was continued from Saturday, was a claim for $6,500, of which $2,700 were paid by plaintiff to defendant on a contract for kerosene, and the balance damages for alleged breach of contract.

Mr. Ness appeared for plaintiff; Mr. Kirkwood for defendant.

Mr. Kirkwood asked the Court that plaintiff be called upon to deposit costs of the court.

Mr. Ness made himself personally responsible for $100.

Examination of Furokawa Gihei continued by Mr. Ness: Nakajima went from the hatoba straight to the Consulate to complain, but it was after office hours, and Totska came and asked Nakajima not to make any complaint at the Consulate, and said he would call on him later with proposals from Mr. Mitchell. Totska did not come back that evening, but next day, the 26th, he came with Kawamura and said that Mr. Mitchell had consented to refund the $2,000, and wanted Nakajima to come to Mr. Mitchell's place. Accordingly Nakajima and I went, and were told by Mr. Mitchell that he had been to Tokiô and seen the Prince of Sawa, and that the Prince of Sawa had said he knew nothing at all of a guarantee for Nakajima. Nakajima expresed his doubts that Mitchell had been at Tokiô the previous night, but Mitchell produced a letter written by Saito as attorney for Sawa, stating, that as the arrangements about the oil had not been completed, Sawa withdrew his promise of guarantee.

Mr. Ness called for that letter, and it was produced by Mr. Kirkwood in copy, dated the 26th May.

Furokawa: This is not that letter.

Mr Ness then produced the original letter dated the 26th May, writen by Saito and stating that as the arrangements had not been completed, the seal could not be affixed to the guarantee.

Furokawa: This is the document, it was shown by Mr. Mitchell and Totska. Mr. Mitchell then said that according to that letter Nakajima had committed a breach of contract. Nakajima said, "No, the reason why the document says that the guarantee will not be given is that the arrangements have not been completed, that is, that you have not delivered the 15,000 cases." Nakajima further said that he held a letter from Sawa that the guarantee should be forthcoming as soon as the oil was delivered, and he showed that letter to Mr. Mitchell.

Mr. Kirkwood called for that document.

Mr. Ness produced it, being a letter dated 18th May.

Furokawa continued: I know that Kawamura went frequently to Tokiô about this matter. Kawamura acted for Mr. Mitchell. On the night of the 25th when Mitchell, Totska and Kawamura were together, Kawamura assisted Mr. Mitchell in obtaining the document purporting to be a withdrawal of the guarantee, and for these exertions Kawamura received a reward from Mr. Mitchell.

His Honour asked if Totska would be produced as a witness.

Mr. Ness replied that Totska was in jail, but that he intended to bring forward Saito as a witness

Furokawa: What I have now stated about Kawamura, I know from Kawamura himself. Kawamura told me that Mr. Mitchell instructed him to go to Sawa or Saito, and from either of them obtain a letter saying that the guarantee would not be given.

Cross examined by Mr. Kirkwood: Already in April I heard about Nakajima's oil contract. After the 20th of April, Matsae came to my place and told me some oil was for sale, and he thought some business could be done. I first saw Sawa about that business at the end of April or the beginning of May. Kawamura went with me to Sawa. Matsae had said that the holder of the oil required the guarantee of a nobleman, and Kawamura knew Sawa before. Matsae mentioned the holder of the oil as living at No. 98 Bluff; he said there were about 25,000 cases. When I went to Sawa, he said he knew the head of Nakajima's house, and he would consider about it; he would, however, leave the whole matter in the hands of Saito as his agent. Sawa never gave me any authorisation to act. Saito repeatedly told me that the guarantee would be given. I do not exactly know the particulars of the security to be given to Sawa for his guarantee. I never carried any letters between Saito and Nakajima, but I brought the document promising that the guarantee would be given from Saito to Nakajima. That document was in answer to a letter from Nakajima to Saito: I and Kawamura took Nakajima's letter and brought back Saito's the same day. As far as I recollect Nakajima's letter was to the effect that he, for the purpose of an oil transaction with No. 98, Yokohama, would want Sawa's guarantee, and that he was willing to deliver the title deeds of his property to obtain that guarantee, and he requested Saito to let him know if Sawa's guarantee could be obtained on such terms. The property to be mortgaged was not mentioned in the letter, but the letter had an enclosure that may have contained particulars of the property. (Paper exhibited being particulars of the property.) I have never seen this document before. I do not know the handwriting. I first saw Mr. Mitchell on the 10th of May at No. 98, Bluff. I was in company with Matsae. I then also, for the first time, met Kawamura. I again saw Mr. Mitchell in Tôkiô on the 14th May, at Matsae's lodgings. Next time I saw Mr. Mitchell was again at No. 98, Yokohama. I was in company with Nakajima, Matsae, and Kawamura. We went to inspect the oil. Totska went with us. On that day no contract was made. The contract was concluded on the 20th, a provisional contract was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

made on the 14th. Again I saw Mr. Mitchell on the 22nd,—on that day it was fair weather; again on the 23rd, about 5 p.m., on the hatoba. I saw Totska in the morning. He came and asked Nakajima to take delivery in two lots, as it was too much oil to land in one day. There was a document drawn up to that effect. (Paper exhibited.) I wrote this document that morning at the request of Totska, and by the authorisation of Nakajima. In the afternoon, Mr. Mitchell, Nakajima, Matsae, Totska and I, were at the hatoba. We saw some oil. Mr. Mitchell said, "This has been landed to-day;" but he did not ask Nakajima to take delivery of it. We went to the hatoba because Totska wanted us to go and see the oil that was landed. 2,000 cases had been landed. The hatoba might probably hold over 10,000 cases. Mr. Mitchell then asked for $2,000. Nakajima said that he had come expecting to see 7,500 cases landed, and not 2,000 cases only. I know Nakajima had money at the hotel on the 23rd, but whether he had brought it with him to the hatoba I cannot say. Nor can I say if he had brought the guarantee with him. I wrote a second letter that same day; it was written at Mr. Mitchell's house. We went there to make certain that the rest of the oil would be landed the next day. I went there with Kawamura. Nakajima told me to go. He instructed me that if 7,000 or 8,000 more cases were landed the next day I might undertake in his name to pay $2,000 next day. (Paper exhibited.) I wrote that document on the 23rd at Mr. Mitchell's house, it contains nothing about 7,000 or 8,000 more cases being landed. Next day the money was asked for, but we were not asked to come and take delivery of the oil. Mr. Mitchell and Totska came in the morning to the hotel and asked for $2,000, but as there was no appearance of the balance of oil being landed the money was refused. The agreement was that the balance of the half of the 15,000 cases should be landed on that day. That was not put in writing by me because the other party could not exactly say how many cases could be landed during the day, but the understanding was as I say. On the 24th I went again with Nakajima to the hatoba. Mr. Mitchell and Totska arrived there and a new arrangement was made. (Paper exhibited.) This is the document. This agreement is identical with the one made on the 23rd, only that the hour of payment is now 2 p.m. instead of 9 a.m. Mr. Mitchell on this occasion said he wanted the $2,000 to pay duties and other charges. The reason that the payment and taking delivery was postponed from the 24th until the 25th was, that Nakajima wanted first to see if Mr. Mitchell was going to keep his promise of landing the balance of the oil. There was no sign of landing the balance either on the 24th or on the 25th. Nevertheless the money was paid on the 25th, because it had been agreed on the 24th that on that day the $2,000 should be paid without regard to the balance being landed. On the 25th I went to the Hatoba at 2 p.m. I saw Mano on the Hatoba, in fact, he came along with me. He lives in Tokió. He was in Yokohama on the 20th, the 22nd, the 23rd, and the 25th. On the 24th I did not see him. On the 25th I met him about 10 a.m. I saw him pay Nakajima money. Mr. Mitchell took the money to the Mitsui bank where he got it changed and wrote the receipt. He handed over the receipt on the hatoba. After Nakajima had commenced taking delivery a foreigner came there; that foreigner had a moustache. What he said I do not know as he spoke in English, but the further delivery was stopped after he had spoken to Totska. Mr. Mitchell was not there at that time, but he came shortly after and said that he would give delivery if Sawa's guarantee were handed over to him. This Nakajima refused. As the goods had not been landed I do not think Nakajima had the guarantee with him, neither did he then telegraph for it. Nor did Nakajima offer his own promissory note for the balance of the price for the 2,000 cases. I did not hear it said, that unless Sawa's guarantee were forthcoming that afternoon, the 2,000 cases would be sold by auction the next day. I am not aware that Nakajima that evening sent for Sawa's guarantee. I do not think that Nakajima has ever sent for that guarantee,—at least I have never seen it. (Paper exhibited). On the morning of the 26th, when I went with Nakajima to Mr. Mitchell's house, Totska produced a document, saying it was a copy of Saito's letter, to the effect that Sawa would not give his guarantee; and when Nakajima challenged the truth of this statement, he produced this document as the original, and Nakajima took possession of it. I do not know whose the handwriting is. Mr. Mitchell, Nakajima, Kawajima, Mano, Sentaro, Totska, and I were present. The document is dated the 26th. I have seen Saito Nobuyo. I have received no letter from Saito addressed to myself. I made the first proposals about this oil contract to Nakajima. There was no question about commission for me. Nakajima is an old friend of mine. I have not promised either Saito or Sawa any remuneration for Sawa's guarantee. There was no mention of commission between me and Kawamura. Nakajima may have intended, when the transaction had been carried through, to make some present to those who had rendered him assistance in the business. What amount would be proper I have no idea. I thought that as the oil could be had against a cash payment of 20 per cent. and a 90 days' bill, it would be a good speculation for Nakajima. These were the terms originally proposed. The agreement with Mano, I think, was made on the 20th May. I was not present when it was made, and have never seen it. I heard about it on the 21st or the 22nd. Mano lives in Sitaya, Okayo-machi, Tokió; the number I have forgotten. I do not know what the price of kerosene oil was in Yokohama on the 26th May. I know that the 2,000 cases, which were on the hatoba, were sold by public auction either on the 26th or the 27th May. I was not present at the auction, but I heard that the selling price was from $2.20 to $2.30 the case. I had no occasion to buy the oil. Nakajima had not instructed me to look for oil in the market.

Re-examined by Mr. Ness: I do not think that Matsae was employed by Mr. Mitchell. When Matsae came to my place, about the 20th of April, and offered oil for sale, he came on behalf of Mr. Mitchell.

The next witness called for plaintiff was Mano Shedetoshe, who stated: I am an oil merchant. On the 20th of May I entered into a contract with Nakajima. (Paper exhibited.) This is the contract. Nakajima has not fulfilled the contract. He told me there were 2,000 cases on the hatoba, but the other 13,000 cases he could not deliver. But he did not deliver me the 2,000 cases which were on the hatoba; on the 8th of June he delivered to me at Tokió 2,000 cases in their stead. As Nakajima has failed to fulfil the contract I have a claim on him of 5 per cent. on the purchase price: this claim I have not yet pressed as Nakajima represented to me that he was sueing Mr. Mitchell for damages. I have paid $2,000 to Nakajima on the contract. On the 26th of May both Mr. Mitchell and Totska knew about my contract with Nakajima, but I do not think they knew it on the 25th. I had conversation with Totska on the 26th May about my contract with Nakajima, and when I accompanied Nakajima to Mitchell's house on the 26th, Mitchell spoke to me about my contract with Nakajima. I was on the hatoba on the 25th May, I was asked for $2,000 by Nakajima, as the 2,000 cases were lying on the hatoba. I said there might be some bad cases and I wanted to examine the lot, but Nakajima promised that he would replace any bad cases, and then I handed Nakajima the money. Mr. Mitchell went away with the money, and he came back and ordered Totska to give delivery. Mr. Mitchell said, "Take delivery quickly" and then he left the hatoba. When about 100 cases had been put into a boat a foreigner, accompanied by a Japanese interpreter, came up and asked, "From whom do you take delivery of this oil?" I replied, "I take delivery from Nakajima, who has just taken delivery from Mr. Mitchell, to whom he has paid the money for it." The interpreter said, "The oil belongs to No. 28, and Mr. Mitchell has no right to give delivery." I referred him to Nakajima, and then there was some talk between them and Totska. In the meantime Mr. Mitchell came back, and I distinctly heard Totska say that Sawa's guarantee must be given for the balance before the oil could be delivered. There was then a very long conversation, Nakajima at last reclaiming his $2,000, and Mr. Mitchell refusing both money and oil, so that Nakajima at last got angry and went to the Consulate, which, however, was closed. Nakajima said repeatedly that he was quite prepared to carry out his contract.

Cross-examined by Mr. Kirkwood: I came from Tokió to-day. I was here the day before yesterday according to summons. I have had no conversation with others about the evidence I was to give in Court. I have been asked that I knew, and that I have stated briefly. I came to Yokohama about this oil for the first time on the 25th May. The agreement was concluded on the 20th May at my house in Tokió. I was not present myself. I first saw Nakajima on the hatoba on the 25th. The contract for Nakajima was made by Suzuya Sentaro. The understanding was that the price should be settled on the day of delivery, and it was settled on the hatoba. I was apprised that the oil would be ready for delivery on the 25th, and accordingly I went to Yokohama. I got that information from Nakajima, and Totska also urged me to have the junks ready. Suzuya Sentaro came to my place early on the morning of the 25th, and told me the oil would be ready for delivery on that day. The original agreement was that the oil should have been delivered on the 22nd. Suzuya is a Yokohama man, and was to let me know when the oil was ready. The arrangement was then that I should pay half the price cash down and the balance in 6 days. I got no message on the 22nd, not until the 25th, and then I was informed that only 2,000 cases would be delivered, and that it was requisite to pay $2,000. I had told my shopman that when Suzuya should come to the shop about oil he should consent to take the oil, but leave the price open. There was no written agreement before the 25th, but there was the verbal agreement with Suzuya that on receipt of the goods I should pay half of the price cash down

Re-examined by Mr. Ness: I think Suzuya acted at the request and on behalf of Nakajima.

The next witness for plaintiff was Suzuya Sentaro: I know of an oil contract between Nakajima and Mano. I think it was on the 10th May that Nakajima came to my place, saying that he was getting some oil from Mr. Mitchell, and wanted me to find him a purchaser. I told him I knew Mano, and in consequence I saw Mano's shopman, Yazoka. I mentioned Mr. Mitchell's terms to Yazoku, and he told me that Mano would take the 15,000 cases, and that the price should be arranged when they were landed. (Paper exhibited.) I have seen that contract. I think Totska must have known of the contract already on the 25th as he saw Mano on the hatoba with Nakajima. Also Nakajima told Totska in my presence that Mano had bought the oil from him. I saw Nakajima pay Mitchell $2,000 on the hatoba on the 25th May. Mr. Mitchell then gave delivery, but after a little the delivery was stopped by the master of No. 28, who said the oil was his. There was then some talk between Mr. Mitchell and the foreigner from No. 28, and Mr. Mitchell asked Nakajima for Sawa's guarantee. Nakajima said he would give Sawa's guarantee when he got the 15,000 cases.

Cross-examined by Mr. Kirkwood: It was about the 10th May when I first spoke to Mano about this oil business, and asked him to buy from Nakajima. He said he was willing if they could come to terms. I do not know when they came to terms. I have seen the agreement between Nakajima and Mr. Mitchell; I saw it on the 21st May; I had heard of it before but did not know it. The written contract between Mano and Nakajima was made on the 25th May. The first agreement between them was made on the 20th or 21st May; I do not know the terms, only delivery was to be taken on the 22nd May.

Cross-examined by Mr. Ness: On the 25th May the contract was put into writing; up to that day I think it was only a verbal

Digitized by Google UNIVERSITY OF CALIFORNIA

agreement. Nakajima told me on the 22nd May that he had made the agreement.

Adjourned until Wednesday at 8.30 a.m.

Wednesday, July 5, 1876.

Mr. Ness stated that he had now finished the case for plaintiff.

Mr. Kirkwood then made his statement on behalf of defendant. He said that on the 13th of May Matsae came to defendant, to look for oil to purchase on behalf of plaintiff; on the 14th defendant was in Tōkiō, and entered into a provisional contract for the sale of kerosene with Nakajima. On the 16th, Nakajima came to Yokohama, and saw the oil on board the *John MacKean*. On the 18th Nakajima was again in Yokohama, and the contract was settled, with the exception of the price. On the 20th of May the contract, including the price, was finally settled, and the provisional contract destroyed. On the 22nd May Nakajima came to take delivery, but the goods had not yet been landed on account of rough weather, and on the 23rd an arrangement was entered into that Nakajima should take delivery in two lots. On that same day 2,000 cases had been landed, and Mr. Mitchell demanded a payment of $2,000 and Sawa's guarantee, and Nakajima promised to bring the same at 5 p.m. on the hatoba, but never did so. Mr. Mitchell went to Nakajima's hotel, and Nakajima, after making many apologies, promised to pay the $2,000 at 9 a.m. the next day, and a document was drawn up to that effect. On the morning of the 24th the money was still not paid and Mr. Mitchell was very much disgusted at the risk of the oil lying at the hatoba. On that day another document was written promising to pay the $2,000 next day at 2 p.m. On the 25th May the money was at last paid. Mr. Mitchell, after having changed the money at the Mitsui Bank, did not go to the hatoba, but told Kawamura to ask Nakajima for the guarantee. Nakajima went to Mr. Mitchell's house to get him to alter his resolution to have the guarantee, but Mr. Mitchell was unwilling to give in on that point, and he went to the hatoba to prevent the oil from being taken away, and had almost to use force for that purpose. In the meantime Mr. Morse, from No. 28, came to the hatoba and assisted Mr. Mitchell. In the evening Kawamura suggested the propriey of finding out how far this guarantee of Sawa's was really *hontō jitte*. Mr. Mitchell and Kawamura started for Tōkiō for this purpose where they saw Saito, who wrote a letter to the effect that as Nakajima had not given Sawa proper security, Sawa would not give any guarantee. Mr. Mitchell returned from Tōkiō in a *jinrikisha*, and lost the letter on the road. Kawamura remained in Tokio for the night. He came to Yokohama on the 26th, and brought with him a copy of Saito's letter of the night before, and a second letter from Saito, dated the 26th, corroborating the former statement, that the reason why Sawa's guarantee would not be given was, that Nakajima had not given Sawa proper security. Saito himself come to Yokohama on the 26th, and repeated verbally what he had written.

Mr. Kirkwood called as witness for defendant Saito Nubuyo.

Mr. Ness objected to this witness giving evidence as to Nakajima's inability to carry out the contract until defendant has proved that he himself was prepared to carry out the contract: in other words, let Mr. Kirkwood put Mr. Mitchell in the witness-box.

Mr. Kirkwood stated that what he wanted to prove by Saito was only the existance of certain documents.

Saito Nubuyo: On the 18th of May I received a letter from Nakajima. I have it here. (Paper produced.) I also received a list from Nakajima of the properties to the mortgaged as security for Sawa; this list was enclosed in the letter. (Paper exhibited.) This is the list. The letter was brought to be by Furokawa and Kawamura. I saw Mr. Mitchell in Tōkiō on the 25th of May. He was accompanied by Totska and Kawamura. He came to say he was prepared to deliver 2,000 cases that day, and he asked for Sawa's document at once. I answered that until the preliminary steps stipulated for by Nakajima had been completed, I could not give the guarantee. By these preliminary steps, I meant 15,000 cases of oil having been delivered at the hatoba: Nakajima having paid 90 per cent. on the purchase price, and having handed over the title deeds of his properties as security. The guarantee of Sawa, and the mortgage of Nakajima's properties, were to the exchanged at the hatoba when the goods had been delivered. I gave Mr. Mitchell a paper to the effect that I would not give the guarantee until the preliminary steps were completed. I took a copy of that paper.

Mr. Kirkwood called for that copy.

Mr. Ness at first objected, as no proof of the loss of the original had been adduced; afterwards, however, the objection was waived.

Examination of Saito continued: I have not got that copy. (Paper exhibited.) This is not my writing. This conversation with Mr Mitchell took place at a tea house in my neighbourhood. On the 26th I saw Totska in Tokiō; he told me that the paper I had given yesterday to Mr. Mitchell had been lost, and that he wanted a copy. I told Totska to give me a letter, to which I could reply; but Totska did not give me any letter. I gave Totska a letter. (Paper exhibited). This is the letter; it is my handwriting. I gave Totska that letter in the morning about 8 o'clock. On that same day I wrote a letter to Nakajima; I did not write to Kawamura or Furokawa. I wrote only one letter on that business that day, but I am not quite certain to whom it was addressed. I sent it by post. (Paper exhibited). This is the letter. It is addressed to Kawamura and Furokawa, but its contents are meant for Nakajima.

The Interpreter of the Court gave the substance of this letter as follows: There was a letter yesterday from Mr. Mitchell to Sawa, and as the matter of your original request has not been definitely settled, I refused for the time being the guarantee. I merely mention this for your information.

Mr. Ness remarked that it would depend on the evidence of Mr. Mitchell if he should consider it necessary to cross-examine the present witness. He should therefore postpone the cross-examination until he has heard the evidence of Mr. Mitchell.

Mr. Kirkwood objected to this manner of proceeding; cross-examination must follow immediately on the examination in chief.

His Honour sided with this view.

Mr. Ness said that in that case he should decline to cross-examine at all.

Examination of Saito continued: This letter I gave to Totska to bring to this port. I again met Kawamura and Totska on the 27th. Kawamura came to my place. I did not go to Yokohama on the 27th May. I wrote to Mr. Mitchell on that day. Kawamura and Totska had brought me a message from Mr. Mitchell, and I wrote to him in reply. (Paper exhibited.) This is my letter.

The interpreter of the Court gave the substance of this letter as follows:—In consequence of your request to explain the words in my message yesterday, "the arrangements not having been fulfilled." I now state that no security has been given by Nakajima and the commercial arrangements have not been completed, namely, the payment of the 20 per cent. on delivery of the 15,000 cases on the hatoba; nor have I got any information from Nakajima when he is to pay the balance.

Examination of Saito continued: I wrote that letter in a tea-house in Tokio. I have had no special conversation with Mr. Mitchell since the 25th. I have not yet received the title deeds from Nakajima; the letter of the 15th contains the promise to hand over the documents on the hatoba, where also the delivery of the goods and the affixing of the seal to the guarantee were to take place. I affixed Sawa's seal on the 4th or 5th of June. I was then told the guarantee would be required. I had got Nakajima's security. The oil was part of the security, but Nakajima's title deeds would be security, that even if there was a loss on the sale of oil, that loss should not fall on Sawa. Half of the property mortgaged by Nakajima belonged to Nakajima's son. I have received no commission on this business. I acted at the request of Sawa.

W. P. Mitchell, sworn: On the 13th of May I first heard about this oil business from Matsae. He came to my house on a Saturday afternoon telling me that there were some Japanese in Tokio who wanted to make an oil contract. As I had to go to Tokio on Sunday, the 14th, I told Matsae that I would call at his house. I there met Kawamura, Furokawa, Totska, and Matsae. Of these men I had only seen Matsae the day before. From Matsae's house I went with Furokawa and Totska to Nakajima's house. There a provisional contract was drawn up by Nakajima and translated by Totska. I said that as I could only make a contract on a cash basis, I should wish to know if Sawa's guarantee was negotiable.

Mr. Ness objected to this answer being accepted, because it tended to add a condition to the contract which was not there.

Mr. Kirkwood argued that the agreement of the 14th May was no contract,—was nothing else than a letter.

His Honour held that the document was a binding contract, and that no questions could be admitted which would tend to alter it.

Examination of W. P. Mitchell continued: I never signed that provisional contract. I told Nakajima that there was plenty of oil in Yokohama, and that I believed I should be able to furnish him with the quantity he desired; if he would come down on the 16th I should be able to give a definite answer. When I said I could only make the contract on a cash basis, Nakajima said that Sawa's guarantee was perfectly good, and easily negotiable.

Mr. Ness objected to the answer, and the objection was allowed.

Examination continued: Again I saw Kawamura, Furokawa, and Matsae, on the evening of the 16th May. Totska had come to my place on the 15th. On the 16th, I again had the party from Tokio, and handed them an order which I had from Messrs. Chipman, Stone & Co., to go on board the *John McKean*, and inspect the oil on board. I did not see them that night after they had been on board. I saw them again on the 18th May at my house on the Bluff. I then told them that I was very busy, and could only make a temporary contract, without giving a definite price; they might take Nakajima's views. I asked them to pay $1,000 bargain money, and after some conversation they agreed to pay $780 bargain money. I then drew up a form for the contract without giving any stated price on my part. I requested them to be back on the 20th, when I should try to arrange the definite contract. On the 20th May they came to my house in the evening. There were Nakajima, Furokawa, Kawamura, Matsae, Totska, and Nakajima's son. Nakajima said he had brought the $700 bargain money, and asked if I could make out the final contract. We then had some conversation about the price. I asked them $2.75, but finally we agreed on $2.67½. While writing out the contract, I again asked about Sawa's guarantee, and was again assured that it was perfectly negotiable. [This answer was again disallowed.] The next time I saw the party was on the 22nd May, at my house, at 9 a.m. It was then blowing half a gale of wind. I said it would be impossible to land anything that day, and they quite concurred with me. I further suggested that to land 15,000 cases at once would be very impractical, if not impossible, and that the most that could be landed in one day was from 2,000 to 2,500. I was met with the remark that this was not according to the contract. I answered, "Not according to the written contract, but to the understanding we had at the time of making the written contract."

Mr. Ness objected to this answer being accepted, as tending to add to the contract conditions that are not in the same. The answer was accordingly disallowed.

Examination continued: A conversation then took place between us with regard to delivery being given in smaller quantities. As nothing could be done that day, Nakajima said he would go and

Digitized by Google UNIVERSITY OF CALIFORNIA

think the matter over. On the 22nd I bought 2,000 cases to be landed as speedily as possible, and I knew at that time that I could get the balance at a moment's notice. There was at that time 100,000 cases of oil in the market, partly in the hands of Chipman, Stone & Co., and partly Fischer & Co. In the afternoon of the 22nd the party from whom I had bought the 2,000 cases commenced to land, and landed 500 cases, and they promised that the balance, 1,500, would be landed the next day. In the evening I sent word to Nakajima that 500 cases had been landed and the balance would be landed next day, and I requested, as the hatoba was very small, he would take delivery of the 2,000 cases on the morrow. He answered that he had been thinking the matter over, and as it was in accordance with the contract, thought the whole lot should be landed. He sent me a document that he would receive 2,000 cases or as many as could be landed on the next day. On the morning of the 23rd May I sent Kawamura and Totska to Nakajima requesting him to come to the hatoba at 2 p.m. (Paper exhibited.) This letter was brought to me on the 23rd by Kawamura. At 2 p.m. I went to the hatoba where I saw Nakajima, Furokawa, Kawamura, Matsue and Totska. Totska was acting on behalf of both parties as interpreter, probably he was more on my side because he was anxious to get into my service. Kawamura also speaks English tolerably well. I can make myself understood in Japanese. I then offered the 2,000 cases and asked them to take delivery at once. Nakajima said that he would go to his hotel and bring the money and security at 5 o'clock. Previously we had some conversation about 20 per cent. on the purchase price for 2,000 cases. They wanted to know how much the 20 per cent. would be. I told them it would be something like $1,100 or $1,200, but as the transaction was a very large one, I suggested that they might pay $2,000. Nakajima then said, "I will bring at 5 o'clock $2,000 and Sawa's guarantee, and take delivery of the 2,000 cases." He did not say for what amount Sawa's guarantee would be. I tried to impress on him the necessity of doing so, as it was very risky to keep such an amount of goods on the hatoba during the night. He did not make his appearance at 5 p.m., and I then sent to Chipman, Stone & Co.'s to ask for a European watchman to be sent for the night to the hatoba. About half past six or seven o'clock Furokawa and Kawamura came to my house on the Bluff. Furokawa apologised for Nakajima not coming at 5, but promised that he would come at 9 a.m. next day. I told Furokawa to tell Nakajima what great risk I was incurring in keeping the goods uninsured on the hatoba. He quite agreed with me, and said that I should be sure to receive the $2,000 and the guarantee the next morning. I asked him to put that in writing, which he did. (Paper exhibited.) This is the document.

The document was read, being a promise next day, at 9 a.m., to pay $2,000, and receive 2,000 cases.

Mr. Ness remarked that the document does not contain a word about Sawa's guarantee; and this is again an instance where the opposite party adduces evidence that tends to vary a written instrument.

Witness continued: Next morning, the 24th, about 9 a.m., Nakajima, Furokawa, Kawamura, and Matsue, came to my house. They again apologised for not having the money with the security; but money and security would be sure to come during the day, before 1 p.m. When they did not make their appearance at 1 p.m. I went to their hotel. Nakajima said he was ashamed to see me as he had not kept his promise. I told him it was impossible for me to keep the goods on the hatoba at my risk and expense. After having considered the matter he said that he would surely to morrow at 2 p.m. bring the $2,000 and Sawa's guarantee, and a document was drawn up accordingly. (Mr. Ness objected to the answer about guarantee being accepted, as the document does not contain a word about the guarantee. Answer disallowed.) There was a verbal agreement before the document was drawn up, namely that Sawa's guarantee should be brought at the same time as the $2,000. (This answer was likewise objected to by Mr. Ness and disallowed.) At the same interview, and after the document was written, a verbal agreement was made that they should bring $2,000 the next day at 2 p.m. and the guarantee, and take delivery of the 2,000 cases. (The Court disallowed the part about the guarantee, but Mr. Kirkwood demanded that then the whole answer should be struck out, which was accordingly done.) On the morning of the 25th Kawamura and Totska brought me a message from Nakajima.

Mr. Ness protested against this being evidence, as Kawamura and Totska were manifestly the agents of defendant himself. Conversation between defendant and his own agents could never be admitted as evidence against plaintiff.

Mr. Kirkwood argued that Kawamura had acted as agent for plaintiff; Saito said so distinctly this morning.

Mr. Ness admitted this, but added that he should have put that right if he had cross examined Saito.

Mr. Kirkwood contended that Kawamura had busied himself about this oil business long before Mitchell had anything to do with it.

Mr. Ness stated that it is in evidence that when Nakajima in disgust went to the British Consulate he was overtaken by Kawamura and Totska who, on behalf of Mr. Mitchell, asked him not to do anything in the matter; and next morning Kawamura and Totska came again to Nakajima on behalf of Mr. Mitchell. Kawamura has received $50 as reward from Mr. Mitchell, and Totska is to be looked upon as Mr. Mitchell's servant. His Honour ruled the evidence as inadmissible. Mr. Kirkwood demanded that his objection be noted.

Examination continued: On the 25th May, I went at 2 p.m. to the hatoba in consequence of a conversation I had had in the morning. On the hatoba I found Nakajima, Furokawa, Kawamura, Matsue and Totska and they were examining the 2,000 cases that were landed. Nakajima asked me what we should do about some cases that appeared to be damaged. I looked over the cases and sorted out 27 which appeared leaky, and these I told them I would replace. I then enquired if he had brought the $2,000 and the guarantee. He answered that he had the $2,000, as I handed me two cheques on the Mitsui Bank for $1,000 each, I asked him if they were correct, and he assured me they were. I told him I should go to the Mitsui Bank and find out, and I told Totska to go on with the delivery of the cases according to the order I have received from Chipman, Stone & Co.'s. I had at that time only an order for 100 cases. I said I should go and cash those notes and bring an order for the balance of the cases. I cashed the notes at the Bank and there handed the receipt to Furokawa in the presence of Kawamura. I then told Kawamura to go with Furokawa to the hatoba and receive Sawa's guarantee from Nakajima, and I would return there immediately with an order for delivery of the balance of the cases. With the $2,000 and the money I had paid already on account to Chipman, Stone & Co., I was prepared to get an order for the balance, my agreement being that I should pay for the order on delivery. I had paid already $500. Besides the $500 paid to Chipman, Stone & Co., and the $2,000 now paid to me I had in my possession the balance that would enable me to get the order from Chipman, Stone & Co. From the Mitsui Bank I went in a *jinrikisha* to my office and commenced to make preparations to enable me to get the order from Messrs. Chipman, Stone & Co. While doing so a message came from the hatoba saying that Nakajima had not brought, or would not give—I do not exactly remember—Sawa's guarantee. That message was brought me by a servant of Kawamura's. I don't know his name. I shall know him if I see him. I was just going to Messrs. Chipman, Stone & Co.'s. I then jumped into a *jinrikisha* and went to the hatoba, where I saw Nakajima's coolies trying to take delivery of the oil by force. I met at the hatoba the parties already mentioned and Mr. Morse, who said there was a great row going on, but that he did not know what was the matter. I had to use a big stick to keep the people from taking forcible possession of the oil. I asked Nakajima, what was the meaning of this. He replied that he was not to give me Sawa's guarantee until he had got delivery of 15,000 cases. I told him he was under a great mistake. I then ordered Totska to stop the delivery after having delivered the 100 cases for which he had my order. I told Mr. Morse that he had still a lien on the goods, and asked him to lend me his assistance. He said he would send for his European watchman. I told Nakajima, who said he had paid $2,700 and wanted delivery of 2,000 cases, that he could not expect me to give him $5,000 worth of goods on receipt of only $2,700: he must give me security for the balance of the price for the 2,000 cases. Nakajima then said he would give me his own security for the balance. I replied I would not take his security but Sawa's negotiable security according to our arrangement. He then appeared in trouble, and I then offered in order to assist him that I would give him 500 or 600 cases as an equivalent for the $2,000 and leave the balance on the hatoba until he could arrange about the security. He pondered over this, and went away about 50 yards where 3 Japanese were sitting on logs of wood on the hatoba. He came back and said: "my friends have brought $2,000." I did not know the 3 Japanese at that time. I now know they were Mano, Suzuya and the banto of Mr. Watson at No. 22.

Adjourned until 8.30 a.m. to-morrow.

Thursday, 6th July 1876.

Examination of W. P. Mitchell by Mr. Kirkwood continued: I made enquiry what the banto of No. 22 had to do in this affair, and Nakajima answered me that it was through the banto of No. 22 that Mano had received $2,000. After some further talk Nakajima said he would go and see the British Consul. I said I should be delighted to see the Consul, and receive his advice in the matter. Before he left I said, "These cases have now remained two or three nights on the hatoba, and I cannot allow them to continue there; furthermore, unless you can bring the security I have asked for by 5 o'clock I shall sell the cases by public auction for your account." He made no reply and left. I remained some time at the hatoba and made arrangements for a night watchman. When I left the hatoba I sent to the hotel to enquire if security had been procured. I got a negative answer, and I went to a newspaper office to advertise the auction of the oil. I then went home, and Kawamura and Totska came to my house and suggested that it would be a good thing to see Sawa about the guarantee. I assented and went with them to Tokio by the 7.30 train. This was all on the 25th May. We went to Saito's house as Sawa's agent.

Mr. Ness objected to this evidence as Mr. Mitchell had no business to enquire from Sawa or Saito about the guarantee; Nakajima was to bring that guarantee when 15,000 cases were delivered, and this condition had not yet taken place.

Examination continued: I asked Saito if he was Sawa's agent, and he showed me a power of attorney from Sawa. I then wrote a note in English.

Mr. Ness objected to any evidence derived from conversations with Saito as only hearsay evidence. Saito is no party to this case. Mr. Kirkwood argued that Sawa or his attorney Saito was; since the 18th May, a party to the contract, as he had bound himself to give his guarantee. Mr. Ness said he had only raised this objection in order to save time; in reality it was a matter of perfect indifferent what Saito had said.

Examination continued: In this note I asked Saito if he had promised Sawa's guarantee to Nakajima in connection with a transaction between Nakajima and myself? Saito replied verbally that he had not yet given the proper security. At my request Saito put that answer into writing. (Mr. Ness called for that paper.)

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

That paper I lost coming back from Tokio the same night. Kawamura translated Saito's letter to me; it was to the effect that Nakajima's title deeds had not been handed over as promised, and, therefore, Sawa's guarantee had not yet been given. I had a long conversation with Saito. He never mentioned anything about the not landing of the oil being a reason for not issuing a guarantee. He never said that the documents would be exchanged at the hatoba. On the morning of the 25th May, Totska came to my house, and by him I sent a letter to Nakajima to the effect that I considered he had not fulfilled his contract. (Mr. Ness called for the letter. Paper produced.) This is the letter. It is dated the 25th May; but that is a mistake, it was written on the 26th May. (Letter read, containing a threat to take proceedings against Nakajima in the Saibansho unless he fulfils the contract.) On the same day, at 10.30 a.m., I sold on the hatoba, by public auction, 2,000 cases kerosene oil, at a price varying from $2.10 to $2.30 per case. On the 27th, Nakajima, Furokawa, Matsae, and an interpreter came to my office, and wanted to know what I was going to do about the contract. I told Nakajima, "From my letter, you must be aware of what steps I am going to take." Through the interpreter I added, that I could still give them the oil if they could bring me security for payment, provided they paid me for the loss on the re-sale of the oil. They replied they would go and see a lawyer. I then heard from Mr. Ness. I went to see him, and asked him to arrange the matter satisfactorily. He promised to try. (Paper produced, and read, which is a note from Mr. Ness, asking defendant to call. A second paper produced, and read, which is a note from defendant to Mr. Ness, dated 31st May, stating that unless the promissory note is forthcoming by next day he shall take proceedings. A third paper produced and read, which is a note from Mr. Ness to defendant, dated 1st June, advising that he has just arrived from Tôkiô, and would see his clients.) On the 4th of June I called on Mr. Ness, at his desire, who told me that he had received $6,000, and Sawa's guarantee, and if I would give him a delivery order for the 15,000 cases within 12 hours he was prepared to hand me money and guarantee. I told him that was impossible, and not according to my agreement with Nakajima, which was to take the oil in small quantities at a time. Mr. Ness showed me copies of the agreements, but I did not find them correct. At the same time, as I had written to Nakajima about the breach of contract, I wrote to the British Consulate. (Letter dated 26th May handed in.) My estimated loss of profit by Nakajima's breach of contract is $1,300. I bought the oil at $2.47½ per case, and I sold it at $2.67½ to Nakajima. I should, consequently, have gained 20 cents per case. After the 27th May I again saw Saito, and had some conversation with him.

Mr. Ness objected to that conversation being taken as evidence. Objection allowed.

Cross-examined by Mr. Ness: Totska was partly my agent. I remember having written to Naka ima that he was employed by me as interpreter (Paper exhibited.) This is the letter. After the 26th May Kawamura was my agent: up to that time he was Nakajima's agent, not mine. I sent him on the 23rd with Totska to Nakajima. He was at my office at that time, I did not think he came there on an errand. I did not request them to go and get a letter from Nakajima. I requested Totska to go, I may also have requested Kawamura to go. Kawamura acted not as my agent, but as Nakajima's, when conveying a message from me to Nakajima. On the 14th May I had contracted provisionally to sell oil, if I could purchase. The contract was reduced to writing by Nakajima, taken away by Totska, and brought back by Totska on the 18th. (Paper exhibited.) This is the contract. On the 18th Totska returned it to Nakajima. That contract does not say anything about being dependent on my ability to purchase. The cases on board the *John MacKean* were the cases referred to in the provisional contract. At the time the cases did not belong to me. I did not possess them on the 20th May, neither did I possess the 15,000 cases on the 22nd May. Up to the present time I have never possessed more than 2,000 cases. The cases on board the *John MacKean* belonged to Chipman, Stone & Co. and Jardine, Matheson & Co. I got no delivery order from Jardine, Matheson & Co. I got a delivery order from Chipman, Stone & Co. for oil on board the *John MacKean*. At that time I did not know that Jardine, Matheson & Co. owned part of the oil. I possessed 2,000 cases on the 22nd May; I had bought them from Mr. Morse. I did not get delivery on the 23rd May. I had information from Chipman, Stone & Co. that 2,000 cases were landed on the hatoba for my account. I got delivery on the 26th May, not of 2,000 cases, only of 100 cases. The balance were delivered to me on the 26th May. I had paid for them on the 26th and 27th May partly out of the proceeds of the auction. On the 22nd May I had paid Chipman, Stone & Co. $125, on the morning of the 23rd May $250, and on the morning of the 24th May $200. (Mr. Ness called for receipts.) I had a written agreement with Chipman, Stone & Co. about 2,000 cases. (Mr. Ness called for it.) There are altogether three receipts, I produce one, I may have the two others. I paid no money on the 2,000 cases. Before I sold the 2,000 cases at auction I had no arrangement with Chipman, Stone & Co. that they were to be sold for their account. They had a lien on the cases up to the moment of the auction. Nevertheless, in my opinion, the cases were mine. The lien was satisfied on the 27th May. At that time the cases had been sold by auction. I rendered account sales to Chipman, Stone & Co. On the 22nd May I made a verbal agreement with Chipman, Stone & Co. about 15,000 cases. The price was never agreed upon nor the manner of payment. I did not, on the 22nd May, offer to deliver Nakajima 15,000 cases because the weather was then too windy. I was not prepared to deliver 15,000 cases on that day. In my answer to the petition I have said I was prepared. It would take about 6 days to land 15,000 cases. It would be impossible to deliver in less time. I undertook to deliver in one day because, when making the contract with Nakajima, he said that it was only by pledging 15,000 cases to be delivered in one day that he should be able to raise 20 per cent. on the purchase price and a negotiable guarantee from Sawa. That is my only explanation of having undertaken to perform an impossibility. The contract of the 20th May was drawn up by Kawamura and Nakajima and translated to me. There are two English copies of that contract, both written by me, and signed by me and Nakajima. I look on the English copy as original, but I wrote it according to what had been drawn up by the Japanese. I considered that the contract subsisting between me and Nakajima on the 25th was the instrument of the 20th May, as modified by later documents drawn up on the 22nd, 23rd, and the 24th.

In this action I rely on three breaches of contract: on the 23rd, the 24th, and 25th May. When I received Nakajima's letter dated the 23rd May, I looked on it as a condonation of my failing in delivery the previous day. It was not properly a condonation, for I had already told Nakajima that it was impossible to land 15,000 cases in a day. On the 23rd May, I had not commenced landing anything beyond the 2,000 cases. It would, consequently, have been impossible for me to have the whole 15,000 cases landed before the 27th or 28th May. (Paper exhibited.) In virtue of that agreement, Nakajima paid me $2,000. I have at all times been prepared to carry out the letter of that agreement. On the 25th May, I was prepared to deliver 2,000 cases on payment of $2,000 I did not deliver 2,000 cases when I received $2,000. This written agreement contains no stipulation beyond payment of $2,000 on one side, and delivery of 2,000 cases on the other. It was with a view to carry out this agreement that I and Nakajima met on the hatoba on the 25th It was I who refused to carry out the letter of this written agreement. I came back to the hatoba after going to the Mitsui Bank. I did not go back immediately, I went to my office. It was about a quarter to three. I went to my office to make arrangements to get a delivery order for the balance of the 2,000 cases. I did not know that Mr. Morse was on the hatoba. He was called by a boy. Mr. Morse did not to my knowledge interfere; I asked him to assist me. He was standing there as having a lien on the oil. I do not know, if he was there to protect his interests. He did not object to let me have delivery before I had paid for the goods. He did not to my knowledge object to Nakajima taking away the goods. He did not to my knowledge know that I had sold oil to Nakajima. At the moment I received the $2,000, I was not in a position to deliver more than 100 cases. I had paid for about 200 cases. I think I can find receipts for more than $275. I cannot swear that I paid more than $275. That would not represent more than about 100 cases. I have become responsible for $400 in order to obtain Totska's release from jail. I have received from Nakajima $2,700. I sold the oil for $4,400. I paid Chipman, Stone & Co. $4,400. On the 20th May the market price of oil was considerably less than what Nakajima should pay. The difference between what I paid Chipman, Stone & Co., and what I obtained at auction for the oil is only $500, which is my loss: to cover that and expenses I want to keep Nakajima's $2,700.

Re-examined by Mr. Kirkwood: On the 15th of May I went to Chipman, Stone & Co. saying that some Japanese were coming from Tokio to look at the oil, that I might be able to make a contract, and I should like to get an order for them to go on board the *John MacKean*. If it had been a fine day on the 22nd May, and the guarantee had been there, I should have been prepared to commence carrying out my contract, and have gone on with it to completion. That would have taken at least 5 days. I told Nakajima already on the 20th May that it was an impossibility to land 15,000 cases in a day.

Mr. Ness objected to this answer as varying the contents of the contract that has been drawn up in witness's own hand-writing, and which expressly stipulates the delivery of 15,000 cases on the 22nd May. Objection allowed.

Re-examination continued.—On the morning of the 22nd May I went to Mr. Morse and told him I wanted 2,000 cases of oil, that I had an arrangement for 15,000 cases but wanted to have 2,000 at once. I arranged the price for the 2,000 cases at $2.47½. With regard to the balance I said nothing as I did not wish to implicate myself too far until I had seen how Nakajima would act. I agreed to pay Chipman, Stone & Co. for the 2,000 cases on delivery. They would commence landing as soon as the weather would permit, and on the same afternoon 500 cases were landed, and I was informed that by 2 p.m. next day 1,500 more would be landed. These 1,500 cases were landed on the 23rd, and I received a letter from Chipman, Stone & Co. that the cases had been landed at the hatoba for my account. (Mr. Ness called for that document; witness stated he had not got it in Court but could bring it within half-an-hour.) The kerosene was at my risk from the time it was landed on the hatoba. On my return from the Mitsui Bank on the afternoon of the 25th I went to my office to make arrangements for paying for the balance of the 2,000 cases. I had the requisite money in my possession at that time. On my return to the hatoba I asked Nakajima if he had brought the security, when he replied he could not give it. I said no more cases would be delivered until security was given. The reason I did not get the delivery order from Chipman, Stone & Co. was the absence of the security. I mean, I would not apply for the delivery order until I had the security. (Paper exhibited.) I do not consider this contract of the 14th May binding on me. (Mr. Ness had never said it was binding as it was done away with a few days later.) I do not consider the letters written by Nakajima on the 22nd, 23rd and 24th May as constituting binding contracts apart from the conversations which took place with regard to them.

Mr. Kirkwood explained that these letters can only be con-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

sidered as *ex parte in memoria*, which in connection with the conversations that took place upon them constitute agreements.

Mr. Ness objected to the answer as tending to add to, or subtract from, the purport of written instruments, which were accepted by Mr. Mitchell, had been produced in Court by him, and were written at the very interviews when these conversations are said to have taken place. Objection allowed and the answer disallowed.

Re-examination continued: I never gave any unqualified acceptation of these letters apart from the conversation which took place with regard to them. At the time these letters were written other agreements, verbal ones, were made.

Mr. Ness considered it a great waste of time that his learned friend went on repeating a course of examination that had been ruled out over and over again.

His Honour advised decendant's counsel to avoid waste of time as much as possible.

Re-examination continued: On the 30th of May I was still prepared to carry out the contract and offered to do so.

Mr. Kirkwood next called

Totska: I am a *hanin*, my occupation is interpreter. I first saw Mr. Mitchell on the 11th of May. I was with Matsae, a friend of mine. From Matsae's place we went to Nakajima's house on business between Mr Mitchell and Nakajima. I was not asked to do so by Mr. Mitchell. Nakajima made proposals to Mr. Mitchell and put them in writing. Nakajima requested me to translate the writing, which I did.

The examination of this witness was here interrupted and the witness box entered by

J. R. Morse, sworn: I am a partner of Chipman, Stone & Co. About the 20th May we had about 25,000 cases kerosene on board the *John MacKean* and the *Lancet*. Mr. Mitchell came to us on the 16th saying that he had some Japanese purchasers for kerosene. On the 22nd he made a contract for 2,000 cases. We agreed to deliver, as soon as we could, on the hatoba. He paid on that day $200 and on the next morning $270. I can produce my books. The balance should be paid on delivery of the oil. He said that he might want in all 15,000 or 20,000 cases, and I told him we could let him have them. The balance of the 2,000 cases was landed on the 23rd. It was landed for Mr. Mitchell's account and was of course at his risk on the hatoba. I went to the hatoba on the 25th. Mr. Mitchell arrived a few minutes after I had got there. He first had a conversation with some Japanese. (Nakajima pointed out to witness.) That man was there when Mr. Mitchell addressed me. Mr. Mitchell spoke in English.

Mr. Ness objected as Nakajima does not know English. Mr Kirkwood argued that Nakajima had an interpreter there. Question allowed.

Examination continued: Mr. Mitchell told me that the Japanese were not allowed to take the oil as they had not come prepared with proper means of payment. He added that they were likely to use force and asked for our European watchman. On the 25th we were prepared to sell Mr. Mitchell 15,000 cases of kerosene oil.

Cross examined by Mr. Ness: I never contracted with Mr. Mitchell for 14,000 cases. He never paid me a cent beyond what he paid me on account of the 2,000 cases. He had no right to deliver these 2,000 cases until they were paid for. He paid for them after they were sold by auction. He consulted us before he sold them by auction. I consider we had a lien on the cases until they were sold by auction. He had not the right to sell them as his property. In fact the property belonged to us. I was called to the hatoba on the 25th by our watchmen who told me the Japanese would take the oil by force unless I stopped them. He had instructions from me that when an order came from us he should give delivery. I had the order ready but he had not sent for it and I interfered with the delivery. If Mr Mitchell has said that I did not interfere his statement is incorrect

Re-examined by Mr. Kirkwood: I did not interfere with the delivery in Mr. Mitchell's presence, but before he came to the hatoba.

Mr. Mitchell was justified in telling the Japanese: these are the 2,000 cases I have to deliver, give me $2,000 and I will deliver your 100 cases and go and get an order for delivering the balance.

Mr. Ness objected: Witness is here to testify to facts not to give his opinion on a question of law. Answer disallowed.

Re-examination continued: I was asked by Mr. Mitchell to give him assistance against the Japanese, and I sent for our watchman. Mr. Mitchell told me the Japanese were not prepared to pay for the oil, and on that account I sent for our watchman.

Adjourned until to-morrow, at 8.30 a.m.

Friday, 7th July, 1876.

Totska's examination by Mr. Kirkwood continued: After the 18th May I again saw Nakajima in Yokohama on the 16th. On that day Nakajima, Furokawa, and Matsae came to see the oil. Kawamura was not with them. Again I saw Nakajima in Yokohama on the 20th May. He came with Furokawa and Matsae about 4.30 p.m. to Mr. Mitchell's house. Nakajima proposed the terms of the oil contract to Mr. Mitchell, 20 per cent. down on delivery of 15,000 cases of oil and the balance in a negotiable security from Prince Sawa. (Mr. Ness objected to the expression negotiable; all these conversations tending to vary the contents of a written contract are not admissible. His Honor allowed the objection. Mr. Kirkwood wished his protest noted.) Nakajima drew up a document containing the terms of the contract, and Mr. Mitchell took an English translation of it. These documents were signed by both parties. They were torn up on the 20th, but I remember their contents. (Mr. Ness thought it a great waste of time to continue this examination on a torn up document, which can have no possible bearing on the issue of the case.) I remember the morning of the 22nd May. Nakajima, Kawamura, Furokawa, Matsae and I went to Mr. Mitchell's office. Mr. Mitchell told Nakajima that the wind was so strong that nothing could be landed that day. Some conversation then took place between Nakajima and Mr. Mitchell with reference to the fact that, although it had been stipulated on the 20th in the written contract that the oil should be landed in one day, this was only in order to facilitate Nakajima in raising the 20 per cent. of the purchase price and in getting Sawa's guarantee, and it was nevertheless well understood between the parties, that Nakajima should take the oil in 5 or 6 deliveries, and in consequence of this conversation, Nakajima put into writting that he was willing to take, under the terms of the contract of the 20th, so much of the oil as could be landed that day, the 22nd. (Paper exhibited.) That is not the document: that document is dated the 23rd. The document I speak about was dated the 22nd, and it was returned to Nakajima on the 23rd when he wrote another document that day. I saw Nakajima later on that same day, the 22nd May, at the hotel.

Mr. Kirkwood asked what conversation took place on the evening of the 22nd, but Mr. Ness objected to the question, because it is already in evidence that that conversation was reduced to writing. Question disallowed.

Examination of Totska continued: There was no writing on the evening of the 22nd May. The conversation did not eventuate in a written document on that evening. On the 23rd May the weather was again unfavourable. Nakajima wrote a document at his hotel, and requested me and Kawamura to take it to Mr. Mitchell. (Paper exhibited.) This is the document. I did not see who wrote it it was written in the next room, but I saw Nakajima put his seal to it. The document stated that Nakajima was willing to receive the 500 cases that had been landed the day before, and as many as could be landed that day. I took the document to Mr. Mitchell's house on the Bluff, about 9 a.m. Nakajima said, "As we did no business yesterday, ask Mr. Mitchell to let us do some to-day, without mistake." At 2 p.m., 2,000 cases were landed; and at Mr. Mitchell's request I proceeded to Nakajima's hotel, to ask him to take delivery of the 2,000 cases. Nakajima asked me to request Mr. Mitchell to wait until 5 p.m. Nakajima went to the hatoba and saw the cases. At 5 p.m. I and Kawamura were at Mitchell's place. Nakajima said that the $8,000 he had expected to-day had miscarried, that he must raise the money somehow, and he asked me to go to Mitchell and ask him to wait until to-morrow for the $2,000, which he would then surely pay, as he could obtain them from Mr. Watson's *banto* at No. 22. I went to Mr. Mitchell together with Kawamura, and Nakajima sent Furokawa with us, and gave him his seal as his representative. On the hatoba, at 2 p.m., Mr. Mitchell had asked Nakajima for $2,000 to pay duties and other expenses, and Nakajima had promised to bring the $2,000 at 5 p.m., together with Sawa's negotiable security, and take delivery of the 2,000 cases. In the evening Nakajima sent Furokawa with his seal to Mr. Mitchell, and ordered him to tell Mr. Mitchell that he was ashamed to come and see him because he had not kept his promise, and to ask Mr. Mitchell to wait for the $2,000 until the next day. (Paper exhibited.) This is the document written on the evening of the 23rd at Mr. Mitchell's house, by Furokawa.

Mr. Kirkwood: What was the agreement at the time this document was written?

Mr. Ness objected. Question disallowed.

Totska's examination continued: Nakajima brought no money at 9 a.m. next day, the 24th. I went to the hotel in the morning, and saw Nakajima, Furokawa, Matsae, and Kawamura. Nakajima said he had not got the money, but he requested me to go with Kawamura to Mr. Mitchell and apologise for his shortcoming, and promised the money at noon that same day. As for Sawa's guarantee, that, he said, he had got. In the afternoon Mr. Mitchell went to Nakajima's hotel; I accompanied Mr. Mitchell, who asked Nakajima why he had not kept his promise. Nakajima asked him just to wait a little longer. Mr. Mitchell then went away. Later in the afternoon, I and Kawamura went to Mr. Mitchell's place, and carried with us a bond Kawamura had written. (Paper exhibited.) This is the document: I saw Nakajima write it. It contained a promise that Nakajima would pay the next day at 2 p.m., and take delivery of 2,000 cases. On that day nothing further was done. On the morning of the 25th I and Kawamura were at Nakajima's hotel, when Nakajima came in and told me that he had now got the $2,000, and would be able to complete the business at 2 p.m. He requested me and Kawamura to go to Mr. Mitchell's place, and tell him that at 2 o'clock he would bring the $2,000, and Sawa's negotiable guarantee. We did so. At 2 p.m. Mr. Mitchell went to the hatoba, and I went to Nakajima's hotel to meet Nakajima's party. I met Furokawa, Kawamura, Matsae, and Nakajima's son, and they told me Nakajima would arrive presently. Shortly after Nakajima appeared, with three other men whom I did not know. When Nakajima came to the hatoba, Mitchell said, "Here are the 2,000 cases; pay me the $2,000." This Nakajima did in two Mitsui Bank notes. Mitchell then said to me, "I will go and change these at the bank; you give delivery of 100 cases, and in the meantime I will get an order for delivery of the balance of 2,000 cases." Mitchell ordered me to translate this to Nakajima, which I did; and Mitchell, Furokawa, and Kawamura went to the bank. I gave delivery of 100 cases when Furokawa and Kawamura came back to the hatoba. Mr. Mitchell was not with them. Kawamura said to Nakajima that Mr. Mitchell had gone to No. 28 for the delivery order and had requested him to get Sawa's negotiable security. Nakajima replied he could not give that security until the 15,000 cases were delivered, but he would give his own security for the balance. Nakajima proceeded to take the balance of the 2,000 cases by force, and I and Kawamura tried to prevent him. Kawamura sent a man named Murata to Mr. Mitchell to tell him that Nakajima

Digitized by Google UNIVERSITY OF CALIFORNIA

had not brought Sawa's security: Kawamura also sent a man to No. 28 to tell them that the oil was being taken forcible delivery of. A foreigner from No. 28 appeared accompanied by an interpreter; that foreigner stopped the coolies from taking more oil. I did not speak to the foreigner. Mr. Mitchell then reappeared, and he asked Nakajima why he had not brought Sawa's negotiable guarantee. Nakajima said he had not got it, but offered his own guarantee. Kawamura said he would complain to the British Consul and he proceeded to the Consulate followed by Nakajima, Furokawa, Matsae, and the three men whom I did not know. Mr. Mitchell approved of Kawamura's going to the Consulate to complain that Nakajima had not got the guarantee. The same evening Kawamura came to Mr. Mitchell's house, and Mr. Mitchell, Kawamura, and I went to Totska to Saito's house. Then Kawamura proposed to Mr. Mitchell to see Saito. At Saito's house there was some conversation that resulted in a written document.

Mr. Kirkwood: What conversation took place that evening?

Mr. Ness objected; question disallowed; but Mr. Kirkwood's protest noted.

Totska's examination continued: I again met Saito at Yokohama on the 27th or 28th of May. Kawamura came from Saito to Mitchell, to say that Saito wished to see Mr. Mitchell in connection with the transaction between Nakajima and Mr. Mitchell. Mr. Mitchell, Kawamura, and I went, in consequence, to a tea house at Nogeyama. Saito said he had come at Nakajima's request to try to settle the affair, that Nakajima had promised him *yen* 800 for settling it, and he wanted to know if Mr. Mitchell would give him *yen* 600? Mr. Mitchell refused and went away. Kawamura came a second time from Saito to Mr. Mitchell's place, and said Saito would compromise the matter if Mitchell would give him *yen* 200. To this Mr. Mitchell agreed and wrote a bank cheque for *yen* 200. I handed the cheque to Saito. (Mr. Ness called for the cheque) Mr. Mouse appeared, but was told he would not be required.

Mr. Ness in commencing his cross examination requested the witness to answer him in English. To this Mr. Kirkwood objected: a witness should always be examined in his own language, if he so wishes it. Totska, on being asked by the Court, declared that he preferred to be examined and give answers in Japanese.

Totska, cross-examined by Mr. Ness: I am at present studying to perfect myself as an interpreter. I was, during this business, acting as interpreter between Mr. Mitchell and Nakajima. There were conversations lasting for an hour and a half. I was able to translate properly between the two parties, to convey the meaning of their words from the one to the other; but as I am not so well acquainted with English as you (Mr. Ness) I shall, in law matters, prefer to speak in Japanese, and I positively refuse to speak in English. I was released from prison on the 4th of this month: I have been in prison during 30 days. The charge against me was that I had made a contract in another name.

Mr. Ness: Was the charge having obtained money under false pretences and under a false name?

Witness:—I have two names, one I had received from a *daimio*, my former master: that name I have now dropped, and this came out during a case at the Saibansho, and I was imprisoned for not having reported to the government officers the change in my name.

Cross-examination continued: Mr. Mitchell had to pay $400 to obtain my release from prison. Mr. Mitchell lent me the $400. I shall repay them in 30 days. I am, consequently, now in Mr. Mitchell's debt for $400. I had to pay these $400 to the Saibansho for being suspected of having changed my name. The occasion of the change of my name being discovered, was a security I had entered into for a friend, to the amount of $500. That document I have not got: it was torn up when the $330 were paid by Mr. Mitchell. I only stood security for my friend in that business. I did not receive the $500, or part of them. Mr. Mitchell had no connection at all with that business. It was not a contract about saddles.

Mr. Kirkwood objected to this cross-examination.

Mr. Ness contended that he could cross-examine to any extent in order to test the credit of the witness.

Cross-examination continued: Mr. Mitchell had no connection with the saddle contract. I do not know where the saddles were. The document to which I put my seal stated that my friend had received $500. It was simply for this that I was in prison for 30 days and had to pay $400. I had used my change of name. I did not know Mr. Mitchell at that time. On the 25th May I was engaged by Mr. Mitchell as interpreter, afterwards I was imprisoned by the Saibansho, and Mr. Mitchell lent me $400 for twenty days to effect my release. Mr. Mitchell was under no obligation to me. My employment as interpreter lasted for about three days when it was interrupted by my imprisonment. Mr. Mitchell had confidence in my being able to repay him. About the saddle contract I can give no information, it was torn up by the Saibansho authorities. No criminal charge was made against me. Mr. Mitchell had not the least connection with the contract in regard to which I was examined. (Mr. Ness called for the official correspondence between this Consulate and the Saibansho concerning that contract. This correspondence was produced and read: First, a letter from the Saibansho to the Consulate, dated 1st June, asking that Mitchell, Cope & Co. be informed that their servant Totska has been placed in jail on the charge of obtaining money under false pretences; second, a letter from the same to same, dated June 2nd, asking that Mitchell, Cope & Co. be requested to attend at the Saibansho, on the 6th inst.; third, a letter from same to same, dated 5th June, that the day of hearing has been postponed; fourth, a letter from same to same, dated 14th June, charging Totska with having been implicated in different fraudulent transactions, among others in a contract made in the name of Mitchell, Cope & Co., with a man in Tokio, who gave *yen* 300 bargain money and afterwards was paid by Mr. Mitchell, Cope & Co. for *yen* 500 [illegible] fifth, letter from same to same, dated 5th July, that Totska having been placed in jail on the different charges enumerated in the letter dated the 14th June, has been released on refunding the *yen* 300 fraudulently obtained by him.) The written agreements made on the 23rd and 24th May to pay $2,000 and take delivery of 2,000 cases were binding and valid contracts. I consider them binding both on Mr. Mitchell and Nakajima.

Mr. Kirkwood objected to the question as being one on a matter of law.

Re-examined by Mr. Kirkwood, who asked if those documents, at the time they were written, constituted the whole agreement or only a partial agreement.

Mr. Ness objected. Question disallowed.

Mr. Kirkwood: (Agreement of 23rd exhibited.) Was any verbal agreement made before, at the time, or subsequent to this paper being written?

Mr. Ness objected. Question disallowed.

Re-examination continued: I have not been tried on the charge on which I was imprisoned. I was only examined for the satisfaction of the magistrate. I have not been punished: my statement was accepted and I was set at liberty. The charge against me was not a criminal one, it is now entirely withdrawn.

Mr. Kirkwood next called for the defence Kawamura: I am a *shizoku*, have no fixed occupation. The first time I met Mr. Mitchell was at Matsae's house on the 14th May. I have known Nakajima about three years this year: Saito and Sawa I have known for 2 years. I think it was on the 15th or the 16th May that I saw Saito and Sawa on this matter. I went to Sawa's house in company with Furokawa, at the request of Nakajima, to get Sawa's guarantee. Next day I went to Saito.

Mr. Ness objected to Saito's and Kawamura's conversation being taken as evidence: Kawamura was acting as agent in the business, and this is also clearly proved by Totska's evidence. He would also other object to any conversation between Kawamura and defendant, or defendant's agents being admitted. Objection allowed but Mr. Kirkwood's protest noted.

Examination of Kawamura continued: Furokawa had told me that Nakajima would pay 10 per cent. on this business. This Furokawa told me when he requested me to go to Sawa's house. Five per cent. was to be divided between me, Totska, Furokawa and Matsae, and five per cent. given to Sawa and Saito. After making the temporary contract on the 18th May, Nakajima spoke himself of the commission in presence of me, Totska, Furokawa and Matsae: he then said that if he did not pay the commission in ready money, he would pay it in goods. I came to Yokohama about 5 p.m. on the 24th May about the oil contract.

Mr. Ness objected to evidence taken from conversation previous to the contract. Objection allowed.) On the 23nd, I, Totska, Furokawa and Nakajima went to Mr. Mitchell's house. There was a high wind that day. Mr. Mitchell said if they would take the risk of the sampans being swamped he was prepared to land the cases. Again I saw Nakajima on the 23rd at Mr. Mitchell's house on the Bluff. I was present when a letter was written on the morning of the 23rd to the effect that delivery should be taken in two lots. That document was written at Nakajima's hotel. Mr. Mitchell was not present. I and Furokawa took the letter to Mr. Mitchell. Nakajima said in handing us the letter: "tell Mr. Mitchell to do his best to have as many cases as possible landed to-day." Mitchell answered on receipt of the letter that 2,000 cases would be landed that day by 2 p.m. About 2 p.m. we were all at the hatoba, but as the money and security were not forthcoming it was agreed to return at 5 p.m., when Nakajima according to his promise would be there with money and security. Nakajima never made his appearance at 5 p.m. I was with Nakajima during the evening. Nakajima sent me and Furokawa to Mr. Mitchell's house to apologise for not having come at 5 p.m. He told us that he had not the money at 5 o'clock; he said he expected the money from Tokio. He told us to go to Mr. Mitchell and arrange with him about the business being done at 9 a.m. on the 24th May. (Paper exhibited.) This is the document, it is dated the 23rd May. Next morning at 9 a.m. as no money had arrived, Nakajima, Totska, Furokawa and I went together to Mr. Mitchell's place, where Nakajima apologised for the money not having come and promised that by 12 o'clock he would take delivery of the 2,000 cases pay the $2,000 and give Sawa's guarantee. At 12 o'clock the money did not come, but at 1 p.m. Mr. Mitchell and Totska came to Nakajima's hotel. Mr. Mitchell asked for the money and Nakajima requested him to wait a little. At last he asked for respite until next day, to which Mr. Mitchell agreed, and the agreement was put into writing: it was to the effect to pay the money on the 25th at 2 o'clock in the afternoon. Nakajima told me in the morning of the 24th that he could get the money from Mr. Watson's banto at No. 22, I never heard anything from Nakajima about Mano. On the 25th, at 2 p.m. Nakajima sent me, Furakawa, Matsae and his own son beforehand to the hatoba, where we met Mr. Mitchell and Totska. About half an hour after Nakajima made his appearance accompanied by three other Japanese. At that time I did not know Mano. Since I have seen him in Court I recognize him as one of them. Nakajima examined the oil and gave Mr. Mitchell two Mitsui notes for $1,000 each. Mr. Mitchell then went to the Mitsui Bank to change the notes accompanied by me and Furokawa. Before he went Mr. Mitchell told Totska to give delivery of 100 cases until he came back; he told Totska to tell Nakajima that he had given him Totska that order, and Totska interpreted it to Nakajima. Mr. Mitchell gave Furokawa the receipt at the Mitsui Bank, and told me that he was going to No. 28 to get a delivery order for the balance of the 2,000 cases, and he requested me in the meantime to go and get the security from Nakajima. Accordingly I and Furokawa went back to the hatoba, where I asked Nakajima for the security. Nakajima replied this was not according to contract. I and Totska both argued with Nakajima that he was committing a breach of contract, because it was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

distinctly stated in the additional agreement that it was to be on the same terms as the original contract. As Nakajima would not listen to our arguments, I sent Murata to Mr. Mitchell to tell him that he had better come and stop Nakajima from taking possession by force; I also sent a message to No. 28, and a foreigner came from No. 28. In the meanwhile Murata and Mr. Mitchell came back. The latter asked Nakajima why he had not brought the guarantee, which he all along had professed to have in his possession? He added: "if you cannot give me security for the 15,000 cases, give me the balance of the price for these 2,000 cases." Nakajima offered to give his own promissory note for the balance of the price. But Mr. Mitchell would not accept but he proposed to Nakajima to telegraph for the guarantee and in the meantime he would deliver him 600 or 700 more cases. Nakajima went and conferred with Mano and Watanabe, who were on the lighter, standing at about 60 yards distance, and came back saying he must have the 2,000 cases. At that time I did not know Sazaya, but he was there and I have since seen him in Court. He was at a distance and could not have heard the conversation between Mr. Mitchell and Nakajima. Nor could Mano have heard the conversation. That same evening Mr. Mitchell, Tetsuka and I went to Tokio. We went to Saito's house; Mitchell informed him that to-day he was in a position to deliver 2,000 cases, that Nakajima had produced Sawa's guarantee but failed to produce it, and as he, Saito, was Sawa's agent, they came to him to produce explanations. Saito replied that time enough he was Sawa's agent, and Sawa had agreed to give his guarantee provided Nakajima gave security.

Mr. Ness here interrupted and said that statement was committed to writing. Saito committed his statement to writing; in that paper he said that as Nakajima had broken his agreement to give Sawa security, Saito would not give the guarantee. (Paper exhibited.) This is a copy of the letter Saito wrote on the 25th May. This copy I made next morning at Saito's house with the original before me.

The Court interpreter stated that this document only says that Sawa has nothing to do with the contract between Mr. Mitchell and Nakajima, and as to the guarantee, as the preliminary steps have not been completed, Sawa's seal cannot yet be granted to the guarantee.

Mr. Kirkwood: Did Saito tell you to what contract he referred in that document?

Mr. Ness objected to last question: The only person who can explain the meaning of the letter is Saito, who wrote it. Objection allowed.

Mr. Ness did not wish to cross-examine. Mr. Kirkwood next called

Murata: I am a servant of Kawamura's. On the 25th May I went to Mr. Mitchell's office at the request of Kawamura, who was on the lighter and told me to go and call Mr. Mitchell as Nakajima was taking possession of the oil.

In answer to Mr. Kirkwood,

Mr. Hall, the Court interpreter, replied, that in the last document extracted two different Japanese words, *yogoku* and *yakusoku* both meaning "contract" or "agreement," are used; "I have no concern with the 'contract' with Mr. Mitchell" and "the steps of the 'agreement' not having been completed the guarantee cannot be given." Without further explanation it is utterly impossible for me to say if these two Japanese words are in this document used as identical terms, referring to the same transaction or to two different transactions. But on comparing that instrument with two other documents written on the two next days by the same man, I would say that the writer makes no distinction whatever between the two terms, but uses them indiscriminately. The same explanation he, on the 25th called *yogoku*, he on the 26th calls *yakusoku*. I think the documents are obscure.

This closed the evidence for defendant.

After the counsels for plaintiffs and defendant had summed up, the Court rendered

JUDGMENT.

For plaintiff in the sum of $2,700, with interest at the rate of 10 per cent. per annum from the dates that sum was paid, namely, in two payments, one of $700 on the 20th May, and one of $2,000 on the 25th May.

Costs to be borne by defendant.

Kerosene Oil	per case	2.40	to	2.45		

Kerosene Oil.—Some 2,300 cases have been sold by auction since the 1st instant, at $2.40 to 2.43.

EXPORTS.

Silk.—The total export for the season 1875-1876, which ended on the 30th June, is 13,591 bales against 11,941 for the previous season.

One effect of the wonderful rise in prices which attends the opening of the present season has been to induce native produces and dealers to bring their goods to this market as fast as possible. The supplies of new Hanks, received since the 18th ultimo from the neighbouring districts of Bushiu and Joshiu, amount to 500 bales against 25 last year for the same period; but buyers, whilst they consider those Silks to be on the whole better than last year, regret the hasty reeling of which, in many cases, they bear too evident marks.

We stated in our last that the opening price of this season had been $455 for Hanks No. 2½ to 3. We have now to quote $580 for the same class of Silk, and the market closes under the impression produced by a telegram of 3rd instant, reporting not only a further advance of 2/3 in London, and fr. 5 in Lyons, since the 26th June, but very active business.

Settlements since the 24th ultimo are 335 bales of new Hanks, and 40 of old Oshiu.

The shipments of the fortnight are 388 bales, 223 of which are included in the total export of the last season.

P.S.—Since the above was written $660 is reported to have been paid for Hanks No. 1 & 2.

	At Exchange 4/10½ in London.	*At Exchange 4.92 at 6 m.s. in Lyons.*			*At Exchange 4/10½ in London.*	*At Exchange 4.92 at 6 m.s. in Lyons.*	
Hanks.—Best No. 1 & 2	—	—	—	Hanks.—Inferior No 4 & 5	—	—	—
„ Good No. 2	$600 to 620 nom.	20/10 to 21/5	58 to 60	Hamatski. No. 3 & 4	$430 to 440	15/3 to 15/7	42 to 44
„ Medium No. 2½ / „ C'mon. No 3	$560 to 580	19/ 6 to 20/2	54 to 56				

Tea.—Business during the past week has been unimportant, settlements only amounting to 2,500 piculs, as buyers for the most part decline to pay the increase in prices held out for by native merchants. The market to-day, in face of heavy arrivals, is tending downwards, and lower quotations are likely to be established soon.

Common	$12.00	to	14.00			
Good Common	15.00	to	17.00			
Medium	18.00	to	21.00

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 29.] YOKOHAMA, SATURDAY, JULY 15, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Must we laugh or look grave over the newspaper suppressions which have been the most interesting announcements of the week? Laugh, when we remember that the Japanese think themselves enormously aggrieved because they cannot get jurisdiction over foreigners; or look grave at the dark abyss of absolutism under our very feet which these acts reveal? Assuredly we must do something of both. The bare idea of being placed within reach of such an administration of law, or such method of procedure—we do not know what to call the process—as that by which the *Hiōron Shimbun*, the *Sōmō Zasshi* and the *Kokai Shimpo* have been suppressed, is too humorous to permit of grave consideration, even at the imperious demand of good manners. Like old Hardcastle's awkward squad, we must really beg permission to laugh at the story of Grouse in the Gun-room, and will promise to be very serious over everything else. We should like to ask a question or two regarding these acts:—

Was not Mr. Makoshi, the editor of the *Sōmō Zasshi*, sentenced a fortnight ago to three years imprisonment for violations of the press-laws? If so, is his paper suspended for the same or a new offence? If for the same, can a man be punished in Japan twice for one offence? And are criminal regulations made retrospective here? If a man can be punished twice for one offence, why not three or ten times? If regulations of this kind are retrospective, how far back does their action extend, a week, a month, a year, ten years, or how long?

We have not the slightest wish to embarrass this Government in any way—on the contrary, indeed, we have great sympathy with it in very many respects, and are convinced that, on the whole, it deserves the gratitude of the country. We have said so times and again. But as surely as it exists as a Government, so surely is it preparing for itself a day of trouble. Its course of action on this question is one not of justice, but of revenge. And of the spirit of revenge Justice knows nothing.

The memorial of the Loochooan Commissioners, a translation of which will be found elsewhere, is really very touching, and cannot be read without exciting sympathy for these simple folk. It is obvious, we think, that Japan has never said to China, in so many words, that she regarded Loochoo as her exclusive appanage, and would resent any interference with it; and perhaps it is well that the matter should be thus treated. Any thing like the direct assumption of exclusive sovereignty might be met with denial, and give rise to trouble—not to war, indeed, for the Chinese have too much on their hands, and have certainly imbibed a very decided fear of the Japanese. The position of Japan in this matter has in it something of the sin of usurpation; but we doubt whether the Chinese will now resent it, unless direct claims are put in to the possession of the islands. If nothing is said on the Japanese side, it is probable that the Chinese will calmly ignore the whole affair. The Loochooans, on the other hand, are evidently afraid of being made the field, as well as the object, of actual contention, and do not at all like the prospect. It is quite possible that they may feel some affection for China, and that their simple sense of duty may be wounded by the imposed necessity of declaring exclusively for Japan. But state necessities and policy will certainly override their plaintive pleading, and Japan will take them in tow. They are not likely to add much to her force or reputation. The "mild-eyed, melancholy" envoys represent a people much averse apparently to labour, war and thought, and it may be doubted whether the grief incidental to forswearing their mother will be very lasting, provided the Japanese govern them tolerantly and with a fair amount of wisdom and sympathy. The lotus-eaters wish for nothing more than rest, calm, and dreamful ease. We only hope they will not be forced to adopt tall hats, swallow tail coats and black cloth fie-for-shames. We hope, too, that the king will be prevented—in case he really harbours such views—from cutting off the heads of the Envoys. They have done their best, and are not to be blamed for not achieving the impossible. No one can read their memorial without being sensibly touched, and Japan owes it to these men and to herself to see that no evil befalls them on their return.

If the Loochooans, too, knew a little more about what is going on in the world, they might derive some comfort from the fact that Japan is really making some progress, and has taken a place in a chariot which, if one of the wheels does not come off, will carry her out of sight of China in a very few years. The worst of it is, that lotus-eaters hate doing anything else but eating lotuses.

The Japanese Government has our entire sympathy in troubles which are simply the inevitable outcome of its efforts to push the country forward, and which must be patiently borne either until they can be removed by authority, or disappear in the gradual march of affairs. But we must absolutely withhold all sympathy for troubles which have their origin in its unwillingness to take liberal views of questions which are quite ripe for the application of such views. The religious question is one of these. It is fairly obvious that all serious difficulties have vanished from it. There is no fanaticism in Buddhism, and no more of it in Shintoism than would raise a religiometer half a degree in a century. And yet we have a poor man fined 2 *yen* and 25 *sen* for burying his wife according to Christian rites under circumstances which would have cost him much embarrassment had he kept her remains above ground while he applied for permision to carry out her last wishes. What a nice discrimination of the exact amount of legal guilt is evidenced by the 25 *sen* superadded to the two *yen!* Would any reduction be made for a quantity? Are children reckoned half-price? What nonsense all this is! We can easily believe that there are many absurd things which the Government is forced to do or tolerate, because public opinion is not yet sufficiently far advanced to permit of its doing otherwise. But

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

an offence of this kind might so easily be condoned with a few liberal words, in order to give the important doctrine of toleration a gentle push forwards, and encourage the people in more enlightened views.

But do not let us be unjust to the Japanese. Let us look at home for a moment, and see how this very question is being treated in England—the land of political freedom, but, unfortunately, also of a social religious intolerance which is a source of equal wonder and shame. Only the mail before last brought the report of a debate in the Upper House on the Law of Burial. It was conducted with great solemnity, ability, earnestness and dignity, and is well worth reading on this account. And what do our readers suppose was its object? This: To consider whether that may be done in England which is done in every civilized country, Turkey included—except Spain—to consider whether a man may be buried, in the only place in many instances in which he can be buried, with the funeral ceremonies of his own religious persuasion! Well does *The Times* sum up an able article on the subject with these words:—

It is melancholy to have to record that the gravest personages in Church and State can seriously occupy themselves with what we must be allowed to call these paltry quibbles. The reader will see the point which the question has reached by the admission of the Bishops and the Conservatives themselves. Nonconformist funerals, with all the demonstration of a silent procession, may be admitted to our Churchyards, with distinct refusal to recognise the authority of the Church or the clergyman. More than this, it is acknowledged to be unreasonable to forbid such processions the use of hymns at the grave. This is conceded; but the step between a Hymn and a Prayer is too great, as Lord Selborne pointed out, for the contemplation of the friends of the Church. It would involve Disestablishment; it is worth resisting by the whole force of Government: it is sufficient to justify prolonging a contest which every additional day renders more embittered. The primate did not conceal his own dissatisfaction with these feeble and ungenerous concessions and his conviction that it would be wiser to go much further than his brethren, and it is melancholy that statesmen and prelates should think it possible to stop short at such littlenesses. The debate was a great demonstration of forces on both sides; but though the Division went against Lord Granville, he won a moral victory, which must insure the complete settlement of the question at no distant time. The Government have accepted the responsibility of proposing such a settlement; and the next step in the business must be left in their hands. It is to be hoped they will rise beyond the narrow views within which some of their supporters would still confine them.

The disputes about the Race Club seem to resolve themselves into the question whether a stream of very turbid water—"not to put too fine a point upon it" as Mr. Snagsby would say—is likely to run any the clearer for having a sluice open into it well known to confine a great deal of very dirty water. The experiment is at least a hazardous one, nor do we know any good grounds on which success can be predicted for it. If racing in the hands of gentlemen has a tendency to become inextricably mixed up with all manner of questionable practices—and if any one doubts this let him read the Greville Memoirs—much more has it that tendency when in the hands of classes less restrained by those feelings, which—say what we will—are more common in the former than the latter class. What rights the whole community, as distinct from the Race Club, actually possess in the race-course, is a question depending upon the terms on which the course was given by the Japanese Government, and the proper construction of these will shortly be pronounced under the authority of a court of law. No one, we imagine, would be displeased to find that they admitted of a very liberal interpretation, and gave a right to use the course to every one paying his quota towards the rent and expenses of maintenance. How far what may be called the Opposition have been so fairly represented on the committee as to have had a full opportunity of making known their views and grievances and carrying what they conceive to be their reforms, we do not exactly know. But we imagine that this opportunity has been afforded them by election on the committee, and if they have failed to carry these views, we must presume that the majority of the Club is against them. That there are always overshadowing influences in these clubs, and that certain men generally get pretty much their own way there, arises, as it seems to us, from the natural constitution of things. They are extremely fond of the sport, lay themselves out for it, have means which they willingly devote to it—whether to make money or not is not here the question—it is their hobby, their study, the object of their leisure thoughts and constant devotion. Of course they are far more successful than those who pursue it with inferior zeal or means, and the grim old argument of the number of bayonets need not go for much in the face of the saying of Mencius, "Whatever men may think, Heaven is just." These clubs too are all elective assemblies, there is ample defence in them against despotism, and if the general consensus of the members does not rebel against the supremacy of which two or three complain, it is fair to presume that things work moderately well. For the steps taken to try the right of the whole community to enjoy the benefit of the race-course, all ought to be grateful to those who have brought it to an issue. But in regard to the means adopted in order to destroy a supremacy which seems to us only the result of the natural order of things, we think them calculated to produce more evils than they would banish. Poison may be resorted to as medicine, but if there is more probability of the patient dying than recovering from it, the balance of argument is distinctly against its use.

We have been requested to publish the subjoined appeal to the Friends of the Blind. In considering what response should be made to it, it may be well to look carefully into the question of what machinery already exists in this country to afford the relief contemplated in Mr. Goble's letter.

75 A., Bluff, Yokohama, Japan,
July 70, 1876.

To the Friends of the unfortunate blind in Japan.

Being myself nearly blind, and having been led by a very natural sympathy for the blind of this my adopted country to try and do something for their benefit, I now apply to you for any aid or information on the subject of this afflicted people you may be willing or able to impart.

After considerable labour and expense, I have succeeded in arranging a system of printing in Roman letters, by which I represent in the "Phonetic" style all the sounds of the Japanese language.

I have printed a little book, and taught some of the blind around me to read it. I find that blind boys can learn to read my book with far less labour than it requires for their brethren who have their eyesight to learn to read their native characters.

All that is now required to put the blind of Japan on the high road to education, and the consequent improvement of their religious and social condition, is simply to find some means of furnishing them with the necessary books, printed in the simple and easy style of my first book.

I have never seen any portion of the process by which books for the blind are printed in other lands, and I do not know how as yet, to make the work so cheap as to put the books within the reach of the poor afflicted ones. My present simple mode of printing upon wooden blocks, would do very well only that it is so very expensive, and so slow, as to make it beyond my means for me to hope to prepare in my life time a tithe of the books that will be necessary for the education of all the blind in this country.

I need presses and appliances such as are used in other lands, to enable me to do the work cheaply and with despatch, and so to scatter over the entire land the "Good News" to those who sit in darkness.

I have neither these appliances, nor the means to purchase them. Therefore I send abroad specimen copies of my little book, showing what I wish to do and how I propose to do it, at the same time soliciting the necessary aid and information to enable me to carry out my project. In so doing I address myself chiefly to those who have already taken an interest in this benevolent work in other lands. Small as is the little book that I have now put forth, still it is a fact that any one who has learned the Alphabet and mastered the eight following pages, is prepared without further instruction, to read any book or paper printed in the same language and same type.

It is also a fact that a young man eighteen years of age, who been totally blind since he was three years old, has mastered the whole book, almost without instruction, within two weeks from the time when I gave him the first copy of the A B C. He and others who are reading the little book are eagerly asking, "when shall we get Geographies and Arithmetics, and all the other books we need, all printed like this one, so that we may learn about the different countries in the world, and improve our minds, and have some rays of light amid our darkness.

Friends and Philanthropists all over the world, will you kindly lend a helping hand, that we may be able to meet this call for light coming from those who are doubly benighted?

I would especially request of all the Institutions for the blind, where the printing for their use is done, to send me such information as will enable me to carry on this work with cheapness and despatch. If any should have it in their hearts to send printing apparatus, will they please first to write to me, so that by a fair

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

understanding it may be arranged to get just what will suit our wants, without mistake or useless expense?

On behalf of the blind of Japan, I await the response of the Christian world.

J. GOBLE.

Selden's criticism upon equity holds good in the case of the removal of the press suspensions from the law-courts to the decision of the Home Department. He says:—

Equity is a roguish thing: for law we have a measure, and know what to trust to: equity is according to the conscience of him that is chancellor, and as that is larger or narrower, so is equity. 'Tis all one as if they should make his foot the standard for the measure, we call a chancellor's foot, what an uncertain measure this would be! One chancellor has a long foot, another a short foot, a third an indifferent foot: 'tis the same thing in the chancellor's conscience.

A petition, numerously signed, has been sent in to the Chairman of the Board of Consuls, requesting that the state of the Creek running at the back of the settlement may be brought to the notice of the Japanese authorities. By the terms of the Convention of 1866 a uniform depth ought to be maintained in the creek of 4 feet of water at low tide. There is now barely eighteen inches in many spots, and this creates incessant trouble, delay and annoyance in a great variety of ways. It is to be hoped that the matter will have the immediate attention of the *Kenrei*.

From the "Japan Mail Daily Advertiser."

Monday, 10th.

The latest telegrams from Europe show that though there is some natural uneasiness in regard to the Eastern Question, there is no foundation whatever for any apprehension that a "war is immenent." So far as can be gathered from actual intelligence and floating report, the views of the British Cabinet are daily gaining greater adherence among the three Imperial Powers most interested.

Owing to some want of arrangement with the Postal Authorities the O. & O. Steamer *Gaelic* brought no Mail from San Francisco. The means of direct communication with San Francisco are not so frequent that we can afford to dispense with the facilities for doing so which the O. & O. Co's steamers offer, and therefore hope the Postal Authorities of America and England will, without further delay, make some provision for regularly despatching a Mail by these vessels.

Gambling is supposed to be prohibited in Japan, but yet any one passing the American Consulate on Friday last might have seen a gang of coolies occupied with dice, and obstructing the thoroughfare, right under the eyes of two policeman stationed in the immediate neighbourhood. The attention of one of the policemen was drawn to the nuisance by a passer by, and then, and only then, did the guardian of the law leisurely proceed to interfere.

From the *Nichi Nichi Shimbun*.

Japan for the first time is about to enter the field of missionary enterprize, as the East Shinshiu Sect of Buddhists will shortly send three of their priests to Corea in order to propagate their doctrines.

Tuesday, 11th.

The following dialogue lately took place between a Japanese Military Officer and a foreign Drill Instructor.—

J. O.—It might happen that a difficulty arose between Japan and England, in which case we should be bound to declare war.

D. I.—Oh, certainly!

J. O.—Of course, in such an event, we should be obliged to invade England.

D. I.—Oh, no doubt!

J. O.—Well, do you think it would be advisable that our troops should proceed to England round the Cape or viâ the Suez Canal?

D. I.—Oh, certainly by Suez Canal. There will be no difficulty, provided you are able to pay the dues.

J. O.—But when we arrive in England, do you think it would be better to land at Dover or sail up the Thames?

D. I.—Well, in case of an invasion of England it is generally considered advisable to land at Dover.

J. O.—Just so, then we will do so! But after landing at Dover, don't you think we ought to proceed by rail to the capital?

D. I.—Perhaps so, but I'm afraid one or two of the Railway guards might stop you.

J. O.—Oh!

From the *Nichi Nichi Shimbun*.

The admiral and the officers of the French man-of-war *Atalante* were entertained at Hamagoten on the 7th instant by Japanese Naval officers.

From the same.

Two Loo-Chooan gentlemen have been appointed to posts in the Judicial Department.

From the same.

The Kôtzûsha Company, auctioneers of Japanese curios, held their first auction on the 8th instant at Ginza, Tôkiô, and sold articles to the extent of over 10,000 *yen*, the purchasers being mostly Japanese officials and foreigners.

From the *Nanimo Shimbun*.

The *Tokedaza* theatre, where the late destructive fire originated, has lately been rebuilt, but the name of the building has been changed to *Bantenza* because the former one proved unlucky.

From the *Mainichi Shimbun*.

There are at present some 70 or 80 men under arrest who were concerned in the late insurrection at Wakayama *ken*.

From the same.

Some time ago the *Shidzoku* of Wakayama *ken* subscribed a sum of about 30,000 *yen* for promoting eduction amongst the the people, which sum they deposited with the *Kencho* officials, to be used in the future as the subscribers might direct. The money was lately demanded of the officials, who were, however, puzzled to return it, for they had contrived to dispose of it for some purpose or another of which the subscribers had no knowledge.

The O. & O. *Belgic* sailed for San Francisco this morning. She had on board 63 bales of Silk for New York and the following Tea:—

From	San Fran.	N. York.	Other cities.	Total
Shanghai - -	—	4,510	85	4,595
Nagasaki - -	—	—	98	98

permission was granted, for which offence, at the instance of the Buddhist priests, he has been fined 2¼ *yen*.

From the same.

The native members of the Greek Church who reside at Sendai presented an address of welcome to the Mikado, on the occasion of His Majesty's late visit to that town, which was graciously accepted.

From the *Saifu Shimbun*.

Père Nikolai, of the Greek Church, preaches at Kôjimachi, Tôkiô, and his service is always well attended. His preaching has had such effect that the people in the neighbourhood have commenced to sell their household shrines.

From the *Chôya Shimbun*.

H. M. the Mikado is expected to return to the capital about the 27th instant.

The Mikado left Tzukitate early on the 3rd instant through pouring rain. As the roads would not admit of the use of carriages, they had to be sent back to Tôkiô from this place, and the rest of the journey will have to be completed on horseback or in *norimono*. The Imperial party reached Iwai about 3 o'clock in the afternoon, and stayed there until the next morning, when a start was made for Midzusawa, which place was reached about 5 p.m. His Majesty paid a visit, *en route*, to Chûzenji, a celebrated temple which, it is said, has been built over 700 years, and was there shown many interesting and valuable relics.

From the *Mainichi Shimbun*.

Wrestling matches will shortly be held at Kitagata, a village in the vicinity of Yokohama.

From the *Kinji Hiôron*.

Some of the farmers in Yamanashi *ken* have come to the determination to abandon their present occupation and seek to gain their livelihood by some other means, as the present method of levying the land-taxes causes them greater hardship than they can endure.

From the *Hôchi Shimbun*.

A heavy fall of rain has given timely relief to the distress which the people, in and about Kiôto, lately suffered through the continued drought.

From the *Hôchi Shimbun*.

The opening of the *Sumida-gawa*, which was originally fixed for the 7th instant but postponed on account of inclement weather, will now take place on the 15th instant.

Thursday, 13*th*.

There was an altogether unnecessary amount of delay this morning in delivering the mail letters and papers from the *Nagoya Maru*. The steamer arrived at 2 o'clock a.m. At 8 o'clock a small instalment only of the mail was delivered, and this only after a representation of the urgency with which the papers were required. This demands the attention of the Post-office authorities.

By the kind permission of the Admiral and Officers of the *Tennessee*, the band of that vessel will play in the Bluff Gardens at half-past five this evening.

From the *Akébono Shimbun*.

It is said that iron cash are in general use in the neighbourhood of Sendai, and that when change for one *yen* is required it is given in the shape of 16,000 of these iron cash, a fact which proves a great nuisance to the recipient.

From the same.

The inhabitants of the northern districts who dress in the foreign style, find that the dogs greatly annoy them by constantly barking at them.

From the *Naniwa Shinbun*.

A man living near the Nippon Bashi, Ôsaka, has the following strange sign hung out at his door. "Umbrellas will be lent, without charge, to any who are caught in the rain.'

The persecution of members of the Press is as active as ever. We learn from the *Hôchi Shimbun* that Mr. Yebihara Yasushi, a *shidzoku* of Kagoshima *ken* and manager of the *Hiôron Shimbun*, was, by order of the *Gon Chiji* of Tôkiô *Fu*, summoned to the *Saibansho* on the 11th instant and there and then informed that his paper was suspended from and after that date, by order of the *Naimushô*. On the same day Mr. Hirano Take, manager of the *Kokai Shimpô*, was summoned to the *Saibansho* and likewise received a sentence of suspension. In the absence of Mr. Kuribara Riochi, the manager of the *Sômô Zasshi*, Mr. Hatano, belonging to the staff of that paper, was also summoned to the *Saibansho* to receive an order of suspension, but declined to receive the same on the plea of not being the manager.

Again on the same day Mr. Imai Ri, the editor of the *Kokai Shimpô*, underwent examination at the *Saibansho* on a charge of infraction of the Press-laws, by reason of an article which he published in the twelfth number of his issue; while Mr. Sakai Kisaburo, editor of the *Akébono Shimbun*, was also tried for certain articles which he published in Nos. 812 and 821 of his paper.

On the same day the examination of Mr. Wakayama Kisei, the editor of the *Hiôron Shimbun*, who was remanded to prison on 30th ultimo pending the result of his trial, was continued.

From the *Mainichi Shimbun*.

Mr. Ito, the editor of the *Naniwa Shimbun*, was summoned for trial at the Ôsaka *Saibansho* on the 5th instant.

Friday, 14*th*.

The M. M. steamer *Menzaleh* left Hongkong at noon on Wednesday, the 12th instant, with mails to the 4th June on board.

The defendant in the case of Saisuke *vs*. W. P. Mitchell yesterday applied for and obtained leave to appeal. Execution of the sentence lately given against him has in consequence been suspended.

The hull of the *Surprise* was towed into Yokoska on the 11th instant for the purpose of being docked there.

A party of native silk dealers was recently seen taking a morning drive round the road—a rather surprising fact, which was subsequently explained as follows:—It appears that the silk men are so beset by the visits of the foreign buyers at abnormally early hours, that they thought it would be rather a good plan to take an early drive, enjoy the fresh morning air, and yet be back again at their place of business early enough to sell their silk about 10 a.m. at, perhaps, an advance of $10 per picul on prices which were paid at six o'clock the same morning.

From the *Chôya Shimbun*.

It is rumoured that an English lawyer is about to be attached to the *Shihosho* (Judicial Department) as professional adviser.

From the same.

Some hundred traders of various sorts, principally from Tôkiô and Utzunomiya, follow in the Mikado's train during His Majesty's northern journey.

From the *Hôchi Shimbun*.

A carriage road is about to be made between Hachoji and Tôkiô.

From the same.

Mr. Mori, Japanese Minister to China, who lately returned to Tôkiô, has been ordered to remain in the capital for the present.

From the *Akébono Shimbun*.

The rice merchants of Tôkiô speculated on an expected rise of price owing to the late unseasonable weather, but the present change for the better has caused them considerable loss.

From the *Nichi Nichi Shimbun*.

The *Hiôron Shimbun* having been suspended from publication, a notice to that effect has been hung out at the front door of its closed office.

Saturday, 15th.

Mr. Hayes, Governor of Ohio, has been nominated on the Republican ticket for President of the United States.

His Majesty the Mikado left Midzusawa on the morning of the 5th instant, took luncheon at Sumisawajiri and arrived at Hanamaki about 4 p.m., and there stayed for the night. Heavy rain fell throughout the day which rendered travelling far from pleasant, but the rain-fall was very welcome to the farmers in the district, as for some time past the country has been suffering severely from drought. On the morning of the 6th instant the Imperial party left Hanamaki and proceeded through Koriyama to Morioka, where they arrived at 3. p.m. His Majesty here received the officials of the Iwate *ken* and paid a visit, on the morning of the 7th instant, to the *Kencho*. Subsequently His Majesty made a trip to the temple of Hachiman in the neighbourhood, returning to Morioka in the evening.

From the *Hôchi Shimbun*.

We hear that Osaka druggets, and lacquer-ware inlaid with mother-of-pearl, which is made at Shidzuoka, sell best at the Philadelphia Exhibition.

From the same.

Mr. Tei Nagayasu, the acting Japanese Minister at Peking, returned by the *Nagoya Maru* on the 13th instant.

From the *Mainichi Shimbun*.

The price of silk has risen recently about 50 per cent., and native merchants expect that this will do away with the dull times prevailing up to the present.

From the same.

The Loochooan Government has informed the *Naimusho* that an English steamer was recently wrecked on the coast of Loochoo.

From the same.

Great preparations are being made to put the Mikado's residence at Noge-yama in order against His Majesty's expected return from the North.

From the same.

The barley crop in the Fukuoka *ken* (Chikuzen) has been very good this year, and the price of rice has consequently fallen.

From the *Chôya Shimbun*.

The Government ship-building yard at Ishikawa-jima, Tôkiô, is to be removed to Yokoska.

The *China Mail* affirms that the *Anna* affair is not yet settled, the German Minister having, it is alleged, made three demands of China:—1, the opening of Wencho, Wuhoo and Ichang to foreign commerce; 2, the abolition of the Lekin tax throughout China; 3, a reduction in the scale of the Customs' tariff.—*S. C. & C. Gazette.*

The *Peking Gazette* of the 15th June contains a first recognition of the fact that the recent drought in the north is leading to famine. Two Censors memorialise requesting the allotment of funds from the Imperial treasury for purposes of relief.—A rather amusing rumour is mentioned by our Tientsin correspondent, that the iron tablet which was lately brought to Peking with much ceremony, to induce rain—having failed to do its duty, is to be banished as a punishment.—*S. C. & C. Gazette.*

There has been great excitement in the dollar market during the last week. On Saturday the price was driven up at one time to 77.50. The market was rather easier Sunday evening, however, at about 76.70. The excitement continued on Monday, and the price is said to have been forced up at one time to 80.01, but it closed rather easier at 78.5. The latest price we heard named on Tuesday, was 78.80, but the quotation was really little better than nominal, for there were simply none left in the place. The market has been easier towards the end of the week.—*S. C. & C. Gazette.*

RAILWAY EXTENSION.

WE are indebted to the Engineer-in-Chief of the Railway Department for a series of "Descriptive Reports of Lines laid out from Kiôto; *viâ* Otsu and Maibara, to Tsuruga: and from Maibara to Kano, Miya and Doda. We should mention that the work is printed "for private circulation only," and our exemption from the obligations thus imposed is due to the courtesy of the MINISTER OF PUBLIC WORKS, concurrently with that of Mr. BOYLE. Before entering upon the task of giving a slight sketch of the contents of the work, we may express the hope that all similar reports will be published in future without this restriction. Publicity and free criticism are the life and soul of such enterprises as those to which we now desire to draw attention, and it were to be wished that all the sub-departments of the Government conducted by foreigners would follow the example here set and let the world know what progress they are making.

The work before us is divided into two sections; the first entitled "Kiôto to Tsuruga extension;" the second, "Nakasendo and Owari lines."

The Kiôto-Tsuruga Railway, passing round the E. side of Lake Biwa, is intended as an extension of the lines constructed below Kiôto—*i.e.*, the line from Kobe to Osaka and that from Osaka to Kobe—bringing them more nearly into connection with the interior of the country N. E. towards Tôkiô and with the N. sea coast at Tsuruga. The four sections of this line are as follows: Kiôto to Otsu (the S. W. point of Lake Biwa) 10 miles; Otsu to Maibara Junction (the N. E. shoulder of the Biwa Lake), 35 miles; Maibara Junction to Shiotsu, 16¾ miles; Shiotsu to Tsuruga 13½ miles: Total, Kiôto and Tsuruga, 76 miles, including the short branch to the lake side.

Leaving Kiôto, the line crosses the Kamo-gawa river, and subsequently, the road from Otsu to Fushimi at Oyake. A ridge of hills has then to be tunnelled, from which the line emerges above the town of Otsu at a point opposite the suburb of Ishiba. Then comes the important section from Otsu to Maibara, crossing the Setta-gawa with a wrought iron girder bridge of twenty spans of seventy feet each, reposing on screw piles or iron cylinders. Further on, the beds of the Okame-gawa and Kusatsu-gawa must be passed by tunnels under them, and another iron bridge, of fifteen spans of seventy feet each, will carry the line over the Yasu-gawa. Several rivers between this point and Maibara must then be passed either by tunnels under or bridges over them, and some rather heavy work is required in the shape of tunnels and embankments before the end of the section is reached. Several stations will be erected to accommodate the passenger and goods traffic.

From the Maibara Junction Station, N for ¾ mile, the line to Tsuruga and that by the Nakasendo will run side by side on separate tracks, but with works common to both. They will then diverge, and the northernmost point of the lake will be touched at Shiotsu, the line showing some heavy work in embankments and tunnels, and being subdivided by four stations.

Thence to Tsuruga (13½ miles) the line demands a fair amount of earthworks and cuttings and will have two intervening stations. Provision seems to have been made by Mr. BOYLE for the possibility of opening and working this small section from Shiotsu to Maibura—*i.e.* along the whole length of the lake. And this is, of course, well. But in view of the great objections to which such a break in the line is open, it is earnestly to be hoped that the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Government will boldly decide on joining Kiôto to Tsuruga without a break.

We need make no extracts from the Report to show what materials for building and what supply of labour can be reckoned on in undertaking these important works. Suffice it that the ENGINEER-IN-CHIEF has carefully considered these questions, and anticipates no difficulty whatever in meeting them.

Regarding the traffic at present existing between Kiôto and Tsuruga, Mr. BOYLE says :—

1.—*Kiôto to Otsu.*

Not only is there a considerable passenger traffic converging on and passing through Otsu, but the goods traffic also should be large, judging by the carrying trade now in existence.* Goods arriving at the shores of Lake Biwa are transported to Otsu by water, thence by land carriage to Kiôto and to the sea coast viâ Fushimi. Fish, charcoal, grains and roots, silk, tea, and other products, besides manufactured articles and bale goods, are among the exports or imports passing through Otsu.

2.—*Otsu to Maibara.*

There is a large steamer traffic in goods and passengers between the various towns, on the borders of the lake, and Otsu. Local trade appears to be thriving ; the people generally seem prosperous and contented.

The following are the principal towns on this part of the line :—

Kusatsu, 16 miles from Kiôto, with a population of about 4,000, situated at the junction of the Tokaido with the Nakasendo.

Hachiman, 27 miles from Kiôto, has a population of 6,000. An important export and import trade is carried on here, 70,000 bales of goods being passed through the town in the year.

At *Jorakuji*, 2 miles further on, there is also a large export trade and an import of some 100,000 bales of goods yearly. About 160 bales of indigo are manufactured yearly in Jorakuji and the immediate neighbourhood. It has a population of about 1,300.

Notogawa has a population equal to that of Jorakuji. About 12,000 rolls of hemp stuffs for summer dresses are manufactured yearly at this place. The principal trade is in hemp.

Hikone is 41 miles from Kiôto. This town was formerly the residence of the Hikone Prince. It is the capital of the province of Omi and has a population of 28,000. A large general trade is carried on, but it is not remarkable for any speciality.

Maibara, 45 miles from Kiôto and equidistant (viz. 35 miles) from Otsu by the railway line or by the lake, is accessible by steamers, and will always be of importance as the place of junction or divergence of the line for Tsuruga and of the Nakasendo, or main trunk, line by Kano, in Mino, to Tokiô.

It has been proposed and is considered desirable, rather than to make the 35 miles of railway between Otsu and Maibara, to construct at first, instead, the 30 miles of line from Maibara to Tsuruga ; when, by placing four first class lake-steamers (at a cost equal to that of about two to three miles of railway) to run between Otsu and Maibara, all through traffic to and from Tsuruga, as well as that up and down country by the Nakasendo, would be well and conveniently provided for in connexion with Kiôto and Osaka.

3.—*Maibara to Shiotsu and Tsuruga.*

There is a flourishing trade at Nagahama in silk and crape, which are largely manufactured for miles around. This town has a population of about 5,700.

At present the chief bulk of traffic through the country between Shiotsu and Tsuruga is dried fish used chiefly for manure, which comes from N. and is shipped at Shiotsu for other ports on the lake and for the interior. About 30,000 tons per annum is the amount passing. The return traffic is much lighter, consisting chiefly of imported articles, such as petroleum, nail rods, &c., and light wares, such as pottery, and lacquered goods. The district N. of Shiotsu does not appear to produce much more cereals than can be consumed in the neighbourhood, but S. towards Nagahama, the country being fertile, the produce is considerably greater than the population requires.

To the W. of Tsuruga are iron and coal mines, which have not, however, been recently worked, nor is communication between them and the railway so easy as to make it probable that traffic may be hereafter derived from them without improved means of local transport.

It seems probable that construction of the line between Shiotsu and Tsuruga would draw an increased traffic between the provinces on the N. coast of Japan and the S. ports ; but if, as is proposed, Tsuruga be made an open port, increase of traffic may also be looked for in the other direction, which, by equalizing the traffic either way would enable the working of the railway to be effected at less cost in proportion to the amount carried.

On account of the convenience and facilities to be gained for the extension of trade, it is expected that both goods and passenger traffic would increase largely by the opening of the port of Tsuruga and the construction of the railway from thence to Shiotsu and Maibara.

* See Appendix B.

APPENDIX B.

TABLE (EXTRACTED FROM STATEMENTS SUPPLIED) GIVING

COMPARATIVE COST, *per annum*, *of* TRANSPORTING GOODS *from* OTSU *to* KIÔTO *and* OSAKA, *by present modes of conveyance and by the proposed Railway ; showing the estimated saving by the latter means.*

* 1 Da=about 300 lbs. † 1 Koku=about 7½ c. ft.

We now come to the Descriptive Report of the lines in the Nakasendo and Owari districts, 67 miles of which have been surveyed, and 51 miles staked out. They consist of three sections, which are as follows :—

Section I. Maibura to Gaifu and Kano... 28 miles.
„ II. Kano to Nagoya and Miya..... 22 „
„ III. Kano to Doda..... 16 „

The first two sections have been staked out for construction as forming a distinct scheme of railway communication, while the third properly belongs to a future extension to traverse the interior of the country, and forms a part of what will be the Nakasendo, or central trunk, line connecting Kiôto and Tôkiô. Of this trunk line we need say nothing at present. The country is not ripe for any such work ; the construction of it would be very costly, and the benefit, for a generation or so, extremely problematical.

Our readers will please to remember that the lines we have hitherto brought under their notice run N. E. as far as Maibara, and thence N. W. up to Tsuruga. Two of the three sections now before us run nearly due E. ; the third, from Kano to Nagoya and Miya, runs about S.S.E. into Miya Bay, the head of Owari Bay. Of the sections from Maibara to Miya, Mr. BOYLE says :—

In addition to providing facilities for purely local traffic, this line constitutes ; 1st—By itself, a communication between the internal navigation of the lake and the external and coasting navigation of the Eastern Sea ; 2nd—In connexion with that portion of the Kiôto and Tsuruga Railway N. of the junction near Maibara, a second link between the opposite seaboards of Japan ; and 3rd—In connexion with the S. portion of the same railway, an instalment of the main trunk line of railway between the E. and W. capitals, with a branch line to the S. coast.

Digitized by Google
UNIVERSITY OF CALIFORNIA

The latter part of the Report is occupied with an account of the route along which it is proposed to carry this line, and a consideration of the supplies of material and labour available for its construction. Mr. BOYLE concludes in the following words :—

The general route of the 144 miles herein referred to, was decided by me after renewed personal examination of the country, at different seasons, and consultation with the higher Japanese officers of the Department and with local authorities. The lines have been laid out without bias or favor, the selection of their course being uninfluenced by rival pretension or competing scheme. They command the main natural existing courses of traffic, and will supply what has for long been desired and a want much felt, viz : direct and ready communication between the N. and S. coasts of this part of Japan.

Owing to the nature of the country, its plains, subject to floods, traversed by large rivers with many feeders, and its hilly parts presenting numerous other difficulties before described, it is simply impossible that good and durable railways can be made in Japan any more than in other such countries except at considerable expenditure. That they can be constructed more cheaply now than when they were first begun, is a natural consequence of the experience gained by Japanese and Foreign Officials and of the knowledge and skill acquired by lately trained assistants and the various classes of Japanese workmen.

Careful estimates, recently made from the working surveys and plans of the several extentions herein described, show that the average cost should scarcely, if at all, exceed £15,000,* or Yen 75,000, per mile, which would include way and works, stations, and rolling stock, &c., for a single line with the necessary sidings and passing places.

We are not informed whether the Government has actually determined upon the construction of these lines, but they have ample justification and indeed encouragement for doing so. The day of costly experiences ought to be past, and their fruits gathered. For a very extensive railway system the country is not yet sufficiently advanced, but the traffic is so large between the districts embraced in these reports that success might be safely predicted for the lines connecting them. But the undertaking will demand another loan of about two millions, and the Government is very properly jealous of increasing its foreign obligations. Yet it is out of all reason to construct public works on a large scale out of the normal annual taxes, and even if it were just to the existing generation of tax-payers, it would not be possible in this country which can only just contrive to make both ends meet. Money would be lent freely in England for public works, and there seems no good reason why it should not be borrowed for purposes which could hardly fail to be of the greatest service to the nation.

THE HIÒGO AND OSAKA TRADE REPORT FOR 1875.

IT seems perhaps a little ungracious and discouraging to say so, but we should not have uttered one word of complaint had the decrease in the Trade of Hiògo produced a corresponding effect on the length of Mr. ANNESLEY's otherwise excellent report for 1875. The rise, decline and fall of empires, dynasties or opinions, possess an undying interest. But it is not easy to extract much entertainment from the caprices of grey shirtings, yarns and taffachelas. Memoirs of clever and distinguished men or women are delightful reading, but much trade report is a weariness of the flesh. Mr. ANNESLEY's obvious answer to this is that the duty he has discharged so fully, and really so well, was wearisome enough to him, that the nature of his subject did not admit of any lively excursions, and that it is rather hard to reproach him with his misfortunes. This, we must admit, is unanswerable.

The tale Mr. ANNESLEY has to tell is rather a sorry one of diminished and disastrous trade, of decline in the value of real property, of hope and enterprise in mourning, and what seems to amount practically to the extinction of such foreign trade at Osaka as demands the presence of foreigners there. This latter fact, however, we are not greatly disposed to lament. The railway has joined the city to Hiògo, and the existence of very small foreign communities in these oriental countries is in itself undesirable. The native traders will buy where there is most choice, and sell where there is most competition. The number of British residents in the foreign concession is reduced to eight. Soon we shall have "The Last Man" singing Campbell's ode to Calcott's music, not indeed among the skeletons of nations, but preparatory to taking the morning train down to Hiògo. Of course, this involves no necessary falling off in the consumption of foreign goods at Osaka, which appears to prosper and maintain that character for enterprise and activity which it has always held.

We need trouble our readers with but few remarks upon the various articles of trade the history of which during the year Mr. ANNESLEY has been at such pains to detail. But one or two points seem to be suggested, which deserve a moment's passing remark. First among these is the lead which the French and Germans—especially the former, we think—have taken in the manufacture of *Mousselines de Laine*. We are told that the reason for this is that the French have been accustomed to make these goods for a long time, and can therefore reduce to a minimum the charges on all the various processes involved. It is also said that the higher price of labour in England is against our manufacturers. Doubtless both reasons are good. But they do not explain all. It is the superior intelligence and taste of the French workman which carry the day. For plain goods the Englishman may be the better man. But where taste and delicacy of perception come in, we are very much mistaken if he must not give the *pas* to his rival. The success which has attended the Schools of Design in England, however, give us some hope that one of these days we shall run our neighbours hard in this branch of industry.

In his remarks upon Exports Mr. ANNESLEY mentions the struggle which is now going on between China and Japan for the supply of teas to the United States. Now this a valuable trade and gives good profits to the grower. The Japanese have the advantage of being nearer to the States than China, and ought to keep the trade in their hands. But they will assuredly lose it unless they are more careful. The early teas are unduly hurried down to the market, and there is throughout the whole year evidence of a want of sound discretion and discrimination in mixing the produce of various districts. Appearance counts for very much with the American buyer, and if his eye is offended he turns away displeased. Uneven colours in the original leaves necessitate excessive artificial colouring to reduce them to uniformity, and this brings objections from other quarters. The main and general fault is that all the teas are too much mixed, and the Chinese are such careful workmen that every mistake made by the Japanese will provoke comparison, adverse to the latter.

The export of Tobacco is very disappointing, and we learn from this Report that the growers will not take proper care in sorting and drying the leaf, and hence the marked decline in the trade. In 1872, 22,780 piculs were exported ; last year only 5,416 piculs. Instead of growing, the trade has steadily and largely fallen off.

* The receipts, during the past year (1875) of depressed trade, have averaged about £66 (Yen 330) per mile per week, on the 40 miles now open. Assuming the receipts on the proposed extensions to be no greater than £51 per mile per week, and allowing 60 per cent. for working expenses, the direct profit on an expenditure of £15,000 per mile would be equal to 7 per cent per annum.

The activity at the Mint seems to us truly astonishing. Nearly a hundred millions of coins have been struck during the year, which, allowing for Sundays and holidays, brings the quantity to something like 40,000 a day. What becomes of all this coin is not so clear. Very little of it is seen here, and the *tempo* and cash seem far more common in the country than the new coinage. It will be observed that the bulk of the coins struck consists of silver pieces of 10 and 5 *sen* (together about 14½ millions), and copper pieces of 2, 1 and ½ *sen*. Is it possible that this small coinage is finding its way to China? It would be extremely convenient and useful there, and the quantity required, were it once to be recognized as an acceptable medium of exchange, would be practically limitless. The task of making coins for three hundred and fifty millions of well-to-do and very commercial people is one which would arouse the enthusiasm of any Mint-master. "What would Nelson give to be here"! exclaimed Collingwood when leading the fleet at the battle of Trafalgar. We might apply the words to Major KINDER.

Mr. ANNESLEY laments that more is not being done to work the mines of the central provinces under the superintendence of foreigners. We heartily join with him, and think that the draught of sleep taken by the Mining Department amounts to shocking intemperance.

In conclusion, we must really make amends to Mr. ANNESLEY for the raillery with which we began our remarks on his Report—one which really does him great credit, and is full, if not of amusing matter, at least of matter which is of high commercial interest to all concerned in the trade of this country.

ON THE VALUE OF SILK.

THE following figures are assumed to represent the silk production of the world in 1875 and 1876, exclusive of the quantities kept for home consumption in the Levant, India, China and Japan. Our calculations for 1875 are based on the estimates given by the *Moniteur des Soies* (22nd April and 6th May 1876). As regards the crops of 1876, it appears from the latest intelligence that China will supply 7 per cent, Italy 50 per cent. and France 75 per cent. less than last year to the manufacturers of Europe and America.

BALES OF 112 lbs. OR 50 KILO.

	1875.		1876.	
China N. 64,000 S. 20,000	84,000	47½ %	78,000	55½ %
Italy	40,000	22½ „	20,000	14¼ „
France	14,700	8¼ „	3,700	2½ „
Japan	13,000	7¼ „	15,000	10¾ „
E. India	7,800	4¼ „	7,300	5¼ „
Persia Georgia Khorosan	6,200	3½ „	6,000	4¼ „
Turkey	5,700	3¼ „	5,000	3½ „
Greece and Syria	3,000	1¾ „	3,000	2¼ „
Spain	2,300	1¼ „	2,000	1½ „
	176,700 Bales.		140,000 Bales.	

The supplies for 1876 being 20 % short of those for 1875, a rise of 20 % in prices would, *cæteris paribus*, appear quite justifiable. In order to account for the far greater advance which has actually taken place in this market we have to look to another side of the question.

Silks can be roughly classed into two categories, the full sized and the fine sized silks. If we group the China, Persia and similar sorts together in the first, and all other silks in the second, and if we put out of our reckoning the Japan silks, which are the ultimate object of the present inquiry, we arrive at the following result:—

	1875.		1876.	
Full sized Silks	90,200	55 %	84,000	67 %
Fine „ „	73,500	45 „	41,000	33 „
Total bales	163,700		125,000	

FINE SIZED SILKS.

1875. ....73,500 bales.
1876.....41,000 „

Decrease 32,500 bales equal to 44 %.

The first misgivings about the issue of the European crop arose on the 14th April, when a sharp frost heralded the return of cold weather in the south of Europe. On the eve of that day the price of Hanks No. 2½ to 3 was fr. 40 in Lyons and 14 in London. An increase in value, equal to the decrease in production, viz.: 44 per cent, would bring that price to fr. 58 and 20 6, the parity of which, at exchange 4 and fr. 5.05, is $580. To pay $580 for that class of silk a buyer must assume: 1stly, that the expected deficiency in supplies has not been exaggerated; 2ndly, that the value of fine silks will increase in direct ratio to its scarcity; 3rdly, that the consumption of silk goods will not be checked by the higher cost consequent upon that scarcity; 4thly, that the maintainance of peace may be depended upon at least for some months to come.

But the price which is now paid here for Hanks No. 2½ to 3 is not $580. It is nearly $700. And the trade in silk goods is known to be worse than last year; there is no sign of a change in the fashions, which continue to patronize woollen stuffs; one hears whispers of ship-owners covering war risks; and the prices quoted in the latest telegrams that we know of barely reach frs. 57, or $580 for best Hanks No. 1 and 2.

THE SILK MARKET.

(Communicated.)

WE trust our readers will not accuse us of wearying their patience if we allude once more to the most important staple of this country, Silk. The transactions in that article, at this port, within the last thirty days have been so startling and so unprecedented, that we cannot help giving vent to some of the considerations which have occurred, not only to us, but also to many houses interested in the trade.

We need not refer at length to the position of the Silk trade at the opening of the present year; the late report of Mr. R. ROBERTSON must be present to the memory of most of our readers, and additional remarks on our part would be superfluous after the exhaustive manner in which all the questions mentioned therein were treated. We therefore proceed at once to what must make the subject of our observations, we mean this year's crop and the consequences of it.

Early in May last a few telegraphic despatches from various parts of Europe reported that bad weather had done some partial harm to the crop; it was, however, too early yet to form an opinion as to the ultimate result. Subsequently the fears which had been at first entertained seemed to give way. There was no excitement in the home markets, as there would have been, had a serious check really taken place; consequently it was generally hoped that a return of fine weather would soon repair the little injury which had actually been done.

The only incidental piece of intelligence worthy of notice was that fashion leaned once more to certain descriptions of goods for which fine Raws were wanted, and that consequently Japanese hanks were again in favour, although still at low rates.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Meantime the silk crop in this country was progressing as favorably as could be desired. In the beginning of last month (June) the native silkmen, openly avowing that the outturn promised to be both abundant in quantity and good in quality, were preparing the opening of the market at about $420 to $430 for fair medium hanks; but even those prices were considered almost too high, when the quality of the first musters was taken into account. Contrary to the general expectation, the first bales brought down were eagerly taken up at $455. That was on the 20th June; four or five days after, a few more parcels arrived on the market and brought from $480 to $490, for much about the same class and quality as the previous musters.

This season's silk, as far as could be ascertained, was, on the whole, found rather better than last year's, but still deficient in evenness and cleanness, and showed, besides, unmistakeable signs of hasty reeling.

It is not our intention to make a daily history of the transactions which have taken place since the 20th of last month up to the present time. Suffice it to say that in consequence of the reported deficiency of the crop in Europe, and the exciting advices received, the anxiety of buyers to secure as much silk as they possibly could, and at almost any rate at first, took the native dealers literally by surprise. Prices rose in consequence by sudden starts, from $480 to 530, from that to 590, then to 630, 660—and finally to 700—720 for medium hanks, say, at the best, No. 2 to 3, in less than a fortnight, so that in the short space of some three weeks we had witnessed an advance of $260 per picul, equal to nearly sixty per cent. on the opening price of the season.

It is not for us to moralize on the mode of conducting business which has led to so extraordinary a result. We can only admit that the foreign houses, who effected purchases at the suddenly increasing figures related above, knew what they were doing and must have been justified either by their instructions or the advices they had received. Were it otherwise, we should be sorely tempted to think that, if any acted upon mere impulse and under the impression that the home market would follow in the wake, they run a very serious chance of being disappointed.

Speaking under correction, we are not aware that so wonderful a rise in the price of silk, and in so short a period of time, has been noticed within the last 50 years or more. We are not yet in possession of sufficient data to enable us to form a correct opinion; a great deal will depend upon the ascertained result of the crops in France, Italy, Spain, Greece, Asia Minor &c.; upon the demand which may manifest itself for such classes of silk as may be required by a possible change of fashion; upon the actual state of the existing stocks of old silk, whether raw or thrown, and finally upon the effect which the advance in the raw material will have upon the consumption, either on the part of the manufacturers, or of the public.

At any rate we may congratulate this country upon the unexpected windfall, by which its resources will be materially increased. Nobody knows whether the present market rates will be maintained; but the native dealers have not been slow to improve the opportunity that was afforded to them and have already, with their usual cleverness, driven it pretty nearly as far as they could. We must do them the justice to say that they were at first willing to dispose of their produce at moderate figures; they, however, saw an opening to better themselves and seized it fairly; and should any reaction happen, they, at all events, will have no reproach to make to themselves.

SPIRIT OF THE JAPANESE PRESS.

The Petition of the Loochooans.

(Kinji Hiōron.)

The matter subjoined is a petition to one of the Daijin from Ikeshiro Oyakata and others, Commissioners from the king of Loochoo, at present in our capital. It is reported that the above has been written, but not yet presented.

To His Excellency ——————

Ikeshiro Oyakata and others, of Loochoo, reverently make the following petition.

It is the natural instinct of man, when in great distress, to pray for relief either to heaven or his parents. We are in this state of distress; and as our own power is ineffectual to relieve us, we make the following prayer from our hearts, in hopes that you may take pity upon us and hear it.

The kingdom of Loochoo is a group of islands lying to the southward of Japan, too weak of itself to preserve its independence, having neither army nor navy. Neither does the island produce a sufficient amount of food and articles of daily use to enable it to support its people without assistance from larger nations. The islanders are grateful for all the compassion shewn to them by the countries on which they have depended, and their earnest desire is to avoid any course of action which might bring this into question.

From the king down to the commoners all are taught the precepts of truth and propriety. These stand us in the stead of army and navy, food and furniture, and to them we owe it that our country has been preserved to us.

These islands, being situated between Great Japan and Great China, have been dependent upon both and have received protection from both. We have served Japan since the 14th year of Keicho (A. D. 1609), and China since the 5th year of Kobu of the Ming dynasty (A. D. 1372). This is written in our chronicles, and known to all.

Since the Restoration and the establishment of the new Government in Japan, we have received increased protection; and all classes, from the king down to the commoners, feel the highest sense of gratitude, and hope that the continued observance of truth and propriety may secure to us the privilege of this protection.

It is not our own wish that we should serve two masters, but a sense of necessity compels us to do so. Our people are accustomed to say that as Great Japan is our father, and Great China our mother, we should reverently obey them both. Surely there is no place where a child is required to obey its father and forsake its mother. Should such a case occur, the child could not be said to be observant of virtue and propriety.

Now, what the Japanese Government commands is this, that we should serve only our father and should forsake our mother. This causes us the deepest sorrow. Mr. Matzuda, a *daijō* of the Home Department, visited our island last year, after Japan had returned from Formosa, and told us that the Chinese government had handed over a certain sum of money for the families of Loochooans who were killed by the Formosans, and that this proved that the islands of Loochoo belonged to Japan. We doubted this, and in the treaty made between China and Japan by Okubo we find no clause stating that China had given up to Japan her share in our islands. On the death of the Emperor Dōcho and the accession to the throne of the Emperor Kōsho, envoys came over from Foochow and announced the facts to us, and in no way departed from the treatment to which we had been accustomed in former days. Mr. Matzuda told us that there was no case known to international law of a country belonging to two powers at the same time, but when we came to look into this law we found that there were not only instances of one sovereign ruling over many countries, but cases in which one country was governed by several nations. Poland, for instance, is governed by Russia, Austria and Prussia. The Poles cannot be pleased to be ruled by those three countries, but the sense of necessity compels them to submit. We do not mean to say that we doubt Mr. Matzuda's representations, but as we may not have thoroughly understood him, we have spoken as above. While Mr. Matzuda was in Loochoo, he constantly urged our king to place his seal on a document consenting to the proposals of Japan. Our king would have been pleased to consent to this immediately, but had he done so it would have been a violation both of truth and propriety, and this is the cause of all our distress.

The inhabitants of Loochoo, we repeat, from the king down to the commoners, are taught not to forsake truth and propriety and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

are commanded to obey both father and mother. Thus it is hard to tell them to sever their connection with China, and, though thus commanded, they could not consent to do it. Confucius has said "Truth is more precious than life," and Mencius says "Life is precious and so is virtue. If it is found that they cannot co-exist, cast away the former and cleave to the latter."

When we were leaving the harbour of Naha, our king Shôtai commanded us, saying that if we failed in our mission we could hope for no forgiveness from him and must forfeit our lives.

If the Japanese Government would send an official to China, and prevail on the Chinese Government to send an envoy to Loochoo announcing that the kingdom belonged to Japan alone, all would be well, for this would show that the Loochooans had not forgotten the former kindnesses of China. But if it is to be otherwise, and the Loochooans themselves have to announce that they belong to Japan alone, both truth and propriety would be violated, and when men stray from these two virtues they are in nothing superior to the beasts. We might, indeed, derive increased protection from Japan. But our honour would be lost.

The Japanese Government urges this matter upon us, but the opinions we hold are those of all the Loochooans, and we are placed in such a strait that we can neither comply with the wishes of the Japanese Government nor return home. There is but one road for us to travel, and that leads to death. When the bird is about to die it sings a sorrowful note, and the stricken deer utters a plaintive sound. The sorrows of death are very near to us, and our prayer is but a mournful lamentation. We should be careless for our own lives; but the life or death of our islands hangs on this question, and we entreat Your Excellency to give good heed to and pronounce a favourable judgment on this our most earnest prayer.

Excessive Taxation.

(Kinji Hioron.)

Excessive taxation is an evil which has existed among all oriental nations from the remotest times, and I am of opinion that it has been one of the principal hindrances to the advance of civilization and enlightenment. There can therefore be no injustice in saying that the poverty and weakness of the oriental nations has more or less had its root in this evil. Some Europeans say, "High taxes may prevail in a country, but if the form of government is democratic, these taxes are agreed upon by the representatives of the people, and no one has a right to complain of them." But to impose high taxes on an absolutely governed people, where the government constitutes itself the sole judge of what is to be levied, and the people have no voice whatever in the matter, is very unjust indeed. The people will not go on bearing such taxes for ever.

As Japan is an oriental country it has been the victim of this evil. Since the establishment of the new Government, many of the old abuses have indeed been reformed. But if we examine the estimate of the taxes which are to be levied in 1877, we find that they amount to *yen* 61,510,266. Now there are about 50,000,000 of *yen* in hard cash in the country, of which 20,000,000 are in the Okura-sho. The remainder is in the hands of the people, and all the rest of the money in circulation in the country is paper money, which amounts to over 90,000,000 *yen*. Taking these figures as a basis of calculation, the revenue for one year is about two thirds of all the money in circulation. Can this be called a light taxation? Those who have eyes can see for themselves that of the total revenue, 51.505.967 *yen* is derived from the land, and therefore comes from the farmers,—for the tax on land in towns is insignificant. When we look further into the question, we see that half of the farmers' produce is taken by the Government, and what is left to them is not sufficient to pay the expense of sending their children to school. Without education there will be no improvement and no increase in the production of the country. In view of the danger which all this causes, the Government has begun to reform the land-tax. But the change is being carried out on some theory unverified by practical experience, so that the results will differ widely from those proposed to itself by the Government.

The Government intended to reduce the total land-tax by 8,000,000 of *yen*, but the expenses incidental to the change have already cost the farmers double that sum. In future years they will certainly be greatly benefited by it, though at present it causes them a large amount of distress. But this 8,000,000 *yen* which is to be remitted from the taxation of the farmers must come from some other source, and though we may imagine that they will be relieved to this extent, it is clear that sooner or later the burden must ultimately fall upon them.

The country can by no means be said to be in a state of tranquillity, and if any trouble should grow out of this question, there is no telling how it may end. What, then, must we do? Give the farmers more time and money for the promotion of education, reduce their taxation and the expenditure of the Government. And how can this be done? By dismissing unnecessary officials, reducing the salaries of those who remain, and abolishing the pensions of the *kuadzoku* and *shidzoku*.

Some men who are desirous of postponing these reforms may say that if we decrease the taxation we shall only be increasing indolence among the people. Be this as it may, we ought to raise the condition of the farmers, and encourage their talents by education. This will result in an increase of production and a gain to them both of time and money, neither of which do they at present possess in any fair proportion.

Again, others say that if the salaries of the officials are reduced, they may resort to dishonest practices, and if the pensions of the *kuadzoku* and *shidzoku* are abolished, they will suffer an enormous amount of distress. I differ from these opinions. I think there are other ways of preventing the officials from getting money by dishonest means, nor do I think that large salaries are any necessary check upon dishonesty. As regards the *kuadzoku* and *shidzoku*, I believe they will never learn how to make their livelihood unless taught by distress.

The present are not the times when the officials should be enjoying themselves in fine houses, surrounded with all the luxury of the age, and talking about civilization and enlightenment which have as yet no real root in this country. They not only prevent the progress of civilization by these means, but may go far to bring about some catastrophe.

I am a man who was brought up in the country and am thoroughly acquainted with Japanese farming, for I have supported my family by working in the fields, and I know how hard it is for the farmers to bear the high taxes imposed on them. For these reasons my words should have more weight than those of men who have merely read works upon agriculture and have never been out of a city, and I hope that what I have said will be fairly considered by all.

The New Press Notification.

(Chôya Shimbun.)

Our Government issued a notification on the 5th inst. to the effect that should any newspapers, miscellaneous writings or magazines be deemed injurious to the tranquillity of the realm they shall have their publication stopped or suspended by the Home Department.

A glance at this notification will make some men lament and anticipate a vast deal of trouble to the Press from it. We have discussed the good and evil of the administration and of the customs of the people. But as we are units of the Japanese nation we have never yet written an article with any treasonable purpose, or with the intent to destroy the peace of the nation. We should not do our duty towards the people were we to disregard the gracious instruction of the government what we are to do, so that the perusal of the notification makes us glad and not in the least sorry.

But if we give a full and attentive consideration to the whole subject we find one matter which excites our fears, and as we are unable to keep silence we will make it known.

What does "injurious to the tranquillity of the realm" mean? It means violations of the 12th article of the Press-laws, we presume, which provides that if any newspaper or magazine incites to the commission of any crime, the writer shall be considered equally guilty with the person who commits it; or of the 13th article of the same law which runs thus: "Any person advocating revolution or the subversion of the state, or who attempts to stir up revolution," &c.

If this should be the fact, and newspapers are to be suspended which violate these clauses of the law, we do not think it will be long before newspapers and magazines will be extinct in Japan, for many a writer has been arrested for violating the two above clauses, and perhaps it would save the Government all further trouble were it entirely to forbid the publication of all newspapers in Japanese. Were any one to ask whether this notification were issued for the purpose of abolishing all the newspapers, we should reply "Very likely not, but as some newspapers have lately come into existence which are expressing themselves with extraordinary rashness, it is probable that the object of the notification is to get rid of these."

Why, then, should any apprehension arise in the minds of the editors? It is not the notification itself, but the manner in which the words "deemed injurious" may be treated by the officials of the *Shihosho* and *Naimusho* (Departments of Justice and the

Digitized by Google UNIVERSITY OF CALIFORNIA

Interior), which causes our perplexity. Our laws have such deep meanings that we cannot understand them, and the questions we put are rejected if we seek for explanations in legitimate quarters.

This being the case, it is very uncertain what is or is not meant by the words "deemed to be injurious to the tranquility of the realm," and this is to be interpreted at the will of the officials. As all our officials are persons of the highest wisdom we are not careful as to the manner in which they may "deem." But we fear that at some future date, some corrupt man may creep into office and decide these questions in an arbitrary way, so that when two articles with similar purpose appear, he may *deem* one to be an offence because he hates the writer, and may *deem* the other to be no offence because he likes the writer. Is not this ample cause for fear? How much more is it so when two men guilty of the same offence are condemned on two different clauses of the Press-laws* --an occurrence which proves how much difficulty the officials find in adjudicating upon these cases. And, again, the expression "injurious to the tranquillity of the realm" is very broad, and a treasonable act may be classed with the loose use of a single word. For this reason, the editors fear the word *deem*. For all this, the notification may have been issued in virtue of urgent necessity, and we may have no grounds for allowing it greatly to disturb us.

The Same.

(Nichi Nichi Shimbun.)

It is commonly said that we are living in times when reforms should be made in the administration of the Government, and, for this reason, public opinion must have a free vent; that the existing Press-laws limit the free expression of public opinion; and, that if the newspapers are liable to suspension under the 98th notification of the Prime Minister, further restrictions will be imposed upon the expression of public opinion and finally extinguish every trace of freedom in the press.

We are not of this opinion. The destruction of the peace of the nation is the destruction of the Japanese Empire, and this would deprive the people of happiness. If this is so, those who hold contrary opinions can only be regarded as rebels, traitors and enemies of the people, and, if need should arise, the people themselves should unite to prevent them from carrying out their designs. It is obvious that a Government on which lies the duty of protecting the people will be held bound to check the doings of such men.

Again, when it is said that the issue of this notification restricts the field of freedom of expression, it is worse still. For were we to say that prohibiting the publication of matter tending to disturb the peace of the nation restricts the limits of free speech, we should be committed to the view that the right to disturb the peace of the nation is included in the right of free speech, which is absurd and can never be the case.

We ourselves daily write with a view of preserving peace in the nation, and arguing against what may be injurious to the country. It may be well to state here that the words *teishi* and *kinshi* both mean to suspend, but one means to suspend temporarily, the other, permanently. At the time the press-laws were first issued we thought this clause ought to have been added to them, and have been expecting it ever since, perplexed that it did not appear before this. Because, if a newspaper should publish any matter tending to disturb the peace, and the editor or writers are punished, it might still appear under new editors and writers, and would then be able to repeat what was said under the previous management. This would be punishment for the past, but no prevention for the future, and for this reason either temporary or permanent suspension must be resorted to in order to guard the future. It is the duty of the judiciary to look after the past, and of the executive to take care of the future. This seems to us only reasonable.

As the notification is worded "which may be deemed to have a tendency to destroy the peace" &c., there must be some one or more persons to decide on this. Can this be entrusted to officials of the *Naimusho?* Surely this cannot be the case, for a few officials cannot be trusted to decide such important issues. The question whether any given writing may or may not have a tendency to disturb the peace of the nation, can only be decided by the opinion of the people in general. For this reason the officials or head of the *Naimusho* cannot decide it. It is only the general opinion of the people which can pronounce whether or not a newspaper has rendered itself liable to temporary or permanent suspension.

* [It is natural enough that the press should keep its teeth in this mistake. Ed. *J. W. M.*]

Judgment delivered in the Tôkiô Court.

("Hôchi Shimbun" of July 11th, 1876).

Matsumoto Gihei, aged 45, of the Shinshiu Sect, *Heimin*, of Lot No. 2 in the Kiji-chô, in the 4th subdivision of the 1st District, Yedo.

Confession.

On the 9th day of May 1876, my wife Misu died from an illness. The said Misu having for some time back been a believer in the religion of Jesus, left word with me, when at the point of death, that she wished application to be made to the teacher Nicolai to perform her funeral ceremonies. With the intention of carrying out her request, I, on the 11th of May, reported the above particulars at my parish temple of Yenriuji at Asabu. Being told at the temple to send in a written petition, I at once did so, but was told that the priest of the said temple was then absent,--and so the matter was not settled. At this moment a large number of people who had come to the funeral were in waiting, and as it was also impossible to keep the corpse unburied for several days, I did not conform to the regulations touching on the matter, but wilfully carried out the funeral according to the rites of the religion of Jesus. For this I am heartily sorry.

July 7th.

Sentence on the above.

Upon the death of your wife Misu, you disregarded the Public Proclamation and, without reference to the Shintô or Buddhist priests, wilfully buried her according to the rites of the Religion of Jesus:--for this offence you have rendered yourself liable to 30 days hard labour, but instead thereof you are sentenced to the mitigated penalty of a fine of 2 *yen*, 25 *sen*.

FANTASIES AND FACES.

For several years back my daily avocations, and indeed my inclination, have directed my footsteps through a certain antiquated suburb of the mighty city of Yedo. I have rarely missed a day—except through some unavoidable mischance—for a considerable period, but, fair weather or foul, might have been encountered plodding along, or, perhaps more correctly, sauntering towards my destination—for I hate your headlong paces which give no time to look about you—by the same high road. Not but what I might have varied my route had I been so disposed. But I never felt any desire that way—quite the contrary—as the very sameness which to another person similarly circumstanced might have appeared insufferably monotonous, was to me but an additional attraction. It pleases me to see the same faces day after day, and to invent a history for each of the owners. I am, in fact, somewhat of a dreamer, I am afraid. I love to stand before a cast-off clothes shop and fill each empty suit with a living tenant. Shew me but a pair of stirrups and I fall to straightway to fit a pair of feet into them, and am not contented until I have built a figure up to match, —just as Professor Owen will construct you a mastodon from a tooth—and put a steed between his legs and started him off on a prance. I have carried such an airy hero through a long campaign as I have walked along, and saved his life in many a tussle, I warrant you. A lady's lantern or a broken *koto* will serve me to found a romance upon. Juliet playing a plaintive air upon the *koto*, and Romeo catching up the refrain outside her window on a melancholy flute. It is worth the telling here, maybe, that some such pretty little story is popular amongst the Japanese. It may be seen pourtrayed on scrolls and silken screens, and gilded lacquer bowls and boxes and other ornaments. Juliet seated in a house of strange perspective, sloping upwards towards the skies, with head drooping, and long black hair floating from her shoulders in the evening breeze whilst she plays upon the *koto*. A rising moon seen through the pine trees betrays the gallant Romeo standing outside the gate, his fiery charger's bridle flung across his arm, and in his hand a flute into which of a surety he is breathing

"Sweet and low, sweet and low"—

A battered helmet has given me a nightmare before now, by reason of a dint in it so deep that, do what I would, no ordinary head could be invented that would fit it. I curtailed my shadow's *os frontalis*; but it would not do: he turned out perforce so foolish. I put the helmet on him

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hindside foremost, and lo! the *cerebellum* became hopelessly disorganized. I tried it sideways; but the figure he presented was ridiculous, and I know not how the matter would have ended, were it not that one lucky day, as I passed the shop in which the head piece hung, I missed it from its peg and found it had been sold. A fireman's hook, albeit old and rusty, calls up the burning street at once. I hear the roaring of the flames and the falling in of roofs, and the cry of people in distress as the blazing sparks fly upwards and fall upon their thatch. I see the standard danced and dandled here and there where the fire is fiercest, and the figures of the firemen dressed in curious garments and quaintly helmeted, when the wind blows back the smoke and flames for the moment. Nor are the minor details absent from my mental picture. The crowds of flickering lanterns swinging to and fro in the hands of owners hurrying towards the fire. The little heaps of furniture rescued from the ruins with the houseless groups around them. The discordant clashing of the bells and the hum of human voices, all are there at the rubbing of the enchanted ring, or—what to me is just as potent—the sight of a fireman's rusty hook.

My people—that is the people whom I meet—are no cold magic-lantern crowd to me. They are living, moving actors in a daily drama, a play of many acts which lasts the whole year through. We are known to one another, and encounter once in every four and twenty hours. We do not bow or give the time of day, nor waste our time in empty forms or ceremonies which we esteem for what they are worth. But there is a mutual recognition in our looks, a gentle dropping of the eyelids—a dipping of our flags to one another, so to speak. No more formal greeting could mean as much, or be so genuine.

I divide my people into three classes for convenience of description. Regular frequenters, casuals, and strangers. The Fencer generally is earliest of the regular frequenters upon the road. We will inspect him first on that account, and also because he is a fine old fellow and hath my best regards. He is above the average height of Japanese, standing full six feet upon his wooden clogs, and has that commanding air about him which the habitual association with arms invariably produces. Yet the expression of his face is mild and courteous, and he has a smile for every one as he strides along. His head is shaved, but a week or so of growth will shew that the hair, if the razor were laid aside, would be snowy white. His body is lean and spare from his wrinkled face to his sinewy feet.—By the way how much of character is exhibited in a foot!—A friend of mine—an oddity we always thought him—had some decided views upon that score. He had reduced it to exactitude, he maintained—a science in fact. "Give me but a person's boots and I'll read you off "his character" he was wont to say. "A fig for your "phrenologies and physiognomies."—He had a rude Hibernian kind of humour, and passed amongst us for a wit.—"Give "me a good look at the individual's old boots, and I'll "put him down in black and white and no mistake." I forget if we ever put him severely to the test. But the Fencer is meanwhile standing in the frosty wind so long that his face is ruddied by the cold, and he is fain to draw his arms quite up into his loose sleeves, which, hanging unsupported, resemble nought so much as a turtle's flappers. His garments—both jacket and *hakama*—are of striped material and of very ancient cut. He generally wears one leg of his trowsers tucked up as if to be prepared for any sudden emergency, and in his girdle may be seen a sword of extraordinary length done up in a scarlet cover. This projects behind after the manner of a tail and cocks up his jacket's skirt. It is the ancient way of wearing it, old fashioned and out of date. On days when the old Fencer is marching off to give a private lesson, his son accompanies him, keeping behind him at a respectful distance, and generally carrying upon his shoulder a pair of fencing sticks. He's a sturdy youngster, so like his father that he might almost be taken for a view of him seen through the big end of a telescope,—a man-of-war *in petto*. He wears his head a little on one side, after the manner of the old man, and tucks his trowser up and takes as long a stride as his little legs will let him. He evidently takes him for his model, and who knows if he could do better? He'll have to grow a good deal taller, though, before he can wield a two-handed sword.

Where the Fencer lives I never knew, but I fancy in one of the old *nagayas*—remnants of the feudal times where a *daimio's* retainers lived, and diced and quarrelled when they were not fighting—in which the place abounds. If he is of an imaginative turn of mind—and what old Japanese is not?—no doubt he spends his leisure time in reveries beside his charcoal fire, and, as he smokes his pipe, blows clouds of ancient memories about his head. Who knows how many valiant fellows pass before him whose eye and arm he trained, and in whose breast the spark he kindled grew and brightened with their stature, till it flamed and blazed into the *Yamato damashi*—the noble spirit of old Japan? Perhaps *his* spirit rises too at times, when he thinks of how he ruffled it in days gone by, without a peer amongst the lusty men at arms with wrists of steel, who loved to take a blow for the pleasure of returning it? nd who knows, also, but that he hath memories of some come-si Aly youth, so apt at fence, that in time he learned to beath master? My word for it, if so he hath, it delighteth him to recal such bouts in which he was the worsted one, as much as any triumph in which the shouts were on his side, for his face is instinct with generosity. I never doubted that he lived in memories of the past, for he has a pensive eye which is oft cast down in reverie as as he walks along. The mannikin behind him shows no evidence of such mental retroversion. Not he, the merry faced urchin. The storehouse of his mind is empty, not filled to over flowing like his father's. Let us hope he'll lay up pleasant treasures there which will gladden him when he turns them over in old age.

It is a real pleasure to meet the Fencer, he is always so clean and fresh looking. He brings a gleam of frosty sunshine with him on gloomy mornings. But I have missed him lately. I fear he has passed out of ken, like the times which called him into being. *Heu mihi! Tempora mutantur.*

NOTES OF A TRIP FROM YEDO TO KIOTO *VIÁ* ASAMA-YAMA, THE HOKU-ROKUDO, AND LAKE BIWA.

m. = mountain.
m.p. = mountain pass.
r. = river.
v. = village.
ri. = $2\frac{3}{7}$ miles nearly.
cho = $\frac{1}{36}$ *ri.* 15 *cho* = 1 mile nearly.

The following notes I have been induced to write out as much from a feeling of indebtedness to those who have done the same before me for other routes, as from the hope that they might be of some use to those who should happen to travel the same road after me. The trip was taken last year during the latter half of July and beginning of August in company with a Professor and student of the Kai Sei Gakko. The time when a journey is taken, in Japan perhaps more than elsewhere, it is very necessary I think to mention, as the impression formed in one's mind of the scenery at any particular place depends very much on circumstances as e. g. the season of the year, the state of one's health. In early summer the hills at one place may be loaded with pink azaleas and purple fuji, *(wisteria Chinensis)* later on they are green. At one time a valley is nothing but offensive mud, at another it is clothed with the rich verdure of young rice, or, it may be, spotted with the white blossoms of buckwheat. All these differences depending on time necessarily make those who have traversed the same route bring home varying accounts of the scenery they have passed through.

There are two main roads from Yedo to Kiyoto, the Tokaido which passes along the Southern coast of the island, and the Tosando or Nakasendo, the mountain road which goes through the centre of the island. These meet at Kusatsu a town 16 miles (3 *ri* 24 *cho*) from the ancient capital and after which they cease to be distinct. The Hoku-rokudo, or Hokkokukaido, branches from the Nakasendo at Oyuwake in the province of Shinshu, and after passing through the provinces Echigo, Echu, Kaga, and Echizen along the Northern Coast (as its name implies) again mets the Nakasendo at Toriimoto in Omi where it stops. The first part of trip was taken by the Nakasendo, nearly all the rest by the Hoku-rokudo, a road as yet very little known to foreigners.

Takasaki, a great centre of the silk trade and chief town of Joshu, 63 miles (26 *ri*) from Yedo viâ Nakasendo, it is well known can now be reached in one day by coach. This method of getting over the plain of Yedo is not comfortable, but certainly better if the weather be warm and is twice as fast as by *jin-riki-sha*. This part of the trip I pass over without further remark because it is already fully described in the transactions of the Society. From Takasaki the road ascends gradually until it crosses Usui toge (mountain pass) a distance of about 22 miles (9 *ri*) to the summit. The river Usui which follows from the *toge* is crossed by a bridge of boats at an interesting part of its bed before reaching Annaka a long straggling town which was formerly a *joka* or castle town. Between Annaka and Matsuyeda the road part of the way consists of an avenue of cryptomerias which reminds one of, although it is much inferior to, that leading to the tomb of Iyeyasu at Nikkô, and in the middle of it there is a very fine pear garden where the horizontal training of pear trees is well seen. After the avenue we passed through a mulberry plantation and soon after found ourselves quite surrounded by mountains. From one part of the road near Matsuyeda a fine view of part of the valley of the river Usui and of Miogi-san is obtained. Miogi-san is the name of one peak of a fantastic range of mountains, but as there is no name to the range I refer to it by that name. Matsuyeda is the best place to start from to explore a most interesting part of this curious range of mountains and I recommend every lover of Nature's wonders, who has sufficient time, to spend two days off the highway amongst them. The first day he might visit the temple called Miogi-san which is situated near the bottom of the rock of the same name and which is well worth visiting. The noble cedars and well-built walls, the long mossy flight of steps, the handsome bronze *torii*, and the sacred aspect of the spot remind the traveller as yesterday of the renowned Nikko. Looking towards the summit of the mountain he will see an enormous letter 'Dai' *(dai no ji)*, which from below seems to be painted pure white.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

This letter is reached after a stiff climb of 25 *cho*. It is situated on the summit of one of those oddly jutting up peaks which characterise this group and from it there is good view of the plain stretching to Yedo. The climber is astonished to find when he reaches the '*dai*' that it is a large framework of thin bamboos tied together and on it are suspended hundreds of votive papers of pilgrims, which from their white colour give the structure from below that striking appearance of being painted white. Its dimensions are 30 ft. by 20. Three *cho* higher up is a small temple called Okunoin and above this the hill is nearly perpendicular and seemed so dangerous to climb that I didn't attempt it. Retracing his steps the traveller will do well to put up for the night at Matsuyeda or better still at one of the tea-houses a little below the temple he has just visited, and next morning let his guide take him to Kurakake-zan and Daikoku-zan. The object which we had in view on starting to these places was to investigate the nature of a hole which is seen in the mountains from the highway between Matsuyeda, which we had just left, and Sakamoto the next town on the road and which I shall therefore refer to again. To reach these places we went to the bottom of the temple steps, then turned off to the left, when we found ourselves in a well-beaten pilgrim path which continued all the way. The walk amongst the rocky hills was interesting. We soon found, contrary to all expectation, that there is a valley between the hill nearest the highway where the hole is seen and the hill which contains the hole. After climbing for some time we saw on our left a rocky hill with a great hole piercing it near its summit, which at first we thought was the hole we were seeking. Next we came to a pilgrim rest where there is a handsome stone lantern. Higher up to another of the same even handsomer than the first. At last we reached Kurakake-zan where the rocks are particularly interesting and very curious. Most striking is an enormous natural arch in the shape of a Japanese saddle (whence probably the name). On the right are two lofty cylindrical rocks standing upright called the 'Candle Rocks' and all about are other rocks in curious positions. Climbing through the arch to a small shrine one gets a finer view of the arch and mountains below, while above is seen the hole we came in search of. This like the first we saw is just a great hole in the summit of the rocky hill and has no great depth, which it appears to have from the highway. I climbed and looked over the ridge a short distance from it, and nearly on a level with the bottom of it, and then found that it could only be the upper part which is seen from the road because the opposite hill between the road and the hole was above my level. Leaving Kurakake-zan we wended our way to Daikoku-zan where to our great surprise we came in this out-of-the-way region to a large house and two temples, the lower one called Daikoku-zan, the other reached by a long flight of well-made steps, called Borongonge-san. Above the latter is another of these strangely jutting up rocks (called Higesuri-iwa) which from below look quite inaccessible. It can however with care be climbed to within 10 ft. of the summit but to do this last stage requires a ladder. I could not see a trace of earth near the summit but a pine tree is growing there with the pilgrim's flagstaff tied to it.

This whole region is evidently of volcanic origin. We saw great quantities of pumice and trachyte and the configuration of the region is doubtless produced by the washing away of soft matter, the hard rock being left behind.

At Matsuyeda there is good accomodation in the Honjin, a house covering a great area, and which is the same as the Tsuwunkaisha the office where *ninsoku* and horses are hired. Those who don't walk should engage pack-horses or *kagos* here to the next station Sakamoto as *jin-riki* are very unsuitable. The road is very picturesque, up and down hill, Miogi-san and, unless it be covered with clouds, Asama-yama seen all the way. Half way the hole in Kurakake-zan becomes visible and from there looks like a deep tunnel piercing the mountains. It is best seen from the village Yokokawa, where the people call the mountain Nakagiri-yama or Iruwaki Daijin Iuki-yama, the former name meaning 'the mountain cut in the middle,' the latter derived from the name of the hero who made the hole. The story in connection with it is that the Mikado's archer many hundred years ago, named Iruwaki Daijin, standing at a stone on the road (yet pointed out) in this village shot an arrow through the mountain. The place where the arrow fell on the other side is called Yaochi or Arrow-fall.

Leaving Sakamoto, Usui toge is crossed, a long mountain pass of 7 miles (2 *ri* 31 *chô*) to the first village on the other side called Karuisawa. It leads from Joshu to Shinshu and is one of the most beautiful mountain passes in Japan. The views from horseback are very beautiful and varied. The hills and vallies are all loaded with fine trees of all kinds and shades of colour. On the right in ascending some pretty rocks called Kirizumi-no-iwa will be noticed, also a hill remarkably like a miniature Fuji called Haruna-san. If the season be too dry for the crops the farmers ascend this mountain and bring water from the top to sprinkle on the fields, after which the rain is said to pour down from heaven. On the summit of the *toge* there are several dwelling houses and a very old temple dedicated to Izanagi Izanami no Mikoto, the ancestor of all the Japanese, which is worth visiting. In descending one is much struck with the great change in the nature of the scenery, which on the Shinshu side is hardly equal to that on the other. One of the most striking objects in the scenery on this side is a curiously situated hill, quite isolated, called Atago-yama. It is close to Karuisawa. At this village it was that we made arrangements to ascend Asama-yama the largest active volcano in Japan. Our plan was to engage horses to await us early in the morning at Kutsukake, a village 2½ miles further on, whither we travelled by *jin-riki-sha*, a pleasant smooth drive with magnificent views of the volcano. At Kutsukake we hired a guide and mounted our horses which took us as far as a place called Hanada, a distance of about 5 miles. The views of the high mountains of Shinshu and neighbouring provinces during our ascent were grand. The most striking peaks were Miogi-san, Nakano-san, Komaga-take, and Yatsuga-take, while enveloped in clouds was On-take in the distance. To enhance the pleasure of our ride we were accompanied all the way by the pleasant and rare cry to the cuckoo. Leaving our horses to await our descent we next passed through some thick forest. From below Asama looks bare a long way down but we found vegetable life to a height of about 7,000 ft., the last being a kind of coarse grass. Above this was only lava of small specific gravity and of a grayish colour and considerable quantities of volcanic dust especially near the top. About 500 ft. from the highest point we reached the old crater which isn't one quarter of the size of the present but which 95 years ago was the source of destruction to 48 villages which have never since been rebuilt. Here we found plenty of insect life. The new and active crater is an enormous hole (roughly guessing, not less than 600 ft. diam.) entirely filled with steam and vapour of sulphur and roaring very loudly. All round the edge are large fissures wherein rocks hang in a very unstable condition ready as it were to fall into the molten mass beneath. From these fissures, as well as from many holes some distance from the crater, steam and sulphur fumes are emitted. We took the temperature of this vapour at different places and the highest we found was 73° C. It is of course this steam and sulphur vapour which form the perpetual white cloud on the summit of Asama, and as one nears the top it is necessary to notice in which direction the wind is blowing in order to finish the ascent on that side from which it blows. We did not consider the mountain a difficult one to climb and thought ourselves well repaid for the trouble. The height our aneroids indicated was 8,500 ft.

Our descent was neither so pleasant nor successful as the ascent. After descending about 1,000 ft. it began to rain and soon after a severe storm followed, accompanied by thunder and lightning. To add to this misfortune a thick cloud covered us, and our guide lost the track, in consequence of which, in addition to being put in very great danger, we had a full hour's extra fatigue, and were so wet when we reached our horses that we thought it prudent to walk a mile and a half to the nearest tea-house called Wakasari no chaya, and there change our clothes. This house was far too poor to lodge us all night, so we had to make up our minds to go on to Kariyado Shinden

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

whither we had intended to go in the morning. This town is seven miles from the tea-house and we started at 6 p.m. However our troubles, although it was a fine night to travel, were not yet to cease. The men who led the horses lost their way twice, and after being taken through a vast wood for 3½ hours in which we passed only two woodmen's huts, we were landed at a village 5 miles from the one we had intended to lodge in. Indeed when we reached the second of these huts our trust in our leaders was so utterly exhausted that we engaged the male inmate to guide us to the nearest village which was then still 2½ miles distant. To do the men justice, however, I should mention that they were warned at the tea-house above referred to against the direct road, on account of a rotten bridge which it wasn't safe for the horses to cross, and besides they came to our hotel next morning and humbly apologized for their mistake. Further the extra ride was not uninteresting as we passed through the sites of many of the villages destroyed at the last great eruption. For a long way after reaching the bottom of the mountain the ground was covered with lava, then we passed through a forest of fir, oak, birch, and chestnut trees, the ground being covered with grass. After this the wood became thicker and richer, and there were in it some enormous rocks which in the dark looked like houses. The village we landed in is called Ozasa, and is twelve miles from Katsukake from which we began the ascent of the mountain and where we left the Nakasendo. Should any one chance to pass this village he might find pleasure in visiting a chasm seventy-two feet deep at one end of it. It is a very picturesque spot and close by is a slope from the top of which there is a fine view of Asama on its N.W. side, where the bed of the great flow of lava which came down at the eruption of 1781 is situated. This view of the mountain is much more interesting and very different from that on the other side. The 8th of April is the day for women to ascend Asama, that being the first day of the great Bhudda festival. Our landlord at Ozasa told us that only five years ago the roaring of the crater was heard distinctly in this village, that the vapour ascended to an enormous height and that the wind carried with it considerable quantities of volcanic dust. (Since writing this I have noticed that the same eruption is referred to by Captain Descharmes and I have therefore more confidence in noting it.)

To the west of Ozasa is another high and very sacred mountain called Haku-san. There is a temple on the top of it and there our landlord told us the cherry trees were in blossom. This was July 16th, three months at least after they are in blossom in Yedo.

The ride from Ozasa to Kusatsu the next place of importance in our journey was very pleasant and interesting. We first travelled through a most magnificent valley watered by the Wagatsuma-gawa (my wife river), a river which flows into the Tone-gawa at Mayebashi. The bed of this river is very singular. Nearly all the way we travelled along it, it flowed in a deep ravine, one side of which is an agglomerate, while the other is a sand formation. We were fortunate also in our views of Asama. The air was perfectly clear after yesterday's storm, and not a cloud was near it except that snow white mass emitted from itself. Unlike Fuji-san it has a long flat summit, and so far as mere shape is concerned is uninteresting. The villages we passed through were poor.

Kusatsu has already been so fully described in the transactions of the Society by Capt. Descharmes that I have very few additional notes to make. It is not a large village and every house seems to be an hotel. These are conducted in a different way from those of other towns, inasmuch as guests engage servants for themselves, and get their food ready cooked from shops. The reason of this is to enable very poor people to visit the baths, who can then bring their food with them, food being very expensive in such an out-of-the-way place. The houses, as in many other mountain villages, are all covered with large stones, presenting a strange appearance, and this is not because strong winds prevail here as from the scarcity of bamboo to keep the houses tight. The four principal baths (of which there are altogether about 20) are in the centre of the village and are frequented chiefly by syphilitic patients. In these we saw a regular process gone through of first stirring the waters by means of planks of wood, then washing the head and pouring water over the body, then sitting steaming and putting cloths or *tabi* on the feet, and lastly entering the baths of which before the stirring we found the temperature to be 52½° C. The faces of the bathers indicated that they felt the heat intensely but perhaps this arose from the sores on them, as the Japanese have been long accustomed to parboil themselves. All the lepers that we saw had their faces entirely covered with burns of the *mogusa*, which is just tinder made from chopping up a mountain grass, and when applied is set on fire with a view to blistering the skin. Like other sulphurous waters, the water supplying these baths bubbles out of the ground. The highest temperature we found in a bath was 61° C. and the temperature of the stream bubbling up which supplied this was 63°. The baths at Ichii-ya, where we lodged, on the outskirts of the village are said to be the coolest of all, having a temperature of 43° to 45°, and these have also a great advantage in having a stream of cold water falling near them. Here the healthy portion of the inhabitants came for their evening bath, and presented to the European traveller a scene which hitherto he had only read of in fairy tales. About a mile from Ichii-ya is the source of the stream which principally supplies these and many others. It is near Suinokawara where the remarkable rocking stone mentioned by Capt. Descharmes is situated. This stone and many other large stones near it are perforated all over with holes, probably on account of the soft parts being washed out by rain. They seem to consist chiefly of oxide of iron, and on them are piled small stones by the people who imagine by so doing that they benefit their dead relatives. Around this place also many fossil leaves in a soft condition are found. Kusatsu we found to be 3,800 ft. above the sea-level. It is one of the coolest and most interesting places we passed in our journey. On comparing the thermometric readings taken in Kusatsu on July 17th, 18th, and 19th with those recorded in Yedo by Mr. Joyner, I find an average difference of 8° C., or 14° F. for those days, in the temperatures of Kusatsu and Yedo.

Leaving Kusatsu we crossed the mountain-pass called Kusatsu-toge, or Shibu-toge, because it leads from Kusatsu to Shibu. We could hire only cows to take us across this pass because the natives said it was too rough for horses to go. However I found it one of the easiest and most beautiful climbs I have undertaken. About a mile and a quarter from Kusatsu we came in sight of Riyofu-no-taki a very pretty fall of about (roughly guessing) 100 ft., over a rock completely covered with oxide of iron which looked like rotting wood. Shortly after Shirane-san, an interesting mountain apparently covered with red oxide of iron to the summit, and quite bare, comes into view. On this mountain many fine crystals of sulphur are found and a stream of water impregnated with alum and sulphur flows down from it. At the place where this stream crosses the road there is a notice engraved on stone '*Doku midzu*' (Poison water), but before this was brought to my notice, I had taken a good mouthful to quench my thirst which it didn't do, as the water was warm and tasted strongly of alum. All the way from this stream to the summit, which we reached at 10 a.m., there were grand views of Asama-yama, Shirane-san, the mountains of Shinshu and neighbouring provinces, and the peerless Fuji towering above all in the distant horizon. There was snow in some of the valleys of the *toge* and on Shirane-san and Asama. On reaching the summit we were struck with the magnificence of the high mountains of Hida, a range beautifully streaked with snow. Our aneroids indicated a height of 7,000 ft. In our descent we came along the side of Yotoke-san, the highest mountain in the east of Shinshu. Shortly after leaving the summit one notices a conical hill called Kazaga-take, on the other side of which lies the famous Zenkoji which we visited the next day. Further down there comes into view a very beautiful plain called Kawanakajima (the river island) where, according to Japanese story, a great battle was fought between the two heroes Shingen and Kenshin, and shortly afterwards the lofty peaks of Mioko-san and Togakushi-san tower above the clouds. Altogether this is a magnificent pass and for high mountain scenery surely unequalled in Japan. It is the highest, and I should think also the longest, mountain pass in Japan, the distance from Kusatsu to Shibu, the near-

Digitized by Google
UNIVERSITY OF CALIFORNIA

est villages on each side, being seventeen miles. Riding on cows we found rather more comfortable than on pack-horses but a little slower. Next day we travelled to Zenkoji famous for its great Buddhist temple. The road is interesting, most of the way through a plain where we felt the heat intensely, and crosses the broad Chikuma-gawa which flows into the sea at Niigata. It was at Zenkoji that we entered the Hoku-rokudo. The temple, approached like that at Asakusa in Yedo with two handsome gates, is 198 feet long, 108 broad, and is elegantly built, the roof being of the costliest kind. It contains the golden Buddha brought from Corea through China, and on payment of a *bu* the curtain which hides the cabinet containing this image was lifted for us, but only in the midst of the sounding of gongs and the chiming of a bell. The cabinet consists of seven gilt boxes one within the other, in the innermost of which is the golden Buddha. The lifting of the curtain impressed those who were present immensely, everyone taking advantage of the favourable opportunity to supplicate the mercy of the god. There are many other interesting things to be seen in this temple.

Leaving Zenkoji we travelled next day to Seki-yama through some high mountain scenery. The most prominent peaks are Idzuma-san, Kuroshime-san, and Miokosan, and behind these the high mountains Togakushi-san, Okunoin-san, and Yaki-yama. This last is an intermittent volcano active at present. At Nojiri there is a very pretty lake containing a small but beautifully wooded island dedicated to the worship of the goddess Wugain (Benten), one of the seven gods of good luck of the Shinto religion. At Seki-yama the province of Echigo, best known to foreigners from the mineral oil found there, is entered. At Takata, one of the largest towns in this province, the road to Niigata separates from the Hoku-rokudo. This town is built as I have heard Niigata is viz.: with pavements on both sides of the streets covered by the projecting roofs of the houses. By this means the people are protected from the snow in the winter and the sun in the summer. Immediately after leaving Gochi the beach of the sea of Japan is reached and between this and Tomari there are only occasional portions of made road —the beach being regarded as the route to be taken. However, riding along it we found a pleasant change to riding inland. Between Gochi and Arima-gawa, the prominent summit of Yone-yama stretching far into the sea forms a striking object in the scenery, and as the latter village is neared there is a very beautiful part of the road over a hill descending to the river, especially in the variety of shade and luxuriance of the foliage. Further on there comes into view a range of mountains much covered with snow, including Kurashime, Rege, and Echo-yama, while behind in the distant horizon is the gold-bearing island of Sado. Between Nadachi and Nosho we saw many women far out in the sea, diving for a species of seaweed called *tego-kusa* which is very much prized and used to make a kind of jelly called *tokoroten*. They seemed to keep swimming, diving, and pocketing the weed with little or no difficulty. It was curious also to see the children bathing and floating in tubs. We noticed that here the rising generation have very dark skins, indicating how much they lived naked in the open air—naked children both boys and girls being very commonly met with. In this part of the coast hemp is one of the chief products of the soil and we found all the natives making rope or fishing.

Itoi-gawa, could one but get European food and accommodation, would make a pleasant summer resort. In this village there is abundance of delicious fish and a fine pebbly beach for bathing, which one can do at any hour of the day because there is scarcely any tide. The inhabitants however are yet little accustomed to foreigners, as about two hundred men, women and children collected on the beach to see us swim—not a small number out of a village of 1,300 inhabitants. For great part of the way between Anumi and Uta there were enormous blocks of granite which didn't require any quarrying. Also a high bluff consisting almost entirely of limestone, which was converted into lime on the spot and boated away. From Uta to Tomari a distance of over 13 miles we travelled by boat, which was tracked by two men and steered by one. This was by far the pleasantest and least fatiguing way we had yet travelled. Oyashiradzu (not knowing parents), which we passed, are high precipitous rocks affording very little passage room between them and the water, so that when a west wind blows it is a dangerous part of the road, as the name implies. The rocks are full of small caves which enable travellers to shelter themselves in stormy weather, when a guide who gives the command to pass from one cave to the next, is quite necessary. It is said that people have been confined in these caves for two and three days. From Tomari the Hoku-rokudo becomes again more worth calling a road and is no more along the beach. Between this and the next village, Ninsen, it passes through rice fields, and in these we saw the labourers stirring up the mud about the roots, with thick bundles of straw on fire tied behind their backs, that the smoke therefrom might keep off the mosquitoes. On the left is a fine range of snow covered mountains called Kurobe-no-mine. On to Uwotsu the scenery is much of the same kind except where the river Kurobe is crossed, the mouth of which is more than a mile broad and much divided into separate streams. Between Nameri-kawa and Machifukuro another broad river is crossed, called the Joganji-kawa or Iwase-gawa. Here the water has a mineral taste. At Toyama we were told the surrounding country is full of springs, and artesian wells can easily be sunk whence the water rises 2 or 3 feet above the ground. At the end of this large town the river Tinzu is crossed by the Fuma-bashi, the longest bridge of boats in Japan. Thence to Takaoka the road goes through a large well watered rice-plain, on one side mountains, on the other sea, and much of it is lined with fir trees like the Tokaido. Here the snow-capped Haku-san is a striking object in the landscape. On to Fukuoka the road was covered with *suge*, a kind of reed, laid out to dry. It is used principally to make hats, an industry for which the next province Kaga is famous. This province is entered when Kurikara-toge is crossed between Isurugi and Takenohashi. In ascending this pass we met many women, each with two baskets of fish and pole on the shoulder, running down the hill very fast, desirous, I suppose, of getting a good market in the villages on the other side of the pass for their fish caught 5 or 6 miles distant. We dined on some of these fish on the summit of the pass, and on asking our hostess for the bill, were surprised to be asked *rok kuwan hap piaku*, but our equanimity was restored when we found from the change that *ik kuwan* equalled 5 *sen* and *hiaku* half a *sen*. When we informed our hostess of the different values of *hiaku* and *ik kuwan* in Yedo and in Kaga, she in her turn seemed surprized! In descending we had two particularly good views of the sea of Japan with wooded valleys in the foreground, the first on the left, the second on the right.

The next town of importance on the Hoku-rokudo is the capital of the province we have just entered—Kanazawa. It is a large town with wide clean streets and when viewed from a height looks quite like a garden, so numerous are the trees cropping up amongst the houses. It possesses a silk-thread factory similar to that in the Kobusho buildings in Yedo but here steam is used instead of water-power. A steam engine in such a town is surely a step in civilization. The castle is very picturesque and in its important features like those of Yedo, Hikone &c. Two considerable rivers flow through the town, Asano-gawa and Sai-gawa, both crossed by well-built wooden bridges under which in the warm summer evenings the people go to cool and enjoy themselves as under the Shijobashi in Kiyoto. Strange sight there to see the bed of the river covered with tables, happy people reclining on them drinking tea and otherwise making merry, and the whole lit up with two or three hundred eastern lamps.

In Kaga, and I think also in some of the neighbouring provinces, the people say '*ya*' for '*hai*' of the Yedo dialect and use it very much as the Germans do the same word. The dialect of this province has many other differences from that of Yedo. Leaving Kanazawa our next goal was Terai the head quarters of the manufacture of the well known Kaga porcelain. From Midzushime we could not go the direct road to Terai on account of the flooded state of the river Awo, but had to wander by Mikawa and the mouth of the river and boat across many a field before we were landed safely again on the main road. At Terai we examined the manufacture of the porcelain in the house of Mr. Shozo the chief manu-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

facturer. First the clay is shaped, then baked, after which the black portions of the design are painted with *toguso*, (which is brought from China) and the dish baked again; after this the red parts of the design are painted with *beni*, the well-known pigment used to paint the lips, then baking again; finally the gold and other colours are put on and baking repeated. The clay is brought from the famous valleys Ku-tani and Nabe-tani which are about 5 miles from the town. The red porcelain is said to be peculiar to Kaga, but whether it is because the Kutani clay takes the red on better than other clays, I could not get trustworthy information.

From Terai we had a pleasant *jin-riki-sha* drive to Komatsu, the next town on the road, in the midst of a golden sunset which illuminated a fine range of mountains in the East, in the centre the high and snow-capped Haku-san or Shiroi-yama. Soon after leaving Komatsu we came upon two large inlets of the sea united by a canal which crosses the road at the village Emai. In these it is said fish are caught in large quantities. We next passed through a tea-district where the villagers were engaged preparing and sorting teas. The larger leaves before roasting were steamed, sunned, and afterwards rubbed between the feet as they are too hard to be treated at once like the young leaves. From Daishoji to Hosorogi the road is hilly but smooth and pleasant for *jin-riki-sha*. The scenery is beautiful, mountains and valleys on the left, valleys and the sea on the right. The ground is cultivated only in small patches at the bottoms of the valleys, in many of which pretty little villages are seen. From Kanadzu to Morita the road passes through a great plain in which there were growing all kinds of crops—rice, various species of beans, cotton, millet, indigo, hemp, potatoes, different species of melons, &c.

The next important town is Fukui. The situation of this town is admirable. Hills surround it closely, affording most picturesque views, and as one enters it he feels as if entering an inhabited garden. The ivy covered walls of the old castle cannot but remined its former inmates, as it did us in imagination, of the good old days of yore when the *sake* flowed there and the *geisha* sang.

The river Asuwa flows through the town and is crossed by the Tsukugo-bashi which at one end has a fine gate called Terute-gomon. From Fukui to Takeba the next 12 miles was among the easiest and most beautiful we had travelled. Here mountains tower over mountains and are green to the highest point. On to Yuno-toge the scenery even improves. The flat valley covered with young rice looks like a green sea and the mountains rise suddenly from its level. One of these called Hinaga-take is a striking object in the scenery. Yuno at the end of the valley is charmingly situated. At the summit of Yuno-toge which we now cross there are four *yasume-ya* (resting houses) filled with girls, who no sooner see a traveller coming than they all set up a shouting and clapping of hands, quite to the alarm of the unexpecting pedestrian. The view from the summit is very pretty and the descent even more beautiful than the ascent. We see still on this side the river Hino which watered the valley just left, winding peacefully round one of the mountains on its pebbly bed. The rich green rice fields separated only by borders of the dark leafed bean, and the trees, some covered with velvety moss, others with rich ivy, rich cryptomerias, graceful acacias with their feathery pink blossoms, here look exceptionally beautiful. Between the pass and Futatsu-ya the road winds through a valley which reminded me of that of the river Watarashi between Nikko and Omama, but there is wanting the grand river and rock scenery of the latter. From Futatsu-ya the road crosses the thickly wooded Kinome-toge and Osaga-toge to Tsuruga, one of the principal seaports in Japan. Tsuruga harbour is undoubtedly one of the best in the island. It is not large but is surrounded by hills which rise suddenly from the sea-level and afford perfect shelter from all winds. Junk building is one of the chief industries of the place. There is a temple called Kino-miya in it, said to be the most famous in the five provinces around; a fine large red *torii* and a handsome stone lamp appeared to me the only objects of interest in it.

From Tsuruga the Hoku-rokudo goes round the N. E. end of Lake Biwa to meet the Nakasendo at Toriimoto and there it ends. Those, however who, by this time, in spite of the beauty of the country they have just passed through, are tired of tinned meats and live *futons*, may branch off across Fukazaka to Shiwotsu, whence two steamers go daily across the whole length of Lake Biwa in 7 or 8 hours to Otsu, which is only 7 miles from the ancient capital. Fuka-zaka is a rough mountain pass. In ascending it the traveller will be struck with the barrenness of many of the hills, many of these being just yellow sand and so different from those he has lately passed through. From the summit there is an interesting view of Tsuruga harbour which from here looks more like a mountain lake than part of the sea.

Lake Biwa is so called from its resemblance in shape to the musical instrument of the same name. It is also called Lake Omi from being situated in the province of that name. According to Japanese fable Fuji-san was raised and Lake Biwa sunk in one and the same night. There are four islands on the lake called Chikubushima, Okinoshima, Takeshima, Shiraishima. The first of these is the most interesting, and is a pretty wooded isle twenty-five *cho* in perimeter containing a temple and some houses. One side of it is covered with white lake birds, the guano of which foreigners are said to have shipped in large quantities when they first visited it. One of the best views of the lake is from the *yagura* of Hikone castle, which anyone who has the ambition to do all the Hoku-rokudo or who traverses the Nakasendo shouldn't miss visiting. Those who are fond of Japanese mythology will find great pleasure in staying a day or two at Otsu and visiting the places of interest around it. To the N.E. is the Fuji-like Mikami-yama where lived the centipede whose tail wound round the mountain seven and a half times, and which was killed by Hide Sato. This great hero shot the deadly arrow from Seta-bashi, a bridge in two parts which crosses the outlet of the lake, and for his skill was rewarded by the goddess Dingnu with a large bronze bell which is still in Midera, a temple interesting from its antiquity and connection with Japanese history as well as from the beauty of its grounds.

Another object of considerable interest is the old pine tree at Karasaki. To reach this is a pleasant walk of three miles along the west margin of the lake in the direction of the sacred Hiyei-zan. It must be an enormous age although not quite so old as the Japanese say, who make it older than Jimmu Tennô the first emperor of Japan. It has been trained to spread over as large an area as possible, and shews that the Japanese taste of training pine trees in this way is very old. The outermost branches spread far into the lake. We measured the perimeter of the polygon formed by the principal outermost supports and found it to be 477 feet, while the principal branches stretched from the centre of the trunk to a distance of from 77 to 83 feet.

Another place that should be visited from Otsu is Ishiyama, celebrated in song. To reach this the Tokaido is followed for 3½ miles to near Seta-bashi, and then for another mile a road to the right along the outlet of the lake, here called Seta-gawa. In this last part of the road a small shrine will be noticed covered with a large number of stones hung up by strings. These, we were told, are offerings from those who are afflicted with diseases of the eye to the god whose assistance is prayed for. Ishiyama derives its name from there being at its base a natural collection of large rocks, presenting a very fantastic appearance. They are approached by an avenue of maple trees, and on the hill above them there are many temples and monuments of various styles of architecture. The rocks, and especially a small shrine above them, are covered with pieces of paper rolled up and tied on them. These are the offerings of beating hearts who have written on them something connected with one they have seen and loved. Our Japanese friend opened and read one, and on it was written his age and when she had met him! Sad tale to tell! From the summit of Ishiyama the moon is supposed to appear clearer than from anywhere else and there people go to view it. From there also there is a good view of the lake, the bridge, the river, Mikami-yama and the strange Hayetonya-yama, a barren sandy range of mountains behind Mikami which can be seen best from its summit.

To reach Kiyoto from Otsu I should advise everyone to take the hill road at the foot of Midera, as then half of the main road which is rather uninteresting is avoided. There is a great amount of traffic on this latter road. Bulls of a large size are used to drag the merchandise along; but, only two years ago when the road was quite full of deep pits, men and women were also employed to do the same work and certainly they looked more like beasts than human beings. This I note because now that a railway is determined on between the city of the Mikados and the lake, it shall soon be one of those customs quite forgotten, and was the only revolting sight we experienced in or around what is undoubtedly the most interesting city in Japan.

Correspondence.

MESSRS. SATOW AND ISHIBASHI'S ENGLISH-JAPANESE DICTIONARY.

To the Editor of the "Japan Weekly Mail."

Tokio, July 12th, 1876.

Dear Sir.—Will you kindly allow me space for the following remarks, called forth by the letter in last week's issue of the *Mail*, signed "Your Reviewer."

Y. R. is greatly mistaken in concluding that my ear tells me that the Japanese word *ten*, heaven, rhymes with the English *pen*. On the contrary, I should certainly not consider the person who used such rhymes worthy of the name of poet. The words in question rhyme no more than the English words *king* and *pin*. If the fact of two words having one vowel sound in common constitutes a rhyme, Y. R. might as well make *left* rhyme with *pen*. I, however, always thought that to effect a rhyme it is necessary that the *vowel* and *the final consonants* should have the same sound.

The very intricate evidence adduced by Y. R to show how the "erroneous pronunciation" defended by Mr. Satow, F. B. and myself has probably originated, is entirely out of place as regards me. I am not an Englishman, and the English sounds are so little dear to me, that I am rather prejudiced *against* them, if anything. My knowledge of the English spoken language could besides not have influenced my knowledge of the Japanese, as the former is of a more recent date than the latter. My ear is entirely a continental one, and Y. R.'s remarks on this point would therefore rather tend to prove, that through not being English I should be more likely to judge correctly in the present case. I will leave to Mr. Satow and F. B. to defend themselves against the accusation of "jostling the unoffending Japanese vowels out of their place"—if they think it worth while to do so.

Y. R.'s account of how he disposed of the words enumerated by F. B. can hardly have been interesting to the latter, their fate being but what everybody could have anticipated. It is of course to be supposed that Your Reviewer's opinion regarding the pronunciation of the Japanese language is based upon what his ear, during conversations with Japanese, has taught him. Therefore, for Y. R. now to lay those words, (which he must certainly have heared pronounced many times ere this), before one more Japanese, and then to hear them pronounced "in the same way as contended" does not in the slightest degree tend to prove, that they *are* actually pronounced so, but only that they *still sound so to Y. R.'s ear.*

It will also be remembered that Y. R., in criticising the new dictionary, asserted that the *i* in *pin* is entirely foreign to the Japanese language,

That the *o* in *motte* is not pronounced as *o* in the English word *on*,

That *ten*, heaven, is surely not pronounced as the English word of the same spelling.

Y. R., however, did not explain *how* these vowels should be pronounced, nor does his last letter give any clear idea of his wishes in this respect. It is therefore difficult to form an opinion of what sound Y. R.'s Yedo friend gave to the vowels in the words enumerated by F. B.. when he (the Yedo man) pronounced them "in the way Y. R. has contended."

Y. R.'s only *positive* assertion,—and that even based on an erroneous quotation—is, that the first syllable in *bekkô* should be pronounced "like *bake*, only shorter and quicker," a direction of very much the same nature as the one given by the sergeant to his soldiers: "When I say 'Right half turn' you have to make a turn to the right of 45°; when I say 'Left half turn' you have to do exactly the same. *only just the contrary!*"

"Y. R. believes that a Japanese vowel has only one sound." As, however, the Japanese *kana* does not consist of consonants and vowels, but each *kana* character *contains* a vowel, Y. R. must by the above assertion mean, that a *kana* character, as far as its vowel sound is concerned, is always pronounced in the same way. He must consequently mean, that in all *kana* characters containing the vowel *e* (as ケ セ テ etc.) the latter is pronounced as "*a* in *bake*, only shorter and quicker." Leaving such cases as ～ウ, pronounced *kiyō*, entirely out of the question, I would advise Y. R., *that he himself should pronounce* before his Yedo friend the three words *Sube*, *Subete* and *Subette*, giving them all that favorite sound of his,—and then see if his friend understands what words he intends to convey.

If Y. R. pronounces the two letters *u* either in *musŭme*, daughter, or in *musŭko*, son, alike; if he cannot hear any difference in the sound of *shi* in *shĭta*, below, and *shiru*, to know; if the interjection *ne* appears to him to be similar to the beginning of the word *nengô*; if the *fu* in *fŭtatsu* sounds to him like the *fu* in *furui*—then I would certainly recommend him to drink no more of the *suidô no midzu*, as it evidently does not agree with him.

I fail to see my mistake in supposing that Y. R. when contesting that the character hitherto romanized as *be* should be pronounced like *ba* in *bake*, touched on the question: "How should the Japanese *kana* characters best be rendered in their transliteration in Roman letters."

I know that the above remarks of mine do not tend to decide the question at issue: my object in writing at such a length is, however, to show, that though the saying *de gustibus non est disputandum* applies to the sense of hearing as well, still in the present case the far greater probability is, that Mr. Satow, whom Y. R. acknowledges to be an authority; F. B. who is considered as an equally good authority by all who are able "to look behind the curtain;" and myself,—who, I readily confess, does not deserve being mentioned in company with the two former—are more correct in our views than Y. R., who with all his accuracy of ear is unable to perceive the difference between the vowels in the English words *beck* and *bey* (for the latter is the same as the one in *pen*), or between the first and second *u* in *musŭko*; who furthermore shows great inaccuracy in other respects (vide his assertion that Messrs. Satow and Ishibashi wanted *ten*, heaven, pronounced as the English word *ten*, and the first syllable of *bekkô* as *beck*); who again does not seem to have any clear idea of what constitutes a rhyme; and who, finally, gives nothing to take the place of what he condemns.

Further discussion of the subject is useless, until some new element be brought in; and I, for my part, have nothing more to say to Y. R for no other reason than that it is most unsatisfactory and disadvantageous to me to discuss with an unknown opponent; such a one is generally liable to assume a tone or use arguments which he would hardly have recourse to if he had to sign his name, and can do so with impunity becauses he looses nothing if he is eventually refuted, a tendency to which is already visible in Y. R.'s letter. My first communication was entirely addressed to you, Sir, but as Y. R. has come forward *in person* to defend the view taken up by him, it is nothing but right he should throw away his anonymity.

Y. R. may perhaps find that I myself am not overdelicate in expressing my opinion; but then he must remember that I sign myself,

Yours faithfully,

WILLIAM BRAMSEN.

[Our ardent correspondent is a little over anxious on the question of our reviewer's *incognito*, and indeed shows a mistrust of what would be admitted into or excluded from those columns for which we are sure, on reflection,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

he would admit that he has no justification. Anonymous writing is only objectionable when bad men abuse it in bad papers. It is the secret of half the vigour of the English Press, and Mr. Bramsen will allow that it is never abused in any respectable English journal. Apart from this, we should ill requite a valued obligation were we to omit adding that the Reviewer of Messrs. Satow and Ishibashi's Dictionary is as incapable of assuming a tone or having recourse to arguments unworthy of a gentleman, in an anonymous essay, as he would be in any writing to which he appended his name.—ED. *J. W. M.*]

Law & Police

IN H. B. M.'S CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Tuesday, July 11th, 1876.

Samuel Hooper, third engineer on board the British steamer *Glamis Castle*, was charged with being drunk, using abusive language, and causing a disturbance on board.

Prisoner denied being drunk.

G Dickie, master of the *Glamis Castle*, sworn: Last Sunday the chief engineer came to me as we were running up the bay, and asked me to go forward, as the third engineer was drunk and persisted in wanting to enter the engine room. I saw the third engineer and told him to go to his room and sleep, and afterwards I would speak to him. He refused to go and used threatening language. I called the second engineer and the storekeeper to take him away, and he was conveyed to his room.

J. Scott, chief engineer, sworn: On Sunday morning prisoner was reported to me by the second engineer as being drunk. I could not read his log. I sent for him. This was between 9 and 10 a.m. He came and threatened me. Afterwards he got more drink, and at 12 I reported him to the captain, who saw him drunk and was abused by him. He has often been drunk before. He had that day drunk a large bottle of gin, and afterwards thrown the bottle overboard.

Adjourned until 3 p.m. to give prisoner an opportunity of bringing evidence in his defence.

The case was resumed at 3 p.m.

Prisoner called for his defence the ship's cook and several of the crew. They all deposed to prisoner having had a glass on last Sunday morning, but none of them could say that he had been drunk, nor had any of them heard him use abusive language.

In answer to the Court prisoner said that he held no certificate. He admitted having had a glass of liquor last Sunday, but denied being drunk.

Fined $2, including costs.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

Monday, 10th July, 1876.

AKANUMA JSUNIKATSU, Tôkiô Fu Chiu Sakan *vs.* J. M. BATCHELDER.

Action for rent due from Lots Nos. 1, 2, 21, and 22 foreign settlement, Tôkiô, and penalty for non-payment 2 per cent. per month, total *yen* 3,500.80.

Petition filed 8th March, demurrer by defendant 21st March, setting forth that the plaintiff is not the real party interested Cause set down for hearing and adjourned from time to time until 10th July, 1876.

Plaintiff and defendant appeared personally.

Akanuma Jsunikatsu: I am the Tôkiô Fu Chiu Sakan; my business is to look after the foreign settlement in Tôkiô and collect the rents. I am authorised by the Chiji of Tôkiô Fu. The rents are paid to me and I give receipts in the name of the Chiji.

His Honor informed defendant that his demurrer was overruled. Defendant asked for time to file his answer to the claim. Cause set down for hearing on the 19th instant at 10 a.m.

Friday, 14th July, 1876.

RIKUCHI HIKOSUKI and YAGISHITA CHOJIRO, by their attorney TETSUKA JUNSKE, plaintiffs, *vs.* C. A FLETCHER & Co., defendants.

This was a claim for $1,375, as follows:—$1,000, paid on 21st April, 1876, on account of price of 1,600 bundles of nailrod iron; damages for breach of contract, $350; interest on $1,000 from April 21st to date of petition, 25 days, at $\frac{1}{10}$ per cent. per day, $25; total $1,375.

A copy of a receipt from C. A. Fletcher & Co. was handed in: "Received from Mitoya, on account of iron sold at auction, the 20th instant, one thousand dollars.

C. A FLETCHER & Co.,
Per Chas. McGerrow."

Plaintiffs, in their petition, stated that the iron was advertised for sale by auction. Plaintiffs bought on the hatoba, and as the goods were to be delivered when landed and sorted, they paid on the following morning, the 21st, $1,000 on account. The same day plaintiffs made a contract with Kitamura Tokujiro, a Tôkiô merchant, to sell him the iron, and received from him $1,000 bargain money. On delivery being demanded defendant said there was some difficulty, and asked for a delay of a day or two. On the 25th plaintiffs went again to take delivery, but defendants wanted to cancel the contract. This was referred to Kitamura in Tôkiô, who refused to agree to it, as he had made an agreement with a second party. Finally Kitamura had to buy iron somewhere else at a loss of more than 350 *yen*. The amount of this loss plaintiffs demanded from defendants, but they (defendants) said it was owing to the carelessness of the owners, and that they could not pay the damages themselves, but that a written statement of the case should be made out, which they would send to the owners. This was done as follows:—"On the 20th April, 1876, we purchased at your auction on the hatoba, 1,600 bundles of nailrod iron, and the following day we paid you $1,000 on account. But as you now state that the goods cannot be delivered we are in great trouble, and require $350 damages to be paid to us on the afternoon of the 3rd instant, besides the $1,000 paid to you on account.

KANOYA CHOJIRO,
MITOYA HIKOSUKE."

On the 3rd, and again on the 5th, plaintiffs applied for payment, but without success, and as Kitamura Tokujiro is constantly pressing for the damages claimed, plaintiffs are compelled to bring this action.

Defendants in their answer pleaded that on the day named they did sell to plaintiffs the iron as stated, in lots of 800, 200, 200, 200, and 200 bundles. The lot of 800 bundles could not be delivered as it was on board ship, though the other lots could have been delivered at any time, but plaintiffs would not receive them. The bargain money, $1,000, was offered to be returned from time to time, but plaintiffs would not receive it. The plaintiffs are in error in stating that they were obliged to purchase iron in Tôkiô at an advanced price to fulfill their contract, as defendant's principals would have furnished the same at the auction price.

Mr. Tetsuka appeared for plaintiffs, and Mr. C. A. Fletcher for defendants.

Tetsuka Junske said that he had not understood that he was to bring either witnesses or documents into Court that day; according to Japanese law his power of attorney is sufficient authority for his statements.

The Court ordered him to produce his witnesses, and for that purpose adjourned the case until Wednesday, the 19th instant.

IN THE FRENCH CONSULAR COURT.

Before E. KRAETZER, Esq., Acting-Consul,
President and
Mr. E. G. VOUILLEMONT and Mr. E. PIQUET,
Assessors.

Wednesday July 12, 1875.

NAKANO KIROKU and ABE HAJIBE *vs.* VALMALE, SCHOENE MILSOM.

This was a claim for 17,516 *rios* 82 *sen*, the price of 522 silkworm egg cards.

Defendants pleaded non-liability.

Plaintiffs were represented by a Japanese attorney; Mr. F. Schoene appeared for defendants.

The Court, after hearing the parties, rendered the following

JUDGMENT.

Whereas the plaintiffs admit that among the 7,522 cartoons, for which they now claim payment from defendants, is included a lot of 2,700 cartoons for which they have already once before sued in this Court;

Whereas they at that time stated that they had sold those cartoons to Mr. Weuve, who in consequence, by judgment rendered in this Court under date of 14th December, 1869, was condemned to pay them the price, $4,050;

And whereas the plaintiffs with regard to the remaining annuals and bivoltines, which, together with the above-mentioned 2,700

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

cartoons, make up the total 7,522, have on the 30th day of the 2nd month of the 3rd year of Meiji, or the 1st April, 1870, through the Governor of Kanagawa, presented a claim at the Swiss Consulate General against Mr. Weuve for payment of these very same cartoons, which they then declared to have sold to him;

Considing that the plaintiffs, when called upon to bring proof of their having sold these cartoons to defendants, have been unable to do so;

And also taking into consideration that the plaintiffs, when they sued through the Governor of Kanagawa in the Swiss Consulate General, claimed *rios* 3,736. 31. 66, while they now, for these same cartoons, claim *rios* 17,516. 82, showing an augmentation of the claim of 14,000 *rios*, for which they can show no cause;

The Court disallows the plaintiffs' claim, refers them to the estate of the late Mr. Weuve, and orders the plaintiffs to pay costs.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before P. F. KEMPERMANN, Esq., Acting-Consul,
President, and Mr. J. PELTZER and Mr. H.
FRANCKE, Assessors.
Wednesday, 12th July, 1875.

H. ANDERSEN *vs.* BAVIER & Co.

This was a counter-claim for $60, entered as a set off against a claim made by defendants on plaintiff and admitted by plaintiff. Defendants disputed the counter-claim, which was for mess money during the month of October, 1875, when plaintiff finished balancing their books for 1874.

Plaintiff appeared personally, Mr. E. J. Bavier for defendants.

The Court gave

JUDGMENT.

This Consular Court has no jurisdiction in the present case.

Reason: The counter-claim is an independent claim, and cannot, therefore, any more than any other claim against a non-German subject, be heard and decided in a German Consular Court.

ARRIVALS.

July 8, *Sunda*, British steamer, Edmond, 1,704, from Hongkong, July 1, Mails and General, to P. & O Co.

July 9, *Gaelic*, British steamer, Kidley, 2,626, from San Francisco, Mails and General, to O. & O. Co.

July 9, *Ada*, British barque, Asals, 686, from London, May 10, General, to L. Knüffler & Co.

July 9, *Glamis Castle*, British steamer, Dickie, 1,537, from Hongkong, General to Adamson, Bell & Co.

July 14, *Nagoya Maru*, Japanese steamer, Young, 1,914, from Shanghai and ports, Mails and General, to M. B. Co.

DEPARTURES.

July 10, *Sekirio Maru*, Japanese steamer, Blekenden, for Hakodate, General despatched by M. B. Co.

July 11, *Belgic* British steamer, Metcalfe, 2,627, for San Francisco, Mails and General, despatched by O & O Co

July 11. *Gaelic*, British steamer, Kidley, 2,650, for Hongkong, Mails and General, despatched by O. & O. Co.

July 12, *Tibre*, French steamer, De Girard, 1,050, for Hongkong, Mails and General, despatched by M. M. Co.

July 12, *Wilhelm Honneyer*, German barque, 572, for New York, Tea, despatched by Smith, Baker & Co.

July 12. *Bombay*, British steamer, Smith, 749, for Shanghai and ports, Mails and General, despatched by P. & O. Co.

July 12, *Hiroshima Maru*, Japanese steamer, Furber, 1,780, for Shanghai and ports, Mails and General, despatched by M. B. Co.

July 12, *Sumida Maru*, Japanese steamer, Gerlach, 690, for Shanghai and ports, General, despatched by M. B. Co.

PASSENGERS.

Per Steamship *Sunda* from Hongkong.—Mr. Kelsall, Staff Surgeon, J. Lambert, Mr. J. Terada, and 2 Natives and 3 Chinese in the steerage

Per Steamship *Belgic* for San Francisco.—Shanghai to New York: Revd. Dr. and Mrs. Carpenter, L. Mackintosh. Shanghai to Liverpool: H. P. Haussen. Yokohama to Philadelphia: 5 Japanese in the cabin. Yokohama to New York: Messrs. E W Ness, Capt W. H Starkey, F. Brodigan, G. A. Holme. Yokohama for San Francisco: Mr and Mrs. Andrews, Mr. Fegdon, and 3 European in the steerage. Yokohama for Liverpool: Messrs A Grant, F. S. Gissing, W. J. Harding, W B Davis Hongkong to San Francisco: 156 Chinese in the steerage.

Per Steamship *Tibre* for Hongkong.—For Marseilles: Messrs Dourille Cochius, Ponte, W. J White.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—Mr and Mrs. P. Heinemann, Mr. and Mrs. Boulet, Mrs. Middleton and infant, Mrs. Scheidt and infant, Bishop Williams, Messrs. Muller, H. Goff, Stevenson, Welch, and 31 Japanese in the cabin.

Per Steamship *Bombay*, for Hongkong: Mr J. Robertson, Lieut. Fowling, Mr. Fennel and Mr. Cooper in the Cabin, 9 Chinese on Deck.

Per Steamship *Nagoya Maru* from Shanghai and ports.—From Shanghai: H. E. Count de Rochechouart, Count d'Imécourt, H. E. Tei and Mrs. Tei, Revd. J. S. Roberts, wife and family, Miss M'Lean. From Nagasaki: Mr. Kinoshima, Lieut. Koosaka. From Kobe: Mrs. Kirkwood, Miss L. Green, Revd. Mr. and Mrs. Valentine, Miss Gouldy, Mr. and Mrs. Miller, Mr. and Mrs. Evers and child, Mr. and Mrs Tolbort, Messrs. Lehman, Potter, W. Laurent, Gulick, M. Salle, Minyard, V. Rochr, J. Diack, and 16 Japanese in the cabin and 3 Europeans, 323 Japanese and 7 Chinese in the steerage.

CARGO.

Per Steamship *Tibre* for Hongkong.

Silk for France	157 bales.
England	229 „
Italy	10 „
Total	396 bales.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—

Treasure	$65,100

REPORTS.

It was reported in the New York Maratime Register some time ago that great doubts were entertained regarding the safety of the British barque *Wallon*, from New York to London, as she had not been heard of since January last, but it is now stated that the vessel has been towed into a port on the west coast of Ireland dismasted.

The *Ada* reports: Light winds after leaving London, and the trades light and unsteady. Crossed the equator April 15th in 23 30 W. S. E. trades were good, passed the meridian of the cape in 41° 30' South; met with very unsettled weather and changeable winds running the easting down. Passed Anjer June 13th. Met with pleasant weather coming up the China sea, and as far as the Loochoos, after passing which had rains, thick weather, and rough seas at times till arrival in port on the 9 h inst.; making the best run this season.

The *Nagoya Maru* reports, fine pleasant weather throughout the entire voyage.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The business done during the closing week was only of a moderate amount, but prices remain in general about the same as before. *Yarns* 16 24, and good spinnings 28/32 remain in demand, whereas low qualities of the latter are rather difficult of sale; in 38/42 no fresh transactions are reported. *Grey Shirtings* 9¼ lb. and 8¼ lb. of best makes continue firm, whereas low qualities 7 lb. and 8¼ lb are almost unsaleable. For *Velvets* there has been a speculative demand and transactions are reported at a slight advance. Other articles are more or less neglected. We quote as follows :—

Grey Shirtings :—				
7 lbs.	38½ yds.	39 in.	per pce....	$1.80 to $2.15
8 lbs.	38½ yds.	44 in.	„ ...	2.05 to 2.45
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	2.05 to 2.52½
9 lbs.	38½ „	44 in.	„ ...	2.30 to 2.75
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.60 to 1.80
„ 6lbs.	24 „	32 in.	„ ...	1.95 to 1.40

White Shirtings:—			
60 to 64 reed 40 yds.	35 in. nom.	per pce....	2.20 to 2.40
Turkey Reds 24 yds.	30 in. 2—3 lb.	per lb...	0.75 to 1.00

Japan Rice	„ ...	2.20	
Kerosene Oil	per case ...	2.40 to	2.42

Kerosene Oil.—Some 2,000 cases were offered at auction during the week but were not sold. The market remains quiet at quotations.

The *Hiogo News* reports that kerosene oil has for some time past been understood to be one of the few paying imports of that place, and the trade had acquired latterly somewhat large dimensions, but as the *Silome* is now loading a cargo of kerosene for Manila, it would appear that this branch of trade, like nearly every other there, has at last been overdone.

EXPORTS.

Silk.—Since the 10th instant arrivals are 800 bales and settlements about 650 bales. We have to report a further advance of $60 for all new Hanks, and hear that a few bales of the Nihonmatz filature (Oshiu) are held at $1,000. The highest price that kind of Silk fetched last year was $680. Owing to the tightness of the money market buyers are still fewer than last week.

A notice of the present value of Japan Silk will be found in the columns of the present issue.

	At Exchange 4/ in London.	*At Exchange 5.05 at 6 m.s. in Lyons.*	
Hanks.—Best No. 1 & 2 ...	$740 to 750	26/1 to 26/5	72 to 74

Hamatski.	No. 3 & 4...	—	—	—

Tea.—Business has been small and unimportant for the closing week, the market being, apparently, perfectly disorganized, and the recent rise in exchange rendering many orders at limits not capable of execution.

Prices have fallen from $3 to $4 per picul, and the market closes weak. Settlements for the week are 2,600 piculs, stocks being heavy, say 16,000 piculs.

Common	$10.00 to	12.00	
Good Common	13.00 to	15.00

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 30] YOKOHAMA, SATURDAY, JULY 22, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At No. 11, Yamato Yashiki, on the 17th instant, the wife of C. A. CHASTEL DE BOINVILLE, Esq., of a daughter.

MARRIAGE.

On the 22th inst., at the Dutch Consulate Yokohama, before W. C. Van Oordt, Esq., and afterwards at the Union Protestant Church, by the Rev. J. H. Ballagh, JAN CARST, of Amsterdam, Holland, to PAMELA MARGARET MARSHALL, of Edinburgh, daughter of the late James Marshall, Solicitor, of Edinburgh and Melbourne.

Notes of the Week.

The Mikado returned yesterday from his northern tour, landed at Yokohama, and took railway to Yedo. He seems to have been received everywhere with great devotion and loyalty by his subjects, and it is hardly possible that his journey should be without some good results to them. But what must have been chiefly missed by any thoughtful statesman in his train, was the presence and the welcome of an aristocracy—the necessary appanage and bulwark of monarchy. Now that the Throne in Japan is taking something of a modern form, and the machinery by which this nation is henceforth to be governed is assuming definite shape, the absence of an aristocracy will be most severely felt, even if it can be borne. The tide of popular feeling, even of popular passion, is rising steadily and rapidly; the Government is very largely composed of new men, the creations of the revolution; and there is really nothing of a very substantial nature between that Throne and the people. A growing section of them, whose writings, moderated in tone by necessary but detested restraints, show that they are ardent if not very accurate students of the history of the free peoples of the West, is becoming clamorous for rights and liberties of a very advanced nature. Some of these writers are impatient of the restraints imposed on the progress of the nation by the mere force of circumstances, and are not ashamed to talk of means of a wholly illegitimate nature whereby to compass their ends—we allude to arguments in favour of assassination. It is true that the *Daimios* were a set of thoroughly incapable men. But their sons might have been brought out into the light and educated to perform the important functions of an aristocracy. Or adoptions, in consonance with the old customs of the country, might have been resorted to with the same end in view. A monarch without an aristocracy is like a body in a state of unstable equilibrium which any great convulsion may overturn. There is not even an aristocracy of wealth here. It is certain that sooner or later Japanese statesmen will recognize these facts. The ruins of the institution lie scattered all over the land. The question is "Can these dry bones live"? The traditions of the country are intensely aristocratic, and under the hands of a great statesman the skeletons might clothe themselves with flesh, and life might again be infused into the revived bodies. But it is the order of nobles which ought to reconstitute itself. Life infused into it *ab extra* would, we fear, present but a low form of vitality, and mock true life as do the convulsions produced by galvanism. In writing of this question four years ago we alluded to this as a source of distant danger, and now that the popular cry for rights and liberties is becoming louder and louder every day, we see the presence of it. Any great concessions made to popular liberty before some organic change in the whole constitution of the Japanese polity has taken place would be fraught with peril. Yet some such concessions must soon be made, and hence our great desire and anxiety to see Government grapple with, and solve, in some form or another, the great question of representative institutions.

The native press will assuredly alienate its foreign sympathisers if it admits articles advocating assassination for political purposes. The crime is one which is held in the utmost abhorrence by all the Christian nations as an odious and utterly detestable thing, and we earnestly hope it may soon be recognized in the same light in Japan. It must be obvious to any reasonable man that the task of reconstructing the institutions of this nation, and bringing them into harmony with the new and growing thought of the people, is one of vast difficulty, and is surrounded by dangers and perplexities of which few of us have any adequate idea. Many of the members of the Government have carried their lives in their hands for years. Attempts have actually been made to assassinate some of them, while the lives of others have been constantly threatened. It is no imputation on the bravery of any man to say that the dread of assassination paralyses him. Men who have no fear of death, as death, and who would lead a forlorn hope without hesitating for a moment, give way under the perpetual horror of the assassin's dagger or pistol. No nerves have ever been able to stand it. Cromwell's gave way under it, and so have those of many other men as brave and determined. The Press should not only exclude all articles advocating this course, but should, one and all, denounce it as a base, unworthy and forbidden thing. The Christian morality is an advance in this respect upon that of the pagan nations. Brutus did not shun it, though we know how much it cost him to make the resolve. But the political morality of this day sternly reprobates it under whatsoever provocation, and we should like to see the editors of the native papers make a bold and determined protest against it. As a historical fact it is well known that during the wars with which Napoleon devastated Europe, and which cost England thousands of men and hundreds of millions of treasure, offers were over and over again made to the British Government to assassinate Napoleon. But of course, they never were made subjects even of the most private discussion, although the Emperor's death would have brought about the peace of the world. We shall hardly be so far misunderstood by foreigners of other than our own race as to be thought to claim this as any instance of national virtue. Doubtless

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

every other nation of Europe would have done the same. We have only adduced the fact to show that the Christian nations absolutely abhor and repudiate the practice even under the most tremendous provocation.

We desire to say that it is not the reproduction of the Consular Trade Reports from the columns of the *Japan Weekly Mail* to those of the *Japan Herald*, of which we have lately complained. These reports are intended to be at the service of all the papers, and we have always made a point of publishing them at such a time previous to the departure of the mail, that the papers could insert them in their mail issues. Many of these reports are far too long to appear in one issue of any daily paper here, and it is for the public advantage and convenience that they are to be found in the form in which they have long been published in the *Japan Weekly Mail*. The worst that has happened is that a report and the explanatory returns attached to it have been spread over two issues of the journal, instead of appearing together in one, and our readers will certainly not complain of this. As regards the supposed duty of H. M. Minister to send a copy of each of these reports to each of the newspapers, the statement is almost too absurd to deserve notice. The labour of copying them once for publication here is enough, and the mercantile public of all nationalities in Japan is greatly indebted to H. M. Minister for publishing them here concurrently with their despatch to England. It is an advantage enjoyed by no other community in the East.

What we complain of is the transfer, bodily, week after week, into the columns of the *Japan Herald* of those translations from the Japanese newspapers which have long formed a prominent feature in this journal, and which have done more to throw light upon the floating opinion of the Japanese, and to enable foreigners to see into the Japanese mind, than has been done—we do not hesitate to say so—by all other means put together. By far the larger part of these translations—perhaps nine tenths of them—are made for the *Japan Mail* by the translator attached to its staff. When the *Japan Herald* brackets these up with the Consular reports, as coming from the British Legation, it deliberately states that which *it knows to be false*. We have been, indeed, from time to time indebted to the British Legation for translations which it has been thought would prove of value and interest to the foreign residents in the country, but by far the larger part of those which help to fill these columns are prepared in this office, and they involve a great deal of very heavy and constant labour to any one who conducts the journal. Many of them demand much question and answer during the process of reduction into the form in which they ultimately appear; references, allusions and dates have to be verified and explained, and it is rare that the preparation of them does not occupy three whole days of the week. Men often forget that what is easily read in ten minutes may occupy many hours to produce. The easier matter is to read, the harder it is to write, and half an hour may be quite sufficient to enable a moderately quick reader to pack away in a condensed form in his mind the matter which has occupied a whole week of very hard work to prepare. If the spoils should go to the victors, the fruits should go to the labourers. The daily papers practically live by their advertisements. No such advantage is shared by a weekly journal, or only to a very small extent, and we complain of the wholesale spoliation of our weekly columns by the *Herald* as a form of brigandage of a most unwarrantable character. It is one, too, which, for reasons we prefer to leave to the ingenuity of our readers, admits of no reprisals. Test this by its working. Men say "The *Herald* republishes all the valuable translations and other matter from the *Weekly Mail* and *Daily Advertiser*, why should I be at the expense of subscribing to these?" Yet the weekly issue of this journal is a source of very heavy expense indeed—an expense of money and labour out of all proportion to the size of the place. Of course, he who rides a hobby must be prepared to pay the expense of doing so, and we have no complaint to make but of the practice to which we refer—a practice which we hold to be very unfair and dishonest. The law does not punish it, and the public winks at it. But it is not the less a violation of propriety, custom, and fair dealing, which can only be defended by taking the word *not* out of the eighth commandment.

We must ask the indulgence of our readers for so much reference to matter personal to ourselves, but the nature of the subject renders this unavoidable,

---

We have received the first number of "*The Japan Fortnightly Review*, a Religious, Scientific, Temperance and Literary Journal," and must beg the projectors of it to take the following words on the subject in good part.

The multiplication of newspapers in a small community we hold to be a very bad thing. It acts in two ways: It saps the roots of papers which otherwise would become strong enough to fulfil all the great and important purposes which newspapers should fulfil; and it fosters the enervating habit of mere newspaper reading—one of the very worst habits to which any mind can be addicted. No one will accuse us of undervaluing the office and the importance of the newspaper press. But we dread to see newspaper reading supersede the habit of more solid and serious reading which, conjointly with serious thinking, helps to form good minds. To whom is this journal intended to appeal, whom to influence, what to record? The foreign residents in Japan? We really wish to say nothing unkind or disparaging, but it is impossible to imagine that any real good can be derived from such matter as, judging from the contents of the first number, the new journal is likely to contain. Let any one look at it and ask himself why he should lay down a sermon of Butler or Melvill or Blair or Guthrie, and read the *Japan Fortnightly Review*. There is more true religion in a hymn of Ken, Cowper or Addison than there will be in a whole year's issue of this journal. Why this infinite dilution? What good purpose can matter so attenuated subserve? Can one derive encouragement from writing of this nature, or regard it with other than serious reflections as to its utility? If a man takes a square inch of pemmican, or a spoonful of Liebig's *extractum carnis*, he may go for four and twenty hours in the strength of that meat. And the same may be said of spiritual food. But what if this condensed form of nourishment is put into many gallons of warm water?

Or is it intended to do any service to the Japanese? Surely not. Very few of them can be reached by this means, and no wise instructor would habitually put a newspaper into the hands of his pupil in order to develope his mind or warm his zeal. He would, of course, give him far more solid food.

It is quite right that great associations in great communities should have their 'organs'—whether in the form of reviews or newspapers. But in small communities, nothing is worse than the drawing of a line separating what is called the religious world from the secular world. It fosters the feeblest modes of thought, and produces a singularly selfish spirit—that, namely, of marked gratification in such and such a state of mind or walk of life, and very considerable indifference to a spiritual state in others which is firmly believed to deserve and secure eternal condemnation. That the assured pains of the lost are a source of great spiritual consolation to some of those who are convinced of their own welfare, is a fact which no one at all conversant with certain forms of thought can for a moment doubt. The large and noble desire for the welfare of those who hold quite different opinions from their own, is extremely rare in such minds. They trust to the Deity to do the persecution at some future time which society at present prevents them doing themselves—a state of mind so dreadful, as it appears to us, that we wholly refuse to characterize it in appropriate terms. In the very first number of this journal this terrible spirit comes out. A correspondent signing himself 'Enquirer,' asks whether a certain injunction in the Bible does not forbid him to pray for those who reject the doctrine of the divinity of Jesus of Nazareth, and it is quite obvious that he desires an affirmative

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

answer to his question. In other words, he enquires whether he should not harden his heart against those for whom any truly noble religious spirit would dictate to him to pray with especial earnestness, if he believes, as of course he must, that they are in deadly error. Is it possible to conceive any thing much worse than this? Here is a question on which some of the wisest and best men have differed for eighteen centuries, and on which during the past hundred years a change has come over the mind of Europe of far vaster proportions than anything imagined for a moment by those who only read books devoted to their own side of religious questions, and yet we find a letter like this published without one word of editorial reprobation or comment! Our mind wholly misgives us in regard to the usefulness of any publication undertaken in this spirit.

The journal is a Temperance journal—and, so far, advocates a good cause. But its "Touch not, taste not" seems to us utterly opposed to the highest moral teaching. The total abstinence pledge is an abundant cause of perjury, and, what is almost worse, of tampering with the conscience in regard to the limits of the imposed restrictions. A man will sign the pledge, and will abstain from beer and wine and spirits; but he will take cider-cup, and pretend it is not forbidden. The cider-cup does him no harm. But the casuistical sophistry, of which he is well aware, debauches his mind; and this, in our opinion, is worse than getting drunk—vile vice as that is. We are no believers in the kind of weakly virtue which is the consequence of flight from temptation. We admit all the danger of contact. But the virtue of asceticism is the virtue of a coward. It is not the men who have never fallen who are the noblest types of man, as man. It is the men who have braved temptation, peradventure have fallen, but who have never become demoralized by their fall, and whose subsequent course is the triumph of manly virtue in the midst of temptation, who really command our highest admiration. The greatest master of the human heart writes:—

They say, best men are moulded out of faults.

In regard to the scientific department of the *Review*, the prospectus says that "local scientific gentlemen have hitherto had no means of scattering their hoarded store of intellectual wealth"—a statement which we beg to deny flatly. The Asiatic Society is such a means; and it is a mere pretence to say that any good scientific paper has ever been refused admission into the columns of the *Japan Mail*—we can only speak for ourselves. But, as a specimen of this department of the *Review*, we will take a paper entitled "What may be found at Inoshima." It gives, within two minutes reading, an account of the *Hyalonema Sieboldi*—or *Hyalonema Mirabilis*, as it is now more often called—which is not for a moment to be compared to Dr. Hadlow's account of the same beautiful sponge published in the first volume of the Transactions of the Asiatic Society. If the scientific papers are to be of no more solid nature than this, they are simply not worth printing.

Frankly, we should welcome a really strong good paper, or what promised to become such, though we pity the purse on which the experiment of founding one is made. But in a paper like this we see no promise, no insight, no light, no vigour, no depth or breadth or height. And we think little sectional papers evils in a small community. This is essentially a religious paper, and seems to have the faults inherent in religious papers, except those conducted by very strong, wise and good men in large communities. We dislike and distrust religious papers as we dislike exclusively Sunday religion. Religion is a thing for every day, and the man whose mind is irreligious from Monday to Saturday takes little good—perhaps takes much evil—from his Sunday exercises, which become then things of moons and feasts and set observances. He plays no chorales or oratorios in the week, and fears to play Beethoven's Pastoral Symphony on Sunday morning, lest the Deity should be offended and his own soul endangered by the swelling of his heart under the influence of this most glorious hymn of praise. God grant that our children may no longer wander in this desert of opinion, but walk with all his prophets, whatever be the form of their utterance, all day and every day!

We do not wish the new journal well, and have no hesitation in saying so.

The subjoined paragraph shows the watchful, intelligent eye with which affairs in this country are regarded in the parlour whence so many weighty judgments upon the affairs of nations proceed—judgments which invariably leave a deposit of opinion behind them on the public mind. *The Economist* does more to settle the estimation in which the finances of nations are held by their European creditors than any journal in the world. The existence of bad laws, or anything like a bad administration of laws vitally affecting the relations existing between debtor and creditor, are as clearly reflected in the opinions of that journal as variations of temperature are indicated by the thermometer. Japan is the creditor of Europe, and cannot afford to disregard a single word let fall by such an authority.

LAW IN JAPAN.—If the following extract from the *Japan Mail* of April 10 is true, the only inference from it will be of a kind adverse to the estimation in which Japanese progress is held. The principle which will award the interest of a debt but withhold the principal sum, is unintelligible to European creditors: and the expediency of making the period of which interest is payable dependent on the dilatoriness of a law court, is difficult of appreciation. The case is thus stated and commented on:—

A (a foreigner) sues B (a Japanese) for a sum of money. Judgment is suspended for a while, during which B sets up a counter claim against A. The Court decides that A's claim is invalid, but orders B to pay interest on the sum claimed from date of claim to date of judgment.

On no conceivable theory of law or justice can any such judgment be upheld, but being that of the Court of ultimate appeal, there is manifestly no remedy through this means. In its own interest we would call the attention of the Japanese Government to this decision.

It will be observed that *The Economist* says "*if* the following account from the *Japan Mail* is true." In order that there may be no mistake in regard to the case, we have verified it by an application to the plaintiff, whose account of it is as follows:—

'Judgment was given after a long delay in favour of A, but execution was suspended for a while because B suddenly set up a counter-claim, *of which no word was heard during the action, and which was absolutely groundless.* This counter-claim has never yet been adjudicated upon, and execution of the judgment is suspended up to this very moment. Meanwhile, however, the main point, that judgment was given for the interest, while the principal was denied, remains absolutely true.'

The following 'sub-leader' has lately appeared in the London *Daily Telegraph*, and it is about as complete an *exposé* as ever was seen of the utter hollowness of the writing upon eastern subjects which sometimes appears in what may be called popular papers. If any one will take up Charles Lamb's essay entitled 'Newspapers fifty years ago,' after reading this extract, he will be delighted to find in the writer of it a survival of the family from one member of which came the immortal paragraph:—"Walking yesterday morning casually down Snow Hill, who should we meet but Mr. Deputy Humphreys! We rejoice to add, that the worthy Deputy appeared to enjoy a good state of health. We do not ever remember to have seen him look better."

The extract from the *Daily Telegraph* is as follows:—

"To a truly conservative mind it is always painful to see the ancient institutions of a great country ruthlessly knocked away by ardent reformers. But when the country in question is of all 'true blues' the bluest, when the custom is as venerable as the greatest admirer of the antique could wish, and when the reformer himself belongs to one of the oldest families in the world, the grief which the act causes is rendered still more poignant. With such feelings, then, all right-minded persons will, without doubt, regard a decree which has just been issued in the Celestial Empire by his Excellency the Daijo Daijin, Sanjo Saneyoshi. 'After this date,' so runs the edict, 'our will and pleasure is, that all others than the military, police, and other officers in uniform, as prescribed, must cease to wear swords, and any one failing to conform to the foregoing will have his sword confiscated.' Imagination recoils when it attempts to picture the inexpressible wrath which such an order must awaken in the breast of every educated Chinese. As well might a decree be issued directing all save officials to eschew the national pigtail. Remonstrance, it is, however, to be feared, will be useless; for not only is the energetic Sanjo Saneyoshi a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

powerful personage and a determined, but he has the support of the *Nichi-Nichi Shimbun*, which influential journal actually rejoices at the prospect of peaceable citizens being in future able to traverse the streets at night without molestation from the jocularly inclined and youthful beaux of the period. Small cause, then, is there for wonder if the Chinese, finding that innovations have at last crept into their own beloved land, see little to choose between remaining at home and going to San Francisco to seek their fortunes. There is even a rumour that the love of quiet repose and isolated inaction is to be still further disturbed by the introduction of a railway at Kioto. If that be so, the Tories of China are indeed in evil case."

There is a growing feeling among the Japanese that more or less difficulty will arise in securing the promised results of the treaty lately made between Japan and Corea. A reaction is very likely to arise there in favour of the old policy of keeping the country closed; the more so as the conviction grows that the admission of one nation to trade must ultimately bring about the opening of the ports to the western nations, who are undoubtedly regarded with an intense aversion by the Coreans. The feeling shewn towards Captain Basil Hall and his officers is fully as strong now as when they touched there over fifty years ago. His own account of his proceedings shows that the Coreans discouraged the landing of the party by every possible means, short of violence, and had not a moment's peace until they saw the last of the strangers they so much hated and feared.

The most recent information from Shanghai reports that the public telegrams from Europe are to be discontinued for want of the necessary funds to keep up the current. Of course this will stop the flow to this country, and we must go on as best we can without one of the greatest necessaries of modern life. Whether something may not be done by united action to remedy this deplorable condition of affairs, remains to be seen.

The steamer which arrived from San Francisco this morning bears the following intelligence regarding the approaching Presidential election.

On the Democratic ticket:
For President, S. I. Tilden, of New York.
„ Vice „ T. A. Hendriks, of Indiana.
On the Republican ticket.
For President, Governor Hayes, of Ohio.
„ Vice „ W. A. Wheeler, of New York.

From the 'Japan Mail Daily Advertiser."

Monday, 17th.

There must be some removable cause for the overpoweringly offensive state in which the west end of Main Street has now been for fully a fortnight. How it has escaped the attention and protests of the residents of that quarter is a mystery which we shall make no attempt to solve. Last night, the air being very still, the stench was overpowering, and spread, from the centre named, about two hundred yards in all directions. It was even strong upon the Bund, and so bad that the cause of it must be of serious magnitude. It should be remembered that apart from all offence to the organ of smell—itself grievously outraged—this stench proceeds from putrescence on a comparatively large scale, and a reservoir of putrid matter in a populated neighbourhood, especially in such weather as this, is simply so much danger in a very condensed, active and pervading form. The matter demands active measures without an hour's delay.

The opening of the *Sumida gawa* took place on Saturday evening last. There was the usual display of fireworks, which was not, on the whole, a very brilliant exhibition, but the rain which fell early in the evening, and again about 10 o'clock, may have somewhat marred the intended effect. The occasion, however, was eagerly seized by the Yedo folk as an excuse for a holiday, and the great charm of the scene lay in the thousands of boats, brilliantly illuminated with coloured lamps, which thronged the river, and the enormous crowds of good-humoured sightseers which lined either bank. Many foreigners witnessed the proceedings, and the last train on Saturday night was so crowded by those returning to Yokohama that extra carriages had to be put on for their accommodation.

From the *Chôya Shimbun.*

Some officials residing at Tzukiji have recently been purchasing many lots of land, situated on the rising ground to the north of the capital, in the name of a merchant. The reason given for this on enquiry was, that a new treaty is about to be made, by which foreigners will be allowed to reside in any part of the capital they may please.

From the *Saikai Shimbun.*

The elder Saigo is supposed to be at Takemura, in the Kagoshima *ken*, but can never be seen any where.

From the *Hôchi Shimbun*

Mr. Kuribara, the manager of the *Sômô Zasshi*, appeared at the Tôkiô *Fu* on the 13th instant, and there complained that the publication of his paper had been suspended on account of certain articles published in it, which were said to be subversive of good order. He, Mr. Kuribara, contented that the writings in his paper tended rather to preserve than to destroy the peace of the nation, and wished to know which of the articles he had published were deemed offensive. In the meantime he declined to accept the sentence of suspension.

From the same.

As there are so many people who are not in the least affected by becoming bankrupt, it is rumoured that a law is about to be passed making it compulsory to suspend an announcement of bankrupty over the door of all those who have failed, and also to prohibit them from wearing the *haworí*, or short overcoat.

From the same.

The drought still continues in Okayama *ken*, to the great distress of the inhabitants.

From the *Nichi Nichi Shimbun.*

As the stress of business on the Tôkiô *Fu* is so great, only the lower officials will be permitted to have a holiday for seven days, while the higher officials will be deprived of all vacation during the summer season.

From the *Chôya Shimbun.*

The officials of the *Genrô-In* will follow the example set by the various Government Departments on the 12th instant, and during the hot weather commence business early in the morning and continue work only until noon.

From the same.

His Majesty the Mikado presented the sum of 1,950 *yen* to the sufferers by the late flood in the Iwate *ken*.

From the *Eiri Shimbun.*

From Jôshiu we hear favourable accounts of the silk-worms, and that mulberry leaves have consequently risen in price.

Tuesday, 18th.

From the *Chôya Shimbun.*

On the 5th instant a vast number of people witnessed the ceremony of laying the foundation stone of the Monzeki temple at Tzukiji, Tôkiô, which is about to be erected by the West Honganji sect of Buddhists on the site of the large temple which was destroyed by fire some years ago.

From the *Kôfu Shimbun.*

The price of silk has greatly risen in Kôshu, and as orders continue to arrive from Yokohama the inhabitants of the district expect that their silk will realize about 600,000 *yen* more than last season.

From the *Hôchi Shimbun.*

One third of the expenses for the construction of the Japanese Consulate at Shanghai will be borne by the *Naimusho*, as the Post Office will occupy part of the building, and the remaining two thirds will be paid for by the *Gaimusho.*

From the *Ôsaka Nippo.*

The rumour that famine prevails in China has caused activity among merchants here, and preparations are, in consequence, being made to ship grain from this port to China.

From the same.

The number of Christians of the Protestant sect are greatly increasing in Awomori, but yet are not nearly so numerous as the converts to the Greek Church in Sendai.

From the same.

Many people here imagined that *kompos* would become of an equivalent value to *sen*, and consequently large purchases have lately been made on speculation.

From the same.

About a thousand *shidzoku* have assembled for consultation in Kumamoto *ken* (Higo).

From the same.

The officials of the Kôchi *ken* have decided to give up a third of their salaries towards the public expenditure of that *ken*.

Wednesday, 19th.

The unwatered state of the streets has attracted attention, and not before attention was due to it. When the dry weather set in Mr. Davis sent round his carts as usual, and all went well enough until his subscription list made its appearance. Then indeed much hydrophobia in a translated form came to light. Among his old supporters there were many on whom he could rely, and these not only gave aid, but promised more if necessary. Many, on the other hand, were glad enough to enjoy the benefit of the water, but betrayed a marked aversion to pay for it, extending this so far that even when they made a contribution they looked upon the request for it as a species of brigandage. It is thus no wonder that Mr. Davis refuses to go on with a work which never yielded him any profit. He was willing enough to undertake it if fairly met by the residents. But he not unnaturally refuses to water the settlement at his own expense, and does not choose to requite his best supporters by throwing the whole of a burden upon them which ought to be shared by all, according to their ability. Meanwhile the settlement is scarcely endurable between ten and five.

His Majesty the Mikado left Morioka on the morning of the 7th instant, and for several days travelled through a somewhat barren and uninteresting country until he arrived, on the 14th instant, at Awomori. The next day horse races were held before His Majesty, who subsequently visited various places of interest in and about the town. On the morning of the 16th the Mikado crossed over to Hakodate where His Majesty will probably stay for a couple of days. It is reported that the Empress will meet His Majesty at Yokohama on his return, which is expected about the 21st instant.

A saying is now common in Osaka that a man who pays his debts is a fool, as it would be better that he should become a bankrupt. This may indicate that the Japanese have taken to the study of Shakespeare and have learnt from Pistol that

"Base is the slave who pays."

From the *Hôchi Shimbun*.

A man named Shinmon-no-tatzu, residing in Tôkiô, has obtained loans from twenty-five different people, against which, in every case, he pledged his house as good security.

From the *Nichi Nichi Shimbun*.

Mr. Masaki of the *Monbusho* (Department of Education) will shortly set out for England to take charge of the Japanese students in that country.

A policeman named Kobaya, assisted by a brother officer, lately attempted to arrest six thieves in the neighbourhood of the Osaka Castle, and in the affray which ensued unfortunately lost his life. We hear from the *Osaka Nippo* that Kobaya's family have, in consequence, been presented by the Osaka *Fu* with the sum of 130 *yen*, in order to defray funeral expenses and compensate them for the loss of their bread-winner.

On the 16th instant some fourteen women, who make their living by keeping street stalls for the sale of sweetmeats, etc., were arrested and marched off to prison for neglecting to pay the tax of 1 *yen* per month for license to vend their commodities.

The *Chôya Shimbun* says that the poor inhabitants of Awomori *ken* subsist for the most part on millet and fern-roots, and only indulge in rice on special occasions.

Thursday, 20th.

Telegrams received in Shanghai on 7th July announce that Servia and Herzegovina have declared war on Turkey.

The *Thabor* arrived in port from Hakodate yesterday afternoon with Mr. Okubo, Minister of the Home Department, and several members of His Majesty's suite on board. The Mikado is expected to arrive in the *Meiji Maru* about noon to-day, and will land at the English hatoba, where he will be received by many of the principal officers of state. The Empress is also expected in Yokohama to meet His Majesty, but it is doubtful if she will proceed to the hatoba.

From the *Hôchi Shimbun*.

The Prime Minister has issued a notification to the effect that the clause in the Criminal Code which states that,—"Those who steal any sum exceeding 200 *yen* which was entrusted to them, or those who steal any sum exceeding 300 *yen* under ordinary circumstances, will be punished by hanging" has now been altered as follows:—"Those who steal any sum exceeding 150 *yen* which was entrusted to them, or any sum exceeding 250 *yen* under ordinary circumstances, will be punished by hard labour for life.

From the same.

The Prime Minister has announced that His Majesty the Mikado will arrive in Yokohama from the North on the 20th instant, so that all Government offices will be closed on that day, no newspapers will be issued, and the day will generally be observed as a holiday in Yokohama and Tôkiô.

From the *Meikio Shinshi*.

At Ikushima, in the province of Aki, where the people for the most part are strict Buddhists, they yet conduct their funeral ceremonies according to Shintô rites, as they are under the mistaken impression that by so doing they are obeying an order of the Government.

From the *Osaka Nippo*.

The thieves who lately had an affray with two policeman in which one of the latter lost his life, were captured a few days ago in Kobe.

From the *Chôya Shimbun*.

The officials of the *Dai Shin-In* (First Judicial Court) are very industrious, and endeavour to settle all matters of appeal with the least possible delay.

From the same.

It is considered that the number of spectators at the opening of the *Sumida-gawa*, was more numerous this year than on former occasions.

From the *Nichi Nichi Shimbun*.

Mr. Miyamoto, *Daijô* of the *Gwaimusho*, has been granted permission to accept the Order of Knighthood which the Emperor of Russia lately bestowed upon him.

From the *Hôchi Shimbun*.

The Government has announced that an Agricultural Exhibition will to be held at Uyéno next year.

Friday, 21st.

The *Japan Herald* is apparently much disturbed at the publication in our columns yesterday of a notification from Her Majesty's Minister, and is led into making some caustic reflections on the subject of the reciprocal duties of ministers and newspapers. These reflections do not seem inspired by very good taste or temper, but we dare say Sir Harry Parkes will survive them. As the notification did not come to us from Her Majesty's Minister, but from one of his officers, and as it is, by very many, not the first published in the same way, we do not quite understand the special applicability of the remarks of the *Herald*. We presume that the extensive diffusion of the notification was one of Sir Harry Parkes' objects, and it is difficult to discover how this could better be secured than by a first publication in these columns and a subsequent reproduction

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in our weekly issue. A certain dry humour, too, in which Her Majesty's Minister is by no means deficient, though the *Herald* seems to think otherwise, may, for all we know, have suggested to him the fact that while the *Japan Mail* never trespasses on the columns of any other local paper, the *Japan Herald* especially seems absolutely untrammelled by any scruples of the kind, and borrows without stint from our daily and weekly issues—to such an extent, indeed, that the only matter of the smallest practical value in its overland issue is taken from our columns. We should not have referred to this matter, but representations to the same effect made less publicly have produced no effect whatever in stopping this practice.

Yesterday was observed as a holiday by the natives of Yokohama in expectation of the Mikado's arrival from the north, which was looked for about noon yesterday. But owing to unfavourable weather the *Meiji Maru*, with His Majesty on board, did not reach the anchorage until nine o'clock yesterday evening. The harbour presented a very gay appearance, as, following the example set by the U. S. Flag-ship *Tennessee*, the men-of-war in port and many other vessels were illuminated with coloured lanterns, and fireworks were discharged at intervals.

On shore numbers of His Majesty's loyal subjects were present to witness the return of their Sovereign, every house was decorated with lanterns, and the Machigaisho brilliantly illuminated with gas.

His Majesty landed at the English hatoba about 10 o'clock, where he was received by the principal officers of state, and the officials of the Kanagawa *Kencho*. Hence, escorted by a troop of Household Guards, and followed by the Ministers and suite, the Imperial party proceeded in carriages through Honcho-dori to the Imperial residence at Noge-yama, where His Majesty stayed for the night.

The route was lined by thousands of spectators and was without difficulty kept clear by detachments of police.

The Mikado left for Tôkiô by the 8.15 train this morning, and will be received at Shinbashi station by the Empress.

The P. & O. steamer *Indus* left Penang on the 5th instant with English mails on board to 9th June, but no news of her arrival at Singapore had been received at Hongkong up to the 12th inst. It was therefore feared that she had broken down in the Straits, and the *Columbian* had, in consequence, been despatched from Singapore in search of her.

From the *Hôchi Shimbun*.

On the 18th instant fourteen applicants, after passing the necessary examination, received permission to practice as lawyers in Tôkiô.

From the same.

There has been a great deal of talk about "Peoples Rights" in Hamamatz *ken* (Tôtômi), and the inhabitants elected representatives lately, who met on the 13th instant at a temple on purpose to discuss this important question.

From the same.

Sakai, the editor of the *Akébono Shimbun*, was summoned to the Criminal Court on the 19th instant.

From the same.

It is rumoured that disturbances are breaking out in Gifu *ken* on account of the mode of levying the land taxe.

From the *Meikio Shinshi*.

Some students of Kobe, and *shidzoku* of Sanda, are trying to convert the people to some religion which is neither Christianity nor Mohammedanism, and are now labouring for this purpose in the provinces of Yamato, Kawachi, and Setsu. It is said that some 30,000 persons in Osaka have already been led astray by their teaching.

Saturday, 22nd.

From the *Chiiya Shimbun*.

A silk-reeling establishment, which has recently been erected by the *Naimusho* at Naitô Shinjiku, was opened on 14th instant with much ceremony.

From the same.

A native of Yezo named Ikasutzuki was lately doing a good stroke of business by exhibiting to the credulous an animal which he called a Yezo cat, which he pretended could sing like a bird, and which, to aid delusion, had some substance attached to its sides which the owner declared were wings. Unfortunately the animal made its escape the other night and Ikasutzuki lost an easy means of earning his livelihood.

From the *Osaka Nippô*.

The dry bed of the river at Kiôto is crowded with people every evening, who go there to enjoy the cool air to best advantage. There may be seen many women who, according to the absurd Kiôto fashion, wear sleeves to their dresses nearly four feet in length.

From the *Hôchi Shimbun*.

On account of the Mikado's non-arrival on the 20th instant as expected, the various Government offices were again closed on the 21st.

From the same.

Okubori Juichi, who was formally employed at the Chikuma *kencho*, and who recently set that building on fire, has been arrested.

From the same.

The editor of the *Bisaku Shimbun*, of the Okayama *ken*, had only issued the fourth number of his paper when he was prosecuted by the *kencho* officials for an offence against the Press-laws.

From the same.

In the neighbourhood of Mayebashi the price of mulberry leaves has again risen considerably, but the silk-worms are progressing so favourably that those who raise them expect to make four times as much profit as usual.

From the same.

A severe storm occurred in the province of Shinshu on the 11th instant, by which many houses were destroyed.

The *Chiiya Shimbun* hears that business is extremely dull at Nagasaki and bankruptcies are of frequent occurrence, but takes comfort from the fact that robberies are few and far between.

From the *Nichi Nichi Shimbun*.

There are this year more visitors to the hot springs at Kusatsu and Ikawo than usual. Many of these visitors spend money lavishly, but they are said to be doing so in despair, as they are for the most part people from Tôkiô and other cities who are on the point of bankruptcy.

From the same.

As traders of all sorts are taxed in Osaka, it is now proposed that medical men of the first class shall pay a fee of 50 *sen* per month, and those of the second class 25 *sen*. The honour of the profession seems touched on this point, and great opposition is offered to the proposed measure.

The old horse-shoe problem has turned up in Japan in a rather practical manner, but in an uncomfortable way for one of the parties concerned, at least. We learn from the *Osaka Nippô* that a man named Gohei borrowed 10 *yen* of a neighbour, which he agreed to repay within 15 days, or, failing to do so, to be liable for compound interest at the rate of 100 per cent. per day for every day beyond the due date. Gohei *did* fail in fulfilling his agreement to repay the 10 *yen*, and a few days afterwards a suit was brought against him at the *Saibansho* for 327,670 *yen*. The *Nippô* does not say if this suit was seriously entertained by the *Saibansho* officials.

Li Hung-chang has ordered one million piculs of Chinese rice to be sent to Tientsin from the South for distribution to the poor at State cost. But to judge from letters received to-day per *Paou-ting* we fear that twenty times this quantity would hardly suffice to avert a general starvation. Canton merchants are leaving Tientsin in large numbers—not only because they are discouraged by the utter badness of trade, but from fear of coming troubles.—*Shanghai Courier.*

SUMMARY OF FOREIGN TRADE FOR 1875.

THE completion of the British Consular Trade Reports for 1875 is marked by the usual Summary of their contents, which will be found elsewhere. It shows an increase of about $3,00),000 in the total foreign trade of Japan over that of last year, and a decrease to about the same extent upon the trade of 1872—the highest figures yet reached. The large excess of imports over exports has been again met this year by a flow of bullion abroad to the total extent of about $12,000,000, so that the country has parted during the last two years with little less than $30,000,000 in gold and silver. Now this is not an altogether desirable state of things, although it must not be regarded in the light in which the economists of the last century would have viewed it. We need hardly say that when men began to see that the precious metals were by no means the sole representatives of wealth, the desire to secure a perpetual flow of them into their country was no longer the ambition of statesmen or economists. And if we remember for a moment the fact that trade necessarily involves a gain to both buyers and sellers—each getting from the other something which he values more than that with which he parts to obtain it,—and that the aggregate annual gains of all nations amount to vastly more than the gold and silver produced in any given year, we see at once that the influx of gold and silver is a most fallacious test of the prosperity of a country. The course of trade in Japan has been precisely that which *à priori* might have been expected. The opening of the country brought to its shores a considerable number of men abundantly provided with money, or within easy reach of it, and all well acquainted with the general condition of the European markets both for raw and manufactured articles. Of these markets the Japanese were profoundly ignorant, and sold their productions, of whatever nature, at prices, which, whether higher or lower, it was at least worth their while to accept. Of course the foreigners, with the markets of Europe and America at their back, were far more anxious to buy Japanese productions than the Japanese were to buy theirs How could the native dealer know whether his country-men or women would like and wear camlets or cords or shirtings or broad cloth? He had to discover this by experiment. The foreigner had no such experiment to make. He knew that silk reeling so many deniers was worth so much in Europe, and that no quantity he might possibly obtain in this country could perceptibly influence its value in Lyons or London. The consequence was that he bought, without a moment's misgiving, all he could find money for, and he was surrounded by men who did precisely the same thing with productions of a different character. Hence it resulted that for some years there was a large and steady flow of bullion into this country. But the trade was nothing like as profitable then to the Japanese as it is now. The foreign merchant bought cheaply, and he now buys dearly. He sold dearly; now he sells very cheaply. We are writing with a perfect recollection of the history of the trade, and we remember that from nine to four shillings per pound profit on silk (of course the progress was downwards) was quite common in the early days of the trade, while such goods as camlets and shirtings often paid twenty per cent profit, after allowing for duty, freight and charges from China. Of course, the Japanese were gainers by the trade or they would not have carried it on; but, relatively to the present state of affairs, they were but small gainers. What is the position of matters now? It is as much as a foreigner can do to screw a bare commission out of his sales of manufactured goods. The Manchester man may get a little more of such profit as there is in the transaction, and of course the Manchester operative thrives on it. But the foreign merchant in this country only just lives out of it, and may look forward to spending his days here without saving twenty thousand pounds in a long life-time. The export trade is exactly the same, only on the other side of the loooking-glass. Five hundred bales of silk come down to market overnight, and the horizon next morning at four o'clock is dark with silk-inspectors. At seven a.m. every bale has been bought, each man having bid against his neighbour to the utmost limit suggested by illusion, enthusiasm or competition, or by all three combined. For the Japanese, Manchester makes yarn or shirtings with machinery contrived with the utmost of human ingenuity. For them the separate condenser of WATT, the railway of STEPHENSON, the telegraph of WHEATSTONE, the penny post, the ubiquitous broker, the merchant, the ship-builder, the 'higgling of markets,' the press, the banker, the statesman, navies and armies which preserve peace, all combine, and the result is that they sell their products to us at prices like those of the silk market last week; while we sell our productions to them at rates which make every merchant rue the day he landed in the country.

But meanwhile the excessive cheapness of our manufactures has created a large demand for them all over the country, and while this demand has been growing year by year larger and of firmer consistency, the productions of the country have not increased proportionately. The consequence is that payment for them has to be made in gold, and hence the drain of the last two years.

Now, what is the use of gold and silver? They are only required for measures of value and in the arts—personal, domestic or decorative ornament. A reserve of them is also considered essential by all sound economists when the whole or nearly the whole currency of a nation is a paper currency. Beyond this they have no use whatever, though of course they possess the *value* given to them by the consensus of mankind.

To what extent are they required in this country? To a very small extent only. The arts absorb but little—comparatively speaking. In domestic life their employment is extremely small. Perhaps not ten Japanese have as much plate as every man has in England who spends fifteen hundred a year, and there are scores of thousands of people with this income. There are very few people in England in this station of life who have not from fifty to two hundred pounds worth of plate in their plate-chests. In Japan there must be extremely few men who have even fifty pounds worth of plate. The women wear very little jewelry and the men none. The country evidently does not want a large metallic currency. That its trade would be on a sounder footing if there were nothing but gold and silver in circulation is certain. But in a country where communication is very difficult and expensive, a country of few roads and no railways, the transport of gold and silver is very expensive. And not only this. In one form or another there is about one hundred and thirty millions of dollars worth of paper floating about—exclusive of banker's paper—or, say, about twenty-five millions of pounds. If this were represented by gold and silver instead of by paper, it would be an expense to the country of two millions and a half of pounds a year, reckoning interest at 10 per cent., exclusive of the loss by wear and tear. Why, then, should more than a small proportion of the currency be in gold or silver?

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

We think no good reason can be given. Of course, as before said, the Government should have a good reserve of the precious metals as a basis for the paper currency. But beyond this gold and silver are but little required. If the nation has parted with so much of its bullion—unless it has committed follies on an enormous scale—it is so much the better off for what it has received in return. The export of bullion only represents the aggregate cost of many millions of satisfied wants, and this is the true object of money. You may indict the Government of a nation for folly, if it deserves to be so indicted. But you cannot indict the people. They had wants. They have satisfied those wants. Who is to say they are fools for having done so?

The fact, however, remains that the available products of the country do not greatly increase, and hence the people have to draw on their savings to satisfy the enlarged sphere of their wants. This is where the trouble really lies, as Sir HARRY PARKES points out in the Summary before us. Yet it is obviously far more easy to show that a country does not increase its its productions, and that it ought to do so, than to make it do so. A farmer may say, "What incentive is there for me to cultivate an extra acre of land?" The truth is that at present he has no such incentive, because he knows little or nothing of the pleasure or advantage of accumulation. The expenditure of the Government is so enormous relatively to the actual wealth of the country that it is forced to take from him everything not actually necessary for the subsistence of himself and his family. He could save labour by the purchase of a horse, or a yoke of oxen, or some foreign machine or implement. But he has not the money, cannot get it, and must go without it. As it is, he works as hard as he can. Without some adventitious assistance of this kind he cannot force more from his land, and cannot extend his area of cultivation.

Look at the expenditure of this Government relatively to the wealth of the country. Let us call the revenue-sixty-five millions of *yen*, or about thirteen millions of pounds sterling. This is about a sixth of the revenue of England. But England must be many hundreds of times richer than Japan. Not twice as rich, or three times, or six or ten times, but many hundreds of times. Twenty years ago a careful approximation was made of the yearly savings of the English nation by an economist of first-rate authority, WILSON or LAING—we forget which. After much study of the subject he placed it at about £150,000,000 a year. If he was at all correct, the present annual savings must be much over £220,000,000, and are possibly £250,000,000. Nor is this a mere comparison touching England alone. France is quite as rich, and so is America. The debt of France just now is exceptionally high; that of America is large, but it has been much reduced during the last ten years; and hence both countries are greatly burdened with interest. Now the interest paid by this country is extremely small, and yet this large revenue has to be raised to keep the finances straight.

The country surely cannot bear it. The whole standard of revenue and expenditure will have to be revised, so as to admit of a reduction of the taxes which fall on the agricultural classes. Then, but not until then, shall we have any improvement from this quarter.

The only other source from which wealth can be derived is from the mines, and, in view of the responsibility which lies on so important a department as that entrusted with the care of the mines, it is greatly to be regretted that it has as yet published no report. It is a great scandal to see an expensive department doing little or nothing—the head of it drawing a salary which would be very large even were he an extremely active and successful administrator, and the subordinates weary of killing time. We are willing to believe that the Japanese are often very difficult to deal with, obstinate, perverse and regardless of good advice. But there are limits which self-respect imposes on every man of honour in regard to his continuance in office if his counsels are unheeded, and it is impossible to exceed these without incurring blame.

But we fear to tire the patience of our readers, and must pursue these subjects at an early future date.

SPIRIT OF THE JAPANESE PRESS.

HISTORICAL LESSONS.

(Sōnō Zasshi.)

There exists a wide difference between the spirit of those whose natural instincts lead them to act oppressively, and those who desire to oppose such oppression. The former, though much against their wishes, fall under the oppression of others; while the latter contrive to maintain their liberty. In other words, those who desire to act as oppressors seek to pursue their ends through the power they derive from official position, or by making men in office the tools by means of which they effect their objects. In doing this they have already sacrificed their independence and feeling of liberty. Those, on the other hand, who wish to evade oppression, and to pursue their liberties and the natural rights of man, are animated with a greater spirit of self-reliance; and cannot be prevailed on to act under the domination of others.

At the beginning of the great revolution in France, the French complained that they were ruled by tyrants, beheaded their king, escaped from their bondage and placed themselves in a position to breathe the pure air of liberty. But, after conquering many nations, Napoleon contrived to terrify the French into submission, and they suddenly lost the spirit of liberty which had previously animated them. They feared the emperor as a boy fears a rigid father, obeyed most implicitly the order of their rulers and became as mere horses and oxen to them. The throne of Louis XVI. had existed for many centuries, while the government of Napoleon was perfectly new and had scarcely time to acquire its full powers. Yet, for all this, the people pulled down Louis XVI. and obeyed Napoleon with slavish fear.

Now the reason why the French had so strong a sense of liberty at the time of the revolution, and so weak a sense under the Empire, is because from the most ancient times they have never possessed the power of self-control and real independence. Nor do they know that every man must keep his station in life. Their inherent elasticity made them join the party of liberty when its standard was raised, for no deeper reason than the desire of gratifying their own wishes. Thus when Napoleon came into power, they threw away their liberties, and fell into slavery by relying on him instead of on themselves.

Now if we turn to English history, we find that Charles I. carried his absolute views to such a pitch that the people soon detested him as the enemy of their cherished liberties, and the majority of the people, joined by the nobles, gentry and clergy, sided with the Parliament, which opposed his absolutism. The king soon found himself greatly isolated and fled to Scotland, where he met with no very pleasing reception, and finally was defeated and executed. Cromwell then seized the reins of power, and oppressed the people, whose spirit deserted them under his rule. They did not obey him from love, but because they feared the consequences of disobedience, and Cromwell was only just dead when Monk led the army against the Protector's party, and after undoing all that Cromwell had done, restored the family of the Stuarts to the throne of England.

Had not the English possessed a great spirit of self-reliance and love of liberty, they would never have prevented Cromwell's family retaining the office which he filled. But they dreaded lest this

* There is a good deal of very slipshod history in this essay—more than it would answer any good purpose to point out, and we are not sure that we have everywhere caught the full meaning of the writer. But perhaps the reference to Charles the Second is the worst, for reasons which must be known to most of our readers. No one has pointed out so clearly as the late Mr. Buckle the extent of ground gained for liberty in this reign, and the causes which tended to secure the victories of the popular party.—[ED. J. W. M.]

should endanger their liberties, and thus acted as they did. Charles II. ascended the throne immediately after Cromwell's death, but he failed to please the people because he endangered their liberties, and they showed a disposition to oppose him. But he died soon afterwards and was followed by James II., who acted much like his predecessor. The people therefore again rose and drove him from the country.

All this shows the difference between the French and the English mind. The English acquired the liberties they now enjoy owing to their self-reliance and proud spirit of independence.

Before closing this article, we wish to say that those who have this spirit of oppression naturally seek for office under Government, where they can best gratify it. These minds are perpetually turned towards the Government, and when they once attain to office they care nothing about the excessive number of officials, or the burden of taxes and duties. Their sole idea is to keep their places and give vent to their natural insolence.

Those, on the other hand, whose object it is to escape the oppression of others, work diligently at their callings, whether as farmers, manufacturers or merchants, and are to be honoured for the independent manner in which they seek to gain their own living.

Glancing now at this country, we find men among the higher classes, and even men of learning, striving to obtain office under the Government. But very few of them labour to advance the welfare of the country by promoting education among the classes just referred to. This seems to prove that the hearts of the Japanese are inclined to absolutism.

Faith.

(Sûmô Zasshi.)

(This article appeared in the last number of the Sûmô Zasshi previous to its suppression.)

Are ye still just, ye Heavens? Why then this confusion in the distribution of rewards and punishments, of happiness and misery, among men? The upright and benevolent man, walking in truth and justice, seeks to secure liberty for the people and thus to bring happiness to the nation. But such an one is detested by corrupt officials. Severe punishments are meted out to him, which he is forced to share with criminals in dark cells, with coarse clothing and loathsome food, deprived of the pleasures which Heaven has apportioned to men. Nor indeed is this the worst. For cases have occurred in which men have died in consequence of these hardships, or have been put to death by tyrants; their sorrows not ending with themselves, but descending to their widows and orphans, who were thus cut off from the means of subsistence. This it is which causes the intensest sorrow.

The corrupt official, however, acts in a precisely opposite manner. He crushes all liberty in the people, bears himself haughtily, and persecutes the man of upright intentions. He wears fine clothing and fares sumptuously, his ear is regaled with songs and his eye with dances, his heart also abounds in pleasure.

But, this being so, doth Heaven afflict the righteous and reward the evil man? God forbid! No, the confusion of good and evil is but for a time. Good will overcome evil, and the distinction between them shall be made manifest. From ancient times many upright men, by reason of adverse fortune, have passed their lives in insignificance. Yet, being now dead, their names live for evermore.

History tells us that in the Western world many men were once denounced by corrupt officials as traitors and rebels, and were imprisoned or put to death, whose names are now regarded with honour as the champions of liberty and popular rights. Others, condemned as criminals in their own day, are now recognized as types of virtue and are honoured as gods.

Far otherwise is it with those who opposed them. They spent all their strength in closing the gates of liberty, but they are now ceaselessly regarded as corrupt, and their unhonoured names live in the memories of men as unclean beasts and birds. Nor is it always that they have had to wait for death for punishment. Assassination has often overtaken them.

This being so, those who fight the battle of the people's liberties must bear with all patience such misfortunes, oppressions and imprisonments as they may encounter. This is in accordance with the law of nature, and no man need be ashamed of submitting to it. By making unjust laws and inflicting cruel punishments, the corrupt officials seek to oppress these righteous men. But the ghost stories which frighten children have no effect upon determined men. As is the oppression, so will the reaction be. The object of the Government never will be attained. The reason why men will encounter bullets by land and storms and perils by sea, is that they wish to accomplish some great object, and those who have pledged themselves to secure the liberties of this nation are content to pass through a similar ordeal in order to gain their end.

For these reasons I say that although corrupt officials try to suppress the rights and liberties of the people, by making unjust laws and inflicting severe punishments, these are not things to be feared, and we should be undaunted in the face of them. The present misfortunes need cause no grief. Though the officials seem strong at present, should they once fall they will be regarded as the beasts or birds.

The life of man is so short that it may be compared to the dew that rests upon a blade of grass. Let us not therefore follow the example of these officials who judge all things by present appearances. If men follow righteous ends, their names shall shine as immortal lights. For it is true that Heaven is just, and errs not in the distribution of rewards and punishments. The guerdon may not be awarded now. Yet Time most surely bears it in his hand.

Kudzuwara Kiyotami,
Kojimachi, Tôkiô.

Assassination—Further Developments.

(Sûmô Zasshi. From a Correspondent.)

I have read the article in your paper on assassination, which argued that if corrupt officials are to be exterminated three means might be resorted to; a rebellion, which would necessarily bring much misery on the people; self-immolation, which would have but a very small effect; and assassination with sword or pistol.

I think this article may be supplemented, and I propose saying a few words about secret assassination, and will try to explain why, as rebellion is injurious to the nation, and martyrdom is ineffectual, secret assassination is better than open murder.

The people have a right to raise a rebellion when the maladministration of the Government is carried to an excessive point. Yet it must always be remembered that the Government wields more or less power, and it is by no means certain that the ends of those who oppose it can be carried, while the attempt always involves a large expenditure of life and money. Men, too, engaged in enterprises of this nature in order to extend the sphere of their liberties, are apt to be absorbed entirely with the combat itself and, losing sight of their cause, afterwards fall into the toils of cunning intriguers.

Martyrdom would not be attended with these disadvantages; but it is ineffectual, because, since the issue of the Press-laws, many have been fined and imprisoned without producing the least effect. It is true that the punishments of the writers have been limited to fines and imprisonments; but had they even forfeited their lives the result would, in all probability, have been much the same, and such rumours as we have heard regarding these laws have always been to the effect that their severity was to be increased, not relaxed.

Now I say that assassination should be done in secret. The article above referred to advocates the commission of open murder with a view to the public confession of the crime at the *Saibansho*. Is this confession to be made in order to extort the world's admiration and praise?

The article in question pleads that a rebellion would cause too much misery, and that martyrdom is ineffectual. But if a man were to commit a few (*sic*) assassinations and openly say "I did it; punish me as you think proper," would this produce any effect? No, certainly not. It appears noble for a man to confess the crime of which he is guilty, but I will try to show that it would be entirely useless.

In the eighteenth century, during the time of the French Revolution, there was a strong party called The Mountaineers (The Mountain?), led by Marat, which did an enormous amount of mischief. At that time there was a woman living in Caen, Corday by name, young but of great courage, and she determined to kill this leader, put an end to the disturbance, and save the country. Animated by these intentions, she went to Paris and contrived to kill Marat with a dagger, exclaiming that she had slain the Devil. She encountered her own execution with heroic firmness, but the succession of bad men was by no means put an end to, and the death, or murder, of this heroine produced no good result whatever. But if she had secretly assassinated Marat and the other corrupt men who followed him, in all probability her object would have been attained.

There is therefore no need to make confession of such deeds under these circumstances. Moreover, if Corday could do no otherwise than confess, there is little to be said. Otherwise she was wrong.

Firing Double-shotted.

(Chôya Shimbun.)

There should by rights be no Japanese who purposes the injury of Japan, his country. If there should be any such exceptional case, such a man could not be justified.

Some of our contemporaries having been found guilty by the *Naimusho* of publishing matter tending to disturb the peace of the country, have been suspended by the orders of the Tôkiô *Fu*.

We had no wish to lean with any partiality towards these papers, but as we had some doubts regarding the justice of the suspension of the *Hiôron Shimbun*, the *Kokai Shinpô* and the *Sômô Zasshi*, we intended expressing them in order to have them allayed by the learned world. While about to put this intention into force, we received a letter from the *Sômô Zasshi*, and the *Japan Mail* of the 15th instant with an article on the subject was placed in our hands. We now publish the letter from the *Sômô Zasshi* and a translation of the article from the *Japan Mail*, in the hope that the public may clear up the doubts of the *Sômô Zasshi* and dispel those which exist in our own mind.

(Article from the Sômô Zasshi.)

'The *Sômô Zasshi* with the *Hiôron Shimbun* and the *Kokai Shinpô* have been suspended for reasons which are incomprehensible to us.

'A notification to the following effect was issued by the Prime Minister on the 5th inst:—"Should any registered newspaper or magazine publish any matter which may be deemed to interfere with, or have a tendency to disturb, the peace of the nation, the further publication of such newspaper or magazine will be suspended at the discretion of the *Naimusho*."

'Were we ourselves suspended through the force of this notificaiton, or for some other cause? If we were, our perplexity is increased, because from the date of the issue of this notification to the time of our suspension we did not issue any publication, so that we cannot be deemed guilty of disturbing the peace of the nation after the issue of the notification. We must therefore have been suspended for some matter published previous to the issue of the notification. Let us illustrate this. The keeping of concubines is an evil custom of long standing in this country, and if the government were to issue a notification to-day forbidding it, could it be called just to punish all who lived in this practice in past days?'

'Suppose a police officer were to come up to a man and say, "You are guilty of theft, come and suffer capital punishment immediately," is there any one who would not contradict him? Surely none, but a man really guilty or an abject coward, rendered dumb by fright. Any one else would indignantly say, "On what ground do you charge me with theft? What proofs have you?" Every one has the right of resisting such a charge, and the Government has no power to inflict punishment on any man without adducing proper proofs of his guilt. The Government which acts otherwise can only be regarded as barbarous, and unlike the Japanese Government, which is civilized. Although we do not believe that our Government would act thus, we cannot understand why it should have suspended these newspapers without any explanation, and the reason why we have declined to accept the order for suspension and now make these enquiries, arises from this cause.'

'We confess that, to a certain extent, we instituted this journal with a view to our own interests. But our principal aim was the advancement of this nation, and thus we feel that the charge of disturbing the peace of the country is exactly as if an honest man were charged with theft. This is our reason for declining to receive the order for suspension.'

'Our Government is wise. It is composed of men of talent, and our demand for explanation must surely be promptly met with proper replies and proofs of guilt, so that our doubts may be dispelled. In that case we shall instantly obey the order of the Government and suspend the publication of our paper. But if there should be charges made and no proofs adduced, we will suffer death rather than suspend publication. Let the nation judge whether this is in accordance with reason or not, and make their opinions known.'

Jishusha,
(The designation of the *Sômô Zasshi* Association.)
No. 23, Kintomi Chô, Kojikikawa, Tôkiô.

(Here follows an earlier translation of the article in the "Japan Weekly Mail" of the 15th inst., commencing with the question "Shall we laugh or look grave over the news, etc?" which has been published in the last issue of the Mail.)

If we examine the article of the Nichi Nichi Shimbun, (the *Sômô Zasshi* proprietary) and that from the *Japan Weekly Mail*, the mode of argument is different, but the meaning is essentially the same, and, as our own perplexity arises from precisely similar causes, we publish the two together and ask an explanation from the learned world.

Causes of Discontent.

(Akebono Shimbun.)

There has been no delay in acting upon the notification No. 98 issued by the Prime Minister on the 11th inst. The *Hiôron Shimbun*, *Sômô Zasshi* and *Kokai Shinpô* have been suppressed—an order which one of them, the *Sômô Zasshi*, declined to receive.

As the notification states that the publication of any newspaper may be suspended which threatens to disturb the peace of the nation, it may be inferred to be the opinion of the Government that the existence of newspapers threatens the maintenance of internal peace.

Now the *Nichi Nichi Shimbun* entered into a long explanation of of the meaning of the word *deem*, and it seemed to us that the journalists must take exceeding care, because by a slight mistake of a writer a newspaper might be ruined. But the opinion of the *Nichi Nichi Shimbun* proved to be erroneous, and so was ours, for we find that the publication of a newspaper can be suspended for matter issued *previous* to the date of the notification referred to. Now whether it be the *Naimusho*, *Shihosho*, the Privy Council, or any other board which has made this regulation, it is clear that there are some who do not think that newspapers are prejudicial to the peace of the nation. Moreover, it is very gratifying to think that the Government takes such extreme care of the peace of the nation.

But those who are likely to become disturbed by reading the newspapers are only the discontented *samurai* and not the farmers and labourers, and it is questionable whether the newspapers should be suppressed on the sole account of the *samurai*. To us it seems as if there were other things which ought to be checked first.

Among the discontented *samurai* who keep their eyes eagerly open in order to raise some disturbance, there are several in Satsuma and Chôshiu—in Satsuma, General Saigo and Lieut. General Kirino. These two men, who hold such high posts in the army, are the chiefs of the *samurai*, and the private schools they have established are more powerful than the *kencho* itself, for before the *kencho* does anything it always first asks the schools for orders.

We do not believe that these men wish to raise a rebellion, but we are sure that there are many *samurai* in all parts of the country who would follow them into action. The chief of the discontented *samurai* of Chôshiu is Mayebara. These are really the men who may be deemed dangerous to the peace of the nation, and they differ much from newspapers, which possess neither sword nor gun. Mr. Mayebara and his followers in Chôshiu obey the commands of the Government, but the *samurai* of Satsuma, although the *han* is said to have been abolished, act as people of an independent nation.

It may be right to check the newspapers on the plea that they tend to disturb the peace of the nation, but it is dangerous to leave unchecked the power of those we have just named. Were these discontented *samurai* to raise a rebellion, they would really do much injury, and thus we hope that as the Government has taken up the question of internal peace, it will kindly address its attention at the same time to these *samurai*.

The Growing Power of the Press.

(Kinji Hiôron.)

If we look into the history of the Press in Europe and America, we find that newspapers were first published in Italy at Venice in the year 1536, and now, after the lapse of three hundred years, the Press has a power equal to that of Government itself. In England, its influence is so great that it is recognized as the power ranking next after King, Lords and Commons; and it is only a few years ago that Horace Greeley, the Editor of the *New York Tribune*, was nominated as a candidate for the Presidency. This is quite enough to show the influence of the Press.

A short time only has elapsed since newspapers first appeared in this country, yet they have become not only popular but powerful. The issue of the Press and Libel-laws last year restricted the boundaries of newspaper enactment, yet the general tone of discussion in the journals has become sounder and the influence of our Press has greatly increased. In other words, the empire over men's minds wielded by the Press has vastly increased, and the laws referred to have greatly contributed to this result.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

They were issued on the 28th June, and this day should therefore be celebrated by the Press.

But this is not all. Something has been issued which should cause even greater joy to prevail amongst us, and that is the notification of the Prime Minister of the 5th instant, which was to the following effect.

(Here follows a copy of the late Notification.)

It is not the effect of the notification which gives us so much pleasure, but the implied fact that the Press in Japan is beginning to exercise the same influence as it does among the western nations. The Government issued this notification because the Press has acquired this great influence suddenly, and has the power of impressing the minds of the people to such an extent that it may disturb the peace of the nation.

Now if the Government recognizes that the Press has the power of disturbing the peace of the nation, it must also allow that it has the power of preserving the peace, and as we constantly write with this view, it is clear that we are of those who promote the interests and preserve the peace of the country. This overwhelms us with joy.*

And, as the newspapers are advancing day by day in power and influence, we may expect another recognition of the fact some time next year.

CAUSTICITY IN JOURNALISM.

(Shinbi Zasshi.)

It is not unfrequently said that the newspaper writers are so constantly punished not because they argue against the Press laws, but because when they receive the license from the Government to publish, they promise to obey these laws, and then go and violate them immediately afterwards. This, it is said, cannot be regarded as right.

But if a newspaper were started without receiving the Government license, the offence would not terminate with the fines or imprisonments imposed on the writers. The proprietors would render themselves liable to the confiscation of the entire property, and their families would be deprived of the means of subsistence. This is the reason why the proprietors promise to obey these obnoxious laws, while at the same moment they intend to struggle for the freedom of speech by the sacrifice of the editors.

Suppose there was a road on which you were forced to travel, and a highway man came up to you with a drawn sword and said "Your money or your life," you would, of course, promise to deliver your money, because your life is more precious. But as soon as your life is out of danger, it is not necessary that you should keep your promise as regards your money.

The promise made to the Government is exactly of the same nature, only that the man who encounters the highway man gives his promise in order to save his own life, while the newspaper proprietor gives it for the sake of the whole nation. Thus there is not the least necessity for keeping such a promise.

A moral philosopher of the West has said that "an extorted promise need not be kept," and this clearly declares what is right on this question.

FUJIKAWA KANJIRO,
Kanda, Tokio.

---

* Nothing can be clearer than that the writer has been reading the Japan *Punch* attentively, and has caught the style of our facetious contemporary.

The Turkish difficulty is now temporarily relegated, and Sir Thomas Wade has his hands free for action in the East. It will be noticed by the mail papers that twelve iron gunboats of special form, suitable for Chinese rivers, are being built with all haste. Messrs. Palmer of Jarrow are constructing six, and Layards of Birkenhead the remainder. These vessels carry one heavy gun; they are of fair speed and very light draft. As this fleet will be ready by the end of July they will be out here in good time should they be required.—*Shanghai Courier.*

We hear that in addition to a small fleet of gunboats of the *Dwarf* and *Cygnet* class, now *en route* for China, 600 tons each, three large men-of-war the size of the *Charybdis*, namely the *Barossa*, the *Scylla*, and the *Scout*, will be commissioned for China if necessary, and if in suitable order. Each vessel carries seventeen guns, and the force will altogether be a very formidable one. England has now a fleet of over eighty small gun-vessels of the *Staunch* and *Arrow* class, of 500, 400, and 600 tons respectively, ready for sea; and yet we are informed, on credible authority, that there is still a strong and influential war party in Peking.—*Shanghai Courier.*

SUMMARY OF FOREIGN TRADE FOR 1875.

On reviewing the Trade of this year as given in the Returns of H. M.'s Consuls it appears that the Imports for all the ports amounted to $29,467,907 or an increase of nearly twenty-two per cent. on those of 1874, and the Exports to $18,014,890 or a decrease of nearly ten per cent. on those of 1874.

It must not, however, be hastily assumed that the Import Trade with Japan is increasing to the extent that these figures might be supposed to denote, or that the productive power of the country is on the decline. It is well known that a large proportion of the foreign goods included in these returns has been sold at a loss to the importers, and that although the production of Japanese Silk and Tea in 1875 exceeded in quantity that of previous years, it was exported at lower values.

The following table shows that for four years the total foreign trade of Japan has fluctuated between forty-four and fifty millions of dollars, and that the aggregate of the year 1875 is three millions of dollars less than that of 1872.

	Imports.	*Exports.*	*Total.*
1872.....	26,188,441	24,294,532	50,482,973
1873.....	27,444,068	20,660,994	48,105,062
1874.....	24,223,629	20,001,637	44,225,266
1875.....	29,467,067	18,014,890	47,481,957

IMPORTS.

Reference to *Table C* shows that the increase in the Imports of 1875 is common to all classes of goods, with the exception of a decrease in Cotton Manufactures of $134,713, and in Eastern Produce of $38,513. This increase, however, is only slight in the three classes of Mixed Cotton and Woollen Manufactures, Metals, and Arms and Ammunition, but is very marked in those of Woollen Manufactures and Miscellaneous Goods, amounting to $2,257,740, in the case of the former, and to $2,892,448 in the case of the latter.

The increase in Woollen Manufactures would have appeared considerably larger, if, as Mr. Annesley has pointed out, the Hiôgo Customs had entered Mousselines de Laine under that head instead of under Mixed Cotton and Woollen Goods.

The trade in Woollens is subject to great fluctuations. In 1872 it amounted to $6,555,014; in 1873 it fell to $4,879,140, and in 1874 to $1,558,896. Again in 1875 it reached, according to these returns, $3,846,636 which is probably more than half a million below the actual amount, in consequence of the erroneous entry of the Hiôgo Customs above referred to.

This comparative recovery in the Woollen Trade is attributable to the steadily increasing importation of Mousselines de Laine which are produced by French dyers and manufacturers in patterns and qualities admirably suited to Japanese taste. While Cloths and Camlets have been neglected, the demand for Mousselines de Laine has steadily increased, and in 1875 the amount imported into Kanagawa was $2,393,157, while the value of all other Woollens was only $474,386. Mr. Annesley also speaks of the deliveries of Mousseline de Laine at Hiôgo having amounted last year to $1,089,674, while the importation of all other Woollens is returned at $916,004. It is not too much to say that two-thirds of the Woollen Trade of 1875 consisted of Mousselines de Laine.

The trade in Cotton Manufactures is steadier than that in Woollens, but exhibits a tendency to decline. In 1872 it was $10,065,155, in 1873 $9,793,488, in 1874 $9,108,750, and in 1875 $8,974,037. In 1875 the importation of Shirtings fell to 47,637,509 yards valued at $2,626,723; the imports of 1874 having been 65,442,004 yards valued at $3,736,628. This decrease, however, was nearly compensated for by increased importations of Cotton Yarn which rose from 104,904 piculs valued at $3,575,554 in 1874 to 137,253 piculs valued at $4,057,840 in 1875, and by a large demand for Cambrics, Chintzes, Imitation Satins or Italian Cloths, Velvets, etc., amounting to more than three hundred thousand dollars in excess of the value of similar imports in 1874.

The large increase in Miscellaneous Goods, which is returned at $8,546,835 does not denote a proportionate advance of trade in the many minor articles comprised under this head, as the imports on account of Government

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are included in that total and these amounted in 1875 to the considerable sum of $3,547,546. Of this sum two millions of dollars consisted of Arms and Munitions of War. Machinery amounted to half a million and the remaining million consisted of ordinary articles of merchandize. The value of Miscellaneous Goods imported in the way of trade was therefore $4,999,289. The value of the importations under the same head in 1874 was $5,744,587, which included importations on Government account to the amount of $1,259,115. The actual trade of that year in Miscellaneous Foreign Goods was therefore $4,485,272 and the increase observable in 1875 is accordingly limited to the sum of $514,017.

The operations in Eastern Produce, which are almost entirely in the hands of Chinese and consist chiefly of Chinese Suger and Cotton, amounted in the aggregate to $4,863,488 or nearly the same as the total of 1874. The returns show that the consumption of Chinese Sugar steadily increases in Japan, having reached last year the large amount of $3,482,588 which gives an advance of $869,529 on the import of 1874. Cotton, on the other hand, fell from $1,156,076 in 1874 to $365,077 in 1875 owing to the Japan crop of last year having proved more favourable.

Exports.

Table E shews that the decrease in the value of Exports is common to all articles of Japanese Produce with the exception of Coal and Camphor. But although the two staple article of Silk and Tea exhibit a decrease in value—the former of $118,376. and the latter of $876,552—the quantities exported have been increased. Thus according to the returns 9,809.59 piculs or 1,307,945 lbs of Silk were exported in 1874 and 11,183.11 piculs or 1,575,081 lbs. in 1875. Of Tea 194,481 piculs or 25,930,800 lbs. were exported in 1874 and 212,870 piculs or 28,382,666 lbs. in 1875.

The condition of the Silk market at the present date gives promise of much better prices being paid for the Silk of the season now opening than those of the season which has just closed, and the Export of 1876 may therefore be expected to exceed in value the shipments of 1875. The subject of the Silk trade has been exhaustively treated in Mr. Consul Robertson's report.

The increase in the export of Coal of $320,435—which is the result of the successful working under foreign direction of the Takashima mine—indicates the advantage which Japan may expect to derive when she becomes convinced of the soundness of the policy of developing her mining resources, on commercial as well as on scientific principles.

The export of rice was limited in 1875 to the trifling sum of $17,091, while in 1874 it amounted to $859,619. The demand for Japan rice will of course depend upon its price, and this will not become low enough to create a steady trade unless entire freedom be given to native operations in this staple product, and until greater facilities are afforded for bringing it from distant parts of the country to the ports of shipment.

On comparing the Imports with the Exports it will be seen that the trade of 1875 exhibits a balance against Japan of the large amount of $11,452,177, which was further increased by $752,050, being the cost of the four large steamers mentioned in Mr. Consul Robertson's report. This adverse balance, as is shown by *Table F.* has been met by an export of treasure, amounting to upwards of thirteen millions of dollars. The Summary of 1874 drew attention to the circumstance that the same amount of treasure was exported in that year, and that it consisted of Japanese gold and silver coin, which was of course only exported as bullion. It will be seen that the same observation applies to the Treasure shipments for 1875.

This drain of Treasure serves to confirm the remark which has already been often made, that it is of essential importance to Japan that she should increase her productions. Her staple exports of Silk and Tea, the annual aggregate value of which does not increase, and which may be roughly stated at five millions sterling, furnish her with insufficient return for the various articles which she imports from Europe, while the few trifling commodities which she sends to China bear but a small proportionate value to the large supplies of Sugar, and occasionally of Cotton, which she draws from that country. The export of the minor articles of Dried Fish, Seaweed, Camphor, Wax and Tobacco continues to be small in amount, and offers little prospect of expansion.

To secure material improvement, therefore, other sources of production must be developed, and as far as it is at present known those which are available are confined to her mineral deposits and the capacity of the country for extending the growth of grain. It can scarcely be expected that Japan Rice will ever compete extensively in the home markets with that of India, Burmah, or Saigon, but cheaper prices would encourage a considerable demand in Northern China, San Francisco, and Australia. Better communication with the Western coast, which could be easily supplied by continuing the railway from Kiôto to Otz on the Biwa Lake, a distance of ten miles, and by constructing a good ordinary road from Maebara to Tsuruga, a distance of thirty miles, would enable the Rice which is grown in great abundance on the West coast to be brought at a much cheaper cost than at present from Niigata to Osaka. In Yezo, an island of thirty-five thousand square miles, with a population of little over one hundred thousand, there are vast tracts of land, untouched by spade or plough, which are as admirably suited to wheat cultivation as the Pacific slopes or the plains of South Australia, and even on the main island it is estimated that not more than a fourth part of the area has been brought under cultivation.

The mineral deposits of the country promise, however, the readiest return, but Mr. Plunkett's Report has shewn how little has yet been made of these by the Mining Department of the Government, which has held them in its charge for several years. While the present system continues the mines of Japan will remain comparatively unproductive. This is to be regretted, as the Iron and Copper which might be obtained from them in considerable quantities would find favourable markets, the former in China and the latter in Europe; and so long as the vast Coal-fields of China remain unworked, the consumption of Japanese Coal in that country might be increased to an indefinite extent. With a large export of Coal, Iron, Copper, Rice and Wheat, the industrial and commercial condition of Japan would present a very different aspect to that which characterizes it at the present date.

In this connection it is satisfactory to note that the works of the Japanese Government, which have been put up on an extensive scale by foreign engineers at the Ikuno Mines in Tamba, near to Hiôgo, are proving successful. At present these mines are worked chiefly for silver and gold, but after additional machinery shall have been constructed a large output of copper is looked for. The Government are also about to open iron mines at Kamaishi, in the north of the main island, and to do this effectively they are constructing there blast furnaces and a line of rail from the mine to the port. They also contemplate, it is said, working the coal mines at Miki, in Higo, with foreign machinery, which will doubless materially increase the present yield. It is to be hoped that the result of these various undertakings will soon be perceptible and that they may have the effect of increasing the exports of the country.

Table G shews a small diminution in the Tonnage of all Foreign Shipping of 18,419 Tons, the total being 951,523 Tons against 969,942 Tons in 1874. Two-thirds of this, or 617,331 Tons, was American. British tonnage amounted to 252,146 Tons, and that of all other nations to 82,046 Tons. British Shipping exhibits an increase on that of 1874 of 14,714 Tons, American Shipping a decrease of 20,275 Tons, and German Shipping a decrease of 39,625 Tons. The increase observable in French Shipping is attributable to the different method of measurement adopted in 1875.

Table H gives the resident Foreign Population in Japan at 2,583 being an increase of 175 on that of 1874. Of this total 1,282 persons, or rather more than half, are British; one hundred and twelve persons having been added to their number since 1874.

CHINA AND JAPAN MARITIME ORDER IN COUNCIL.

We have been requested to publish the following notifications :—

NOTIFICATION.

The Undersigned hereby makes known that he has appointed Mr. William McDonald to be Government Surveyor of British Shipping for the Port of Kanagawa under the China and Japan Maritime Order in Council, 1874, copies of which may be obtained at the British Consulate at that Port.

He also publishes for general information the annexed notification issued by the Registrar of Shipping at Shanghai on the 1st November 1875.

(Signed) HARRY S. PARKES,
H. B. M's Envoy Extraordinary and Minister Plenipotentiary in Japan.

British Legation,
Yedo, July 19, 1876.

REGISTRY NOTIFICATION.

No. 3 of 1875.

Notice is hereby given that the China and Japan Maritime Order in Council comes into force from this date, and may be obtained at this office for twenty-five cents per copy. British vessels sailing under provisional Certificates or Letters granted by Her Majesty's Minister in China or Japan must be surveyed and registered anew before departure from this Port, and all British ships must be provided with Light and Fog signals and be marked in accordance with the provisions of the Merchant Shipping Acts 1854 to 1875.

Her Majesty's Minister in China has been pleased to appoint Mr. L. Barton to be Government Surveyor of British Shipping at this Port.

By Order,
(Signed) W. HANDYSIDE TAPP,
Registrar.

Registry Office of Shipping for China and Japan.
Shanghai, November 1, 1875.

Law & Police

IN H. B. M.'S CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Tuesday, July 18, 1876.

A. J. Wilkin *vs.* F. Beato and J. Grigor.

Mr. Ness appeared for plaintiff; Mr. Dickins for defendants.

Plaintiff, as trustee for the estate of Mr. W. H. Smith, debtor, filed a petition against the defendants and another, whose name was subsequently struck out, for the recovery of the property named "the Grand Hotel," conveyed by the debtor to defendants, on the ground of what in law is called fraud, under a bill of sale.

The present motion was to make another amendment in the petition by the omission of the defendant Beato's name, upon his affidavit stating that the allegation at the end of the 10th paragraph of the printed petition was false as far as regards Mr. Beato. The paragraph in question reads to this effect: "That the defendants had due notice of the execution of the said debentures or bills of sale, and that the goods and chattels described therein where, and remained up to the end of January last or thereabouts, in the possession, order, or disposition of the said debtor, he being a trader, by the consent and permission of the grantees, named in the bills of sale, about which time the defendants took possession of the said goods and chattels, or a large portion thereof."

Mr. Dickins, in pressing his motion that Mr. Beato's name be now struck out from the petition, argued that his client had never had possession of the property in question, and therefore he ought not to be put to the expense of defending an action to which he was a perfect stranger.

Mr. Ness resisted the motion; he held that Mr. Beato's bare declaration that he did not take possession was insufficient to justify the Court in dismissing the action against him.

Mr. Dickins replied that Mr. Beato's declaration was made on his solemn oath as an affidavit; Mr. Grigor is the only one who has got possession, and if the action results in favor of plaintiff, then an order against Mr. Grigor to surrender possession will be just as effective as an order against Mr. Grigor and Mr. Beato.

Decision reserved.

The motion heard yesterday in H. B. M.'s Consular Court in the case of A. J. Wilkin *vs.* F. Beato and J. Grigor was to day dismissed with costs.

Before C. W. Goodwin, Esq., Acting Chief Judge.

Monday, July 17th, 1876.

Nakajima Saisuke *vs.* W. P. Mitchell.

The defendant, by his counsel Mr. Montague Kirkwood, applied by motion for an order for leave to appeal *in formâ pauperis* from the decree made in this suit at the hearing in H. B. M.'s Consular Court of Kanagawa, on 7th July last.

After hearing Mr. Montague Kirkwood in support of the application, and after reading the affidavit of the defendant that he was not worth $25 beyond the subject matters in dispute, and the certificate of counsel that there were good grounds for an appeal and that the same was not vexatious, His Honour made the order sought for, and assigned to the defendant Mr. Montague Kirkwood as counsel.

U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul General.

Monday, July 17, 1876.

Sujibayashi Naokichi *vs.* Chipman, Stone & Co.

This was a claim for bargain money deposited.

Mr. Stone appeared for defendants; Jozhikuni appeared for plaintiff.

The petition stated that in January and February, 1875, plaintiff made a contract to purchase a lot of lamps, chimnies, &c., and made a deposit of bargain money. The goods did not arrive within the stipulated time. Plaintiff applied repeatedly in vain to have the bargain money returned, and prays that defendants be ordered to refund $30 of the $180 deposited, which, according to agreement, was to be repaid in double the amount in case of breach of contract, to wit, $60, and the remaining $150, with interest thereon at the rate of 12 per cent. per annum.

Defendants admitted the contracts, and the $180 bargain money. The goods arrived in time, with a trifling exception, and they have tried to force delivery. They had previously been victimised by plaintiff to the extent of $300.

1. Contract dated 12th January, 1875, read, stating that Mr. Yechigoya has this day contracted for 2,000 doz. ⅝ inch chimnies, at 41 cents per doz.; to arrive in ten months from date, and be paid for on arrival at Custom House, where delivery is to be taken; bargain money $30, to be returned with double the amount in case of breach of contract.

2. Contract dated 18th January 1875, that same has purchased from same 1,000 doz. hand lamps, at $2.75 cents per dozen, to arrive in ten months, bargain money $50.

3. Contract dated 26th January, 1875, that same has purchased from same 1,200 doz. lamps according to sample with ⅝ in. chimnies and ⅝ in. hinge burners, to arrive in 11 months, bargain money $50.

3. Contract dated 8th February, 1875, that plaintiff has this day purchased from defendants 2,000 doz. ⅝ in chimnies at 35 cents per doz, and 500 doz. 1 in. chimnies at 55 cents per doz., to arrive in 10 months, to be taken delivery of from Custom House and paid for on arrival. Amount advanced $50.

In all four contracts "accidents of the sea" make an exception from the time of arrival.

Plaintiff did not appear personally; his attorney said that as he himself knew all about it, he thought plaintiff's presence unnecessary.

The Court ordered plaintiff's attendance.

Adjourned until 1 p.m.

Court resumed at 1 p.m.

Plaintiff: I have asked Mr. Stone for the goods, in his office No. 28. I went because I heard the goods, or part of them had arrived. I was told they had not arrived. I have seen Mr. Stone, Mr. Morse and Mr. Charley. The contracts were up on the 26th of the 12th month. On that day I went and told them the contract had expired and as the goods had not arrived I wanted my deposit money back. They told me the ship with the goods had arrived two days before and they did not want to give the money back. On the 7th January, 1876, the goods were all landed. I found that out at the Custom House. Defendants did not send to me. I then went to defendants. They said the goods were in the godown and I went to look at them. I found them different from contract. I told defendants as the goods were different I could not take them. The chimnies were wrong; some too large, some too small. I had already sold the goods at Tôkiô. As the goods were different I could not make delivery. The party from Tokiô came down and refused the goods when I told him they were different. One half the burners were to be with screw, one half with hinges: 1,700 doz. with hinges. I did not open all, but I opened some of the boxes. I had contracted for English chimnies, those that came were American. (Sample which was produced by defendants.) This is not the sample shown me. This is American. I also objected to the goods being late. Defendants said they had any amount of goods in their godown. I might go in and look for myself. They thought I might fined 1,000 or 1,200 dozen of what I wanted and for the balance they would take off 25 per cent. Mr. Charley told me so, and that if I would not agree they would have nothing to do with me. So I got another Japanese, who can speak English, to go to defendants and ask for my money. Mr. Stone became vexed. I went myself next day and had some talk with Mr. Stone, who said he would take off 25 per cent., and could do nothing more. I then wrote my petition to the Consulate.

The man in Tôkiô had deposited with me the same amount I deposited with defendants. I showed the Tokiô party my contracts. He went with me to defendants. His name was Radzuzaya. He has two houses, and to them my whole contract was sold.

Sakurai, cautioned.—I translated the contracts from English for plaintiff at defendants' place. I was at that time in defendants' employ. Before the goods arrived I went to Tôkiô.

Mr. N. J. Stone, sworn.—We made the four contracts on the 12th January for 2,000 dozen ⅝ chimnies to be like sample. The chimney produced and now in Court is the exact sample. The contract would expire on the 12th November 1875. The goods by the barque *Ugo* arrived on the 1st October. We called on plaintiff to take delivery. Previous to this a portion of the second contract goods arrived in the *Cremona* on the 6th September. The lamps spoken of in first contract were complete; part arrived in the *Ugo* and part in the *Cremona*. I produce sample which is the same with the exception it that is white instead of green. The green sample was broken so a white lamp was made instead, and with the exception of the hinge burners all which arrived were screw burners. Immediately on the arrival of the *Cremona* I sent for plaintiff and explained to him about the white and green lamp, and told him if he would accept the white instead of the green I would telegraph for the hinge burners, as I had fully time to do. The 1st contract I had complete and wanted

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

plaintiff to take delivery. The 2nd and 3rd contracts I was willing to complete with exception of the green lamps. But plaintiff declined to take delivery of the 1st contract on the ground he would not take delivery of any unless he could have everything. There was no agreement that the contracts should go together: each was a separate contract. As plaintiff would not take delivery of the first contract I did not feel justified in telegraphing for the hinge burners. He had once before refused to take delivery of what he had bought, and witness had to make a reduction of $1,300 to make him take the goods. The market price on the contract goods had fallen and witness agreed to make a reduction, but not 25 per cent. Witness has thus had all the goods called for by the contract, except the green lamps and the hinge burners. Witness has sold the greater part of the goods to the man in Tokiô, with whom plaintiff says that he contracted.

Plaintiff being asked by Court what the difference is between the two kinds of lamps, said that he had contracted for the lamps with chimnies and they came without chimnies. He had bargained for white lamps, consequently the difference was not in the colour, but in the lamps being without chimnies. Defendants wanted him to take the lamps by themselves, and the chimnies would come afterwards, but that would be too late. Mr. Stone made no offer of telegraphing for the hinge burners. Plaintiff was offered some chimnies by defendants, but as the chimnies were not according to contract and did not fit the lamps, he refused to take delivery of them.

Mr. Stone said that his firm had received no other chimnies than those that came from America in the latter part of 1875, except some that arrived in January. Witness is positive that he, in October, offered plaintiff the chimnies of which he has produced sample in Court, and which were according to contract, but plaintiff said he would have none of the contract goods unless he could have all the goods mentioned in all the four contracts.

Plaintiff denied this: only as above said he refused the lamps without chimnies.

Mr. Stone said the chimnies did arrive with the lamps in three ships, and he offered plaintiff the lamps complete with exception of the hinge burners, and these he did not get because plaintiff would not receive the goods on the first contract. Witness could have got them in time. The hinge burners always arrive by rail and steam, lamps and chimnies by sail.

Adjourned until Wednesday, at 10 a.m.

Wednesday, 19th July, 1876.

SUHEAYASHI NAOKICHI *vs.* CHIPMAN, STONE & Co.

Case continued from Monday last.

Mr. Stone appeared for defendants; plaintiff appeared personally.

Ikeda Saburo, alias Charley: I am employed by Mr. Stone. I know plaintiff. I remember the contracts about lamps and chimnies. I know that the ships having them on board did arrive. The *Cremona* was one of the ships, the *Ogo* was another. In October last year I told plaintiff that the chimnies had arrived, and asked him to take them. Plaintiff said he would not take the chimnies without the lamps, and also that the burners were wrong. I told him that Mr. Stone would telegraph for the burners if he would take the chimnies. Plaintiff also said that here was a difference in the colour of the lamps, which should have been green. With regard to the chimnies plaintiff made no objection. I have not compared the chimnies with the sample so I cannot say if they were according to sample; but they looked alike. Plaintiff refused to take the chimnies on the first contract. Either in the 12th month or in the commencement of the following month plaintiff came to Mr. Stone's place, and said that as the contract time had expired he wanted his bargain money back. Mr. Stone answered that he had offered the goods, and plaintiff had refused them, so he could not return the deposit. Afterwards Mr. Stone made plaintiff an offer that if he would take the lamps he would take off 25 cents per dozen from the contract price. The negotiations, however, were finally broken off.

To Mr. Stone: 500 dozen of the lamps were afterwards sold to the Tokiô party for 90 cents a dozen; likewise 500 dozen burners were sold to the same party for 90 cents a dozen. The chimneys were also afterwards sold at 42½ cents per dozen.

Mr. Stone: This makes $2.22½ per dozen, lamps complete with burner and chimney.

Plaintiff, being asked by Court why he did not accept Mr. Stone's offer to telegraph for the hinge burners, said that no merchant would think of receiving lamps by themselves, chimnies by themselves, and burners by themselves, as all three together are requisite in order to get a light. On his attention being drawn to the circumstance that his first contract was exclusively for chimnies he said that the reason why he refused to receive the chimnies was that they were not according to sample. He called as witness

Choya Heibe: I am a merchant. I made a contract in 1874 with Chipman, Stone & Co.; my goods arrived in the commencement of the 12th month, 1875. The chimnies for myself and for plaintiff in this case were to be according to the same sample. I know that, because I and plaintiff went together to Chipman, Stone & Co. When my chimnies came they were according to sample. The samples here in Court are not like my chimnies which were longer.

Mr. Stone recalled: I made a contract with a man named Kioya in December, 1874: he contracted for small-sized English chimnies, and the sample was sent on the 24th or 25th by American mail to England. They were entirely different from plaintiff's. My first contract with plaintiff was made on the 12th January, 1875. I am not aware that I have seen the last witness before: I think he is the banto of Kioya. Of the chimnies now here in Court the most valuable are those produced by me. I still swear that the chimnies offered by me to plaintiff were according to sample, and were made by the Bristol Brass and Clock Co., from the sample sent, which had plaintiff's name attached to it.

Shimadzu deposed that he, on the 25th May last, went with plaintiff to Mr. Stone, to ask him to return plaintiff's bargain money. Mr. Stone said that the goods had arrived in proper time. Plaintiff contended that they were different from contract, and he wanted his bargain money back, which Mr. Stone refused. Plaintiff then said he would sue him, to which Mr. Stone answered, "all right."

Judgment reserved.

Thursday, July 20, 1876.

JUDGMENT.

This action was brought to secure return of bargain money paid by plaintiff to defendants on four several contracts, to deliver lamp chimnies, lamps, and burners, within certain specified periods. The plaintiff alleges breach of contract on the part of defendants. The answer denies this breach, and charges that plaintiff, without cause, refused to receive the goods.

The contracts were in writing, and dated respectively the 12th January, 18th January, 26th January and 8th February, 1875. The first of these was for 2,000 doz. ⅝ chimnies, to be like a sample agreed upon by the parties at the time the contract was made, to arrive in ten months.

The second was for 1,000 doz. hand lamps complete, like sample, 500 doz. of which were to have hinge burners, and all to have chimnies; to arrive in ten months.

The third was for 1,200 doz. lamps like sample, to be supplied with ⅝ chimnies, and ⅝ hinge burners; to arrive in eleven months.

The fourth contract was for 2,000 ⅝ chimnies and 500 doz. 1 in. chimnies; to arrive in ten months.

Upon these different contracts the plaintiff advanced, or deposited, as bargain money, in all the sum of $180,—that is to say, $30 on the first contract, and $50 upon each of the others. And it was agreed that if the goods provided for in the first contract did not arrive in time, double the amount advanced, that is to say $60, should be paid to plaintiff.

The evidence is exceedingly contradictory. It is clear, however, that the number of chimnies provided for in the first contract did arrive long before the expiration of the contract time, and that plaintiff was asked to take them. He refused, alleging now that they were not according to sample. The sample unfortunately was sent to the manufacturer. The defendant, Stone, produces specimens of the chimnies, which did arrive, and swears positively that they are in all respects similar to the sample upon which the contract was made. And he also says that the refusal of the plaintiff to receive them as stated by him at the time was, not because they differed from the sample, but because he did not want them unless he had the lamps. He would not take the one without the other.

It appears also that afterwards, when the lamps and burners arrived, which they did also long before the expiration of the contract time, there were no hinge burners, as contracted for. The defendants allege, and the defendant Stone testifies that there was plenty of time for him to get the hinge burners, before the expiration of the contract time, and that he offered plaintiff to do so, provided plaintiff would take the chimnies mentioned in the first contract. This plaintiff refused to do and defendants thereupon failed to do

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

anything further, feeling assured that plaintiff did not intend keeping any of the four contracts.

I am of the opinion from the evidence that the plaintiff committed a breach of the first contract in refusing to receive and pay for the chimnies therein provided for, which chimnies arrived before the expiration of the contract time. I am also of the opinion that the defendants were justified in doing nothing further under the other contracts, while the plaintiff continued to decline fulfilling the first.

The real motive of the plaintiff in thus refusing may probably be found in the fact that the market price of chimnies in Yokohama was lower, when the goods arrived, than the price agreed upon in his contract. The evidence shows that the defendants sold them at a large loss.

My experience here leads me to believe that many of these contracts are entered into on the part of Japanese in the hope and expectation that some trifling difference may be found in the goods, or some breach committed by the other party: to afford them opportunity of speculating in damages or in a large reduction of the price of the goods.

I am not disposed to encourage this amusement, and finding nothing in the evidence in this cause to justify me in ordering a return by the defendants of the bargain money, and an additional penalty of $30, it is hereby ordered, and adjudged, that the complaint be dismissed with costs, to be paid by plaintiff.

(Signed) THOS. B. VAN BUREN,
Consul General.

RIKUSHI HIGOSUKI and YAGISHITA CHOJIRO *vs.*
C. A. FLETCHER & Co.

Continued from Friday last.

Rikushi Higosuki: I am a merchant. On the 20th of the 4th month defendants had an auction of nailrod iron on the English hatoba. I bought 1,600 bundles. Defendants said they would give delivery the next day. On that day I paid on account $1,000, but when I asked for delivery defendants said the goods were a little short but they would soon have them ready. Every following day, sometimes as often as thrice a day, I went, generally together with my partner, to defendants to ask for the goods: this went on for five days. I had sold the goods to a party in Tōkiō. I then asked defendants to let me have as much of the nailrod iron as they had got, even if it was short of the amount sold. Defendants then said they could deliver nothing at all, but would return the $1,000 paid on account. This, however, I refused, and I told defendants the reason, viz., that I had sold the iron myself at Tōkiō, and had received $1,000 bargain money. Shitomura Tokuchiro is the name of the party at Tōkiō who bought from me. I told him how matters stood and asked him to let me off, but he refused. I made my bargain with him on the 21st, the goods to be delivered immediately. I made $52 profit. Tokuchiro had again sold the iron to a third party. I have not yet paid Tokuchiro his $1,000 back. I cannot pay him until I get the money from defendants. Through the non-delivery of the goods Tokuchiro has lost $570, and that amount he claims from me. When defendants offered to return me my $1,000 and I refused, I did not say how much I would take.

To defendants: I do not know to whom the iron belonged. Afterwards I was told by you that it belonged to Chipman, Stone & Co., at No. 28. I did not buy the iron on commission: I and my partner bought it for our own account. Sometimes we buy on commission.

Yagishita Chojiro: I have heard the former witness' evidence. It is in every respect true. The prices were—

800 bundles	$\frac{1}{16}$	inch, at	$3.55	per picul.
200 ,,	$\frac{1}{8}$	,,	3.40	,,
200 ,,	$\frac{5}{16}$	,,	3.05	,,
200 ,,	$\frac{3}{8}$	,,	3.20	,,
200 ,,	$\frac{1}{2}$	,,	3.10	,,

It was the lot of 800 bundles that was short, and defendants said as that lot was the one that sold highest they could not deliver the balance, which was all at lower prices.

To defendants: The lot of 800 bundles was bought by the firm called Mitoya: the lot of 200 bundles $\frac{3}{8}$ inch was bought by a merchant named Dokin, in Otamachi. I bought it from him, and paid him commission on it.

Tokuchiro: I am a Tōkiō merchant. I bought the iron on the 12th, from plaintiffs in this case and immediately afterwards I resold it at Tōkiō. I gave plaintiffs $1,000 on account. If the iron had been properly delivered to me by plaintiffs the latter would have made a profit of $52. I did not ask plaintiffs to buy the iron for me.

To defendants: Plaintiffs have not delivered me any iron on that purchase. I would not buy it now at that price.

C. A. Fletcher, sworn: The statement of the plaintiffs as far as the purchase of the iron is concerned is correct. The sale was *bonâ fide*. The reason for non-delivery was inability, as the goods were not delivered from the ship. It is a mistake of plaintiffs' when they state that we would not deliver the iron because we were short on that part of it that had carried the highest price. We offered to return the money paid on account, as soon as we found that we could not deliver. The same goods were subsequently resold at auction, and the same parties bought them.

Judgment for plaintiffs in $1,052 with interest from the 25th of April last, at the rate of 12 per cent. per annum, and costs.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before P. F. KEMPERMAN, Esq., Acting Consul,
President, Mr. E. HAGENS and Mr. H. FRANCKE, Assessors.
Monday, 17th July, 1876.

COLL. PETER FALCK *vs.* CHAS. ROEPKE.

This was a charge of assault and battery.

Plaintiff stated that he, on the 24th of last month, had been assaulted by defendant in the public house No. 108 kept by the latter, called the Yokohama Hotel, and had been struck in the eye and on the mouth.

Defendant contended that plaintiff was the aggressor, and he had only tried to protect himself: defendant had stumbled against the billiard table and thus hurt himself.

Both plaintiff and defendant appeared personally.

Captain Graham was called as witness. He deposed that plaintiff lived in the same house as himself. On the morning of the 25th June, about 2 a.m., he heard Falck coming home, and when witness saw Falck later on he perceived that his eye and mouth were injured as by blows from a fist. Later in the day witness saw defendant, who told him that Falck had come to his place last night to play at billiards, and that during the game Falck had aimed a blow at defendant, who had put up his hand to parry it, and thus hit Falck in the face. Afterwards Falck fell down and struck his eye against a corner of the billiard table, and left without paying for his game.

A Japanese girl, who at that time was servant in No. 108, deposed that she was called by her master, the defendant, about half past two in the morning of the 25th of last month to shut up the house. She saw the plaintiff in the room; he was bleeding and defendant told him to go out.

Mrs. Roepke gave evidence that her husband and Falck came to the house on the 24th of last month about 11 p.m. Witness was in bed and after having slept some time she awoke, and as she could hear that billiards were being played she arose, went to the billiard room, and asked her husband to shut up the house as it was late, about 1 a.m. Defendant asked plaintiff to pay for the game, which plaintiff refused, and then struck at defendant who parried the blow. Plaintiff was very much intoxicated, and fell against the billiard table whereby he hurt himself in the face so that he bled profusely. Roepke helped Falck on his legs again, and Falck asked him to explain something about it. This request Falck repeated several times. Roepke was only a little intoxicated.

Plaintiff stated that he went on Saturday, the 24th June last, with Roepke to his public house No. 108, at his invitation, and there played billiards with him. During the game Roepke suddenly struck him with the fist in the eye and on the mouth, so that several teeth became loose, and when he asked Roepke the meaning of this, Roepke took him by the collar and threw him through the door into the street. He had to call in the assistance of Dr. Jongh the next day. Plaintiff was not drunk, and cannot explain the conduct of defendant; there had been no previous quarrel between them, and no dispute about the payment for games or drinks.

Defendant said that it is a notorious thing that plaintiff, when intoxicated, makes scandal. Plaintiff and defendant met each other in the "Plymouth Arms," and went from there to defendant's house about 11 p.m. In defendant's house Falck kept the gin bottle standing on the bar and helped himself every moment. As he was going to lose the third game of billiards he threw down the cue and would play no more, and when defendant asked him to pay for the games and drinks he refused either to pay or to sign a chit. Plaintiff had five glasses of gin in the house.

Captain Graham, when asked by the Court, deposed that plaintiff, during the time witness had known him as his tenant, which was now seven or eight months, has always behaved

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

decently and was not at all of a quarrelsome nature. Witness may have seen Falck excited, but never the worse for liquor.

JUDGMENT.

Defendant, Charles Roepke, ordered to pay a fine of one hundred marks and costs; in default of payment three days' imprisonment.

Thursday, 20th July, 1876.

Before P. F. KEMPERMANN, Esq., Acting Consul, and Mr. J. PELTZER and Mr. E. HAGENS, Assessors.

E. BATAVUS *vs.* HOHNHOLTZ & Co.

Mr. Montague Kirkwood appeared for plaintiff, Mr. Elfen for defendants.

The plaintiff in this case claimed $825 for wrongful dismissal from the service of the defendants.

The petition of the plaintiff alleged that he was engaged by the defendants as book-keeper, for three years from the 1st August 1875, at a salary of $65 a month, board and lodging free; and that he remained in their service up to the 22nd of February last, when he was dismissed without any sufficient cause.

The defendants in their answer admitted the agreement for one year with the plaintiff but denied the wrongful dismissal, stating at length that the plaintiff had left of his own accord on being found fault with by the defendants' manager, G. F. Graham, and that no one was to blame but himself. The replication of the plaintiff denied that he left of his own free will and asserted that G. F. Graham drove him by force out of the store without good cause for so doing, and threatened, shaking his fists at him, to make him lie up in the hospital for three months, if he did not leave forthwith. He also entered into the details of the conversations that there took place, alleging that they all corroborated his statement that he was dismissed.

Defendants in their rejoinder again alleged that plaintiff left of his own free will, and that the allegations of the replication were for the most part false.

Mr. Montague Kirkwood, after the President had briefly stated the pleadings, addressed the Court on behalf of the plaintiff. He stated that the dismissal was most unjustifiable, that he should prove that the defendants rejoinder was entirely false, and to do so should call Mr. Gibbin and a Japanese who were present during the greater part of the conversations that took place on the 22nd February, also Mr. Micklejohn who had tried to arrange the dispute on the 22nd February in a friendly way. Further he would show that the defendants had not a vestige of proof in support of any one of their allegations, and that he was entitled to the amount he claimed for plaintiff.

Mr. Elfen then sought to establish his defence by the evidence of G. F. Graham, but on Mr. Kirkwood's objecting that he was a party to the cause, his evidence was not received. After considerable discussion between Mr. Elfen and the Bench the President and Assessors withdrew for a short interval, and on returning into Court gave judgment for the plaintiff in the sum of $575 and costs.

IN THE IMPERIAL ROYAL AUSTRO-HUNGARIAN COURT.

Before RUSSELL ROBERTSON, Esq., Acting Consul.

Friday, July 21, 1876.

A. Kalser, an Austrian subject, was charged with stealing a revolver and a pair of boots from Baron R. v. Stillfried, while in charge of his house No. 159, Yokohama, during the Baron's absence in China.

Prisoner denied the charge.

Baron Stillfried, sworn: Prisoner was my cook. I left for Shanghai on the 5th April last. Prisoner asked me to let him stay in my house during my absence. I agreed, on condition that he would look after the house. When I came back from Shanghai on the 21st of May, I was informed by my servant-maid that a pair of boots and a revolver were missing from my room. I asked the prisoner what had become of them, and he told me he would bring the things, but requested me not to say anything about it. This I promised, but next day he denied knowing anything about the boots: as for the revolver, he said he had taken it with him to Tôkiô and left it with a Mr. Smoleck, an Austrian in Government service. He promised to send for the revolver, but some days afterwards, when I reminded him of it, he said he had pawned the revolver with Mr. Smoleck for $2,50. I gave him the money to procure the revolver back, when he asked me if he should go to Tôkiô for it. I told him it was of no use to go to that expense, he could write to Smoleck to hand the revolver to Mr. Seager, a friend of mine in Tôkiô. He afterwards told me he had received a letter stating that the revolver had been delivered to Mr. Seager. On the 12th of this month I went myself to Tôkiô, but when I asked Mr. Seager, he told me he knew nothing about it. I wrote a post card to prisoner, who then ran away from my house: I came back from Tokio on the 16th, and I then gave him to the 18th to return my things. As he failed to do so I brought my charge. On the 19th I received a letter from prisoner saying that he would bring the revolver next day. Accidentally I heard that the revolver was with Mr. Janini, where I have seen and recognised it.

H. Janini, sworn: I keep a small restaurant at No. 136, Yokohama. Prisoner used to visit my house, and in the month of April he came and told me that his master, Baron Stillfried, had gone on a trip to Shanghai, and during his absence he, prisoner, wanted to board with me. I agreed, and one day, some time after, prisoner produced a revolver and asked me for a loan of $4 on the same, which I gave him. Baron Stillfried has been to my house, seen the revolver, and recognised it as his property. Witness produced a bill against prisoner for $23, of which $19 were for boarding, and $4 money lent.

Prisoner stated: I left Baron Stillfried's employ on the 1st April last, and hired a small room at No. 183. When the Baron was going to Shanghai he sent for me, and asked me to take care of his house during his absence. This I agreed to do, but as he had left me no money for support, I had to board with Mr. Janini, and to him I pawned the Baron's revolver. When the Baron came back, at the end of May, he asked me about the revolver, and I told him an untruth, saying that I had pawned it in Tôkiô. The Baron did not give me any money to redeem the revolver. I went to Mr. Janini with $7, and asked him to let me have the revolver back, but he would not unless I could pay him half of his bill.

When asked by the Court if he acknowledged having stolen the revolver, prisoner said he did not: that if he had sold the revolver so that he could not restore it to its lawful owner he would have committed a theft, but he had always the possibility left of restoring it, as he had only pawned it.

Sentenced to one month's imprisonment with hard labour.

Prisoner said that he would appeal against this sentence to Shanghai.

THE DOCTRINE OF THE CHI; OR THE CHINESE PHILOSOPHY.

(Celestial Empire.)

OCCASIONAL PAPERS.—No. 1.

It brought down such a storm upon me twenty years ago, when I ventured through Wingrove Cooke to publish what I understood Yeh to say, was the meaning of Tao-li, that I have not dared hitherto to give utterance to the views I have formed, from conversation and reading, of the meaning of the Symbol of The Yin and the Yang, and what are called the Eight Diagrams of Fuh-he. But as now Canon McClatchie has led the way, and declared with the authority of thirty years' missionary labour, that Chinese Philosophy is not a congeries of nonsense, but has a meaning if you have only wit enough to see it, perhaps it may be endured that I should say what that meaning is as it has been explained to me.

As with Taoli and with every thing else there seems to be no very great mystery in it. It is simple enough if one can only get rid of the rubbish great authorities, commentators, and learned ignorami generally, persist in heaping round the truth whenever it comes to the surface. Whoever the author of the Diagrams may have been, he seems to have arrived whether by inspiration or observation, induction, deduction, or whatever process, at the simple conclusion that all things visible are but the phenomena consequent on the action of certain forces; and having satisfied himself of this, to have set himself to work, first to discover what these forces were, and then to invent some simple symbolism by which to express them. Perhaps the idea flashed on him as he sat on a rock watching the action of the currents; the water flowing in different directions, and taking different forms, as affected by the ground over which it flowed, and the rate at which it sped; here flowing a yellow turbid stream, here clear and pellucid, there depositing a sandbank, here gathering the mud up into itself: in all he could see the action of a hidden force, in one sense seemingly apart (inseparable from it) existing by as well as in the water. And as the fall of the apple struck the chord in Newton's mind, which led to the discovery of gravitation; so perhaps as the older Philosopher watched the waters at the mouth of one of China's rivers, the mystery of the universe became gradually clear. Form is but the Manifestation of Force.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

But how to write down the discovery his mind could scarcely grasp was difficult. He had no terminology at hand already half expressing what he wanted to give utterance to; he must commence from the very beginning, and invent a symbol which should express the picture of the universe, faintly impressed on his agitated mind. The simplest form of matter he could think of would be the dot, the simplest form the circle, for all other forms thought would shew him were but combinations of more forms than one. From the dot then all things took their rise: the germ in the centre of the egg from which the world had sprung. But the dot was not sufficient to express the spreading universe he saw on every side. North, east and west, above, below him, around the dot there was and yet there was not a something yet a nothing; the potentiality of being so far not brought into form. How could it be made appear? The answer followed by the secret of existence: limitation: until conditioned, limited, brought into shape, although there was that from which all things were made, it still was far beyond the grasp of human sense. What taught him the nature of this limitation? I cannot say where Euclid found his definitions, axioms, and postulates: most probably in the unconscious observation of his mind, striving to find solution for a pressing need, and taking as true that which afforded him the easiest escape. Time it flashed across him is that which limits matter. And for time he had to find a symbol limiting, confining, the potentiality of being. He saw around the dot the easiest source of all.

The circle was the natural symbol, (suggested perhaps by the horizon) beginning and ending in itself simply, and equally confining all within it: the circle round the dot expressed sufficiently the first great thought and gave him tools to work with. But though he had a symbol which expressed the world so far, it was imperfect: a form indeed but lifeless: how could he best express that life, through which the countless variations of ever-changing nature had their origin? Motion there must be, or the limitation of dead matter was without effect; and motion something more than simply round and round the centre, which gave rise to no phenomena, but left the blank as blank as heretofore. He had got the idea, the conception, of the primordial state of primeval matter enclosed by the boundary of time.

What was that matter? was it dust? was it vapour? was it fluid? how could he tell? it was invisible, yet in it was the power of becoming visible: all form must be brought out therefrom, but how? As he gazed at the water before him, he saw how the useless fluid, by the action of the unseen currents, took new shapes and natures, and he saw what was needed: ere the varied picture of living forms could spring from the void before him, there must needs be life, the spirit Chi must be breathed upon the waters, or the fluid aether would remain to all intents as inexistent as before. Perchance it took but little time to see that life and motion were but different names for the same thing—the mere phenomenon of force. There must be force, or the creation were but incomplete: life, action, motion or matter might as well have still remained unbrought forth into being: what was that force? The currents told him as he watched them: only motion. One doubts if then he saw that simple limitation, the very fact of fencing in, was in itself a force sufficient: that you could not possibly conceive the thought of the enclosing matter within hard unyielding limits, without the idea of pressure at the same moment entering your mind: more likely the first thought of of motion was allied to his conception of ever-revolving, never-ending time and as he saw the boundary walls revolve, he saw all the within moved with them, the universe revolving set in motion and carried on by Time. Or even perhaps his first idea of motion, was but the spreading of the central germ to the surrounding void, a thought the very symbol would suggest: and he pictured to himself, it spreading upwards round to the limit time imposed it: upon deeper and darker at the centre, gradually finer and lighter as it opened outwards. From the centre he saw radii shooting out over to the circumference, the volume of matter ever less comparatively and in appearance, as it was further from the point from which it started. And the new thought struck him that if the central germ must spread, ere it could do so it must lose its unity: without division there could be no life. He altered his symbol: instead of the central spot he now drew two. Then for the motion he saw necessary: was it reverse side to side, or was it round and round the axis? perchance he tried experiment in the pool that the receding tide had left beneath his feet, and saw that if the water were pushed from side to side, the boundary would scarce contain it: that if you tried to make it simply revolve, the divided centre he had come to think was necessary, disappeared in one. For the moment he dismissed the question: the simpler thought had taken possession of him, that given his void within the fence of limitation, he would assume the central matter spreading and filling it: he saw the germ resolving into atoms, shooting outwards ever and unceasing, till all was as the centre, and it was difficult to stop, as atom after atom spread from the germ, he saw it ever tending to the barrier beyond which it could not go: the limitation he saw necessary, or there could be no universe, and as each atom followed atom, it seemed in time the centre would be left a void, and that the outer edge would have attracted to it all that once lay far within it.

Again the waters helped him, as he saw the reflux of the wave forced up against the rock, which stood unyielding, a final barrier to its advance: and he saw the atoms spreading still from the centre, but pouring back as fast as pushed against it: they could live alone in turning back. He saw the double stream, now spreading from the centre now flowing back, and it required but short space to see the streams flowed on together: that ever as the germ spread outwards, so the atoms flowed back inwards, and fed the source from which they started. To draw the double stream, widening as it took its outward course, narrowing as it approached the centre, there was one way alone: the line we see dividing the circle with its divided centre the first symbol of the universe. And then he sat to meditate upon the symbol he had drawn: and as he meditated, thoughts and fancies crowding fast upon him, he saw that he had found the secret on which he had so long time pondered.

In the stream outwards spreading, he saw how by the dispersion of its elements, the world alone could spread: in that opposing he saw how the solid earth came into being: without dispersion the world could never live, without attraction there were nought whence life could spring. Gravitation or the Force we term centrifugal were unknown to him, but the water depositing its mud had shewed him concentration went on downwards, and the rising mist gave him the idea that all dispersion had an upward tendency. To and from the starting point of his symbol, the centre from which all things sprung, he saw that all things tended, and as they did so more or less directly, so they took their difference of form.

To class phenomena was his next thought, but ere he could conveniently do so, he needed now a name not only for his symbol but for its parts, and from the sound of the wind which had breathed the dead water before him into life and motion he called the Initial Force Chi Chee or Chi a-kling thereto the word by which they already expressed grandeur, Tai-chee, the Great Breath, the life, the soul, the spirit of the Living Universe. And when this spirit came into being by division, he called it Yin and Yang, the sounds which seemed best to him to express alternate drawing in and puffing out the Breath. Original One but while it was so inexistent. The great initial force manifested by division, became the Dual Force known as the Yin and Yang, dispersing as it flowed out, collecting as it poured back into itself. He had his symbol and his system at last complete. The world or more the universe resulting from the action of the Dual Force, in the void brought into being by encircling Time: all difference of form but owing to the different relations of the forces: and although some thousand years have passed, more thousands it may be then we can guess, the system stands untouched!

His postulates were simple. Mere being consists in limitation. Existence in motion therein. Motion involves Division. In all things there is compensation, and with these few materials it seemed that he had need of nothing more: all knowledge was now open to him, for he had possession of the master key: all power was in his hands, he knew how all phenomena had come to pass, and so arose the Doctrine of the Chi. The Diagrams which in a future letter I shall try to make clear, are but the symbols by the use of which he strove to shew the working of the Dual Force, which understood, there were no difficulty in understanding past or future.

C. Alabaster.

AN INSCRIPTION FOR A PICTURE OF A VOLTAIRE.

If thou would'st view one more than man and less,
Made up of mean and great, of foul and fair,
Stop here; and weep and laugh, and curse and bless,
And spera and worship; for thou seest Voltaire.

That flashing eye blasted the conqueror's spear,
The monarch's sceptre, and the bigot's beads;
And every wrinkle in that mag'and sneer
Hath been the grave of Dynasties and Creeds.

In very wantonness of childish mirth,
He pulled Bastiles, and thrones, and shrines away,
Insulted Heaven and liberated earth,
Was it for good or evil? Who shall say?

Lord Macaulay.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Since the last report business in *Cotton Goods* and *Yarns* has been rather irregular, some articles having kept firm, whereas in other cases great concessions have had to be made to promote sales; altogether our market wears an unsettled appearance. The position of *Grey Shirtings* is very different according to weights and qualities. Good makes of 9 lbs and 8⅓ lbs. continue firm, with a moderate business whereas low qualities of 7 lbs. and 8¼ lbs. though with a large speculative demand show a considerable decline; inferior 9 lbs. *Shirtings* are likewise lower. We may mention here, that in consequence of the stagnation in the trade in China there is a great tendency there to send 7 lb. and 8¼ lb. *Shirtings* to Japan, and this of course, to some extent, accounts for the bad position of these goods here. For *Yarns* there is not much demand and offers are lower than they were the previous week. *T. Cloths* are neglected. *White Shirtings*, *Turkey Reds* and *Drills* attract but little notice. *Velvets* continue to be firm. In many cases it is very difficult to give exact prices, and the following quotations are more or less nominal.

Grey Shirtings:—

7 lbs.	38½ yds.	39 in.	per pce....	$1.70 to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	nothing done.
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1.90 to 2.50
9 lbs.	38½ „	44 in.	„ ...	2.20 to 2.75
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.50 to 1.75
„ 6lbs.	24 „	32 in.	„ ...	1.20 to 1.35

White Shirtings:—

60 to 64 reed	40 yds.	35 in.	per pce.	2.20 to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb...	0.75 to 1.00
Black Velvets				7.75 to 9.00
English Drills	15 lbs.	40 yds,	30 in.	2.90 to 3.05
Taffachelass	12 yds,	43 in....		*nom.* 2.10 to 2.20

Yarns.—

No 16 to 24	per picul..	$30.00 to 33.00	
No. 28 to 32	per picul..	$32.50 to 38.00	
No. 38 to 42	per picul...	$39.00 to 42.00	
Reverse Twist ... 16-24 ...	„ ...	32.50	

Woollens.—There is no change of importance, since our last, to note in the market for this staple, though a somewhat better feeling has been maintained throughout the week. The low prices actually ruling for plain and printed Mousselines de Laine have induced native dealers to buy on speculation, transactions having taken place principally in printed goods. Bradford goods continue to be neglected, and quotations generally remain unchanged.

Plain Orleans	40—42 yds.	32 in....	6.50 to 7.50	Figured Mousseline de Laine..	30 yds.	30 in...	0.23 to 0.27
Figured Orleans	29—30 yds.	31 in....	4.75 to 5.25	Multicolored „ ...	30 yds.	30 in...	0.30 to 0.35
Shimagoro	30 yds.	30 in...	5.25 to 5.75	Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80 to 1.20
Italian Cloth	—30 yds.	32 in....	0.25 to 0.33	Presidents	54 in. to 56 in...		0.60 to 0.70
Camlet Cords	29—30 yds	32 in....	6.25 to 7.25	Pilots	54 in. to 56 in...		0.40 to 0.45
Camlets Asstd.	56—58 yds.	31 in ...	18.50 to 19.00	Union	54 in. to 56 in...		0.40 to 0.65
Lastings, Japan...	22—30 yds.	32 in....	13.00 to 14.50	Blankets, scarlet & green	7 to 8 lbs...	per lb...	0.40 to 0.41
Plain Mousseline de Laine	—30 yds.	30 in....	0.17½ to 0.19				

Sugar.—There has been little or no business in *Formosa* kinds and prices have declined to $3.25 to $3.35, at which figures quotations may be considered nominal. There is no change in prices of *China* kinds: the market is quiet and small sales only are reported.

Sugar:—Formosa in bag	per picul....	3.25 to 3.35	China No. 5 Kong-fun	per picul ...	4.40 to 5.00
in Basket	„ ...	3.05 to 3.10	„ No. 6 E-pak	„ ...	3.40 to 4.00
China No. 1 Ping fah	(nom.)	7.45	Swatow	„ ...	2.60 to 3.20
„ No. 2 Ching-pak	„ ...	6.40 to 6.90	Daitong	„ ...	2.90 to 3.00
„ No. 3 Ke-pak	„ ...	5.80 to 6.20	Japan Rice	„ ...	2.20
„ No. 4 Kook-fah...	„ ...	5.00 to 5.50	Kerosene Oil	per case ...	2.30 to 2.36

Kerosene Oil.—The *Ella Nicol* with 7,860 cases arrived on the 12th instant, but we have only small sales at auction to report. The market is quiet at quotations given.

EXPORTS.

Silk.—Since the 7th instant arrivals are 1,900 bales and settlements about 1,300 bales, including 75 piculs of Silk of the Imperial filature of Tomioka, the sale of which was previously reported. Prices for Hanks No. 2½ have receded $25, and the unsold stock is estimated at 700 bales. We quote:—

Hanks.—Extra to No. 1	$760	to	780
„ Best No. 1 & 2	740	to	760
„ Good No. 2	710	to	730
„ Medium No. 2½	675	to	690
„ Common No. 3 }	650	to	670
„ Inferior No. 4 & 5 }			

Tea.—The closing week has been remarkable for considerable activity in low grade Teas, though operations have been confined to a few buyers. Settlements of these amount to 3,000 piculs, at rates varying from $13 to $20; the later transactions showing an advance of $2 to $3 on prices ruling at the commencement of the movement. Other grades call for no remark, except that really eligible parcels of *fine* and *choice* are difficult to meet with.

Total settlements for the week amount to 6,000 piculs and arrivals are small, consisting of about 1,400 piculs.

The *Glamis Castle* sails to-day for New York, viâ Amoy and Suez Canal.

Common	$10.00 to 13.00	Fine	$25.00 to 31.00
Good Common	14.00 to 16.00	Finest	32.00 to 37.00
Medium	17.00 to 19.00	Choice	Nominal.
Good Medium	20.00 to 22.00		

EXCHANGE AND BULLION.

Exchange.—The arrivals of Mexican Dollars have been small, and rates have further advanced, in consequence of the continued tightness of money, with every appearance of lasting until outside relief arrives.

Rates close as follows:—

STERLING—Bank 6 months' sight ...	4s.	On SHANGHAI—Bank sight ...	77½
„ Bank Bills on demand	3s. 11d.	„ Private 10 days sight ...	78½
„ Private 6 months' sight	4s. 0⅛ to ¼d.	On New York—Bank Bills on demand	94
ON PARIS—Bank 6 months' sight ...	5.00	„ 30 days sight Private	96½
„ Private 6 ms. sight	5.12	ON San Francisco—Bank Bills on demand ...	94½
ON HONGKONG—Bank sight	3½ % disct.	„ 30d. sight Private	97
„ Private 10 days' sight	Nominal.	Kinsatz	334½
		Gold Yen	387

NORTON'S PILLS

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTONS' CAMOMILE PILLS, London.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

A POLITICAL.COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 31] YOKOHAMA, SATURDAY, JULY 29, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

At 113, Creek, JANET JAMIESON, the beloved wife of ALEXANDER WYLIE, Engineer.

Notes of the Week.

The event of the week has been the opening of the line of railway from Osaka to Mukomuchi, a point about five miles from Kiôto. The remainder of the section—that is, the five miles from Mukomuchi to Kiôto—will, it is to be hoped, be completed and opened with state ceremonial before the end of October. We have as yet no details of the occurrence of Wednesday, but the telegram of the Commissioner of Railways published on Thursday morning gives sufficient assurance that all passed off satisfactorily. There are certain indications that the progress of railway construction will not be pursued much further at the present moment, and we are not greatly disposed to quarrel with this decision. But we must except the short section—only eight miles—from Otsu, on the Biwa Lake, to Kiôto. The break caused by the want of this will really very seriously add to the expense of bringing produce from the West Coast, and thus reduce the value and usefulness of the line from Kiôto to Kobe. We earnestly hope that a point will be strained to do this. Without another loan for public works it is clear that any considerable railway extension would be unadvisable, because the expense it would entail must be defrayed by taxation. But this short section might surely be undertaken without any great financial distress, and in view of its great importance we trust that the Finance Minister and the Minister of the Board of Works will be able to see their way to do it. All these sections will require good roads made as feeders to them, but the laying out of these is not open to the objections which may fairly be brought against any further extensive railway works. The money required for them will be spent entirely in the country and circulate among the people of the districts thus improved, and if it were disbursed direct, instead of first going to Yedo, there would be a small advantage from this change in the mode of circulation.

The heat has been rather trying during the week, and has rent in many places the veil of snow which entirely covers the head of Fusiyama until the end of June. The pilgrims to the sacred mountain are to be seen in small bands on the Tokaido, and the legations are busy with applications for passports. A melting public turns towards Hakone, Oyama, Miyanoshita, and Shubashiri; and all but those who keep the Saints' days long for those holidays which

> when they seldom come,
> They wished for come.

In the last century the mathematicians set themselves to work out the problem of "the line of quickest descent"—the straight line evidently not being so. In like manner there is some little curiosity here among pedestrians as to the time of quickest descent from the summit of Fusiyama. As there is nothing whatever to see coming down, and the descent may be made immediately after sunrise when the body is refreshed and invigorated by sleep, there can be no objection to doing it against time, and we are prepared to hear that something less than two hours is quite enough for it, if attempted by men in fair condition, who are moderately good mountaineers and are not afraid of pace coming down a pretty steep gradient. This time, of course, is to include the walk down the slight incline from Chujikiba to the main street of Shubashiri—a distance of something over four, perhaps close upon five, miles. If any pedestrian attempts the feat alone, we recommend him the precaution of carrying two watches as a greater guarantee than one alone would afford against possible error. Objectors might possibly claim that the jar on a watch incidental to coming down at a great pace in jumps or strides of five or six feet, might disarrange its even normal motion. There is not the slightest evidence that it does so, but the precaution is just as well taken. Of course, if it is really the case, both watches would be affected. But they would certainly not be exactly equally affected. At best, however, the plan is only an imperfect guard against error. It is no guarantee. We fear that the enterprise of the Shubashiri people has not yet gone so far as to establish a system of signals between the village and the summit of the mountain, otherwise the question could be settled with far greater ease and certainty. If any pedestrians should undertake the feat *against time*, we would ask them to communicate the results to us, and if it is done by men who understand their work, the public must be prepared for some surprises.

The contents of the following letter, addressed to us from England and received by the last mail, seem so important, that we publish them, and have made them the subject of more lengthened comment elsewhere.

"Opinion, in reference to Japanese affairs, is wonderfully altered since my last visit home four years ago. It now tends as much towards exaggerating the shallowness and artificial nature of the progress made by Japan as, before, it led to an undue admiration of the Japanese character. Many causes have combined to bring about this result, not the least important of these being the loose conduct of the students, or other Japanese, in this country, and the bad debts many of them have left behind. The accounts of the illiberal policy of the Government brought home by unfortunate merchants, and the complaints of a great variety of disappointed employees all tend to lessen the favour in which Japan was held and to destroy its popularity in this country. There does not appear to be the same interest taken in the country as there was a few years ago, and it is probably now regarded in a truer light. A vein of sarcasm runs through every remark made on Japan in private or in the public organs of opinion, and the extraordinary manner in which western ways are copied and aped is treated with open satire. The two extracts enclosed, which are cut from *The Times*, are characteristic in their way. To us who read the announcement that in order to save the pocket of the nation, the Mikado lived in an ordinary house rather than have a palace built, it seems ridiculous that such extravagances should be indulged in as "the handsomest and most costly state carriage ever yet built," or a "service of plate the gilding of which cost £2,000." The building of iron-clads which will probably cost over one and a half million sterling, is also looked upon as a silly extravagance, of which the country stands in no need and for which it is not ripe.

Original from UNIVERSITY OF CALIFORNIA

We do not know why instances of royal courtesy which, in other countries, would somehow find their way to the public ear, should be denied acknowledgment here.

During the recent stay of the Mikado at Awomori some races were held, at which two foreigners happened to be present. Desirous of seeing the sport to advantage, and yet uncertain where best to do so, they took up a position on the other side of the course opposite His Majesty. This was opposed by the police, but the Mikado at once sent over an attendant to request that the foreigners might not be interfered with. A second thought suggested the despatch of another officer to invite them to the enclosure in which the Court was gathered, on entering which the Mikado graciously bowed them an assurance of their welcome. The occurrence may be slight in itself, but it marks the existence of friendly feelings in His Majesty towards foreigners, and a high-bred courtliness in exhibiting it.

A translation, which will be found elsewhere, on the subject of the Loochoo islands is interesting in its bearing upon the petition of the Loochooan Commissioners published in our issue of the 15th inst., and the remarks it suggested. It is very improbable that the Chinese will make any admissions that will facilitate the acquisition of Loochoo by the Japanese, and they are not likely to recognize that acquisition, though they may do nothing to oppose it. What is certain to be very agreeable to them is to hear that the Loochooans have scruples about acknowledging the sole rule of Japan, as the memorial of the Commissioners clearly proves that they have. Indeed, they said very distinctly that they could not consent to sever their connection with China unless the Chinese Government would send an envoy to Loochoo intimating its acquiescence in the sole claim of Japan to the possession of the islands, and this the Chinese will certainly not do.

A translation published elsewhere shows that the ordinary official Japanese mind is quite in the dark in respect of the office and value of the newspaper press. Nor is this at all to be wondered at in the present condition of political thought in this country. It seems well, therefore, to say that, primarily, the value of the Press is the liberty of speech which it involves: secondarily, the educational power it possesses. Without the first of these, men are merely slaves; without the second they must remain in gross and grievous ignorance. Individual newspapers may be thoroughly bad things, as a priest may be a bigot, a physician a quack, a merchant a cheat, or a lawyer a rogue. But this has nothing to do with the right of free speech, of which the newspaper is the outward and visible sign. Of course there must be an eternal antagonism between absolute governments and newspapers. But men must judge for themselves whether they will be slaves or free men; and of what value life—sad enough at best—can be to men without liberty is, thank God, inexplicable to an Englishman.

A writer in the *Nichi Nichi Shimbun*, a translation of whose article entitled "How to provide a substitute for the drain of gold from Japan by increasing her products" will be found elsewhere, urges on the Government to mining operations on a larger and more serious scale than any hitherto undertaken. We trust his argument will have weight, for much of it is very good. It is well to point out, however, that his political economy is not very sound, for he seems to forget throughout his article that any money spent by the Government upon the mines must first come from the people in the shape of taxes. He is probably right, however, in urging caution in regard to further railway construction at present—excepting of course the small section for which we have put in a plea elsewhere.

We are sincerely sorry that the occasion should ever have arisen for any such protest as that which appears elsewhere in our columns from the officers of the Union Church in Tôkiô. It seems to us that symbols held to be sacred by any sect of religionists, and which are or may be the outwar . us by which cherished feelings or traditions are warmed or conveyed, demand respect at the hands of all men, and that grave censure justly attaches to any one who violates this obvious dictate of religious toleration. The event is most deplorable. What trace is there here of that "charity which believeth all things, hopeth all things, *endureth* all things?" We are very sorry to say so, but a fair experience of life has brought us to the conclusion that next to the wondrous beauty of really Christian love, stands, as a matter of wonder, the extravagant deformity of Christian bitterness.

From the 'Japan Mail Daily Advertiser.'

Monday, 24th.

A fine road is to be made between the provinces of Hinano and Tôtômi, where hitherto there existed only a mountain path.

From the *Naniwa Shimbun.*

At Uwajima, in the province of Iyo, *jinrikishas* have recently come into fashion, but most of the men who draw them are of the *shidzoku* class.

From the *Nichi Nichi Shimbun.*

The governor of the Kumamoto *ken* recently summoned the various government school teachers to his presence and advised them to have their hair cut in the European fashion, and to urge their pupils to do the same. Many of the teachers are showing great indisposition to act according to the wishes of the *Ken-rei*

From the *Mainichi Shimbun.*

At 2 a.m. on the morning of the 21st instant a fire broke out at Dote-ato-chô, Shiba, Tôkiô, and destroyed some twenty houses.

Tuesday, 25th.

We shall dismiss the subject of the *Herald's* trespasses upon our columns, so far as we are concerned, in a very few words.

We are accused of making similar use of its law reports. It is true that we did so during the temporary loss of a law reporter. But on representing to the *Herald* that we desired to share the expense of such reports, an arrangement to that effect was made, and the remuneration we paid was said to be perfectly satisfactory. The law reports we publish are the same as those of the *Herald*, and we have the same right to them as every man has to the possession of that which he pays for. It is impossible to adduce stronger confirmation of this than a notice received this morning from the *Herald* Office that the arrangement for supplying us with law reports will terminate at the end of this month!

In attempting to depreciate the acquisitions of the translator whose work has formed the subject of this question, the *Herald* forgets that the high value it sets upon his labour is the cause of its trespass. It is true that he is assisted by his father, who is a scholar of very high attainments. The young man himself has a knowledge of English such as is possessed by extremely few Japanese, and it is to the union of the knowledge possessed by the two that the translations owe their chief value. But as no living Japanese possesses in his own person the acquirements which combine to make the foundations of the work of which we speak, it seems rather strange that the very grounds on which their merit really rests are selected as reasons for depreciating them.

In regard to the Trade Reports which have been placed at the service of the public through our columns, doubtless the British Minister will feel very deeply the charge of jobbery brought against him on this account. The only impression it will make on most minds is one of wonder how any man can deliberately sit down and write such balderdash as that in last night's *Herald* which contains it.

The M. M. steamer *Tibre*, with mails on board to 18th June, will leave Hongkong to-day at noon.

It is well known that the Mikado was expected to arrive here from the North on the 20th instant early enough to proceed to Tôkiô the same day, but that unfavourable weather

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR,—It is due to the members of this community, and to the officers and members of the Tskidji (Union) Church, Tokio, to set forth the following statement:—

The Union Church was fully and regularly granted by the Trustees for a religious ceremony performed on the eve of the 27th instant. Previous to the ceremony the Church was entered, and certain portions of the altar and floral decorations, which had been temporarily placed there, were removed without the knowledge or consent of any one of the trustees or other officers of the Church—save the one who of his own moving committed this act. We deem it a matter demanding our earnest protest, and further would say that the advertisement inserted in the *Japan Gazette* of the 28th, seemingly in the name of the officers of the Church, was not authorized by them, nor by the Pastor, and was unknown to all save the party, or parties who in an unauthorized manner inserted it.

P. V. VEEDER, Pastor of the Union Church of Tōkiō
W. E. PARSON, Elder " " " " "
D. THOMPSON, Trustee " " " " "

Tōkiō, July 29th, 1876.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR.—I have read in the *Herald* of the 22nd instant the translation from the *Yomiuri Shimbun* concerning Mr. Kubota (?)

Being told that the Swiss gentleman mentioned has been absent from Yokohama and buying Silkworm's eggs, &c. &c., for the last month or two, I have no doubt that such like arrangements may be made; I have however not heard that Mr. Kubota's engineer has left the service of his former employers.

Having unfortunately not much chance of getting anything to do in this market for some time to come and being well acquainted with engineering and silk-inspecting, I should like to find a Mr. Kubota, silk-filature owner of some kind or other, under whose name I might operate in the different silk districts while still retaining my present situation.

Your valuable paper is probably the best means for finding such a chance. Thanking you beforehand for your trouble,

I remain, Sir,

ANOTHER CONTINENTAL SILKMAN.

Yokohama, 29th July, 1876.

Law Report.

IN H. B. M.'s CONSULAR COURT.
Before RUSSELL ROBERTSON, Esq., Consul.
Wednesday, 26th July, 1876.

Yesterday afternoon the Acting Chief Judge of H. B. M.'s Supreme Court for China and Japan, C. W. Goodwin, Esq., heard a motion from Mr. Ness *in re* Nakajima Saisuke *vs.* W. P. Mitchell, asking that the leave, given by His Honour on the 17th instant to defendant, to appeal *in formâ pauperis* against the judgment delivered on the 7th instant by H. M.'s Consular Court at Kanagawa, be revoked.

Mr. Ness appeared for Nakajima Saisuke; Mr. Montague Kirkwood for Mr. W. P. Mitchell.

His Honour confirmed his former decision that defendant be at liberty to file his petition in the cause without making the usual or any deposit, at the same time expressing an opinion that his granting this leave to defendant did not interfere with any right of plaintiff's to execute the judgment he had obtained before this leave was granted.

U. S. CONSULAR GENERAL COURT.
Before General T. B. VAN BUREN, Consul-General.
Tuesday, July 25, 1876.
THE PEOPLE OF THE UNITED STATES *vs.* CHARLES FOSTER, fireman on board the U. S. S. *Yantic*.

Prisoner was charged with stealing money, last Sunday night, from the till of a public house.

Prisoner pleaded not guilty.

Goro Tokichi, a Japanese woman: I am the wife of complainant. Last Sunday night, about 12 o'clock, the cries of my child caused me to leave the bar, and go into the next room. From there I heard a noise at the till, which is under the counter, and not locked. A jinrikisha man called out that the foreigner was doing something. The prisoner and the jinrikisha man were the only persons in the bar-room. I saw the prisoner shut the till, and run away with some Japanese money in his hand. I called to my husband, who was in the yard. The jinrikisha man followed the prisoner. My husband kept a look out, and shortly afterwards he saw prisoner in a jinrikisha. My husband stopped him, but he refused to descend. Then the jinrikisha was drawn up to the house. When prisoner was in the house he wanted to pay for some drink, but after searching all his pockets he could find no money. When he was brought back he had *satsu*. He asked for coffee, and made a great noise. We had sent for police, and a European police officer came and arrested him. I don't know exactly how much change was in the till.

Nimoto Tokichi: I keep the "Railway House." The prisoner was there before 12 o'clock on the night of the 23rd, and had several drinks; but on turning out his pockets he could not even pay his jinrikisha. When my wife called me, I was in the back yard. I ran into the bar-room. She told me the prisoner had run away with money from the till. I then ran out, and I and the jinrikisha man tried to find the prisoner, who shortly afterwards passed in a jinrikisha. I called to him in English, and asked him to come in, but he did not answer. The jinrikisha man then drew up at my house. I told the prisoner if he would give me the money back I would say nothing; but he grew rude, and said I had robbed him. He took out a *boo* and a ten cent *satsu*. I think there must have been five or six dollars in the till in change.

Police Constable Mansbridge, sworn: On Sunday evening about midnight, I was ordered to the "Railway House." I found prisoner sitting in a chair. I was told that prisoner had robbed the till. Prisoner denied the charge, saying he had just enough to pay for his drinks, and took out ten cents. I asked him if he would submit to being searched, he said "yes," loosened his pants and shook his shirt, held out his open hands, and asked me if I was satisfied. I told him I was not, but took his cap off his head, removed the linen cover, and found inside of the cap, 5 boo *satsu*, 11 has boo *satsu*, 2 quarter boo *satsu*, one twenty cents *satsu*, and one ten cents *satsu*, which I counted out on the bar in his presence. Complainant said, "here are also 25 cents he has just paid me for drinks." I then took prisoner to the station. I had not seen any money in prisoner's possession when I saw him earlier in the day.

Prisoner: My name is Charles Foster, I am a second class fireman on board the U. S. S. *Yantic*. I came ashore on Sunday morning. I brought eight dollars with me, some in silver, some in paper. I went to the "Railway House" twice during the day. During the night I was in there and paid for everything I got. Complainant and another man were there all the time. When I went away they were sleeping. I was intoxicated. I went out and took a jinrikisha, and went down to the "Liverpool House." When I returned complainant stopped me, and I went with him into his house. I did not take the money from the till. I have been on board the *Yantic* eleven months.

Prisoner was found guilty, and ordered to be imprisoned for 30 days and to be fined $10. If the fine be not paid, a further imprisonment of 30 days.

If the ship sails before expiration of sentence, prisoner to be delivered to the ship, with a statement of his offence.

The money was returned to the complainant.

Wm. Nathan and John Brown, seamen of the American barque *Etta Loring*, were charged with creating a disturbance and with refusal of duty on the 24th instant, also with refusing to give up liquor and abusing the officers.

Prisoners admitted being drunk and refusing duty.

John Loring, master of the *Etta Loring*: Brown and Nathan were to be discharged at New York. Last night, about 9 o'clock, there was an unusual noise in the forecastle. The mate went forward and found the prisoners had got liquor. I asked them to give it up. They refused positively. Almost until midnight they kept on carousing, calling their officers dirty names. You could hear them from the poop. When they were asked this morning to turn to, they refused to do so. I have had no trouble with these men before, and should have let this pass if the men had not refused to turn to.

Frank Thompson, second mate, was sworn, and corroborated the evidence of the former witness.

Sentenced to five days' imprisonment, and to pay a fine of $5 each.

Original from UNIVERSITY OF CALIFORNIA

IN THE FRENCH CONSULAR COURT.

Before EMILE KRAETZER, Esq., Acting Consul, President; and
M. E. PIQUET and M. A. DEVEZE, Assessors.
Saturday, July 22, 1876.

A. LAPLACE *vs.* L. BEGUEX.

This was a claim for $1,001.68.

M. Laplace had furnished $4,522.25 to establish M. L. Beguex, his nephew, and M. Joseph Ruel, his brother-in-law, in a hotel, "The Hotel des Colonies," in Yedo. This claim was acknowledged by a document dated 26th Nov., 1869, and should have been paid on the 1st July, 1871. It was not paid, and on the 1st May, 1872, a new document was signed, M. Beguex and M. Ruel each assuming a moiety of the debt. M. Laplace acknowledges to have received $1,450, leaving a balance in his favour of $3,072.35, of which the moiety is $1,536.18. This amount M. Ruel has, under his signature and under date 19th June, 1876, acknowledged to owe to M. Laplace; and after giving M. Beguex credit for 19 months' salary at $40 or $760: one month's salary at Osaka, $150, and charging him with his passage from France $389, besides some minor expenses, a balance remains in favour of plaintiff $1,101,68, which is now claimed.

M. Degron appeared for plaintiff. He stated that plaintiff had left Yokohama after having sold everything, and before his departure he had addressed a letter to his nephew, defendant, L. Beguex, asking for some settlement of this old debt, but had received no reply.

Mr. Dickins appeared for defendant. He stated that Mr. L Beguex denied his indebtedness. The document made in 1869 between Mr. Laplace on one part, and the defendant Beguex on the other, and in which the latter acknowledged himself indebted, with Ruel, in $4,552, stipulated that the first payment should be made in 1870; but we are now in 1876, and through the lapse of more than five years the debt has become extinguished by limitation. In case, however, the Court should not admit this plea, Mr. Dickins produced a counter claim from L. Beguex against Laplace, amounting to $2,017, the principal item of which is 19 months' salary at $40 per month, or $760.

The Court observed that there is a document dated May, 1872, in which Mr. Beguex and Mr. Ruel acknowledge to be indebted to Mr. Laplace in $4,522, of which debt each of them assumes the moiety.

Mr. Dickins stated that he was unacquainted with that document.

The Court went through the different items of plaintiff's claim and defendant's counter claim, and, after hearing the evidence of Mrs. Laplace and Mr. Joseph Ruel, rendered the following.

JUDGMENT.

Considering that the parties do not agree with regard to the balance due by Beguex to Laplace for the purchase of material for the Hotel des Colonies, the Court, taking as basis the amount of $1,536.18 admitted by both parties, establishes that Laplace owes to Beguex $234.25 paid to him by Beguex; $760,00 for 19 months' salary at $40 per month; $150.00 for 1 month's salary at Osaka: $60.00 as interpreter in a silk-worm egg transaction; total $1,204.25.

On the other hand Beguex owes to Laplace $60.00 paid for account of defendant; $18.00 for a piece of flannel sent to defendant's mother; $70.00 received cash from Mrs. Laplace; $40.00 for clothing furnished in Shanghai; $12.75 costs of transport of 100 cartoons; total $200.75, which, together with the $1,536.18 due on the Hotel des Colonies, amount $1,736.93. The mutual claims for lodging and board are liquidated against each other, which appears at the time to have been the tacit understanding between the parties.

Laplace has to pay the travelling expenses of defendant as he had sent for him from France, and naturally ought to pay his passage.

The balance is then $532.68 due by Beguex to Laplace, the interest is fixed at 6 per cent. per annum from the date of the present judgment.

Beguex is besides ordered to pay costs.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before F. W. KEMPERMANN, Esq., Acting Consul, President; and
Mr. J. PELTZER and Mr. E. HAGENS, Assessors.
Saturday, July 22, 1876.

F. W. HOLM *vs.* H. W. HOHNHOLZ & Co.

This case, which was reported in our issue for Wednesday, the 28th June last, was a claim for $241.05 on two promissory notes. The claim was resisted by defendants, who contended that although their promissory notes were yet in possession of plaintiff, they were not indebted to him. Plaintiff had incurred a book debt with them amounting to about $400, of which he had paid $150 with his own promissory note to defendants, who had transferred the same to Messrs. Lane, Crawford & Co.; and the balance, or about $250, had been liquidated against defendants' two promissory notes, now sued for. This statement plaintiff denied, saying that he had paid the $250 balance of his book debt in cash to defendants, who consequently, yet owed him for the two promissory notes.

Plaintiff appeared personally, and Mr. Elfen for defendants.

Mr. Elfen observed that the evidence of Mrs. Walker in this Court proved that plaintiff's statement that he borrowed the $150 wherewith to take up his promissory note from Messrs. Lane, Crawford and Co., not from Mrs. Walker but from Mr. Druse, is untrue.

Plaintiff replied that he got the $150 from Mr. Druse, and paid no interest for the same. Druse got the money from Mrs. Walker, but inserted plaintiff's name in the note as the borrower and his own name as security. The reason for this proceeding was that Mrs. Walker owed Druse money, and by this arrangement Druse expected to get paid.

The Court gave Judgment as follows:—

If defendant, H. W. Hohnholz, trusts himself to take his solemn oath that he has not received from plaintiff the $226.05 charged plaintiff in a receipted bill of 1st May 1875, for provisions, board and lodging, and cash advanced, than plaintiff's claim for $151.05 is dismissed, and each of the parties shall pay half of the costs.

But if defendant shall not trust himself to take such oath, then he shall pay to plaintiff $226.05, and the whole of the costs.

MONTENEGRO'S IMPORTANCE TO INSURRECTION IN TURKEY.

TO THE EDITOR OF *The Nation*:

SIR: In a leading article on "The Prospect of a General War in Europe," in No. 536 of the *Nation*, while you appreciate the grand question at issue most justly, you have, if I may be allowed to say so, not clearly estimated the mechanism of the movement or the relative value of the various appliances which are being brought to bear in the struggle, which now bids fair (and let us hope not falsely) to be the last appearance of the Grand Turk on the European stage.

That the general peace will be kept we have been assured from Berlin, but under circumstances which imply that the Porte and and its dominions are not included in the negotiations. It seems most probable that no European power will now be obliged to take part, but between this and abstract peace in the East the difference will, I apprehend, be found to be immense. The rayah will not be prevented from doing his best to throw off the old yoke, and the critical question now is when the Principalities will be free to intervene. In all Russian diplomatic procedure, the whole of Turkey is included in the Asiatic department, and the preservation of European peace only means that neither Austria nor any other European Government shall be permitted to intervene, while the Principalities shall be free to act as their own interest and inclination lead them.

The only question of vital importance which the late Conference at Berlin could settle was simply this of the freedom of action of the Principalities, the assurance of which will, I feel certain, turn the scale so decisively against Turkey that the struggle cannot even be a long one. But in your estimate of such an intervention you put Montenegro out of the question, while all is made to depend on Servia and Roumania. But from Roumania nothing except perhaps pecuniary assistance is expected, its army being notoriously ineffective, and the conquest of Servia alone would probably be no great work for the Turkish army, while Montenegro is really the main hope of the insurrection, and the enemy most dreaded by those of the Turkish commanders who have any experience in Montenegrin warfare. And so far is it from the fact that "a large proportion of her (Montenegro's) fighting men are already engaged" in the war—as you assert—that, while the number of rifles which the Prince can put in the field is 25,000 (including the home guard), the number of Montenegrin volunteers in Herzegovina has never, up to the time that I left there in March, been above 700, and is not now above 1,000. Of this I have various assurances too strong and too independent in their sources to be greatly in danger of error. We have a right to suppose that the Porte has used its best efforts to conquer the Herzegovinian insurgents. We know that troops have been sent even from the Asiatic provinces, and that

the elite of the Turkish army have been employed in the fruitless struggle. Yet, if at any time since the beginning of it the 10,000 men whom Montenegro is always ready to send across the frontier had been sent into Herzegovina, that province of Bosnia would have been cleared of Turkish troops in a fortnight, with the exception of the few fortified places. It is very probable that in those battles which took place near the Montenegrin frontier, the people living along the frontier took their rifles and slipped across to the fighting and back again as soon as it was over; and for this reason the Turkish commanders carefully avoided the frontier in all their operations, and the only cases in which they were obliged to approach it were the movements to relieve Niksics. The Prince of Montenegro had a most difficult task in compelling his people to maintain a neutrality which international law, as understood by civilized nations, would never have demanded of him, because the whole fighting population, if left free to follow its impulse, would have gone into Herzegovina; and he had not merely to prevent organized expeditions, but to restrain the individual subject—to maintain his control over a population whose noblest occupation and most passionate ambition are to fight Turks. To enable him to do this, there was need of a discipline and moral control of which I venture to say no example can be found out of Montenegro, but also of a partial relaxation of that discipline to prevent an explosion at home.

There is no doubt that so far as the insurrection has gone its great strength has been in the Montenegrin volunteers in it, not from the numerical force, but from the higher character of the organization introduced by them and the moral influence of their presence. There is no more doubt in my mind (and I have had an inside view of the affair since August last) that if at any time Montenegro had sent ten thousand men into the field of hostilities the Turks would have been irretrievably beaten on that side, and that any attempt to avenge themselves on Montenegro by the southern frontier would have been equally put at naught by the fifteen thousand men left for its defence. We have, moreover, good military authority (Herr von Wickede, the German military critic) for believing that Montenegro and Servia would be able to hold their own against any army Turkey could *now* put in the field, even if it were concentrated to attack these two Principalities. But this is so far from being the case that already fifteen thousand men are required for a new insurrection in Bulgaria and the garrisons in Crete, Epirus, Thessaly, and Albania must be strengthened to meet movements threatened there, which will certainly be precipitated if the garrisons are withdrawn, and which now wait only for Montenegro to declare itself.

The destiny of the Turkish Empire may possibly be decided without any interference from without except that of Montenegro, the only non-vassal state whose interference is needful. This little remnant of a once great empire, the only fragment of it that has never been brought under subjection to the Turk, and which you leave out of consideration, is therefore really the most important element in the coming *mêlée*, not merely from the strength it can put in the field, but because its warlike prestige is so great amongst all the tribes west and south of it that its declaration of war will be the signal of half-a-dozen movements as formidable as that of Herzegovina.

It is certain that the Russian Government is not ignorant of any fact of importance bearing on this question, and that it perceives that the interference of Europe is not needed to break up the Turkish Empire. It is, I believe, equally beyond doubt that the same Government desires the dissolution of that empire, and that it is due to Russian influence alone that Montenegro and Servia have not interfered long ago; and for these reasons it seems to me that we are looking in the wrong direction in expecting the fall of the Turkish Empire from outside aggression. Its dissolution will be due simply to the utter failure of the force that has held it together to accomplish that work any longer. The work of Russia since the Crimean war has been simply to restrain inopportune movements, to remove impediments to co-operation between the various elements of the empire, to restrain and direct, until the proper moment, all the aspirations towards independence of the several discontented tribes subject to the Porte, and to release them at that proper moment.

The only opponent of this policy in the councils of Europe to-day is Austria. The Hungarian element in the empire, which is at present the dominant one, understands that the formation of a Slav state at her southern boundary will ultimately draw away the Slav provinces of Austro-Hungary; and the Hungarians, ready in past years to destroy the empire to secure their independence, are to-day ready to destroy it again rather than give the South-Slavs their freedom either from Turkey or their own rule. It would seem, too, that Austria would willingly risk a war with Russia rather than have the insurrection continue to a successful end, so that this antagonism between Hungary and Russia presents the only probability of war over the dissolution of Turkey. The vacillating tendencies of Vienna, one day subsidizing the insurrection and another crossing the Turkish frontier to kidnap a dangerous insurgent leader, were simply the struggles for ascendancy of the Slav and Hungarian elements, and while Russia had perhaps no objection to Austria leading the Slavs as a Slav power, she could not risk increasing the influence of Hungarian Austria; so that, when the permanence of the Andrássy cabinet became assured, an immediate divergence between Austria and Russia manifested itself, and that divergence has become greater every day since, up to the holding of the Berlin Conference.

The first consequence of that divergence was the prohibition by Russia of any occupation of the disturbed provinces by Austria. Whatever public profession the Austrian Ministry made, this measure was prepared for with completest provision, and regarded by military Austria as beyond question up to February last, and even now is not by the army considered improbable.

In this juncture the Berlin Conference meets and "secures" the peace of Europe, menaced only by this divergence of two Eastern empires. Information which I am disposed to regard as well-founded says that Austria, in this case, was convinced by a significant pressure from Germany that European interests would be consulted by allowing the insurgents (with the aid of such friends as they could get to aid them) to settle their account with the Turks without any Austrian interference except on conditions agreeable to Russia, and that the interference of the Principalities would not be considered to justify Austrian interference, the real intention of Germany being to prevent was between her two allies, and at the same time effectually to bar the future aggrandizement of Austria, by the formation of a confederacy of the Balkan provinces which should, at the same time, prevent Russia from acquiring any more territory on that side or getting possession of the mouth of the Danube. That this idea of the "United States of the Balkan" was present in the minds of influential Germans I have a proof in a letter addressed to me by a German friend of high consideration at Berlin on the eve of my starting for Herzegovina, in which this solution was laid down as the only one in accordance with English interests; and, in the face of all the conflicting interests, it is clearly that which would be least likely to disturb the peace of Europe. The fact that the new accord of the three powers receives the energetic support of Berlin, while Vienna accepted it much against her will, goes to confirm this view of the matter, viz., that the peace of Europe is secured by Russia and Germany compelling Austria to to consent to the practical relinquishment of all future annexation from the Turkish empire, Russia, on her part renouncing territorial acquisition.

There is an apparent inconsistency in the antagonists, Hungary and Russia, equally opposing Austrian occupation of Bosnia; but this is explicable by the fact that both oppose the further annexion of Slav provinces by Austria—the Hungarians from fear of being overpowered, and Russians from fear of losing their interest in the Slav states. Hungary would accept Austrian occupation in the interest of the Porte, and Russia in the interest of the insurgents, but as the Slav party at Vienna look forward to it as a stage towards absorption, both Hungary and Russia oppose it. In the early stages of the insurrection, while the policy of Germany was still veiled, Russia might have given part to Austria as the price of co-operation, but when Germany had come to an understanding with Russia, then concession became needless and was refused. This explains why, until the end of January, Russia made no objection to an Austrian occupation, which was in Ragusa regarded as a matter of course up to that time, and was only in February forbidden by Russia.

To your general conclusion—viz., that the sooner the crash comes in Turkey, the better—all that I saw in Herzegovina and Albania induces me to accord. The only vestige of government remaining in those provinces is the effect of the moral pressure of European functionaries; beyond their reach, neither justice, liberty, nor protection of life or property can be depended on, and rarely are obtained except by the strong. Not a stone has ever been laid or lifted to futher trade or production since the Turks came in. The only good road in Herzegovina was made seven years ago under pressure from Austria, and the bridge to complete it is still unbuilt, though the money has been sent five times from Stamboul to build it.

THE DEEPER CAUSES OF THE COMMERCIAL DISTRESS.

(Pall Mall Gazette.)

Six months ago there seemed to be some evidence that the severe commercial distress in this and other countries was about to disappear. But the evidence was mistaken; for with the progress of the present year commercial difficulties have certainly increased. Modern industrial enterprise and commerce have become so vast and various that they can only be dealt with accurately by being distinguished into groups and classes. The first and most profound difference between the commercial countries of the present time and of periods so recent as forty or fifty years ago—that is, just before the era of railways, steam navigation, and new gold supplies—is the increase in the accumulated and realized capital possessed in various degrees by all classes above the humblest. Among the more opulent classes, solid fortunes—composed of lands, houses, premises, obligations of States or companies, and the like—are beyond all previous example: and the incomes thus afforded entail a certain and steady expenditure equal to the maintenance of a vast trade. In this country there is the largest number of such solid fortunes; in declining progression they exist in the following countries:—Holland, France, Germany, Austria, Italy, Russia, Spain. In America, the New England States present the same phenomena as does this country, but upon a scale comparatively small. The creation and increase of these solid fortunes is one of the most beneficent results of civilization and law. Among ourselves, at this moment, it is the expenditure of the opulent class which, in spite of the distress among manufacturers and merchants, keeps in profitable employment the large industries devoted to supplying the wants of the wealthy and well-to-do. But for this a collapse of manufacturing enterprise would mean now, as it did mean in former periods, a collapse of nearly all the trades and employments of the country. We have therefore assured to us by reason of these accumulations of capital, a home and foreign trade of no small magnitude, but a trade which from its nature varies little in character or extent—a trade of the same nature as that of Holland, a country almost wholly dependent on the expenditure of incomes yielded by capital invested in securities. But in this country pre-eminently—(next in the United States, and then in Germany, France, Austria, and Russia)—there is also the commerce of enterprise and invention, the commerce of ambition; which—by means of greater daring and sagacity, by the command of larger means of capital and credit, the early application of new inventions, the discovery of new materials and new wants, and the reduction into practice of cheaper methods of production—is perpetually carrying forward commerce to new conquests and new regions, and constantly enlarging the field of employment for skill and capital. It is this aggressive commerce to which we have now become so accustomed that when it is interruped we at once complain, as we do now, of distress and difficulty.

During the last forty years there have been at least four periods prior to this one during which the commerce of the country has been brought to a comparative standstill. The five years ending with 1842, were full of distress and suffering, and we can now see clearly that the chief causes of that distress and suffering were (1) three bad harvests greatly aggravated in their effects by the corn law, (2) tariff and excise legislation which checked and diminished trade, (3) the political perils of Chartism, and (4) financial discredit much increased by the defective management of the Bank of England. Free-trade measures, better harvests, and railway construction rendered the four years 1843-6 a season of great prosperity. The panic of October 1847, and the three dark years 1848-50 were occasioned by the extravagant lengths to which railway investments had been carried, by Irish famine, and the spread of revolution all over the Continent. Towards the end of 1851 the prices of commodities, the wages of labour, and almost every item of outlay entering into cost of production, had fallen to a very low point, and capital therefore began to be tempted by the cheapness of goods and securities. The demand for articles of every kind in the new gold countries at the same time became powerful; and the Russian war (1853-6) had the effect inseparable from all wars, of fostering unsound trade by the hasty dissipation of scores of millions of borrowed money—that is, of capital wasted so far as any useful purpose is concerned—politics apart. The panic of November, 1857, was the climax of these vicious influences. Inflated credit and inflated enterprise had again carried prices and cost of production beyond the remunerative point. The consumer could no longer pay the price of the articles offered to him, the markets therefore became impracticable and they did not recover in any sensible degree till the end of 1861. The first effect of the civil war in the United States (1861-5) was to pour into Lancashire a flood of wealth from the sale in India and elsewhere of the masses of cotton goods which had been produced in 1859-60 at cheaper rates than had been ever known. The limited liability law came into operation in 1862, and France, Germany, and Russia all began to build railways as fast as money could be had from their own people and from foreigners. The next climax of high prices—that is, of excessive cost of production—came in May 1866: and 1867, 1868, and 1869 were years of gloomy reaction and disquiet, of falling prices, lessened wages, scarce employment, and absence of enterprise.

From the middle of 1870 to almost the middle of 1871 there was the Franco-German war. Then came peace—the indemnity of 220 millions sterling paid to Germany, and the schemes of vast and rapid expenditure occasioned in that country by the sudden acquirement of so much riches. Two or three years previously Austria and Hungary had become one nation, and had entered upon a free and constitutional life. Italy had become unified, and all over Germany there had been a removal of the obsolete and autocratic impediments to labour and skill. The Suez Canal was opened at the end of 1869. Telegraphs were being carried to the farthest part of the commercial world: and by successive inventions steam vessels had been brought to a point of economy which gave them the command of the longest voyages. But beside all these influences—nearly all of them in their spheres and degrees revolutionary—the United States since 1837 had been constructing railways at a pace never before reached either in that or any other region: and not railways only, but canals, docks, wharves, warehouses, and every sort of fixed investment directed to the extension of business, commerce, and manufactures. In Europe there had been since about 1862 the regular appearance as large borrowers of a group of half barbarous States never before heard of in the money market. Turkey, Egypt, Honduras, Peru, Roumania, Venezuela, and the whole tribe of South American settlements obtained year by year tens of millions sterling, and applied at least some portion of the money to the purchase of English materials and labour.

The effect of the war of 1870-1 in stopping nearly all reproductive labour and enterprise in France and Germany—the waste, in short, of gigantic hostilities carried on for a twelvemonth—and the delirium of the peace and its accompanying ransom in the conquering nation threw upon this country in 1871-3 the task of supplying the urgent demands of no small part of Europe. To the fortunate persons who happened to be in possession of the means of supply—notably the owners of coal-mines and iron-works—the results were fabulous. As we all well remember, nothing was talked of but colossal fortunes made in a few months, and an advance of wages and prices beyond all example. The whole industrial and commercial machine was being driven with a velocity and subjected to twists and alterations it could not long endure. A pause came in the summer of 1873. The panic in New York in September of that year told very plainly that in the United States the tension had become insupportable, that floating capital was exhausted for a time, and that cost of production had destroyed consumption. Exactly the same phenomena repeated themselves in Germany, Austria, Russia, Holland, and Belgium. In all these countries since the autumn of 1873 there has been a process of relapse and retreat from a state of things in which expenditure of all kinds had outrun first income and then floating capital: in which wages had long exceeded the intrinsic value of the work performed in exchange for them: and in which the market prices of securities had been raised excessively by a belief in future profits very far larger than the community could furnish or afford.

The case of the United States and of Central Europe is in effect our own. The six years 1867-73 included, as regards commerce and manufactures, a greater number of events and changes, each of them more or less revolutionary, than any preceding period of the same length—events and changes, too, which affected a greater number of countries and regions. Considering the profound character of the disturbing causes, the wonder is that the reaction has not been even more disastrous than it has been and is; and (as we shall see on another occasion when we resume the subject) it is precisely the amplitude of the arresting and compensating forces now at the command of industry and commerce, which affords the best reason for believing that recovery is certain, and perhaps not distant.

A DUTCH STATESMAN.

(The Spectator)

A remarkable coincidence drew attention, a week or two ago, to the fact that Holland, a small and as most people believe, a stagnant State, has produced in our time two statesmen of the first rank, comparable for enlargement of views and for brilliancy of parts with any of the living political leaders of England, or France, or Germany. While the Dutch Liberals were honouring, at Amsterdam, the memory of their illustrious chief Thorbecke, who died in 1872, the friend and rival of the Liberal chief passed quietly away, leaving no heirs of his ideas and hopes behind him. It would be quite inaccurate to affirm that M. Groen van Prinsterer, whose death, on the 19th ult., has profoundly moved public feeling in Holland, was in any sense to the Dutch Conservatives what Thorbecke was for a whole generation to the Liberals; but he was a man of such warm sympathies, such remarkable capacities, and such energetic convictions, that his character was a potent and wholesome force in public affairs. He was wont to say, "My strength is in my isolation;" he never sought, and it is believed that he repeatedly rejected, a Ministerial portfolio, but to the last he preserved, by his eloquence and his single-minded fervour, an intellectual and moral authority over Court, and Parliament, and people which was unique in its kind, and which cannot fail to be missed. Such a career and such a character deserve appreciation outside the narrow circle within which circumstances confined their action. The name of M. Groen van Prinsterer is scarcely known to any but his own countrymen, and the warmth of affection with which this champion of "lost cause" is regarded can hardly be understood without some slight knowledge of the ground on which he battled and the antagonists with whom he was matched.

M. Groen van Prinsterer, in truth, cannot be understood at all, unless we refer him always to and compare him with M. Thorbecke. These two men, in truth, made the history of Holland during the last generation. Educated at the same University—that of Leyden—they became early friends, and their friendship was never broken by the wide divergence of their political views. After Thorbecke's death, some four years ago, M. Groen published an interesting correspondence with his great rival, extending over a long period of bitter political strife. Both the young Dutchmen quitted Leyden with high reputations as jurists, but their intellectual paths were soon parted. While Thorbecke absorbed the influences of German philosophy, and treated jurisprudence, history, and politics from the point of view of a systematist and evolutionist, Groen van Prinsterer brought a totally different temper and theory to the same studies. He also became a student and writer of history, and his works have been warmly praised and freely used by Mr. Motley. His "Archives of the House of Orange" is a great undertaking, finely executed, for the Royal family was with him the object of an adoring affection and an imaginative allegiance, more complete than that of Scott to the Stuarts or that of Macaulay to the memory of William III. The House of Orange, nevertheless, was not, in M. Groen's conception, a mere Royal family: it represented for him the traditions of the old Batavian Republic, before the ideas of the French Revolution crept in and ruined, as he believed, the national habits of moral discipline, of willing and manly subordination, of Puritan simplicity and directness of character. Around this ideal he wove a historical romanticism, which elevated the whole succession of the Orange Stadtholders into heroes. In this he followed and propagated the ideas of a very extraordinary man, the poet Bilderdyk, whose deep detestation of France and of the dominance of the Bonapartes has left ineffaceable marks upon the national sentiment and policy of Holland. Bilderdyk died in the year when the Belgian secession gave a strong impulse to reactionary forces among the Dutch, and his work fell mainly into the hands of Groen van Prinsterer. For the following decade the latter laboured industriously with his pen to exalt the Orangeist policy, and to exclude the rising tide of Liberalism. With this political mission was interwoven a religious revival, which curiously combined a reaffirmation of Calvinistic orthodoxy and a sentimentalism more closely akin to the Oxford Movement and the Neo-Catholicism of France. As early as 1836, Groen had been nominated Councillor of State; and in 1840, when the revision of the Constitution was forced upon the King, the leader of the pietists and reactionaries, as his opponents described him, became an "extraordinary member" of the Second Chamber. But in the following year he was elected deputy for Harderwyk, and sat down to his death as member successively for the Hague, Leyden, and Arnhem. The Constitutional Reform movement was inspired by Thorbecke from his Chair of Law at Leyden, and the weariness with which the nation began to view the old King's obstinacy on the Belgian question materially assisted the reformers. M. Groen, of course, was foremost among the champions of uncompromising resistance, but the abdication of William I., in 1840, and the appearance soon after of Thorbecke in the Chamber weakened the Conservative forces. The cool judgment and the logical force of the great Liberal leader, were more than a match for the flashing rhetoric and warm, poetic imagination of Groen; and Reform gained ground steadily, till at length the *contre-coup* of the French convulsion of 1848 terrified the Crown and the Conservatives into sudden and complete submission. The Constitution of that year, which Thorbecke carried peacefully and soberly, in the midst of mad democratic storms around, has secured for Holland political freedom and orderly progress such as no other nation on the European continent enjoyed down to the most recent times. The present King ascended the throne in the following year, and his reign, though remarkable for many critical struggles in politics, has been no less pacific and untroubled by internal or external convulsions than that of Queen Victoria.

But Groen van Prinsterer was not one of those who consented to recognise the beneficent results of the change he had so stoutly opposed. He never ceased to deplore the success of the Reformers in 1848, nor to express his content for the pusillanimity of the *bourgeoise* Conservatism which had surrendered unconditionally at the first blast of the Liberal trumpets. He waged war persistently against "the Revolution," which was to him what "Liberalism" was to Dr. Newman. Indeed, if we were to seek out a parallel for M. Groen's peculiar powers and position, we should say that he was what John Henry Newman might have been, if he had plunged into political instead of theological controversy. The intellectual isolation of the one and the other, their hopeless and gallant struggle against forces which gather and grow under the impulsion of resistance; their lofty eloquence, penetrated with tenderness and poetry, yet capable of dealing the rudest blows; their personal influence, so magnetically felt even by those who intellectually protest against their dominion,—all these resemblances seem to us to bring M. Groen more nearly on a level with Dr. Newman than with De Maistre, to whom Mr. Grant Duff has compared him, or Stahl, to whom he has also been likened. No doubt there are great differences in the intellectual and literary capacities of the men, but we are not measuring the one against the other. In Groen's prolonged conflict with the Liberalism of Thorbecke, and especially in his resistance to the secularisation of the school system of Holland in in 1857, he displayed a marvellous energy and fertility of resource in Parliamentary tactics: but he felt that he was fighting almost single-handed, for the ordinary Liberal-Conservatism of the Dutch *bourgeoisie* had no liking for—indeed, no intelligent conception of—his romantic and half-mystical ideas. He was, as it seemed, born two centuries at least behind his time, for the devotion to an impossible ideal, which marred his career and nullified his services, would have found a sphere of possibilities under the old Batavian institutions. M. Groen van Prinsterer was too passionately convinced of the truth of his opinions to submit them to any compromise, and he never chose, therefore, to accept the embarrassing responsibilities of office. Thus, though his influence as a Parliamentary speaker at the Hague was as great as that which Mr. Gladstone wields in the House of Commons at Westminster, M. Groen has left no permanent traces of his policy in the history of Holland. He fought a losing fight most gallantly, and with few to aid or to cheer him: but his defeat was predetermined by the aggregate of forces which he would himself have described as "the Revolution," and with which he had in some sort a personal feud.

THE REFORM OF THE PLATFORM.

(The Nation.)

There is, of course, nothing to be said against the strong desire and determination of the reformers in the Republican party that the person nominated for the Presidency at Cincinnati shall be himself a reformer, and not one of the men who, as has been well said, "are part of the thing to be reformed." To be a reformer, too, the candidate must be, as we endeavoured to point out a fortnight ago, not simply a man who is in favour of reform in the abstract, or who is willing to do as much for reform in the Presidential chair as the existing party usages will permit, but a man who is willing to sacrifice himself for reform, willing to fight for it with the Senate and House and all the Managers, and suffer for it the endless vexations which they can inflict on him, and to trust to the people to support him in disregarding party usages. He must

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

be a man, in short, like General Jackson, of sufficient force of character to make a revolution in the Government. Jackson made a revolution by converting the offices into party "spoils," or, in other words, by disregarding the existing usage for the gratification of his own malignity and ambition. We must now have a man who will again make a revolution and destroy the existing usage, and this time in the interest of the public; but to do this he must be, as Jackson was, a fighting man, not afraid to "embitter sentiments," or to "destroy harmony," or to "antagonize" prominent public men, or "hurt the party."

There cannot, then, be too much care taken in the choice of the candidate, for much if not all will depend on him. But, on the other hand, we trust reformers will not overlook the platform, and treat it as of no consequence, because of late years it has become, in the hand of the managers, a mere form of words signifying nothing. On the contrary, the present appears to be an excellent opportunity for reforming it as well as for reforming the candidates. It ought to be borne in mind that the platform of the party in power should differ materially from that of the party in opposition. The latter may be, and indeed can hardly help being, a mere piece of criticism, or a general declaration of principles. The former, on the other hand, should be a genuine programme of the policy to be pursued both in administration and legislation, by which the party may be afterwards judged. The Republican party has never, during its whole existence, had the kind of platform which we now need. Its object being first the restriction of slavery and then the preservation of the Union, and these being ends which admitted of large and picturesque description, while the means to them had in the nature of things to be left in the main to Providence and time, the practice of making sober and minute plans and specifications has died out among politicians. The platform of both parties has become a piece of turgid rhetoric, abounding in glittering generalities, and carefully avoiding any distinct and definite promises, and consequently supplying no means of holding the party to any strict and proper responsibility. It would have been impossible, at any time since 1865, to fasten on the Republican party any ordinary sin of commission or omission by the aid of its platforms, so carefully vague have their utterances been on all prominent topics of the day. In fact, so long as it does not actually organize a rebellion for the overthrow of the Government, it is at present useless to try to convict it out of its own mouth of any wrong-doing. It says a thing ought to be done, but does not say *when* it ought to be done; or it recommends a thing so shadowy that no critic or fault-finder can himself point out *how* it could be done; or it solemnly affirms something which no sane person ever thinks of denying, or proposes to defend something to which there is nowhere the least sign of hostility; or proclaims its desire for something to which nobody but a brute or a savage would refuse his consent. Even when it makes a specific recommendation, as, for example, of a return to specie payments or of a reform in the civil service, it is almost sure to be so general in its terms that the party cannot be held bound to the passage of any "particular measure" which the wit of man could devise.

The general result is that the platform has become simply a display of fireworks, with which the professional politicians amuse the public during the few weeks which intervene between the nominations and the election, well knowing that after the election it will be forgotten, or that, at all events, there is nothing in it which can be made a handle of against the party management. Take as an illustration the declaration of the Philadelphia Convention in 1872 with regard to civil-service reform. It was very sweeping, and seemed to be an emphatic endorsement of the plan of reform the President was then pursuing and a condemnation of the old system. Nevertheless, when Congress met, all or nearly all, the leading Republicans treated any attempt to change the old system with ridicule and contempt, and did so openly and without any regard to the platform.

Now, we do not mean to say that the platform should contain drafts of bills, or should even specify with minuteness what Congressional enactments should provide, or what course the Administration ought to pursue; nor do we undertake to fix the degree of particularity with which it should speak on any subject. This is a matter which must necessarily be left to the judgment of the framers of the resolutions. We simply wish to call attention to the fact that the platform must, in order to restore a proper sense of party responsibility and furnish the public with a test of party sincerity and efficiency, describe with reasonable accuracy not only what the party proposes to do, but *how* it proposes to do it. With regard to civil-service reform, it ought to give us, not general approval of reform only, or even a general proposition that reform consists in appointing good men and keeping them (for we have had this already, and it has done no good), but some account of the process by which the reform ought to be effected, sufficiently minute to enable us to ground a positive charge of treachery and deceit on any leader or manager who shirks or opposes it. And this and all else ought to be expressed in plain, homely, unambiguous English, free from cant and from bombast.

We will take leave to add that if it contained not one word about anything but civil-service reform, it would be all that the times demand; for the condition of the civil-service includes almost every evil of which the American people have at this moment to complain. The seat of all the fraud and corruption and infidelity and inefficiency and negligence is to be found in it. Everything which is now most denounced in the pulpit, in the press, on the platform, and by the fireside can be surely, and for the most part directly, traced to it. Suppose the laws were faithfully executed, the taxes honestly collected, the public accounts correctly kept, all branches of the administration performed with vigor, skill, and efficiency; suppose the best men in the State found it easy to get them; suppose the public service were attractive to that large body of the upright, sober, efficient who, unfit for strife, are willing to give faithful labor for small pay, if accompanied with security; suppose legislation were carefully considered, and framed in the light of the most recent experience of the civilized world; suppose men who had given special attention to particular subjects were listened to by Congressmen, and found little difficulty in becoming Congressmen themselves; suppose there was among all classes, and especially among the rising generation, a revival of that splendid and ennobling interest in the problems of the art of Government, as applied to complicated commercial societies like ours, which distinguished the American people at the close of the last country and the beginning of this; suppose the game of trickery, chicane, and humbug which Morton, Conkling, and their kind call "politics" were to fall into disuse, and the persons who play it consigned to obscurity or forced into some honest pursuit, what should we, as citizens of a free state, have now to lament? Why, nothing—absolutely nothing. There might still be fraud and corruption, and bad legislation; but the way to cure them, as far as may be in a world inhabited by mortal men, would be clear. The philanthropist or statesman or reformer would still have work to do in abundance, but they would work with hopefulness, and be able every day to count their gains. And what is it that hinders this most desirable consummation? Simply, the usurpation by the legislative branch of the Government of the Executive power of making appointments to office, and the use of the power thus usurped to further the selfish aims of individuals in the almost total disregard of the public interest. The usurpation is, in fact, so great and far-reaching in its consequences that it has effected a change in the structure of the Government. The President, as he now exists, is no longer the President provided for by the Constitution. It has a host of new duties, to which most of its time is given, and is armed with new rights, for the protection of which almost all its votes are directly or indirectly cast. The public service is no longer the machine contemplated by the Constitution. It has no one responsible head; it works under no system of discipline or accountability. It resembles no corps of which the framers of the Government had any knowledge or foresight, and none which now exists in any civilized country. Nor is it organized either on American or foreign experience of human nature, or with reference to peculiar needs of American business or society. It is in all respects peculiar, barbarous, unprecedented and unparalleled. In short, the Government we live under is essentially different from that which was founded for us eighty-nine years ago, and is essentially worse, and essentially unfitted to the need of a modern state; and the change has been effected not by legislation, but the insidious growth of an abuse begun by an unscrupulous President, and perpetuated and converted into a system by two generations of adventurers and intriguers. If the Republican party, then, wishes to bring the Republic back to the simplicity and purity of the earlier days, it must restore the old distribution of powers and duties, and reorganize the civil service on ordinary business principles. The task does not seem a great one, if we think only of the amount of labor it would require; but if we think of the effect it would produce, it seems worthy to rank with any of the greatest political changes of modern times.

Shipping Intelligence.

ARRIVALS.

July 23, *Great Republic*, American steamer, Dearborn, 3,883, from Hongkong, July 15, Mails and General, to P. M. S. S. Co.

July 24, *Sir Lancelot*, British ship, Hepburn, 886, from Shanghai, Ballast, to Jardine, Matheson & Co.

July 25, *Hiogo Maru*, Japanese steamer, Vroom 630, from Hakodate, Mails and General, to M. B. Co.

July 25, *Modeste*, British corvette, Captain Buller, 2,100, from Kobe.

July 27, *Genkai Maru*, Japanese steamer, Connor, 1,917, from Shanghai and ports, July 20, Mails and General, to M. B. Co.

July 28 *Malacca*, British steamer, Edmond, 1,685, from Hongkong, Mails and General, to P. & O. Co.

July 28, *Shinagawa Maru*, Japanese steamer, Sickmier, 900, from Kobe, July 26, Mails and General, to M. B. Co.

DEPARTURES.

July 22, *Glamis Castle*, British steamer, Dickie, 1,587, for New York, viâ Kobe, Tea, despatched by Adamson, Bell & Co.

July 23, *Nevada*, American steamer, Williams, 2,145, for Shanghai and port, Mails and General, despatched by P. M. S. S. Co.

July 24, *City of Peking*, American steamer, Maury, 5,079, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

July 24, *Haidamack*, Russian corvette, Captain Tirtoff, 1,100, for Hakodate.

July 24, *La Clocheterie*, French corvette, Captain Reinnier, 2,000 for Hakodate.

July 25, *Great Republic*, American steamer, Cobb, 3,883, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

July 25, *Kiushiu Maru*, Japanese steamer, Christensen, 550, for Kobe, General, despatched by M. B. Co.

July 26, *Tanais*, French steamer, Reynier, 1,910, for Hongkong, Mails and General, despatched by M. M. Co.

July 26, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

July 26, *Toyoshima Maru*, Japanese steamer, Thomson, 656, for Hakodate, General, despatched by M. B. Co.

July 28, *Osaka*, British barque, Lowe, 527, for London viâ Kobe, Ballast, despatched by Edward Fischer & Co.

July 28, *Ella Nicol*, British barque, Wilson, 475, for Kobe, Kerosene, despatched by C. & J. Trading Co.

July 28, *Chili Maru*, Japanese steamer, Drummond, 800, for Kobe, Mails and General, despatched by M. B. Co.

July 29, *Midge*, British gun-boat, Captain Salmon, for Kobe.

July 24, *Tennessee*, American frigate, Captain Lowe, for Hakodate

PASSENGERS.

Per Steamship *Great Republic* from Hongkong —For Yokohama: Mr and Mrs Haffenden, 2 children and nurse, Mrs F. C. Goodrich, Mrs. F V McNain, A H. Wiegand, and 1 in the steerage. For San Francisco: Revd J. Wilson, wife and 3 children. Steerage: Mrs Trinadad, daughter and 3 children.

Per Steamship *Nevada* for Shanghai and ports.—Viscount Brennier de Montmorand, and servant, Minister of France to China, Georges Dubail, Esq. (Secretary) Mr. W. White, Captain J. A. Amesbury Mr E C. Kirby, and 1 Japanese in the cabin.

Per Steamship *City of Peking* for Hongkong.—Messrs. A. E. Brunnier, and Wilson.

Per P. M. S. S. *Great Republic*, for San Francisco: Messrs. E G Rose, Lieut Field, Miss Rains, Felix Salle, Mr Lambert and Family, Rev. Mr Wilson, Rev. Mr Nelson, Mr. and Mrs Tolbort J. Preston, H. W. Davis, John Coram, Mr. and Mrs. Fobel, Mrs. Halsey and Family, Count de Rochechouart, F. A Davis C. F. Fishe and Family, J. B. Hay, Captain Le Bon, G. Chludow, P. Pachuro, F. Klots, H. G. Hollingworth, Count d'Imécourt, A. A. Fisher, Saml. Morris, and 140 Chinese in the Steerage.

Per Steamship *Tanais* for Hongkong —Messrs. Bowlers and Lassiere.

Per Steamship *Tokio Maru* for Shanghai and ports —Mr. and Mrs. Fuller, Miss Gulick, Miss Scott, Miss L Green, Mrs. Von der Heyde and child, Mrs. Benumann, Mrs Lawrence, Messrs. Twombley, Pryer, A. Machenhauer, Peltzer, W. Reynell, J. Scott, F. A. Potter, Dr. Funk. Captain Bridgford, and 33 Japanese in the steerage.

Per Steamship *Genkai Maru*, from Shanghai, &c.—Rt. Revd. Bishop Burdon and Mrs Burdon, Rt. Rev. Bishop Williams, Mr. Cargill, Miss Cargill, Mr. Merrill, Mr. Simeon, Dr. Ermerins, Mr. O. J. Ferreira and Child, Mr. Rymer Jones, Mr. J. H. Pinckooss, Mr. Callwell, Mr. Van D lden, Mr Lipman, Mr. H. D Schmid, Mr. L. J. Sa, Mr. Conner, (San Francisco) 19 Japanese and 1 Chinese in cabin, 4 Europeans, 7 Chinese and 26, Japanese in steerage.

Per Steamship *Malacca* from Hongkong —Mr. and Mrs. Rickard and family, Mr. Cooper, R N., and 4 Chinese.

CARGO.

Per Steamship *Nevada* for Shanghai and ports.—
Treasure $22,400
Per Steamship *Tanais* for Hongkong —
Silk for Marseille... ... ... 370 bales.
London ... ... 449 „
Total... ... ... 819 bales.
Waste Silk... ... ... 25 bales.

Per Steamship *Tokio Maru* for Shanghai and ports.—
Treasure ... ... $50,500.
Per Steamship *Genkai Maru* from Shanghai and ports —
Treasure $163,000
„ ... ...*yen* 500,501
Per Steamship *Malacca* from Hongkong —
Sugar ... ... 8,637 bags.
Sundries ... ... 1,628 packages.

REPORTS.

The *Sir Lancelot* reports: North-easterly winds and stormy weather. Had a heavy easterly gale off the Kii channel which continued for some days.

The Steamship *Malacca* reports: Light S. W. winds after leaving port, but during latter part of trip strong N. E. gales and a very heavy sea.

The *Gaucho* left this afternoon for Yokoska, to be docked.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The previously reported large transactions in *Cotton Goods* and *Yarns* have, to a great extent, satisfied the demand, and we have now to report a quiet market with prices showing a downward tendency. *Grey Shirtings* may be considered nominally as unchanged. In *Yarns* a moderate business has been done at weaker rates. Superior spinnings of 28/32, though somewhat lower in price, continue in good demand, whereas low spinnings of these counts are almost unsaleable.

Grey Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce....	$1.70 to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	2.00 to 2.45
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1.90 to 2.50
9 lbs.	38½ „	44 in.	„ ...	2.20 to 2.72
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.45 to 1.70
„ 6lbs.	24 „	32 in.	„ ...	1.15 to 1.30

White Shirtings:—				
60 to 64 reed	40 yds.	35 in.	per pce.	2.20 to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb...	0.75 to 1.00
Black Velvets				8.00 to 9.00
English Drills	15 lbs.	40 yds.	30 in.	2.90 to 3.05
Taffachelas	12 yds.	33 in....	*nom.*	2.10 to 2.30

Yarns.—

No. 16 to 24	...per picul...	$30.00 to 32.50	
No. 28 to 32	...per picul...	$32.00 to 37.50	
No. 38 to 42	...per picul...	$39.00 to 42.00	
Reverse Twist ... 16/24 ...	„ ...	32.50	

Woollens.—Plain *Mousselines de Laine* remain saleable at the same low rates as quoted in our last, while printed sorts attract more attention. We hear of some transactions in *Black Orleans* and *Shimagoros*, but at very low rates.

Plain Orleans	40—42 yds.	32 in....	6.50 to 7.50	
Figured Orleans	29—30 yds.	31 in. ..	4.75 to 5.25	
Shimagoro	30 yds.	30 in...	4.25 to 5.75	
Italian Cloth	—30 yds.	32 in....	0.25 to 0.33	
Camlet Cords	29—30 yds.	32 in....	6.25 to 7.25	
Camlets Asstd.	56—58 yds.	31 in ...	18.50 to 19.00	
Lastings, Japan...	22—30 yds.	32 in....	13.00 to 14.50	
Plain Mousseline de Laine	—30 yds.	30 in ...	0.17½ to 0.19	

Figured Mousseline de Laine..	30 yds.	30 in...	0.23 to 0.27	
Multicolored „	...30 yds.	30 in...	0.30 to 0.36½	
Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80 to 1.20	
Presidents	...54 in. to 56 in...		0.60 to 0.70	
Pilots	...54 in. to 56 in...		0.40 to 0.45	
Union	.. 54 in. to 56 in...		0.40 to 0.65	
Blankets, scarlet & green	7 to 8 lbs...	per lb...	0.40 to 0.41	

Sugar.—During the past week the native dealers have evinced a greater desire to buy, but hoping that holders may shew some wish to realize their long-standing stocks, they offer prices which are so low as to meet with no response. In Yedo stocks are becoming very light, and as little Sugar is on the way from Formosa, and none from China ports, a considerable advance in values is daily expected. Importers of *Takao Sugar* are asking $3.75 per picul, and are firm in their demands; some even demanding 84.

Refined Sugars are not in active demand, but there is some improvement in this respect to-day. The quotations for *China Sorts* are quite nominal.

Sugar:—Takao in bag	...per picul .	$3.50	
„ in basket	„	...$3.15	
Taiwanfoo do.	„	...$3.05	
do. in bag	„	...$3.20	
China No 1 Ping-fah	„	...$7.75	
„ No. 2 Ching-pak	„	...$7.10	
„ No. 3 Ke-pak	„	.. $6.20	

China No. 4 Kook-fah	...per picul...	$5.50	
„ No. 5 Kong-fun	„	...$4.90	
„ No. 6 E-pak	„	...$3.80	
Swatow...	„	...$3.00	
Daitong	„	...$2.85	
Japan Rice	„	...$2.20	
Kerosene Oil	„	...$2.35	

Kerosene Oil.—Our market remains quiet, though, apparently, a few holders are forcing sales. The *Ella Nicol* has taken her cargo of 7,860 cases to Kobe.

EXPORTS.

Silk.—A large business has been done during the week at lower prices, and in consequence of very heavy arrivals dealers were anxious to realize at the subjoined quotations.

Arrivals are 1,580 bales, and settlements, since the 22nd instant, 950 bales of Hanks and 250 of Oshiu, filature and other sorts, the stock consisting of 1,000 bales. The total export to date is 1,483 bales against 211 bales for a corresponding period last year.

	At Exchange 3/11½ in London.	*At Exchange 5.00 at 6 m.s. in Lyons.*	
Hanks.—Extra to No. 1...	$720 to 740	25/2 to 25/10	69 to 71
„ Best No. 1 & 2 ...	$690 to 710	24/2 to 24/10	67 to 68
„ Good No. 2 ...	$660 to 680	23/3 to 23/10	64 to 66
„ Medium No. 2½ .	$630 to 650	22/3 to 22/11	61 to 63
„ C'mon. No 3) „ Inferior No 4 & 5)	$600 to 620	21/8 to 21/11	58 to 60

	At Exchange 3/11½ in London.	*At Exchange 5.00 at 6 m.s. in Lyons.*	
Kakida.— Good	$730 to 740	25/6 to 25/10	70 to 71
Hamatski.—Good	$520 to 550	18/8 to 19/7	51 to 54
Soday.— Good	$550 to 570	19/7 to 20/3	54 to 56
Hatchojee—(Tussah).....	$480 to 510	17/4 to 18/4	48 to 50
Tajuma.— (Tamba).....	$430 to 480	15/8 to 17/4	43 to 48

Tea.—The closing week has been marked by no feature in our Tea market worthy of comment. Settlements have been moderate, amounting in all to 2,600 piculs, mostly of the lower grades at prices shewing a weaker tendency. The general quality of most parcels offering is anything but desirable, and it seems quite apparent that the first crop of the current season has almost all arrived on this market.

To-days prices rule as under, the general tone of the market being decidedly weak.

Common	$10.00 to 12.00	Fine	$25.00 to 30.00
Good Common	13.00 to 16.00	Finest	31.00 to 36.00
Medium	17.00 to 19.00	Choice	40.00 nomi.
Good Medium	20.00 to 22.00		

The Str. *Quang Se* has been advertised for New York viâ Kobe and China ports, and will probably have fair despatch. The S. S. *Bengal* is also seeking freight for the same destination, rates being £3 to £3.5.

The *Etta Loring* is reported fully engaged, and will have despatch for New York about the 10th proximo.

EXCHANGE AND BULLION.

Exchange.—There has been very little doing during the week. Sterling rates have suffered a sharp decline, and Private Paper is much enquired after at quotations.

Rates close as follows:—

Sterling—Bank 6 months' sight.....	3s. 11d.
„ Bank Bills on demand.....	3s. 10d.
„ Private 6 months' sight.....	3s. 11⅜ to ½d.
On Paris—Bank 6 months' sight.....	4.90
„ Private 6 ms. sight.....	4.97½
On Hongkong—Bank sight.....	3 % disct.
„ Private 10 days' sight.....	Nominal.

On Shanghai—Bank sight	76
„ Private 10 days sight.....	77 nomi.
On New York—Bank Bills on demand.....	94½
„ 30 days sight Private.....	96½
On San Francisco—Bank Bills on demand.....	95
„ 30 days sight Private.....	96⅜
Kinsatz	396
Gold Yen	388

Original from UNIVERSITY OF CALIFORNIA

prevented this programme being carried out. Though the Japanese possess telegraphs it is evident that they have not yet adapted their customs to a telegraphic age, or the Empress would not have been obliged to wait at Shinbashi station all day on the 20th instant, expecting the Mikado's arrival which was then doubtful, when Her Majesty might have been summoned to the station by a telegram in ample time to meet the Mikado, when his arrival at Yokohama was a matter of certainty.

From the *Hôchi Shimbun*.

Officers of the Army Department will proceed in a few days to survey the northern coast of Japan.

From the same.

The school at Noge-yama, in Yokohoma, which has recently been closed, will shortly be re-opened as a school of medicine.

From the same.

Regulations have been issued by the Bureau of Police for the guidance of police constables in cases of fire or accidents by water.

The learn from the *Chôya Shimbun* that while His Majesty the Mikado was proceeding from the Shinbashi Station to the Imperial Palace, on the 21st instant, a man from among the crowd which lined the route attempted to address His Majesty, but was immediately arrested. He was taken to the nearest Police Station, and on examination stated that he was a farmer belonging to the province of Iyo, Izuoka by name, and that he was desirous of partaking of the advantages which education would afford, but which his great poverty would not admit of his attaining, and he therefore wished to solicit His Majesty's assistance towards procuring the desire of his heart.

From the *Chôya Shimbun*.

A rumour is current among the people that while Mr. Mori was in China he had a discussion at the Tsung-li Yamên about the Loochoo Islands, which he contended belonged to Japan, but was flatly contradicted by the Chinese officials, who distinctly stated that the Loochooans were subject to China.

From the *Nichi Nichi Shimbun*.

Complaints were formerly made that the *kuadzoku* and their servants treated the people disdainfully, and were even haughty in their bearing to the *kuchô* and the *kochô*, but they are now, happily, giving up such foolish and objectionable practices.

From the *Osaka Nippô*.

At the temple of Kurosumi the priests give holy water to faithful attendants which is said to cure any sickness.

From the *Akébono Shimbun*.

Their Excellencies Messrs. Sanjô, Ito, Okuma and Kuroda will start on a visit to Yezo in a few days.

From the same.

All the officials who accompanied His Majesty the Mikado on his northern tour have had seven days leave of absence granted to them.

The P. M. Co.'s steamer *Great Republic* left this morning for San Francisco. She takes 397 bales of Silk to the States and the following Tea:—

From	San Fran.	N. York.	Other cities.	Total
Shanghai	—	5,001	2,339	7,340
Hiogo	—	2,407	676	3,083
Yokohama	3,618	285	2,761	6,664
Hongkong	915	1,328	1,756	3,999
Total	4,533	9,021	7,532	21,086

Wednesday, 26th.

An advertisement which will be found elsewhere announces the temporary suspension of the *Ostasiatische Zeitung*—not its extinction—on account of a dearth of subscribers. It is catalepsy, not death.

From the *Hôchi Shimbun*.

Mr. Sakai, the former Editor of the *Akébono Shimbun*, was summoned to the *Saibansho* on the 23rd instant, but on putting in an appearance was informed that his trial was postponed until the next day, as the Judge was unprepared to proceed with his case. On the 24th Mr. Sakai again presented himself at the *Saibansho*, with a similar result.

From the same.

Some fifty Tôkiô *Geisha* have recently started off for Jôshu, which shows that the silk producers in that province have greatly prospered this year.

From the *Nichi Nichi Shimbun*.

The Government has issued 1,800,000 Cards for Silk-worm Eggs this year, which they have sent to the various *kencho* in the Silk districts for distribution among the producers.

From the same.

Though times are dull at Kiôto the tailors have received many orders for children's *kakama*, which shows that many of them are sent to school.

From the same.

At 3 a.m. on the 20th instant a fire broke out at Kuwana, in the province of Ise, and was not extinguished for some nine hours, when it had destroyed 15 houses and five lumber yards,

From the *Mainichi Shimbun*.

A new road, which can be used by *jinrikishas*, is about to be constructed in the Hakone district between Yumoto and Tônosawa, and also another between the latter place and Sokokura.

Thursday, 27th.

We have been favoured with the following telegram from the Commissioner of Railways:

Osaka, 27th July.

The line between Osaka and Mukomuchi, near Kiôto, has been successfully opened to day for public traffic.

The Agent of the Great Northern Telegraph Company has informed us that the Cable between Singapore and Batavia has been repaired, and is now in good working order.

The following movements of the Mitsu Bishi S. S. Co.'s steamers may be of interest to our readers:—

The S. S. *Hiroshima Maru* left Shanghai yesterday and her arrival here may be looked for on Thursday, the 3rd August. She will be followed by the S. S. *Sumida Maru*, leaving Shanghai on the 28th instant, and due here on the 5th proximo.

The S. S. *Nagoya Maru* will be despatched from Shanghai on the 2nd August, and in order to connect with the S. S. *Gaelic*, will be due here on the 9th instead of the 10th prox.

From the *Chôya Shimbun*.

There are, on an average, 200 cases brought before the civil court in Tôkiô every day.

From the *Saikai Shimbun*.

Many English and French men-of-war now visit Nagasaki to obtain supplies of coals, and it is said they are preparing for a war with China.

From the *Mainichi Shimbun*.

His Majesty the Mikado will visit Yokoska on the 2nd August, to witness the launch of a Government vessel which has just been completed.

We learn from the *Hôchi Shimbun* that in April last the *Shihosho* instructed the Bureau of Police that prisoners might be supplied with books of various sorts, but were on no account to be furnished with newspapers. It seems strange that the *Hôchi* should only be in a position to make this information public now, but for some inscrutable reason the Government seems desirous of preventing such announcements from being duly made known to the public through the medium of the press.

From the *Hôchi Shimbun*.

A Buddhist priest named Fukuzawa is preaching at a temple in Asakusa, called Denbôin, with so much forcible eloquence, that even during this hot weather some 300 people attend his service daily.

From the same.

Summer is usually the busy time for the *geisha*, but on account of the dullness of business, and poverty of the people, there are many among them who are now altogether giving up their calling in Tôkiô.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Friday, 28*th*.

The P. & O. steamer *Malacca* arrived this morning with English mails to 9th June on board. The delay in arrival beyond contract time was caused by the *Indus* breaking her shaft between Penang and Singapore. A steamer called the *Jeddah*, which happened to be passing, took the *Indus* in tow for a short time until met by the P. & O. steamer *Columbian*, when a transfer took place, and the *Columbian* towed the *Indus* into Singapore, where the damage was repaired. The *Indus* left Singapore at 3 a. m. on the 15th instant and arrived in Hongkong at 9 a.m. on the 20th, thus making a capital run.

Letters received yesterday morning from Peking afford very certain grounds for the belief that war with China will be avoided.

From the same source we take the following extract, which has great importance at this moment in this country :—

"The long drought, which has been doing so much harm in the provinces of Chili, Shantung and Honan, has happily ceased. We had a good strong rain the day before yesterday, and it looks as if there would be a continuance of it."

The M. M. steamer *Djemnah* left Shanghai on the 16th instant, taking 5,579 bales of Silk for Europe, being the largest cargo which any one vessel every took from that port, and equal to more than one-third of the entire annual export from Japan.

The Rt. Rev. Dr. Burdon, Bishop of Victoria, arrived here yesterday by the *Genkai Maru*. Dr. Burdon will preach in Christ Church on Sunday morning next, and also hold a Confirmation during the evening service on the same day.

The *Nichi Nichi Shimbun* says that a newspaper, to be called the *Chûgai Hiôron*, will be published on the first of next month. The *Hôchi Shimbun* says this paper will number on its staff some of the writers connected with the lately suspended *Hiôron Shimbun*, and therefore looks for some stirring articles.

From the *Nichi Nichi Shimbun*.

Mr. Sano, a member of the *Genrô-In*, who held the appointment of Commissioner to the Vienna Exhibition, has received permission to wear the Austrian and Saxon decorations which were conferred upon him.

From the *Kumamoto Shimbun*.

It is reported that Shimadzu Saburo has had his hair cut in the foreign style.

From the *Osaka Nippô*.

A number of teachers, and others interested in the progress of education, met together in Osaka on the 24th instant, to discuss matters connected with the Normal College of that city.

From the *Hôchi Shimbun*.

Mr. Sakai, the editor of the *Akébono Shimbun*, appeared again at the Tôkiô *Saibansho* on the 26th instant, when he was informed that he had, after due examination, been found guilty of an infraction of the Libel-laws, but that judgment was reserved for the present.

From the same.

His Majesty the Mikado gives a dinner party at the Imperial Palace to-day, the 28th instant, at which the Prime Minister, several of the *Sangi*, and other high officials who accompanied His Majesty on his northern journey, will be present. The subordinate officials will be received by His Majesty to-morrow.

From the same.

Drought has so long continued in the Shimane and Ehime *kens* that the farmers have at last begun to solicit the gods for rain.

Saturday, 29*th*.

From the *Akébono Shimbun*.

It is said that certain reforms will shortly take place in the regulations concerning Foreign Settlements.

From the *Mainichi Shimbun*.

Another display of fire-works will take place on the *Sumidagawa* on the 5th of next month.

From the *Hôchi Shimbun*.

It is rumoured that a notification will shortly be issued to the effect that no Japanese subjects, whether merchants or farmers, will hereafter be permitted to form companies with foreigners for the purpose of carrying on business of any nature.

From the same.

His Excellency Yamao, the Vice-Minister of Public Works, will shortly start for Mi-ike to examine some mines there, and is expected to return about the middle of next month, when their Excellencies Sanjo and Ito will start for Yezo.

From the same.

Wrestlers are hereafter it to be under the jurisdiction of the Army Department, and Mr. Gojo, a descendant of Nominoshikune, the founder of the sport in Japan, has been specially appointed to control them.

From the same.

Even children of ten or twelve years of age can earn about one *yen* a day at silk reeling in Jôshu, so that many children from Tôkiô and other cities are about to proceed to Jôshu in order to make money.

From the *Chôya Shimbun*.

Yesterday being the fiftieth day since the death of the Imperial Princess, Yoshiko no Mikoto, a special service was held at the Gokokuji temple, Otowa, Tôkiô.

From the same.

Mr. Sakai, the editor of the *Akébono Shimbun*, again appeared at the *Saibansho* on the 27th instant, and there signed an acknowledgment of the truth of the charge made against him, judgment in his case being still reserved.

From the same.

Three Americans proceeded to Sapporo with Mr. Kuroda in the *Genbu Maru* on the 25th instant, who will act as instructors of agriculture. Mr. Kuroda also took with him sixteen women who had learnt silk reeling at the Imperial filature works at Tomioka, and who will teach silk reeling at the Government establishment which is to be shortly opened at Sapporo.

The O. S. S. Co.'s steamer *Menelaus* arrived in port to-day from Liverpool, having made the passage including stoppages in fifty-four days.—*Shanghai Courier*.

A slightly incredible rumour is abroad to-day, in which there is possibly some small substratum of truth. It is confined principally, we believe, to the Chinese, and is causing them intense excitement. The story is as follows:—Four Chinese gunboats, it is said, were coming up the coast with sycee, *en route* for Shanghai, when they fell in with a French man-of-war, who attacked them, killed thirty of their men and would have taken the treasure by main force had it not been for the opportune arrival of an English war-vessel, who came to the rescue and beat the Frenchman off. Such is the story, exactly as it reaches us: we have been unable to verify it or test its accuracy, so give it as it stands. There is no doubt however that the Chinese are greatly exercised about it and are talking of nothing else.—*Shanghai Courier*.

The clipper ship *Windhover*, Captain Findlay, bent sails Wednesday, and will sail to-day or Monday for London, being the first sailing ship from this port with new season's teas.—*S. C. & C. Gazette*.

News has reached Shanghai of the arrival in London of the steamers *Glencarn* and *Hankow*. The dates of their arrival are unknown by the local agents, but according to Reuter the teas taken by the *Glencarn* were on the London market on the 7th. It is generally reported that the *Glencarn* passed the *Hankow* in the Mediterranean, the latter vessel making an unusually long voyage between Port Said and Gravesend.—*S. C. & C. Gazette*.

EUROPEAN OPINION REGARDING JAPAN.

THE extract, published among our 'Notes of the Week, reflecting the present condition of opinion in England regarding Japan, is well worthy of the careful and earnest consideration of the Japanese Government. The letter from which it is taken comes to us from an excellent source. The writer of it is a man of sound judgment, of large experience in the ways and doings of the Japanese, a careful observer and a conscientious reporter of facts; and there is no room whatever for supposing that he is mistaken in the impressions he conveys regarding the existing state of English opinion upon Japanese affairs. Now this is a very serious matter. The English are a very sober and solid people. They form opinions for themselves from facts, and pay no heed whatever to the rambling sentimentalism which is not without its weight elsewhere even in English-speaking countries. If they are very slow to praise, they are also slow to blame. They are very just, very shrewd and very practical. Their anger is reserved for deception, foul play and trickery, but they have a large fund of contempt for shams, artificiality, unfounded pretension and hollow display. Disdaining to imitate the ways of other nations, they have become a law to themselves, and their inflexible pride renders them supremely indifferent to the opinions of others. For this reason, too, they readily—perhaps too readily—form unfavourable opinions of those who appear over anxious for such opinions. They hold that reality, truthfulness and solvency are titles to respect in whatever class they are found, and though deeply tinged with caste feeling and even caste prejudice, they look down on an insolvent noble even more than on an insolvent trader. The judgment of the nation naturally finds utterance in the public journals, and these journals again exercise a large influence upon the opinion of Europe—none the less so on account of their extreme moderation and sobriety of expression. Thus it is certain that for some time at least the opinions regarding Japan reflected by our correspondent will be maintained in Europe. That it is as unduly depreciatory of the Japanese, as the previous estimates of them were too high, seems to us to admit of no doubt. And it will be observed that our correspondent takes the same view. He thinks that these opinions are due to the natural reaction from an estimate equally erroneous in the other direction. But in both cases the foreigners are the offenders. The Japanese were praised beyond their deserts, and they are now depreciated below their true merits. If they were somewhat spoiled by our flatteries, whose fault was that? And if "there never was yet fair woman but she made mouths in a glass," who is to blame one who wants not for attractions and whose praises have been sung all round the world, if she consults her mirror over often and looks to see whether smiles, frowns or the caprices of coquetry become her best?

But let us turn to our correspondent's letter and see what are the items of his bill of indictment. First, it seems that the young students have not left a good impression behind them, while they have left a great many bad debts. It is the old story of *Messieurs les étudiants, vont a La Chaumière*, &c., &c. As to their bad debts, London tradesmen are a little careless about giving credit, and there may be some fault in this direction. Still, these things should not be. Even a hundred and forty degrees of longitude do not cancel obligations towards the tailor and bootmaker, and men who wear coats which they have no intention of paying for deserve at least never to be well fitted. We think, however, that the students in England are not alone to blame for the bad odour the Japanese are in there. It is time to say that some of those who have been entrusted with official positions in England have not been as jealous of the good name and fame of the nation as they should have been. It is no secret that scenes of low profligacy have been but too common in quarters where the reputation of the Japanese nation should have been specially preserved from such a slur. Making every legitimate allowance for a moral code far lower than and widely different from our own, respect for the opinion of society, and a proper sense of pride in the reputation of the Japanese nation, should long ago have stopped, even if they would ever have permitted, the scandals to which we here only obscurely refer, but which have become lamentably notorious in London. Next we come to the charge of the illiberal policy of the Government in matters relating to trade. This covers a great deal of ground, but has much foundation. The truth is however, that the Japanese are not so much to blame for this as some of their foreign advisers, who, in season and out of season, have never ceased teaching them to regard foreign trade as prejudicial to their welfare, unless carried on under conditions repudiated as economically unsound by every leading economist in Europe. It is not too much to say that this doctrine has been dinned into the Japanese mind until all the great commercial nations of the world, with England at the head of them, are looked upon as little better than strong men desirous of plundering weaker ones. And thus it is that instead of allowing its people to buy and sell how and when and where they like, on the safe and solid ground that no man will enter into a commercial operation except for his own advantage, the Japanese Government fetters trade in every way, and with an ingenuity, which, if displayed in an exactly opposite direction, would greatly increase the wealth of the country in ten years. We have lately seen at Kobe how the Government has stepped in between a foreigner and one of its subjects, and prevented the carrying out of a contract entered into in good faith on both sides and promising to be beneficial to both sides. A native finds somewhat—a mineral or manufactured production—which the foreigner at once recognizes as promising some advantage on exportation, at a price which gives the Japanese a good profit. At that price he will get a few piculs of it. But let him try and get ten thousand piculs, and he will see what happens. A bar at once is placed across his path, and the whole transaction is stopped. What has made England so rich? A small business at large profits? Nothing of the kind. *An enormous business at small profits.* This is the secret of an expanding and profitable trade. But here, if the foreign merchant finds that it will pay him to buy a thousand piculs of copper at such and such a price, or to contract for it, the demon of officialism, or rapacity in some other form, comes in and forbids the transaction. And why? "Because the country is being robbed, and the profit which the foreigner will get should be preserved to the Japanese." Was there ever such fatuity? The foreigner's ready money offered for the product—whatever it may be—is like so much capital added to the country in aid of its productive power. If we are told that by parting with its minerals the country parts with its wealth and is so much the poorer for ever, the obvious answer is that on no other conditions can the minerals ever be of value to the nation. All semi-civilized nations seem to have a dread of their metals going away. They will export their coal without a grudge. But when their copper begins to flow, they apply a styptic as if to stop a mortal hæmorrhage. Why? There is no single reason which will hold water for a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

second. A nation cannot be ruined, and must be benefited, by free trade, because its aggregate commerce is simply the sum of myriads of transactions, not one of which would be entered into but for the profit it promises. But if the Japanese apply for their ideas of commercial legislation to men saturated with false economical views, they must not complain if their reputation suffers for the superstitions of their priests.

Next, we come to the dismissed employés of the Government—a rather difficult point to deal with. As Sir ROGER gravely said on a case of conflicting argument,—"There is much to be said on both sides." The Japanese have had some bad servants; and bad servants make bad masters. That they have dealt illiberally in money matters with their foreign employés, cannot certainly be maintained, and in cases of unexpected dismissal good allowances have always been made for unexpired time and passage money home. But still there must be some good grounds for the very strong feeling of dissatisfaction which exists among many thoroughly good foreign employés of the Government. They complain that much of their best work and best intentions is often frustrated by perverse control at the hands of men who have no real knowledge whatever of the subject matter in question. This is one of the most trying positions in which a really good worker can be placed. Fruitless or frustrated labour eats the heart out of a man, and the better and more conscientious he is, the more is this the case. Hence arise failing energy and flagging enthusiasm, time is spent in thinking of disappointment which should be spent on recreation or in the pursuit of ever widening plans, and a harvest of thistles is gathered instead of a garner of wheat.

What can be done to cure this? We reply: The gradual weeding out of the inferior men, and placing more implicit confidence in those who remain. There are many subjects on which their foreign employés have to decide which the Japanese are certainly not yet competent to pronounce judgment upon. They must therefore see that they employ good men, and then they must trust them more implicitly.

With regard to the charge of imitation, there is something in it, but not so much as has been made of it. It is idle to acknowledge the merit due to the nation for having grasped the idea of the superiority of the western over the oriental civilization, and then blame it for taking the path of western thought. The results must, in the nature of things, be immature as yet, and nations, as little as individuals, profit by theoretical experience or the mistakes of others. For many years yet the Japanese can do little more than grope their way, and this must always be borne in mind in estimating the results even of their best efforts. Their own civil service is an enormously expensive, clumsy, and, we fear, corrupt machine, and it will require a generation, or a genius, to transform it.

It seems right, therefore, at this point, to say what the Government has actually done for the nation, so that European readers may form an estimate of how far the present disparaging opinion held in Europe is justified. In a few words then it has done this: It has established peace throughout the Empire; it has done much to reform the law and the administration of justice, though far more yet remains to be done; it has greatly mitigated the severity of the criminal code; it has covered the country with improved schools, and established a university and various colleges in the capital; it has given a very fairly efficient postal and money-order system to the nation—an enormous boon; it has laid telegraphs from one end of the Empire to the other; it has freed the country from the domination of the *samurai*—a fruitful cause of internal disorder and external eruption; it has abolished the custom of carrying swords; it has done much to raise the standard of public morals by prohibitions calculated to that end; it has made some advance in the direction of religious toleration; it has introduced railways as far as it seemed wise to do so, in view of the condition of the country; it has lately paid serious attention to road-making; it has laid down comprehensive rules for the guidance of the public departments; it has grappled successfully with insurrection and disaffection; it has shewn China that even her barbarous tribes may not molest Japanese subjects with impunity, and Corea that it can punish wanton insult; it has created a national army and navy, and, doing so, has attacked the clan system at its root; it has lighted its coasts with almost disproportionate brilliancy, and has established lines of steamers on those coasts for the purpose of promoting their trade.

These are no mean services to render to a nation in the course of six years, and we are not disposed to allow the European judgment of Japan to pass without a protest against its practical unfairness. In view of the causes which have given rise to it, we are not surprised at its existence. But it is in a great measure unjust, and the real truth lies between the exaggerated estimates formed some few years back of the country and the national character, and the depreciatory estimate which we have sought to combat. The time has almost arrived when something like a true view of the national character of the Japanese—differing alike from the extravagant admiration of sentimentalists, and the shallow judgments of the ignorant—ought to be made by some foreigner with experience and art enough to do it. It might be done in twenty lines, but they must be twenty such lines as never yet have been written in this country. Of caricature, there has been plenty; there has also been plenty of fancy painting. But no artist has yet been found strong enough to paint a portrait which all shall praise as a likeness, and none be able to disparage as a picture.

SPIRIT OF THE JAPANESE PRESS.

LOOCHOO.

(Choya Shimbun, July 23, 1876.)

When our envoy Mr. Mori was in China some time ago, he discussed the question of the proprietorship of Loochoo with the Tsung-li Yamên, and, in doing so, he brought forward as a proof that it belonged to Japan, the fact of the protection which the latter country has exercised over it ever since the expedition to Formosa. The Tsung-li Yamên, however, not only refused to give into this, but on the strength of a variety of arguments which they adduced, persisted in asserting that Loochoo belong to them. Thus says street rumour at present.

Since this rumour has became prevalent throughout the country public writers have published their several views in reference to it. Some say that the assertion by the Chinese of such a claim is owing to the ill-advised arguments which Mori used in his deliberation with them. Others, again, say that we must not brook such an injustice on the part of China, and that we should therefore despatch a new envoy to that country and override its obstinate arguments by means of our prestige and strength. Others, again, adopting similar arguments to what were used by those persons who were adverse to the expedition to Corea, say that the number of matters within our country itself which requires attention is immense, and that it is not a time when we should commence disputes with outsiders; that if the possession of Loochoo would bring no increase to our country's strength nor any real benefit to its interests, the best victory that we could gain in respect to it would be to wash our hands entirely of it; and that it is the extreme of injustice for the powerful to override the weak, and the great to oppress the little. Besides these, numerous

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

other arguments are brought forward. The two which we have last mentioned, if compared with the two first ones, the violence of which renders them unworthy of any acceptation, will be said to express very peaceful views, but there are, we regret to say, some points in them which render them unsuited to the times and will prevent their adoption.

China is a country with many millions of square miles of territory. Disorderly persons are, however, rampant in it and foreign foes glare at it from without. To maintain the well being of a country by means of a government which has been long declining is one of the hardest of tasks, and yet China, while its internal administration is becoming more and more disorganized and its strength feebler and feebler, ventures to make so insignificant an island as Loochoo the grounds of a dispute with us. Loochoo has now been a dependency of China for several hundreds of years, and has never ceased to observe the ceremony of sending embassies to it to receive instructions as to the succession of its sovereigns, its year names, etc. Europeans, too, have always regarded it as being a possession of China. Such being the case, if the Tsung-li Yamen were now to give in to Mori's arguments and admit that it is an appanage of Japan, their conduct in doing so would, by making it appear that a country so large as theirs had been forced to give way to one so small as Japan, bring great discredit on their fame and destroy their influence beyond the seas. Dread of of this is the only reason that actuates them in their present policy.

Their assertion of their claim is, however, solely owing to Mori having broached the subject with them, and, had he not done so, China, haughty though it be, would have never wished, in the midst of numerous troubles that now beset it, to give rise to a fresh source of complication. If we glance at China's present internal condition, we see it involved in a complication with England on account of the Yunnan affair in the West: in the North, troops have been despatched to Shinkyo and their commander has fallen beyond the great desert. Germany is pressing her on account of the "Anna" murders. The Moukden guerrillas have provoked an expedition against them. Bands of robbers who oppose the troops sent against them, and oppress travellers, abound, and no source of trouble is wanting. In such a state of affairs let the officials labour never so hardly they cannot provide adequate remedies, and how then will they find leisure to pay attention to one little island beyond the seas. While this is so, writers on this subject, unable to appreciate the state of affairs which we have described, having heard that Mori made the mistake of broaching the question at Peking and failed in attaining the object which he had in doing so, dread a second complication with the Chinese Government, and, in their dread, go the length of saying that we should abandon Loochoo altogether. Does not this show that their argument is unsuited to the present times?

While the present condition of China is as we have described, it is too obvious to require argument that we should have nothing to dread in taking up the subject of Loochoo. And if the inhabitants of that island, regardless of the gratitude which they owe to us for the kind and friendly protection that we have exercised over them, be still desirous to continue in their old state of fealty to China, and in that wish pester our Government with petitions to that effect, their doing so can only be ascribed to their dislike to reform old customs, and not to any estimate that they can have formed as to the relative advantages or disadvantages of belonging to China or Japan. If, therefore, our Government determines what the rights of the question demand and treats Loochoo accordingly, in doing so it cannot be said to be acting towards it either arbitrarily or oppressively. And even though the inhabitants of that island might in the first instance regard with great dislike their appropriation by Japan, they would, nevertheless, by such appropriation, be relieved from the stigma of belonging to two countries, and would, by the adoption of our civilization, ultimately succeed in freeing themselves from their antiquated and benighted customs. Yet writers on the subject say that the action of our Government towards it is arbitrary and oppressive, a statement which can only proceed from utter inappreciation of the spirit of the times.

Should, however, these writers turn to us and ask what advantages we should derive from the acknowledged possession of Loochoo, we must confess that we cannot very easily point them out. As far, however, as we are concerned, it would be impossible for us, after having attested the fact of our proprietorship of Loochoo by freely spending both life and money on its behalf during and since the Formosan expedition, and thus establishing our protectorate over it, to endure the thought that all the labour and expense that we have thus undergone should be rendered as unproductive as the froth of the sea.

How to provide a substitute for the drain of gold from Japan by increasing her products.

("*Nichi Nichi Shimbun*," of July 24, 1876.)

The great evil from which Japan is at present suffering is the out-flow of her gold coinage. I have views on this question, which are somewhat different from those which have been so freely published of late, and which I have noted down below.

When Japan rested from the stormy times of the Revolution, she shook off the barbarous custom ingrained for a thousand years, and entered on a career of civilization. The intelligence of the people has, however, as yet, been only partially developed, and their productive industry has not been established, nor do they seem to care for this. They think only of vying with each other in imitating the customs of Europe and America, and their machinery and articles of every kind. Those things must be procured from these countries hence the drain of gold.

Japanese are quick to adopt the passing fashions of the day without due consideration. They do not wait until foreign arts are in the natural course of things introduced into Japan, but hasten to provide themselves from abroad. Under these circumstances, how can needless expense be avoided.

The following are the principal causes of an export of coin.

1. The surplus of Imports over Exports, the balance of which must be paid in coin.

2. The salaries paid to foreign employes.

3. Foreign Legations, Consulates and Students.

4. The interest of our foreign and internal debt.

These are all unavoidable expenses, and all I wish is to see them replaced by increased production. But I hear that our productions, far from increasing, are actually diminishing every year. The condition of the people is becoming gradually worse, and everywhere, even in the remote villages, bankruptcies are becoming more and more numerous. This is no time to send away our gold to pay for European inventions.

Agricultural produce depends on the seasons, and cannot be suddenly increased: in manufactures Japan cannot rival Europe, nor in producing articles for exportation except in a very few things. It need hardly be said that the only source from which large profits can be obtained would be from minerals, if good deposits could be discovered. The mineral wealth of Sado and Tajima is not only well known in Japan, but is praised even by Europeans. But with these gifts of nature in our land, we are but ill-provided with gold and silver, iron and copper. The reason is that mining is unsuited to our national temperament and that many turn from it with dislike. A small amount of capital goes but a short way: it is soon expended, and the mining operations have to be given up. Of this there have been not a few instances. Others, again, who recognise the value of mining operations, but who are destitute of means, have applied to capitalists to advance the necessary sums; but the latter, deeming it an unprofitable venture, have not come forward. There are, thus, very few in our own land like to those, who, in Europe and America, get mining on foot in order to effect actual profit to their country. When, then, can we hope to set on foot projects that may prove of benefit to Japan? As we have sought to give in exchange for articles imported from other countries, we ought at once to set about mining operations. In such case, the Government should take the initative, and should encourage the people, and then the latter would no doubt be influenced thereby. We trust that the Government may fix its attention on this, and at once set about framing regulations for the purpose. Surveys should be held, so as to form an estimate of the produce to be derived from the mines: and if any mine yield from 200,000 to 500,000 *yen*, then some hundred and fifty other mines should be worked, and an example thus set to the people. Thus the people would be encouraged to making efforts themselves.

We have heard that some of the nobles have purchased the Railway between Yedo and Yokohama, and that the Government intends, with the price so obtained, to extends the lines to the North and East. The nobles have been influenced by patriotic motives and have obtained also for themselves immoveable property, but this matter does not actually cause profit to the interior. Every one knows that in countries like those of Europe and America, which extend over a wide area of land, railways are of immense advantage in order to bring down produce for export. Japan, however, is but a small island empire, and quite surrounded by sea; its facilities for exports are many, though its produce is but small, and thus it is unnecessary to open up much railway communication. Again, all our railway plant has to be bought from foreign countries, giving more than 50 per cent. profit to foreigners. If, however, the Government would apply to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

mining purposes the sums paid by the nobles for the said railway, and were to encourage other wealthy nobles and gentlemen to take up mining operations also, this would be a grand source of profit to Japan. And as it would also place those nobles, &c., in possession of valuable property, the advantage of both sides would be secured by one and the same line of action.

A Western proverb says,—"The Government sets on foot the "arts of the people, and the people's arts give rise to wealth and "power." If our Government now give attention to this, they cannot but set on foot mining operations. But though we think that there is nothing of more importance than this, there may be some who observe, "not only would the expenses of so doing be "thrown away without benefiting the Government, but the latter "may also thereby add to the national debt." To such persons we would reply. "As mining is only set on foot *subsequent to* a survey as to whether it will prove profitable or otherwise, it is very plain that there would not be any such waste of capital. People have doubts about the advantage to be gained, because there have already occured instances of works being suspended on account of want of capital. But even though our Government were to spend thirty or forty millions without any advantage accruing to *mining* operations, still this money would prove of advantage to the local districts in which it is spent and would enrich the people dwelling there. This would be caused by the above-mentioned sums being circulated throughout our own country. The greatest advantages to be derived from mining operations are,

1st.—The people would, by such circulation of money, be relieved from inconveniences at present existing in consequence of its non-circulation.

2nd.—The people would be benefited by the outlay on Government mines in various local districts.

3rd.—The circulation of money, thus effected, would be of advantage in removing present obstacles to the export of produce

4th.—Assistance would be afforded to poor and distressed people by giving them employment in the mines.

Although the above great advantages would accrue from mining, it has not yet prospered on account of the doubts and suspicions entertained by many persons. We have long wished for the development of mining operations, and we are persuaded that those mines which, after a large outlay of capital, have yielded in a slight degree, would, later on, yield far more abundantly. Those mines on which but a small amount of capital and of energy has been expended, have been abandoned. Thus, though mining is of immense advantage, there are but few capitalists who devote their attention to it. But if the Government would take it up, great profits would accrue to the people; and this is what we earnestly desire.

Rights and Liberties.

(Nichi Nichi Shimbun.)

It is idle for men unacquainted with geography to talk about the means by which the wealth of the nation may be increased, and it is equally idle for uneducated men to agree about the rights of the people. Thus education must precede all discussion upon the rights of the people, just as a knowledge of geography is necessary to enable a man to grapple with the question of the increase of the nation's wealth.

There has latterly been a good deal of discussion among the middle classes respecting the rights and liberties of the people. To a superficial examiner the pleadings are very showy, but if we examine them a little more narrowly they prove to be like rootless plants or streams without a source, which wither or evaporate and disappear directly they are exposed to the sun. Without any knowledge of geography men try to prove that Japan may be made as wealthy as France or Russia, and, their defective education prompts them to claim for the people of Japan the same rights and liberties as are enjoyed by the people of England and America.

The latter feeling prevails among those who are discontented with the Government, and they take a lead on the question of the people's rights, much like gamblers who would make the people their stakes at play. Lamentably enough, the people seem to be pleased with this, little knowing that their fortunes are staked upon the issue.

The Emperor Shinsô of the S5 dynasty of China made great efforts to increase the wealth of the country, and his Prime Minister, Oanseki, desirous to please him, began to fill the the Imperial Treasury, careless of the misery he produced among the people by doing so. Then some one came to him and suggested that there was a large lake called Riosanpaku, at Santo, which might be converted into a fine piece of arable land. The Prime Minister applauded the idea and asked how it could be done. He was told in reply that it would only be necessary to dig out another place which would hold all the water of the lake, and let this water run into it. Oanseki then saw the drift of the reply, and was thus reproved by his Censor—a man of a very different class from those who are tying to lead the people astray by exciting them about their rights. This Oanseki, being a Prime Minister, acted thus for what he conceived to be the good of the country. But he was ignorant of geography and was misled, just as the people are to-day whose fortunes are made the stakes of these gamblers.

When I look into the progress of education in this country, it is so minute as only to be visible through a microscope, as it were, and few seem to have learned the duties which they really owe to the nation. They take no pains to promote the establishment of schools for the welfare of their children, and for the promotion of the productions of the Empire, and they really give no evidence of any advance upon the ideas of the Tokugawa times. Yet they are eternally crying out that the Government deprives the people of their natural rights and liberties, and clamour for these rights, liberties and representative institutions.

Now I cannot understand how men who neglect their duties towards society as a collective body, and set at naught the laws of nature, should set themselves to work to obtain these distant objects (rights and liberties). If men do not possess a certain amount of independent power it is obvious that they cannot guard rights and liberties merely made over to them formally by their rulers. In England the people have the Parliament on the banks of the Thames as the protector of their rights and liberties, and there the representatives of the people of England, Ireland and Scotland assemble. These representatives have sufficient power to counterbalance the authority of the Cabinet, if need be, and they and the Ministers meet face to face for the purpose of advancing the interests of the country, in the doing of which they indirectly advance their own interests.

But the steps which have led to this condition of affairs have successively been the signing of Magna Charta by king John, the confirmation of the Charta by Henry the Third, the Petition of Right of Charles the First, the Habeas Corpus of Charles the Second, the Bill of Rights of William the Third, the Act of Settlement, etc. These steps are carried over five hundred years, and the foundations of all of them were the independent spirit of the people. The difficulties and hardships encountered in this long struggle are only known to those who have studied history.

But some man may say:—"True, it took the English all this time to secure their liberties, but this was because they were engaged in a new struggle. But we Japanese can take the progress of affairs in England as an example, and can imitate the steps which have proved beneficial to her. Thus if our Government grants the people the right to do so, they can instantly attach themselves to the machinery of Government and become an integral part of it. This being so, why is the Government so despotic? And, being so, why do the people not protest? Why do they not clamour for their rights? They think only of the question in the light of possible fines and imprisonments, and it is lamentable to see our people so weak."

I will reply by making a comparison.—Let us suppose two families to live in one village. In each family there is a son. The son of the first family obeys his parents, does his duty properly, and tries to advance the welfare of his house. Whenever the father undertakes any steps he consults the son, for it is good to consult with so useful and dutiful a member of the house. But the son of the second family cares nothing about the prosperity of his house, laughs at his father's ways, and tells him they are ridiculous. The father, naturally enough, refuses to consult his son, knowing that it would be useless to do so. Then the son adduces the example of the neighbouring family, and says that there the son is always consulted in the affairs of the house, demanding why he should not be consulted in the same manner. "When I ask my father to consult me," he exclaims, "I am met with hard words, and this is most unreasonable. I was born in this family, and therefore have the right to say something regarding its affairs"—and thus he keeps on crying until his voice is hoarse. Now all this simply comes from the fact that the son in the one case is dutiful and intelligent, and that in the other he is a fool. The relations between father and son are those of nature, and though to a son belongs the right of speech regarding the affairs of the family, yet it is absurd that he should seek to exercise any control over the government of the house unless he has previously proved that he can discharge the duties devolving on him. He has no right to be angry because his wishes are not complied with. If men cannot discharge the primary duties of life, their clamour for rights and liberties has no foundation whatever.

Original from UNIVERSITY OF CALIFORNIA

Now, when I look at the Japanese, they seem to me to resemble very much the son in the latter case, and it is natural therefore that the Government should likewise resemble his father. Those who argue about rights and liberties, therefore, must not take the other case only as an illustration, because, by doing so, they mislead themselves and others.

UMICHI HAYASHI.

(Note appended by the Editor.)

We differ in some points with this writer, but we agree with him in the main,—that is, as regards the false foundations of the cry for rights and liberties—and thus we publish his letter in our leading columns.

CONFLICTING ESTIMATES OF THE VALUE OF THE PRESS.

(From the "*Chôya Shimbun*," July 25, 1876.)

In the old times of despotism officials were wont to say that the Government was made by them, that they had the right to treat the people as it pleased them, and that it was unbecoming that the latter should interfere in the management of affairs. We are, however, of opinion that the Government has been made for the people, and that though the latter are bound to receive the orders of the Government they are certainly not to be looked upon in the light of its servants. So far from this being so, great injury results to the country if the people are not looked upon as the masters of the Government. No country has ever been able to preserve its well being when its Government was entirely uncontrolled, and the misfortunes which have resulted from this latter state of affairs are indescribable. Great care must, therefore, be exercised to prevent absolutism on the part of the Government.

The Government of this Empire cannot now avoid being termed "absolute," but it nevertheless must not be said to be entirely so. For has not our Sovereign expressed his wish to establish a constitutional Government, and has he not, with that intent, founded the Senate and High Court of Justice, and divided the Government into the three branches of the Executive Board, *(Seiin)* the Board of Discussion *(Genrô-in)* and the Legal Board *(Taishin-in)*? If, too, we compare the Government of our own country, it being such as we have described, with that of others which are perfectly absolute, we shall observe great differences, and our officials are at present very different from those who managed the Government in the old days of despotism. While, however, we make this admission, we beg to publish a very startling piece of street news which we have recently heard. It is said that a certain official, whose name we have not learned, stated that. "There was nothing which caused "so much injury to the Government as newspapers, and that, it was "for this reason, that the recent severe press laws had been published, and that it had been decreed that those papers which "published articles subversive of the Government should be "suspended; that, with the exception of three papers, the Yomiuri, "Yeiri and Tokiô Shinshi, all those published in Yedo seemed to him "calculated to interfere with the tranquillity of the country, though "in what way he could not exactly point out. He thought, therefore, "that it would prove to the good of the country if they were all "at once prohibited." At the time he said this there was another official standing beside him who is reported to have answered:—"What you state is very true, but if newspapers were, in the "absence of clear and distinct evidence of the injury which they "caused to the country, prohibited, or even if they were prohibited "on account of offences which are now things of the past, such pro-"hibition would be much akin to despotism and would provoke "disturbance on the part of the people, resulting in I know not "what injury to the Government." The first mentioned official, on hearing this, laughed and said:—"Our Government is now so "strong that, no matter how many millions of discontented *shi-"dzoku* combined against it, they could effect absolutely nothing. "How much less therefore, could such vagabonds as the news-"paper writers do anything to injure it? If they persume to "comment too freely on the administration, it is a very simple "matter to stop and punish them by giving them their quietus. "What strength have they that would enable them to fight against "punishments so severe as this?"

Ah, is it possible that a member of our kind-hearted Government can have expressed such sentiments? Newspaper writers are men possessed of but a single pen, by means of which they give vent to their sincere opinions as to what will redound to the advantage, or prove to the detriment, of the country or the people. To compare any strength or power which they may have to that possessed by the discontented *shidzoku*, or the Government, is like comparing a bird's feather to a lofty mountain.

We, in our articles, state only what we consider to be just and proper, and we never stoop to flatter any one. Our object is always to endeavour to promote the civilization of our country, and to secure the continuance of the tranquil well-being of its people. What leisure, then, have we left wherein we could imitate the proceedings of those discontented *shidzoku*, who are anxious only for those things that will redound to their own profit? Should the opinion of that official to whom we have referred ever be adopted by the Government, and newspapers prohibited in accordance with it, it will be a heavy misfortune to us. What can be the idea of that official? We should have guaranteed that there were none such as he among the members of our excellent Government, but if the street rumour which we have quoted, prove in this instance to be that one that is found to be true out of a thousand, we shall not hesitate to apply to him the name of tyrant, and compare him to the old despotic officials to whom we referred at the commencement of this article.

THE RETURN OF THE MIKADO.

(Hôchi Shimbun.)

When the gun announcing the return of the Emperor from the North was fired, there was not a single house in the capital that did not hoist flags and rejoice. Various officials went to the station to meet the Emperor, while his subjects of various classes left their homes to catch glimpses of their Sovereign

It is not necessary that we should express in a lengthy manner how every one in the whole Empire is pleased to think that His Majesty went over the bad roads in the North in the hot and rainy season, for the sake of promoting the welfare of his subjects. Peace prevails throughout the nation, and everyone is satisfied. Although there should occassionally be a few who show a feeling of discontent, they can soon be silenced by a single notification.*

I will now mention what sad events have arisen in these times, so happy for us Japanese, in two countries which the European Powers consider as semi-civilized. Disturbances have sprung up in Turkey, and as all are well aware, they are gradually increasing in severity. All the leading Powers, with the exception of the United States, may become involved, and Heaven may have ordained that the title of Saltan should no longer exist in the world. This indeed is a sad state of affairs for Turkey.

Our neighbour, China, too, has got into trouble with England, and is also pressed with internal disturbances. The foolish people of China kill or injure foreigners, and frequently bring the government into trouble. Terrible vengeance may follow very soon, with sword and fire.

Such is the sad state in which China and Turkey are. Japan, on the contrary, is in a state of peace and happiness. If this tranquil condition of affairs arises from internal health and prosperity, and not from factitious appearances, our joy would be great. Otherwise sorrow would prevent our uttering a word.

There must be a sufficient reason to account for the sad state of affairs now prevailing in the two semi-civilized countries already referred to, and it behoves those who are entrusted with the affairs of this country to exercise the utmost care.

The news from England received yesterday is satisfactory. We find that within a week's space the Mediterranean fleet was increased so that Admiral Drummond has under his orders twenty iron-clads of the most formidable kind, manned by twelve thousand seamen and marines. The Channel fleet was re-enforced by the the coast-guard ships, and a North Sea fleet was to be formed at once. In one day one hundred tons of gunpowder and one million rifle cartridges were sent to Malta and Gibraltar, whose garrisons were being made up to war complements. And finally forty thousand troops were ready to leave England at a very few days' notice, with a new siege train. We hear that these hosts would be at once replaced by an equal number of militia. Even in these days of big battalions, England's forty thousand well-equipped troops would have some weight in European war.—*Shanghai Courier*.

FANTASIES AND FACES.

A WREATH OF VAPOUR.

How did I ever come to think of her as Koidzumi—Little spring—when I had such pretty names as Kiku, Hana, Fuji, Komurasaki and a host of others—too numerous to mention—to choose from? I hardly know, except, perhaps, that there's an indefiniteness—an air of unreality—as it were, about a little bubbling sparkling mountain spring, which suited my fancy as regards the pretty stranger. It affords me infinite amusement when I plot a story for my faces to invent for each a name. I seem to recognize a fitness in certain designations for certain people. I regard a well selected name as a sketch in shorthand of the bearer's character and personal appearance, and for that reason am often moved to pity when I encounter an individual who is forced to face the world improperly described,—ticketed as Jack when he should have been Andrew,—manifestly a counterfeit, and all without his so much as having a voice in the matter, or the power to shift his tally if he so desires. Now Kiku and Fuji are very well in their way, it must be admitted. They are flowers, and, as such, might fairly have been deemed not inappropriate perhaps. But they pleased me not. They seemed to have too much of earth about their roots to match my "lily maid." Well enough for full-blown beauties, with rosy cheeks and sun-burnt bosoms, I thought. But out of keeping with an unsubstantial vision that flits across one's path and vanishes,—a dream-child, easily recalled on waking, but gradually disappearing, as time goes on, like a badly fixed photograph—a fantasy, in fact—a vision. She was to a certain extent a regular frequenter,—for a short time only.—She then became a casual, and now she is a stranger. Alas! a total stranger.

Koidzumi! Yes, there's a vast deal in a name for all the doubt there has been cast upon it. A rose would surely never smell as sweet if it had been called a cowslip. It's idle to deny that a violet owes something to its pretty name, and it is just as certain that few people hold a stock in any estimation, because it's called a stock no doubt. And yet it has a sweet and homely perfume. Successful men have mostly names which fit them like a wedding garment. There's a martial clank, for instance, about the name of Alexander, which calls up the conqueror of the world, surrounded by the pomp and panoply of war. Small thanks to Archimedes, say I, for turning to mechanics. There's a whole smith's foundry in his name. A sound of bars and bolts and levers and archimedean screws, which must have jangled in his ears from the time he was an infant and his mother called him to her knee. How about our glorious commonwealth if we had had no Cromwell? There's a stern resolve about the Protector's name, with which his deeds kept time. His brother Richard would surely have done better if he had borne another Christian name. *Consul Romanus* had nightly terrors for De Quincey in his opium dreams. How he would have been affected is open to conjecture, if, instead of *Consul Romanus*, he had been appalled by nightly visions of *Oliver Cromwell*, ushered in with a roll of drums? Cæsar Borgia would have tried his nerves too, or I am much mistaken, and.....But Koidzumi's tripping down the street, and I must try to sketch her as she passes. Good reader, before I touch my canvas, I would ask you how are you affected by her name? In the chamber of your mind does it ring a silvery tinkle, and raise the curtain on an airy, fairy sprite who trips across the stage in a dainty fashion? If so, we see alike and understand one another. Ah me! how shall I describe her? I fear me, I cannot. As well try to catch a sunbeam in a butterfly net, or stand upon one's shadow. Who could do justice to her face, her figure, or her dress? To depict a western lady's dress were easy work. It's a reality, a fabric, made with hands, to be seen in warehouses and windows. It rustles, it is materialistic. But what mortal ever saw exposed for vulgar barter the garments of a daughter of the "rising sun," or knew them to so much as betray their existence by any sound? With the wearer, they are part and parcel of her—a harmony, a madrigal. Apart, they are but an abstraction—an idea. Koidzumi's small and dainty, from her mouth—a very Cupid's bow—to her twinkling feet, which look all the whiter for the contrast they present to the black lacquered clogs on which she walks Her oval face is framed in glossy hair of midnight hue, which is dressed so neatly that it most resembles an ebony carving. Behind, it is ornamented with coral-headed pins of yellow tortoise-shell, and, half hidden in the tresses, may be seen a string of coral beads. Her taper waist is girdled by a silken *obi* of many folds, which is tied in a huge bow-knot behind and relieved of uniformity by having carelessly twined through it a roll of gossamer-like crape, and the sun shines on a silver buckle and a richly mounted pocket-book, from which descends a little chain displaying at its end a coral of great price. Her favourite colours are blue, or brown and gold. These shew to great advantage her grey silk dress. In summer time, however, she lays aside the grey, and adopts a garment of a different texture and somewhat different color. It is grey, indeed, to a cursory observer, but a critical examination detects a warmer under hue—a roseleaf tint, as if her body sent a ruddy glow into it. A mixture of the grape and mouse tint, as it's name *(budo nedzumi)* implies. And where her dress is folded across her breast, a neck-kerchief of finest gauze, like to a summer cloud, a wreath of vapour undefined, may be seen to rise and fall upon her bosom. And when the wind plays round her feet it discloses now and then a scarlet silken under-garment.

On holidays her neck and face are powdered, and she wears a patch of gilded *beni* on her nether lip. But on what I took to be her "week days," her damask cheek is undefiled by art. She is like a polished gem beautifully set. But most of all is her gait to be admired. It is comparable to naught so much as the flowing brook from which she has been called, which sparkles in the sunlight and babbles as it goes.

I loved to meet her in the autumn mornings, when the yellow *Icho* leaves were falling and the *Momiji* had turned to scarlet. She seemed like a promise of the Spring. She never looked at me, I must confess, nor did I dare do more more than glance at her,—for she had about her an air of modesty that resents intrusion more unmistakeably than words or looks can do—until a morning came in the early winter of last year, when I felt an unwonted tumult at my heart which told me that something unusual had happened. For, looking straight, I thought, in my direction, was Koidzumi, and in her meek eyes there seemed to come

> "A happy mist,
> Like that which kept the heart of Eden green
> Before the useful trouble of the rain."

I felt bewildered, and half inclined to stop or turn back, when—I scarce know how it happened—I found myself looking after Koidzumi and a handsome youth who had turned and joined her. Since then I have seen her once or twice, but not of late, and always in his company. I begin to fear she'll not return, for I have looked for her for many months in vain. Can it be, that, like the ancient Fencer, she has left for ever the haunts she was wont to gladden by her winsome presence? Or is she but a vision only, after all, which, like a snow flake, melts in the handling? Who knows?

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us. A coil at last a teaspoonful of Ointment was worth a "fowl and any quantity of peas and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

If the writer of the article in the *Sōmō Zasshi* entitled, 'The Duty of a Patriot,' is not a humbug,—and we are strongly persuaded that he is nothing of the kind—he is a very fine fellow, but is bent upon making a martyr of himself. If this be the case, the following anecdote is worthy the attention of the Japanese Government. William the Third of England had a troublesome subject who was in much this kind of mood, in which, however, the king was very unwilling to indulge him. "————," said he, "has set his heart on being a martyr, and I have set mine on disappointing him."

We published a translation in our issue of last week of an article from the *China Shimbun*, which opened with a statement that when Mr. Mori was in China some few months ago he discussed the question of the proprietorship of Loochoo with the Tsung-li Yamên. We have, however, the best authority for stating that Mr. Mori has never held any discussion upon the Loochoo question with the Tsung-li Yamên. Mr. Mori has obtained leave of absence from Peking during the summer, on account of sickness in his family, and also because little or no official business is transacted in the Chinese capital during this season of the year. Mr. Mori will, in all probability, return to Peking early in the autumn.

It is but a short time back that we drew the attention of our readers to the state of the silk market at this port. When we were writing, prices had reached what we considered an extravagant height in the short space of three weeks, and so sudden an advance led us to believe that a reaction could, not unreasonably, be expected to ensue ere long. Nor have we been deceived in our anticipations. What with the tightness of money, and absence of news from Europe in consequence of the rupture of the wires, transactions in silk lost for a moment their briskness, and market prices which had been pushed up as high as $700 for medium hanks No. 2¾ to 3, receded to $630 to $640, whilst common and inferior descriptions fetched but $600 to $620.

This reduction, connected with a low exchange, as well as encouraging advices privately received by some operators, induced shipments from the 1st July to the 2nd instant amounting to 3,000 bales, a perfectly unprecedented figure so early in the season.

Within the last three days the activity of buyers has gone on increasing; nearly 1,200 bales have been settled; the stocks which, hardly ten days ago, amounted to over 1,000 bales, have been reduced to 200, and the daily arrivals from the country seem unable to keep up with the demand, whilst prices continue to show an upward tendency. The native dealers have caught the fever from the foreign buyers, and are raising their demands almost every moment. Good all round Hanks No. 2½ to 3, which five days ago might have been bought at $620 to $630, are now held for $720 to $730; some of the holders have taken their silk off the market, and ask $750 for what they would have gladly sold at $620 at the beginning of this week.

In the midst of the excitement which prevails in the market, the foreign Banks have been much straightened by the excessive demand for dollars, unexpected, at least, at this time of season, and the consequence has been an almost sudden rise in exchange. The rate on London for documentary Bills at 6 months sight, was on the 1st of this month 4s.; it is now 4s. 2½d., and there is little to be done even at that rate. The exchange on France at the same date was f5.05; it is now f5.35. This makes no less than 5 per cent. to be added to the cost of silk since the departure of the last mail, over and above the increase of the price of the silk itself.

Meantime imports are far from participating in the increase which characterizes the chief staple of the country. The native dealers are, it is true, willing to buy largely shirtings, yarns, mousselines, &c., but offer no advance on the late prevailing rates. On the other hand the recent rise in exchange is at least in favour of the importers, some of whom have seized the opportunity to realize to a considerable extent; but, for all that, we are sorry to say that imports in general leave but an unsatisfactory result, and were it not for the unhoped-for assistance resulting from the altered state of exchange, would not shine in comparison with silk.

Our readers will have understood that the unprecedented extent to which Silk has been sold in the last four or five weeks, has considerably added to the resources of the native dealers In fact, the dollars which recently were stored up in the coffers of the foreign Banks have rapidly found their way into those of the native establishments, which revel now in unexpected plenty, and they therefore take the opportunity of this overflowing of cash to notify that they are ready to make advances to both Japanese and foreign merchants.

We know that some of the latter have already availed themselves of this facility, and suppose that others will do likewise. We feel assured that the borrowers are thankful for the help tendered them, whilst the loans they will obtain cannot but redound to the benefit of the native dealers.

Mr. Tzuda, who according to a translation which appeared in our issue of the 8th July, had been trying to introduce into Japan the system of artificial fertilization of cereals as recommended by Mr. Hooibrinks, has published a pamphlet purporting to prove that the system has been fairly successful where a proper trial has been given to it. Mr. Tzuda says that his system has been tried in about one hundred different places in the Kanagawa *ken*, and that the result is an average increase of twenty per cent. in the crops. From various other parts of Japan have favourable accounts of the process been received, so much so, that Mr. Kido, the Minister of Agriculture, has himself written a preface to Mr. Tzuda's publication, recommending a trial of the system. Mr. Tzuda further says that the labour of fertilizing growing grain is but one third

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

that of clearing it from weeds, and the cost of materials required is trifling, so that the extra outlay in cash and labour is amply compensated for.

We have much pleasure in calling attention to the following notice of Mr. Brunton's forthcoming Map of Japan from the *Geographical Magazine*. Mr. Brunton's well known professional skill, his intimate knowledge of this country, and the careful execution of any work he undertakes, are sufficient guarantees that the map will be complete in every respect, and so supply a want which has undoubtedly been long felt.

BRUNTON'S MAP OF NIPPON (JAPAN).†—Mr. Brunton has resided for a number of years in Japan, employed upon the execution of public works. His occupation necessitated frequent journeys, and like many others in a similar position he felt the want of a trustworthy map. Japan is not in the same position as uncivilised and unexplored countries. Fairly correct maps of the provinces exist, as any one acquainted with Siebold's *Nippon* will know, and it only needed some one to bring together these native materials, to translate them, and to adjust them to the coast surveys made by the British Admiralty. The useful task has been accomplished by Mr. Brunton. His map is ready now for the engraver, and will prove a useful accession to our cartographic materials on Eastern Asia. The names have been spelt according to the method accepted by the British Legation at Tôkiô, that is to say phonetically, and there is not the slightest difficulty to pronounce them so as to be understand by the Japanese. The same could not be said of the Admiralty spelling, which defies every principle, in spite of the rules laid down for the guidance of officers.

The Governor of Kanagawa is evidently a man of active temperament in the matter of legislation, who thinks that most of the evils of society and trade are curable by Notifications, or at all events by Regulations drawn or amended by himself. From the stability of foreign banks to the supervision of native bum-boats no subject seems to come amiss to his comprehensive legislative genius. Unfortunately, as he himself no doubt thinks, for humanity in both its native and foreign varieties, his short but very remarkable career as a bank reformer was irretrievably blighted by the failure on the part of the foreign banks to recognize his fitness for the task, which, with no ordinary hardihood, he set himself to encounter. But great minds never give way to despair. The prompt rebuff administered by the bank managers is little likely to be repeated or imitated by the owners of native bum-boats. The luckless offender detected in the act of vending his vegetables to a foreign merchant vessel, unless indeed he happen to be a reduced editor or writer for one of the suppressed newspapers, is certain to receive with all becoming meekness the sentence of fine or suspension of his means of livelihood, which it will be the privilege of some petty Custom House or police official to impose under Art. X. of the *Gon Rei's* new regulations.

It has been contended, and we think rightly, that some of these regulations are infractions both of the spirit and the letter of the clauses of the Treaties and Conventions, by which freedom from official interference in trade is secured. Amongst the restrictions on trade and intercourse, which, by the 9th Article of the Tariff Convention it is declared "have been entirely removed," are:—

"4.—All restrictions resulting from attempts on the part "of the Custom House authorities, and other officials, to obtain "fees."

"5.—All restrictions limiting the classes of persons who "shall be allowed to trade with foreigners at the ports of, &c." (London Protocol June 6, 1862.)

The *Gon Rei's* regulations appear to us to clash with these clearly expressed obligations of his Government, and consequently to require modification. And it seems to us no less clear, that before issuing regulations which may affect more or less materially the convenience of all foreign shipping at this port, the foreign Consuls should have been afforded an opportunity of pointing out the objectionable character of some of the principles involved in these regulations as they are at present worded.

† A Map of Nippon (Japan), by H. Brunton, C. E., F. R. S. Scale 20 miles to the inch. M.S.

NOTIFICATION 196.

To the *Kuchô*, vice *Kuchô*, *Kochô*, and *vice Kochô* of the various districts and divisions of the sea coast.

The regulations hitherto existing for the sale of provisions and miscellaneous articles to foreign men-of-war and Japanese ships in this harbour have been abolished. The following new regulations will come into force from the first of August next. Make this, therefore, known to those who carry on the above trade under your jurisdiction.

NOMURA YASUSHI,
Vice-Governor of the Kanagawa Ken.

31st, July 1876.

REGULATIONS FOR THE SALE OF PROVISIONS AND OTHER MISCELLANEOUS ARTICLES TO FOREIGN MEN-OF-WAR AND JAPANESE SHIPS IN THIS HARBOUR.

I.—Those who wish to supply foreign men-of-war, or Japanese ships, with provisions and miscellaneous articles, must first obtain a license, the necessary distinctive flag, and a copy of these regulations.

II.—A copy of this license must be handed to the inspector at the Custom House, and have his seal of approval stamped on the flag.

III.—On applying for a license a list of articles which the applicant intends to supply must be presented.

IV.—The word *provisions* above stated comprises poultry and game, butcher's meat, fish, and vegetables: and *miscellaneous articles* such as are required for the personal use of those on board, articles of merchandise being excluded.

V.—The boats conveying provisions and miscellaneous articles either to or from foreign men-of-war or Japanese ships, must have the distinctive flag hoisted.

VI.—A fee of 50 *sen* must be paid on the receipt of such flag, and the following *ken* taxes will be levied on every boat engaged in the trade, payable on or before the 20th of each month.

Yokohama and Kanagawa	2 *yen*	per month.
Yokosuka	1 ,,	,,
Uraga and other ports	50 *sen*	,,

Beyond Yokosuka the trade will only affect Japanese vessels.

VII.—When such flag is lost by water, fire, or robbery, the fact must be made known, and if on examination the statement of such loss prove correct, another flag will be issued.

VIII.—All duly licensed boats must embark and land at the western hatoba, and articles for sale will be examined by the Custom house officials stationed there.

Note.—So as to facilitate such examination, a list of artic'es for sale should be written in a book and shown to the officers at the hatoba.

IX.—All business must be conducted betwen sun-rise and sunset, and under no circumstances may trade be carried on during the night time.

X.—These regulations apply only to foreign men-of-war and native vessels. Any one found trading with foreign merchant vessels will be immediately arrested and punished.

XI.—The stamped flags are not transferrable, even to relations. In case of illness, should a substitute be required, his name must be reported.

XII.—These flags shall be periodically inspected.

XIII.—Provisions and miscellaneous articles may not be sold to the ships of the Mitsu Bishi Co. bound for foreign ports.

XIV.—Whenever the Inspectorate of the Custom House, policemen, or other officers desire to inspect the boats while in the harbour, their orders must be strictly obeyed.

XV.—Those who lose their stamped flag through carelessness, and not by accident, may receive a new one on application, for which an extra fee will be charged.

XVI.—Payment for provisions and miscellaneous articles sold to foreign men-of-war and Japanese ships in harbour, must be received in hard cash or paper money, as all barter is strictly prohibited.

XVII.—Any one violating the foregoing regulations will render himself liable to a fine not exceeding 2 *yen*, or suspension of his license.

Note.—Those found carrying on this trade without a license will, when detected, be charged the fees in accordance with these regulations for the full time he has been engaged so doing, and will further be liable to be fined.

The P. & O. steamer *Sunda*, with English mails on board to the 23rd June, arrived in port this morning. We publish elsewhere the latest telegrams.

The steamer *Thabor* will start to-morrow for a tour of Light-house inspection, but will first proceed straight to Hakodate, in order to convey Their Excellencies Sanjô, Ito, Terashima, and several of the *Sangi* and members of the *Genrô-In*, to that port. Messrs. Sanjô and Ito, accompanied by some other officials, are about to make a tour in the island of Yezo, and will thus have an opportunity of personally ascertaining the condition of the population, and whether practical improvement can be made in the trade of that part of the empire, without the useless and lavish expenditure which was entered into by the Kaitakushi Department.

The *Meiji Maru* leaves for Hakodate to-morrow, for the purpose of trying to pick up and repair the broken telegraphic cable across the straits of Tsugaru, from Hakodate to Awomori.

From the 'Japan Mail Daily Advertiser."

Monday, 31*st.*

From the *Osaka Nippô.*

The Kiôto and Osaka line of Railway having been opened the river boat-men are in great trouble, and talk of taking passengers from Osaka up to Kiôto for six *sen*, and down from Kiôto to Osaka for 3 *sen* each.

From the same.

Very recently a stage coach commenced to run between Osaka and Sakai, a distance of about three *ri*, but the *jinrikisha* men of the district considered that the introduction of the coach seriously interfered with their business, so that about two hundred of them assembled and made an attack on the vehicle, which they smashed to pieces.

From the *Chôya Shimbun.*

Mr. Yamada Sei-ichi, the Editor of the recently suspended *Kokai Shinpô*, has been imprisoned for seven months for violation of the Press-laws. This is the first instance of a term of seven months' imprisonment being inflicted.

From the same.

Mr. Sakai Kisaburo, the former editor of the *Akébono Shimbun*, was, on the 28th instant, sentenced to imprisonment for the term of six months for violating the 12th article of the Press-laws.

From the *Hôchi Shimbun.*

An amount of 300,000 *yen* having being subscribed towards re building the Monzeki temple at Tzukiji, Tôkiô, the work will be proceeded with rapidly. The temple will be constructed after the plan of the Nishi Honguanji temple at Kiôto.

From the same.

The poverty of the people of Tôkiô may be judged from the fact that this season only one-fourth of the usual amount of tea has been sold. Only in fans has a good trade been done.

From the same.

A recent order issued by the Governor of Aitchi *ken*, that every male should have his hair cut in foreign style, caused so much dissatisfaction in the *ken*, that many people had their heads shaved altogether so as to avoid complying with the order.

From the *Nichi Nichi Shimbun.*

It is rumoured that about ten of the existing *kens* will be abolished.

From the *Meikiô Shinshi.*

There are about 3,000 families of Roman Catholics residing at Urakami, near Nagasaki. Recently one of the most wealthy families among them having recanted and returned to Buddhism, through the teaching of priests of the Shinshu sect, some twenty other families quickly followed the example set them.

From the *Akébono Shimbun.*

A woman named Kondô Hisa adopted a deserted child, and received from the authorities, as is customary, a donation of ten *yen* for so doing, but soon after the receipt of the money the child was sadly neglected, and subsequently died from ill-treatmen on the part of the woman Kondô Hisa and her husband, both of whom have been arrested in consequence.

Tuesday, 1*st.*

From the *Hôchi Shimbun.*

Nakayama Kisei, the editor of the recently suspended *Hiôron Shimbun*, and who is at present undergoing imprisonment for an infraction of the Press-laws, has been further sentenced to imprisonment for six months and a fine of eighty *yen* for another offence against the same laws.

From the same.

Prisoners will be allowed to leave jail for a limited time to visit their sick parents, on making proper application to the authorities, but this privilege will not be extended to those who are condemned to imprisonment with hard labour.

From the same.

When the Coreans were in Tôkiô their table was supplied by the proprietors of the Baisatei tea-house, who thus learnt how to cook certain Corean dishes. There is now a rage for this sort of cookery among the officials, who flock to the above tea-house in such crowds that they cannot be properly accommodated. The owners, consequently, are about to enlarge their premises.

From the same.

Another newspaper, under the designation of the *Môsô Zasshi*, will very soon be published by the proprietors of the late *Sômô Zasshi.*

From the same.

Some 150 sheep were lately imported from America on account of the Government by a Mr. Jones, who held an appointment under the Agricultural Department. These sheep cost the Government nearly $60 a head, but yet, when they arrived here, no place had been prepared for their accommodation, and not knowing what to do with them, the Government sold them at auction for $3 a head.

From the same.

A ferry boat was crossing the Katzugawa, in the province of Owari, on the 22nd instant, but as recent heavy rain had caused a freshet the boat became unmanageable and capsized, three or four passengers being drowned.

The silk crop has proved so favourable in Jôshiu and Yashiu this season, that many inhabitants of those districts have gone on a pilgrimage to Ôyama.

From the *Naniwa Shimbun.*

Mr. Ito, the editor of the *Naniwa Shimbun*, has been sentenced to ten days' imprisonment and a fine of 5 *yen*, for publishing are article in his paper which was considered an infraction of the Libel-laws.

From the *Shidzuoka Shimbun.*

Three persons recently ate some hemp leaves, thinking they were harmless, but very nearly died from the effects of so doing.

From the *Tokka Shimbun.*

It is rumoured that the Government officials are keeping a strict watch on the proceedings of all those who were proprietors, or engaged on the staff, of the three recently suspended newspapers.

Wednesday, 2*nd.*

From the *Osaka Nippo.*

Since the opening of the Railway between Osaka and Kiôto, one of the proprietors of a number of passenger boats which used to ply between those two cities, has sold out all his boats and become a dealer in *sake.*

From the *Kinji Hiôron.*

The moral conduct of the *Kuadzoku* has not hitherto been a credit to the nation, and with a view to necessary reformation a certain Government Department has been ordered to watch and report on their doings.

From the *Akébono Shimbun.*

Her Majesty the Empress will very soon start for the hot springs at Atami, in the province of Idzu.

From the *Nichi Nichi Shimbun.*

As there is much passenger traffic northwards during the summer, from this date a stage coach will run, for the first time, between Tôkiô and Utsunomiya.

From the *Chôya Shimbun.*

The Ikuno silver mines, in the Province of Tajima, are daily improving and gold is said to have been found there.

From the *Meikiô Shinshi.*

The Shintô sect have made the life of Mahomet, which was translated at this office, their special study.

From the *Mainichi Shimbun.*

We had announced that the *Jingei Maru* would be launched in the presence of His Majesty the Mikado on the 2nd instant, but on account of the vessel not being thoroughly com-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

pleted, the launch will, in all probability, be postponed until September.

Thursday, 3rd.

From the *Chôya Shimbun.*

The police have been dispensed with in the Sakai *ken*, and their duties are now performed by the various *Kochô*, who dress in the native style while on their beat.

From the same.

Mr. Komatz, lately of the *Hiôron Shimbun*, and Mr. Miyamoto, lately of the *Saifû Shimbun*, are together about to start another newspaper, to be called the *Hana-uta Shimbun.*

From the *Nichi Nichi Shimbun.*

It is rumoured that a newspaper, to be called the *Kôko Shinpô*, will shortly appear.

From the same.

It is understood that the Government will shortly establish a branch office of the *Naimusho* at the Bonin Islands.

From the *Hôchi Shimbun.*

The Government is deliberating at present as to whether Christianity will be permitted or prohibited in Japan.

From the same.

An extraordinary meeting of the *Genrô-In* took place on the 1st instant. The object of discussion is supposed to have been that of the pensions of the *Kuadzoku* and *Shidzoku.*

From the same.

Mr. Makita, the editor of the *Hôchi Shimbun*, was summoned to the *Saibansho* on the 1st instant.

From the same.

A coal mine has been discovered at Horomui, on the banks of Ishikari river, in the island of Yezo, which is said to cover an area of twenty *ri* square.

From the same.

In Yamanashi *Ken* (Kai) the people expect that their silk will produce this year 600,000 *yen* more than was expected, judging by the production of previous years.

From the *Akébono Shimbun.*

On the first of this month an extraordinary meeting of the *Genrô In* was held, but the question discussed, being an important one, was kept secret.

Friday, 4th.

From the *Mainichi Shimbun.*

An attempt was made, under the superintendance of a French Engineer, to convey water from Lake Hashirimidzu to Yokosuka, a distance of about 3 *ri*, but the works have not proved a success and will have to be reconstructed.

From the same.

A fire broke out in Ikéda-mura, in Kumamoto *ken* (Higo), on the afternoon of the 1st instant, and was not extinguished until it had destroyed some sixty houses.

From the *Chôya Shimbun.*

It has been arranged that a meeting of the *kuchô* and *kochô* of Tôkiô *Fu* will hereafter take place on the first Wednesday of every month, at the Chief Police Station.

From the *Kôfu Shimbun.*

The weather has been very hot in Kôfu, as the thermometer has registered 92 to 95 degrees.

From the *Hôchi Shimbun.*

The exact area of the park at Uyéno had not hitherto been known, but a survey having recently been made, it has been found to contain 299,768½ *tsubos.*

From the *Saikai Shimbun.*

During the month of June some Buddhists priests, belonging to the Kumamoto *ken*, visited Kagoshima for the express purpose of preaching and propagating their religious belief, but the *kencho* officials would not permit them to do so.

From the *Hôchi Shimbun.*

The National Exhibition, be held at Uyéno, Tôkiô, will be opened on the 15th March next year.

Saturday, 5th.

The *Mainichi Shimbun* hears the rumour that the use of *kiu* (moxa) will hereafter be prohibited.

From the *Nichi Nichi Shimbun.*

The Mikado was present at the *Sei-In* to-day, and for the future will attend the meetings every Friday.

From the *Chôya Shimbun.*

A display of fire-works will take place to-day, the 5th instant, at Riogokubashi on the Sumida river.

From the same.

Three Chinamen, who were lately arrested in Tôkiô for selling opium, and who have for some days been remanded to prison, were brought up to the *Saibansho* on the 3rd instant to receive sentence. They had all rendered themselves liable to imprisonment for 90 days, and this sentenced was actually inflicted in the case of one of them, but the other two were let off with a fine of *yen* 2.25, as they pleaded that they had to support their parents who were over seventy years of age.

From the *Hôchi Shimbun.*

A cemetery is to be laid out at Tôkiô where foreigners can be buried.

From the same.

We hear that Chinese subjects will now be permitted to adopt Japanese children, a proceeding which has hitherto been forbidden.

From the same.

By order of the Government a map of Corea will be published by the *Sihei-rio* (paper money department).

IMPERIAL GOVERNMENT RAILWAYS.

PROGRESS IN JAPAN.

TO whatever goal the world is rushing, there is no doubt of the advancement of humanity in all essential things. Faithfully and fearlessly science is explaining the phenomena of life, and pointing out the unity that underlies all apparent contradictions. Religion, for ages restrained by the shackles of superstition, walks forth in her own unclouded beauty, and freedom no longer urges without result her divine claims. The histories of all lands and ages lie before the readers of to-day, and it is universally conceded that never has the world taken such a mighty stride as during the years of this century that have already flown. This progress has been not only in the discoveries that lighten labour and satisfy man's yearning for knowledge, but in the vast growth of justice, equality, and charity, wherever the influences of modern thought have been felt and followed. In this march of triumph England has led the van. Her Stephensons, Brunels, and Brasseys have changed the aspect of the globe, her poets have ennobled the ambition of millions, her merchants have covered seas with their fleets, her capital is the heart of commerce whose slightest throb is felt to the confines of civilization, her travellers track regions of eternal snow and the wild deserts of Africa, wresting their secrets from them with undaunted heart, whilst her soldiers' bugles have wakened every echo in the world.

No conditions of life have ever been more favorable for the development of the individual than those that prevail in England. Popular freedom has there been built upon the broadest possible foundation, but it does not follow that another nation of different temperament and character will exhibit the same capacity for improvement, even under similar circumstances. There is an interesting sentence in Lord Elgin's diary, written during his short visit to Japan eighteen years ago, which is worthy of attention. It runs as follows: "A perfectly paternal "government; a perfectly filial people; a community "entirely self-supporting; peace within and without; no "ill-will between classes. This is what I find in Japan in "the year 1858, after one hundred years exclusion of "foreign trade and foreigners: Twenty years hence "what will be the contrast? God grant that in opening "this country to the west we may not be bringing upon "it misery and ruin." The time mentioned by Lord Elgin has almost elapsed, and yet, strange to say, it is difficult to give an unhesitating answer to the question whether Japan has received more benefit or harm from her intercourse with western nations. It cannot be denied that in many respects she has improved, and that within recent years her sympathies have been widely extended. The great law of progress which the world follows condemns all national selfishness and seclusion, and any obstacle that stands in the way of universal brotherhood is inevitably overthrown. Of her duties to other countries she is daily becoming more conscious. She cultivates friendship with the most civilized; she revels in a flood of fresh thought; she comes "with sunburnt visage, with intense soul and glittering eyes" to take her place among the nations crying for progress. This growth of sympathy has not only bound Japan to other countries with cords that cannot easily be severed, but it has affected individuals in a marked degree. The Mikado is no longer confined to his palace, or condemned to perpetual privacy. He lives for his people. Nothing could be more interesting than the accounts that have been published of his recent journey in the north. He inspects schools; he examines industries; he rewards merit; he shows that he wishes to be looked upon as the father of his people: no conduct could exhibit finer appreciation of the very soul of Christian civilization. Japan has also advanced in liberty. Nowhere has the principle of personal liberty been so amply vindicated as in England. Within her borders every individual enjoys the fullest freedom consistent with the well being of the many, but in Japan liberty is a plant just beginning to display its green leaves above the soil. Under an absolute despotism perfectly free expression of opinion is almost impossible, for the despot is presumed to be the originator of all Government enactments, and severe criticism of any real or supposed injustice becomes personally offensive and unpardonable. The Japanese Government has lately got into difficulty with regard to the Press-laws. Whatever provocation those who guide affairs may have received, their recent most unwise treatment of writers who express unpalatable opinions cannot commend itself for a moment to any right-thinking mind. We can easily understand that in a semi-civilized country, where there is much sympathy with American democracy, and the tendency of the people is towards constant change, uncontrolled freedom of expression might result in evil. If the Government cannot afford to grant the latitude that is called for, let it by one decisive edict confine the periodical literature of the country to its own organs, making compensation to those who have already embarked their capital in newspaper enterprises which they cannot conscientiously confine to the diffusion of opinions inspired solely by the Government. In spite, however, of these difficulties, which result naturally enough from the oligarchic despotism by which the country is ruled, we hold that far freer utterance of personal opinion is now current than ever existed before.

A desire has also arisen for complete popular representation, which must sooner or later be gratified. When we remember how gradually the constitution of England, as it now exists, has been constructed, we need not wonder at the difficulties that beset the Japanese with regard to the formation of deliberative assemblies. The power of the sovereign in early English history was very great, and we have only to turn to the life of CHARLES the First to see how, little more than two hundred years ago, it was possible for an English monarch to become a despot, and defy his parliament successfully for a considerable time. When he found that parliament was not disposed to accede to his demands, he dissolved it, and levied the taxes himself. Such conduct on the part of the Sovereign would now be impossible, but it is only after years of unresting effort, and by dint of great sacrifices and self-devoted patriotism, that the constitution has been established in that security which is the boast of Englishmen, and the envy of other nations. We need not expect to see any powerful parliament in Japan for a long time, but the frequent discussion of the subject is a satisfactory sign of growing desire for the untramelled expression of the people's will. Another sign of the recognition of personal liberty in Japan is the gradual rise of women in social estimation; they are daily becoming more capable of assisting their husbands, brothers, and sons in the earnest efforts of life. Five years ago the Mikado, in a message he addressed to his nobles, giving them permission to take the female members of their families abroad with them, said: "In consequence "of the want of a system of female education in our "country, many women are deficient in intelligence. Be"sides, the education of children is a thing which is "connected intimately with the instruction of their "mothers." But it is not over children only that women

possess influence; the power they exert over men for good or evil is incalculable. The story of Merlin and Vivien might be told of new actors every day, for wisdom often lies at the mercy of a smile. As the women of Japan advance in liberty, purity, and refinement, the men will learn by degrees that the most perfect pleasures are those that appeal to the higher parts of their nature, and that woman, as in Comte's philosophic religion, if rightly trained, becomes a goddess to be worshipped. One of the great reforms this country has accomplished within the last few years is the abolition of the enforced celibacy of the priesthood. In former days no Buddhist sect, except the Monto, permitted their priests to marry. The evils of monachism in Europe in the middle ages are known to every student of history, and the acknowledgment of the elevating influence of good women could nowhere be more fitly made than in the high places of religion. Another most striking fact in modern Japanese life is the thirst for knowledge now so universally exhibited. In his introduction to "Education in Japan" Mr. Mori has sketched the history of his country's longing for European education, and has collected in that volume the opinions of the most experienced teachers with regard to the best method of study to be pursued in this country. Japanese students have already distinguished themselves in European universities, and the Government has selected for service in Japan the best instructors they could procure, whilst the state grant for education has been much increased, and primary schools have been established in almost every village in the Empire. In former times the Chinese classics were the only standard of learning, science was unknown, and anything like independent thought was rather repressed than encouraged. Now Japanese students pursue their work in a systematic manner, infinitely better calculated to bring about useful results, and for this they are indebted to foreigners, and the introduction of western ideas. Another improvement to be noted is the comparative purity of the current native literature. Not many years ago books were openly sold that pandered to the most vulgar taste, but a commendable step has been taken in the total repression of anything likely to stimulate vices that are only too ready to break into dangerous flame. A strong desire for the more careful administration of justice has produced a new criminal code, and, however far short of perfection it may be, yet the introduction of these revised laws indicates an honest zeal for improvement, which deserves the highest praise. Examination of criminals by torture has been done away with: the edict forbidding the wearing of swords, the abolition of sumptuary laws, regulations for the better observance of outward forms of decency—these and many similar steps in the right direction are mainly owing to the influence of foreign feeling and advice.

But with all this commendable progress there is much reason to fear that intercourse with western countries has, in many respects, rather injured than improved the people, for two of their worst faults have been lately acquired, or increased,—extravagance and conceit. The carelessness which the Government show with regard to money is almost incredible. The Mint they built at Osaka six years ago was altogether out of proportion to the resources of the country. They engaged a large staff of foreign employés at most liberal salaries; they bought gold for coinage, which was ultimately exported at a loss to the country of six or eight per cent; they coined millions of twenty *yen* pieces, when they should have been turning out copper cents. By a little judicious management their silver *yen* might have been accepted as the standard coin of the Far East, but they were too indifferent to take the necessary trouble to establish its circulation. They open railways before they begin to make convenient roads throughout the country, and the line between here and Yedo probably cost more per mile than any other line in the world. They make costly experiments in colonizing Yezo, wanting in every element of success: they lavish immense sums on iron-clads, which might be spent to better purpose in fifty other ways. The number of envoys and students they sent abroad some years ago was far greater than they could afford to support; and we may mention that the extravagance of the special embassy in 1871, which consisted of fifty or sixty individuals, was strongly censured at the time. A curious instance of thoughtless waste was lately mentioned in a native newspaper. The Government some time ago ordered from America a number of sheep, for which they paid $60 a head, but when the animals arrived, the official fancy had passed away, and they were sold for $3 each; this being one small example of follies that are daily perpetrated. The country people are impoverished to support the government, and a large proportion of the taxes collected are undoubtedly squandered without compunction. The people are far too heavily burdened, and if the peasants were not the most charmingly ignorant and subservient of mortals, many very audible protests would have been heard long ere now against these wholesale exactions. The fatal facility with which paper money can be manufactured, and put into circulation, is not without its charms for a Government never credited with great wealth. The steady drain of bullion from the country, which has been going on unfalteringly for years, tells a tale the merest tyro in political economy can easily understand. The country has been indulging in excessive expenditure, and the result will be national bankruptcy, unless the balance of trade turns heavily in favor of Japan. Public works ought to be very gradually and economically carried on in this country. The taxes should be greatly reduced, and more money spent locally, in the construction of good roads and public buildings, for instance, so that all the tax-payers may reap some direct benefit from what they contribute to the public purse. All early travellers in Japan agree that there were no beggars in the country when foreigners first made their appearance, but now, besides much squalid wretchedness, there is a great amount of actual mendicancy and destitution. Besides economy, humility is a lesson all who take any interest in Japan should impress upon the nation. The overweening conceit of the Japanese would be objectionable, if it were not ridiculous. The old fable of the frog that perished through its efforts to enlarge its body to the dimensions of an ox, should be a warning to all who assume positions nature never intended them to occupy. The Japanese have not the vital force, the muscle, bone, sinew, fire, energy and manly independence of the Anglo-Saxon, and they cannot compete successfully with nations endowed with the superior stamina which is due to long continued progress as well as to race. How can they imagine for a moment that in the course of a few years they have reached the elevation which other countries have attained only after centuries of toil? The excessive praise so unthinkingly awarded them has been far from beneficial. Would that they could be taught to see things as they really are! Truth lies at the very root of national well-being, and unless it is properly valued

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

official peculation, commercial immorality, and social distrust will spread their poisonous branches like the Upas tree, which kills all beneath its shadow. If there were a universal recognition among this people of the importance of truth, it would go far in assisting them to realize their ambitious dreams.

Whatever Britons may glory in, they cannot boast of their manners, for both at home and abroad they chill all they meet by their selfish reserve. The manners of the Japanese are infinitely more pleasant and polite. Let anybody wander on a holiday among crowds of Japanese pleasure-seekers, when the cherry blossoms hang in white clusters overhead, and the red fire of the plum tree blazes through the woods. What pleasure they derive from bright colours and fair scenes! How a sly little joke will always set the silver bells of laughter ringing! What contentment, order, and quiet happiness! In England the lower classes on such a holiday too often prove themselves to be a reckless and disorderly rabble, and any one who has mixed much with Japanese who study foreign languages and habits, must notice that frequent imitation of western brusqueness is often to be met with now a-days. A few years ago no petty *daimio* could ride along the road without being met with indications of respect bordering on abject servility, but now the Mikado himself scarcely receives the recognition of simple courtesy. The reaction has been painfully extreme.

In artistic taste also, the Japanese have degenerated. As a nation they have a peculiarly delicate æsthetic sensibility, which their pictures, porcelains, temples, gardens, all bear witness to, but when they imitate western art, they often arrive at the most incongruous and painful results. It is a bad thing for any country to be untrue to its own genius. The Highlanders of Scotland ought never to give up wearing kilts and speaking Gaelic, and the Japanese are worse than foolish to despise their own language and dress.

But a far greater misfortune than that of an alien language, or unbecoming dress, is the scepticism which is over-running the country. A religious instinct is implanted in man's breast, and utter unbelief, such as that which prevailed in France during the first revolution, should earnestly be deprecated. There is a pretty Japanese song which says that as there are many paths on the hill-side, all leading to the summit, so there are numerous religions, but they all end in the one source of good. It is a great misfortune to a nation to have its faith unsettled. Buddhism, Confucianism, Shintôism—all contain much that is excellent, but they are rapidly losing their power, and there is no evidence that Christianity is beneficially extending its influence. Buddhism, or even an outworn pagan creed, is better than blank nihilism.

But of all the evils that have been apparently caused by foreign example, perhaps the most vexatious is the continual, and often uncalled for, interference of the Government with the people. Not a day passes without the issue of some notification, generally more or less contemptible. There is a passage in Buckle's "History of Civilization" which we should be glad to impress on the inmost consciousness of every member of the present administration. He says: "The extent to which the governing classes have interfered, and the mischiefs which that interference has produced are so remarkable, as to make thoughtful men wonder how civilization could advance in the face of such repeated obstacles. In some of the European countries the obstacles have in fact proved insuperable, and the national progress is thereby stopped. In every quarter, and at every moment the hand of Government was felt. Duties on importation, and duties on exportation; bounties to raise up a losing trade and taxes to pull down a remunerative one; this branch of industry forbidden, and that branch of industry encouraged. Then too we find laws to regulate wages; laws to regulate prices; laws to regulate profits; laws to regulate the interest of money; custom house arrangements of the most troublesome kind. A system of interference with markets, interference with manufactories, interference with machinery, interference even with shops." The striking passage, from which the above sentences are extracted, needs no comment. It forcibly applies to the method of legislation the Japanese Government seems to delight in.

In spite of all the drawbacks we have mentioned, we believe that, whatever difficulties now beset Japan, she is on the road to a nobler life than when she "fleeted her time carelessly in the golden world" she lived in long ago. This country may be compared to a child who has left the quiet retirement of home for the bustle and activity of a public school. The big boys sometimes take advantage of his ignorance, and induce him to expend all his pocket money on toys and sweetmeats; they bully, pet, and tease him by turns, but eventually he conquers all difficulties, and his life becomes stronger, braver, and better than it was in the seclusion of home. Or Japan may be compared to a brook that has left

> "The lake, and all its lilies, for the leap
> Into the unknown deep."

It falls headlong on the rocks in foam and confusion, but soon it is streaming merrily between green banks and bending boughs, the channel broadening and deepening beneath the weight of its gathering waters.

In conclusion, we believe that Lord Elgin assisted to bring rather blessing than misfortune to the pleasant people he admired so warmly. We have no doubt that a future of fame and usefulness lies before Japan, so great are her advantages: a bright and beautiful country; inhabitants possessing many estimable and some admirable qualities; a monarch who has already shown his sympathy with all classes of his subjects; and not a few men of talent at the head of affairs, whose earnest ambition we trust it may be, amid all the dangers and difficulties of this time of transition, to preserve the glory of their country and the dignity of their Sovereign.

SPIRIT OF THE JAPANESE PRESS.

The Duty of a Patriot.

(Sômô Zasshi.)

If a man were to live in solitude and wholly without social intercourse, both his happiness and his faculties would suffer.

Let us suppose a man placed in absolute isolation from his birth, what effect would this have on him? Natural objects would appeal to him through the senses of sight and hearing—the sea, the waves and trees, etc; but his mind would remain stationary, and his faculties would be much like those of the animals. He would require a few clothes, and some form of shelter, and be forced to protect himself against cold and hunger. But of the conveniences and happiness of social life he would know nothing, and we may hence infer that half of man's happiness is dependent upon social intercourse.

When the Almighty created man, he endowed him with the social instinct in order to promote his happiness, and when men formed themselves into nations, they obeyed the dictates of Heaven. The capacity for enjoyment in man is connected with these social instincts, and a western Sage has said "The social state is the origin of all happiness."

Now, a child has duties to perform towards its parents in recognition of their care of him—his nurture and education, and, similarly, men have duties towards society. The nation of which they form part is the root of their happiness, and they are bound to repay it for its benefactions to them.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Men institute governments in order that the rights and liberties which they have received from Heaven may be preserved and protected. But these Governments often abuse the power with which they are entrusted and neglect their duty towards the people. They enact unjust laws and mal-administer the national affairs, whence it arises that these rights are impaired, and trouble and distress ensue. What are the people to do under these circumstances? Must they obey the unjust laws and submit to the mal-administration of the Government? Although it is their duty to obey the laws, their first obligation is to Heaven, and whatever may be the trouble or distress arising from the pursuit of this course, they have no right to disregard the laws of Heaven and obey those enacted by men. The liberty and happiness enjoyed by the present generation are the fruits of the labours of their ancestors, and it follows that the men of this day are bound to promote the welfare of their posterity. Were they to acquiesce in the unjust laws and connive at the mal-administration of the Government of the present day, they would entail misery and hardship upon their descendants, who are the natural heirs of increased liberties and rights. Thus subservience involves a disregard of the laws of Heaven.

Must, then, men assemble in large numbers, and attack the Government with fire and sword? The people possess the right of acting thus, but men never can be certain that this course will secure the object desired. Liberty may be compared to a target and revolution to the arrow discharged against it. Excitement will make men miss their aim, and if rebellion lasts long, the issue of it may be the destruction of those very liberties which it was commenced in order to attain. And, on the other hand, the result may be attained only by the sacrifice of many precious lives and much property, and the use of fire and sword. The attendant evils may be very great. Cities may be destroyed, and fathers and sons become enemies. The people detest carnage and the shedding of blood; yet, after becoming familiar with them they disregard them, and become demoralized in consequence. Thus a revolution, begun in order to acquire liberty, may end with disastrous consequences, and the people ought not lightly to enter upon this path, which is but little in accordance with the love which Heaven bears towards man.

Is it then well that men should endeavour to ensure their happiness and liberties by means of martyrdom? Subservience arises from an excessive humility, while revolutions often have their rise in ambition or the morbid desire of distinction. Martyrdom is different from these, and has its origin in the hatred of oppression, the love of liberty and of country. It is little heard of or seen, and yet it has a great influence over the minds of men. If any innocent man meets his death through the acts of tyrannical rulers or corrupt officials, the people are deeply affected by the incident; and the love of liberty and hatred of oppression become inflamed within them. Men are led to say, "I also am willing to undergo death for the good of my countrymen, and, be officials never so bad, they are still human beings and are capable of certain good feelings. And if they see a succession of men becoming martyrs for a great cause, they will become ashamed of their evil deeds and corrupt motives. Thus martyrdom causes not the destruction of multitudes of lives or property, it involves the lives of the actors and of them alone; and hence, it is this and nothing else that men should encounter for the sake of their country.

There is no man who does not desire happiness, and it is grievous to die before the appointed time. The feeling common to all men is to love life and shrink from death. Yet when the life of one man is compared with that of a whole nation, there is a wide difference between them, just as a grain of sand is smaller than a mountain, or a drop of water than the ocean.

As already said, the root of happiness is the social state, and thus it is that to give up one's life for the sake not only of the present but future generations, is the duty of a patriotic man. And if by this martyrdom of one man the liberties and happiness of a whole nation may be secured, though his blood may dye the herbage crimson and his bones lie bleaching on the earth, yet will his souls enjoy glorious and eternal bliss.

Does it not seem then that it is a sweet and exalted thing for a man to die for his country?

Centralization and Localization.

(From the "*Nichi Nichi Shimbun*")

In actually carrying out an Administration, there should not be lost sight of the proper balance of Centralization and Localism. It is only after a combination of these two that a perfect form of administration can be obtained. Thus, then, must it not be allowed that the important point to which deep thought should be given by statesmen, and on which their minds should be carefully fixed, is the proper adjustment of the balance of Centralization and Localization? Supposing that, through error in regard to this one point, one or two should overbalance the other, the evil effects caused thereby will not be limited merely to the impossibility of carrying out a perfect form of administration. There would certainly be occasioned calamities to the country and the people, and misfortunes to society; civilization would be impeded, and the national tranquillity disturbed, so that in the end but few would be able to escape from a very avalanche of tumult. This has been clearly shown, both in ancient days and also at the present time, in the histories of Japan and of foreign lands, as is well known to ourselves and to the public generally.

The fence by which our Government is surrounded is nine fathoms in height, and we rustics are totally unable to form a conjecture as to the nature of the Court deliberations. And yet, if we secretly reflect upon the rent of the Government as judged from what we can actually perceive before our eyes, we find that signs of their leaning overmuch towards Centralization have gradually arisen and cannot but attract the notice of politicians. This is a matter that has constantly caused anxiety to politicians, and we have already made known our arguments in regard to the profit or loss, advantage or disadvantage, to be derived therefrom; this being by reason of our desire to ward off the evils arising from the preponderance of the scale of Centralization. Now a writer in the "Weekly Mail," at Yokohama, seems also to hold opinions exceedingly like our own, and has already expressed his views with skilful pen, arguing strongly against the inclination of the Japanese Government towards centralization. He laments the fact that, by reason of all the products of the whole country being collected together in Yedo, the impoverishment of the local districts grows worse day by day. He further considers it a happy opportunity that His Majesty the Tenno should, by his excursion to Mutsu and Dewa, observe for himself the actual state of affairs in the country, and is desirous that the Heads of the Local Governments should profit by that opportunity to report to the Emperor upon the condition of the districts under their jurisdiction, and to represent the inutility to the Government of the policy of Centralization.

From a letter just received from a correspondent of ours, we have obtained an item of information which is worthy of felicitation and rejoicing for the sake of our whole country. Upon reading it, we were filled with joy, perceiving that the voice of the weighty arguments contained therein would of itself come to notice, and could not be concealed.

"His Excellency Kido made personal examination into the "following affairs;—the accomplishment of the extensive works "of a new embankment, at the private expense of the people, at "Satté in the Saitama *ken*,—the fact of Yatabé Saisuké having "in the Fukushima Ken, upon a capital of merely 3,000 "*yen* loaned by the Government, established a grazing farm and "so provided means of subsistence for (the inhabitants of) Ya-"mane and 15 other villages,—and the formation, at Koriyama, "by Abe Inohei, Shigiwara Yasaku and Hashimoto Seizaemon, "of a Company, having for its object the cultivation of waste "moorlands. On each of these occasions, His Excellency, per-"haps because the matters in question entirely coincided with his "usual ideas, gave great praise thereto. Upon looking back on "the state of Yedo, His Excellency was, while there, every day "seeing 30,000 *yen* spent for the construction of a single stone "bridge, or in the erection of a single Government office 50,000 "*yen* disbursed, and he did not think it a very wonderful matter. "My own opinion is that if these sums so expended were portion-"ed out on all sides, and the inhabitants of the Local Districts "were caused to put forth their powers, then an impulse would "be given to their occupations, their produce would be rendered "more abundant, and the results of these plans for the country's "welfare would be by no means small. Considering the matter "in this light, we cannot restrain our grief at the fact that an "undue preponderance of Cetralization is certainly not beneficial "to an Administration. We have heard that whenever H. E. "has had an opportunity, he has frequently represented his views "to the Emperor. A glance at the following two verses of Chinese "poetry presented by H. E. to the Emperor is sufficient to prove "that H. E.'s object is certainly "Localism."

"'For the lengthy period of 2,500 years has the might of the "'Emperor lasted like the splendour of the sun: I beg that in "'the interval of the numberless affairs of state, He may be "'pleased to look down, from His lofty pinnacle, upon the dense "'smoke arising from the homes of His people.

"'In the capital extravagance throws away tens of thousands

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"'of money, yet how about the desolate appearance of the poverty stricken villages? At the present moment the only good "'plan I have is to beg for a feeling of unselfishness and of tenderness towards the people?"

His Ex. Kido is, in our opinion, a statesman who is fully acquainted with both Home and Foreign affairs, and of wide intelligence in regard to the prosperity or fall (of countries) in olden times and at the present day, and who has always been connected with the Central Government, has undertaken charge of the national affairs, and exerted himself on behalf of the Emperor's concerns, thereby showing the great merit of trying to effect the tranquillity of our country and homes, and who has also constantly fixed his attention upon the vital point of the balance between Centralization and Localism. We believe that at the present moment, when he has accompanied the Phœnix Car on its Northern progress, he has observed the actual condition of the local districts, given his careful attention to the question of profit or disadvantage to the administration, pondered deeply over the condition of the people, and that he has,—in connection with the actual appearance of their real state, and what he perceives displayed before his very eyes,—respectfully represented to the Emperor the evils arising from a centralized form of administration. Must we not allow that his feeling of anxiety for his country is exceedingly deep-felt and profound. We have heard from outside sources that His Majesty, our enlightened, kind, and powerful Tennô of this period of Mei i, has always given his wise attention to the prosperity of his realm, and never, even for a moment, forgets the affairs of the nation. And if so, then the fact that he will with pleasure receive H. E. Kido's worthy suggestions, is, we firmly believe, a matter beyond all doubt.

His Ex. Kido, so wonderfully intelligent, having met our divinely enlightened and exceedingly gracious Sovereign, has found an opportunity that would not have occurred once in a thousand years to represent for His Majesty's gracious hearing the most important and urgent point in regard to the administration. After this, the time cannot be far distant when it will come to pass that the system of administering the Government will be completely changed, and the evil of undue preponderance of Centralization warded off. Should this be the case, will the fruits of the Imperial progress consist merely in the happiness and prosperity of the people of Mutsu and Dewa alone? No, it must also be styled the greatest prosperity to the whole country of Japan! This is what we, upon reading the wise suggestions of H. E. Kido, style a most important piece of news, deserving of both felicitation and joy in regard to the whole country of Japan. Do the public consider our so styling it to be right, or otherwise?

Official Appointments.

("Hochi Shimbun")

We have heard that on the 29th ultimo the rules for the duration of time of official appointments to *Kon* were determined. In the case of *Konin*, three years constitutes one "term," and four of these terms, making up a period of twelve years, constitute one "appointment." For the first term of three years, they are to be considered as "acting" only, after which those of them who are found to be fitted for their duties, are to be advanced to the full rank. From the second "term" onwards, an increase of 50 *yen* upon their monthly salary will be granted them each "term," and at the end (of this second term) they will be made *Choku-nin** official. Another "term" having passed, they will become *Sei-chô-kan*,† and their place of registration will be changed to that in which their appointment is held. When the full period of twelve years has expired, there will be bestowed upon each of those who wish to retire from office a present of money equal to ten times the amount of his monthly salary.

In the case of *Sanji*, an enquiry will be made every three years as to their diligence or otherwise, and to each of those who have been more than ordinarily zealous will be given a present of the amount of one month's salary. No limit is stated for the duration of *Sanji's* appointment.

It is said that in the lower grades also provisions are made, of similar nature to the above.

Laws and their Administration.

"Chôya Shimbun"—August 3 1876.

The chief object which the Japanese Government ought to hold in view at the present day is to raise the standing of their country as speedily as possible to a level with that of foreign countries. The Imperial edicts that have been issued ever since the revolution and the mode of administration, shew that the Government has not lost sight of this object, but, to attain it effectually we must bring our degree of civilization to the same height as theirs is, and carefully adjust the equipoise of our respective rights.

Our Government is accordingly desirous to gradually promote this civilization by spreading education, and to secure the country's rights by eliminating objectionable clauses from the Treaties, and there is no one who would find fault with them on this account. When, however, we consider our present condition, great doubts are engendered in our minds as to the ease with which this revision of the Treaties can be effected, and we will now venture to define the grounds on which these suspicions are founded.

The alteration of the clauses in the Treaties to which we object is a subject which virtully concerns both foreign countries and ourselves, but we think that our object cannot be attained unless we render our laws and form of administration such that foreigners can regard them with confidence, and it is not very likely that such confidence can be infused into foreigners unless our own countrymen are first made to feel it. That the latter regard both the laws and administration with approval need not be argued, but still occasional doubts in regard to them cannot be avoided. The confidence which we ourselves place in both is very great, but we are nevertheless, in view of the case of Kusama Tokujoshi and Sawada Naonori, two men who for one and the same crime received different punishments, unable to avoid some suspicion. Another source of suspicion to us is the recent case of the suspension of the *Shimô Zasshi*. These two cases are the most serious that occur to us, but there is an incalculable number of others which are less striking, and when we entertain such suspicions what will be those felt by the numbers of people of a less liberal turn of mind? At least two-fold.

If then our laws and administration are regarded with such distrust by our own countrymen, of what nature will be the views held by foreigners in respect to them? Those of us who are accustomed to read the foreign newspapers published in Yokohama can readily understand them. Their articles on the subject teem with expressions which we would not venture even to give utterance to, but, though we, not knowing the evidence on which these foreign writers base their articles or the ideas which actuate them, would loudly proclaim our Government's innocence to the world, still to what else can the calumnies and slanders which these writers heap upon our Government be ascribed than to distrust of our laws and administration?

While, therefore, both foreigners and natives resident in this country regard our laws and administration with the distrust which we have described, our officials, let them labour never so hard, will not find it a very easy task to attain their object of amending those parts of the Treaties of which we do not approve, and the far off distance of the day on which they are likely to do so fills us with sighs. Will our Government endeavour to put an end to all mistrust on the part of our countrymen by slaying those who already share in this mistrust and forbidding its entertainment hereafter by others? We think that there is no law throughout the world sufficient to effect such an object as that, and we beg therefore that those who agree with us in bewailing the imparity of our standing with foreign countries will favour us with their views as to how this can be best put an end to.

The Rights and Liberties of the People.

REPLY TO AN ARTICLE IN THE *Chôya Shimbun* PUBLISHED ON THE 29TH JULY.

(Nichi Nichi Shimbun.)

In the *Chôya Shimbun* of the 11th of July Mr. Amano has answered and opposed the article written by Mr. Umichi, and published in the *Nichi Nichi Shimbun* of the previous day. The composition of Mr. Amano's article is excellent, but as there are some parts of it which I cannot thoroughly understand, I will place myself in the position of Mr. Umichi, and ask the *Chôya Shimbun* to clear up my doubts.

Having never heard his name before, I do not know what kind of a politician Mr. Amano is. But the *Chôya Shimbun* says that his letter was sent through the post, and the letter itself refers to what had been published in the *Nichi Nichi Shimbun* of "*yesterday*" Now, when I examine the newspapers, I see that the type was set on the previous day, and printed on the following morning, which leads me to suppose that the letter may perhaps have been written by the editor of the *Chôya Shimbun* in the name of Mr. Amano. At all events, as the editor says he agrees with Mr. Amano's opinion in every respect, I will now argue with the *Chôya Shimbun*. The *Chôya Shimbun* says that Mr. Umichi is the chief opponent of the people's rights and that he (Mr. U.) says the present Japanese

* Those receiving their appointments direct from the Crown.
† Actual chiefs of office.

do not yet know how to discharge their duties toward the country, nor, indeed, anything else: and asks how, under such circumstances, they can be entrusted with rights? They had better be digging potatoes, he says, and this is the same thing which many of the officials are saying.

How is it that the *Chôya Shimbun* should merely glance over an argument and yet attack it so severely? When I read the article of Mr. Umichi I cannot find any part of it which indicates that he is the opponent of the people's rights. Mr. Umichi says that education is essential to the people's rights, and when they are not possessed of such education it is useless for them to talk about their liberties; that it is unjust in the people to urge upon this government concessions of rights, when they do not discharge their duty; and therefore the people had better acquaint themselves with their responsibilities, for this is the road they must take in order to acquire their rights:—also that this is the speediest way that their object can be obtained, and for this reason it is better for them to dig potatoes, meanwhile, than to carry on such absurd discussions. This is sufficient to prove that he is not an opponent of the people's rights, but a man who should be honoured for the love he bears them.

The *Chôya Shimbun* is very much like Yôkô, the ancient Chinese, who delighted in seeing pictures of dragons, but when a real one made its appearence was terrified by it. It is wrong to say that those men who merely love the name of a thing are good, and those who love the real object are bad. Moreover, if the *Chôya Shimbun* means that the rights of the people cannot be obtained unless the people make the government an enemy, and tease it in the same manner as a cross mother-in-law does a bride, I do not think another word need be said.

When we examine the men who are clamouring for the people's rights, except those who are in the highest stations of life, we find that they are cunning men who make the cry a useful weapon in arguing against the administration of the government, and there is no justice in these men making the rights of people their stakes. These dissatisfied men are angry at their own misfortunes, and finding that it is too late to raise the cry of "joi" (expulsion of foreigners) and that the "feudal system" is unsuited to the present state of the minds of the people, have found the "people's rights," and intend to make this the tool wherewith to work against the government and dissipate their own spleen. Were such men appointed to some trifling office in the government, they would gladly purchase a gilt watch and raise their noses in the air, and the spirit of the people's rights would very soon fly away from them. But the editor of the *Chôya Shimbun* does not believe that there are any such men as these. Then all we can say is that he is not a man who is thoroughly acquainted with the affairs of the world. And it is very doubtful whether discussion with such a man is of any practical use.

The *Chôya Shimbun* says that the government must grant the people their rights as early as possible, and as the government desires speedy reforms, and it is not well that the people's rights should alone be withheld. But this is shooting at a place where there is no enemy, for Mr. Umichi never said a word about this; and if the *Chôya Shimbun* intends to argue against the use of arbitrary power in the name of Mr. Umichi, it is not my wish to interfere.

Mr. Umichi said, I will repeat it, people should pursue their education and learn their duties toward the nation, so that the arguments that have already been urged on this question may not be in vain. This, I think, is very honourable to him. But the *Chôya Shimbun*, believing it was an argument for upholding the power of rulers and checking that of the people, thought it was necessary to argue against it. This, however, appears to be a mistake, and I ask the *Chôya Shimbun* and Mr. Amano to give an explanation of it.

WAKAYE IKICHI.

Natural history is no work for one that loves his chair or his bed. Speculation may be pursued on a soft couch, but Nature must be observed in the open air. I have collected materials with indefatigable pertinacity. I have gathered glow-worms in the evening, and snails in the morning: I have seen the daisy close and open; I have heard the owl shriek at midnight, and hunted insects in the heat of noon.—*Johnson.*

Method raises a lively and beautiful composure out of a chaos of complicated and desorderly materials, and from a disorderly concourse and dark confusion of ideas calls forth light, order, and harmony. This assigns to every part its proper magnitude, figure, and situation, with so much judgment that all stand in need of one another, and each contributes gracefulness and strength to the whole.—*Blackmore.*

HISTORY OF THE TOKUGAWA DYNASTY.

(*Continued.*)

CHAPTER 2.—*From the death of Nobunaga to the death of Hashiba Hideyoshi.*

Nothing could exceed the consternation caused on all sides by the death of Nobunaga. Upon hearing of the merited fate of Akechi Mitsuhide, the leaders of the Ôta clan assembled at Kiyosu to discuss the situation, and finally selected Hidenobu,[1] son of the eldest son of Nobunaga,[2] as his successor. They caused him to be enfeoffed of the province of Ômi, of which the produce was assessed at three hundred thousand *koku*. The remainder of the possessions of Nobunaga was distributed among the members of his family and clan.[3] Meanwhile the three provinces of Kai, Shinano and Kôtsuke had fallen into a state of anarchy under the following circumstances. Kawajiri Shigeyoshi, a *Kerai* of Nobunaga, held of him a fief in Kai, and was murdered by the people of the province in the disturbances that followed upon the occupation of the country by Nobunaga. The K'wanrei of the K'wantô, Takikawa Kadsumasu, on news reaching him on the 7th of the death of the Ôta chief, at once left his government and hastened to Owari, in which conduct he was imitated by Mori Nagayoshi who had been entrusted with the direction of affairs in Shinano. Uyesugi Kagekatsu[4] and Hôjô Ujimasa took advantage of this state of things to dispute between themselves the possession of the three provinces, either side appealing to arms. Iyeyasu, upon becoming aware of their conduct, ordered Sakai Tadatsugu and Osuga Yasutaka to occupy Kai. The people of the province were assembled and came in crowds to proffer their submission, all of whom were, by written assurances under the seal of Iyeyasu, confirmed in their possessions. In the 7th month the Mikawa chief himself entered the province, the elders of which vied with each other in supplying him with fodder and provisions. He encamped his forces at Kofu, and by his moderation ensured the pacification of the country, which throughout acknowledged his authority. He then marched into Shinano, a majority of the lords of which province submitted to his rule. In the 8th month Ujimasa sent his son, Ujinawo to dispute with Iyeyasu the possession of Kai; but after experiencing several defeats at the hands of the Mikawa chief, found himself compelled to acknowledge his military inferiority, and in the 10th month, through his relation Ujinori, sued for peace, which was granted upon the terms that the whole revenue of Kai and Shinano should be collected by Iyeyasu, while the revenue of Kôtsuke should be allotted to Ujimasa. Upon these terms Iyeyasu accepted peace, and at the same time consented to bestow his daughter's hand upon Ujinawo, for whom his father demanded it. In the 11th month Ujinawo withdrew his forces from the field, and then the chief barons of Kai and Shinano became the vassals of Iyeyasu.

In the twelfth month Hiraiwa Chikayoshi was invested with the government of Kai, and the administration of Shinano was entrusted to Okubo Tadayo. Iyeyasu then returned to Hamamatsu, having in ten month's occupation of the territory effected the reduction of the two provinces. Uyesugi, however, was permitted to retain possession of four *kôri* comprising a tract of country extending as far as the district of Kawanakajima on the banks of the Shinano river.

On the first day of the first month of the eleventh year (A.D. 1583) the barons of the five provinces of Mikawa, Tôtomi, Suruga, Kai and Shinano came to Hamamatsu to offer their new year's congratulations to Iyeyasu.

In the 10th month Iyeyasu was advanced by Imperial rescript to the inferior division of the upper fourth rank, and was appointed Ukonye Chinjô.

In this year Hashiba Hideyoshi encountered Shibata Katsuiye at Shidzugatake in Ômi, and inflicted upon him a severe defeat. Katsuiye fled to Kitanoshô, in Yechizen, and there died by his own hand. Iyeyasu, ere the struggle

ended, had sent envoys to Hideyoshi to assure him of his sympathy, and Nobutaka, one of the sons of Nobunaga, chose this moment to ally himself with Katsuiye He was attacked, however, in Gifu, by his brother Nobuwo. The garrison, unable to hold out, abandoned the castle and took to flight, closely pursued by Nobuwo, and Nobutaka in his despair made away with himself.

Rupture between Nobuwo and Hideyoshi.

In the 2nd month of the 12th year of Tenshô (A. D. 1584) Iyeyasu was elevated by Imperial rescript to the inferior third rank, and was, in addition, made one of the Sangi.

Hideyoshi remained at Ozaka, and his increasing influence excited the jealousy of Nobuwo, while the former was urged by dislike of his rival to cast about for means to remove him from his path. Among the principal officers of Nobuwo were three leaders specially distinguished for their valour. To these Hideyoshi purposely made advances, which coming to the ears of their lord so intensified his suspicions that in the 3rd month he caused them to be put to death and breaking off all intercourse with his wily competitor sent envoys to Iyeyasu demanding his support. Hideyoshi at the same moment sought the favour of the Mikawa chief, proposing, in the event of the overthrow of Nobuwo, to partition the teritories of Mino and Owari between them. Iyeyasu indignantly refused the bribe, preferring to maintain his old friendship with the Ota house to any personal aggrandisement by the sacrifice of it, and finally separating himself from Hideyoshi, collected his forces and marched to Kiyosu, whence he sent word to Nobuwo to form an intenched camp at Komaki-yama. The castle of Mayama, meanwhile, had been reduced by a detachment of Hideyoshi's troops under the command of Ikeda Nobuteru, and with a view of checking the progress of Iyeyasu, orders were issued from Ozaka to maintain that conquest, and Mori Nagayoshi was instructed to occupy Haguro in Owari. The latter was attacked by Iyeyasu and driven from his position, vast numbers of his men being slain in the pursuit, while the victor, whom Nobuteru vainly attempted to draw into the hilly country where he had posted his forces on an eminence, escaped the snare by retiring upon Komaki. Enraged by the news of the disaster at Haguro, Hideyoshi assembled a large army and marched to Mayama, whence he reconnoitred the country in the neighbourhood of Komakiyama, and recognising the strength of the position, regularly invested it, including village, wood and hill for many leagues round in one vast camp.

On the 28th day Iyeyasu and Nobuwo at the head of twenty thousand men, comprising the flower of the Mikawa soldiery, moved to Komakiyama. In the 4th month Nobuteru, with the approval of Hideyoshi, concerted a secret attack upon Okazaki. Iyeyasu, however, became aware through his spies of his enemy's preparations, and after satisfying himself as to their object secretly warned the Okazaki garrison to be on the alert. Sakakibara Yasumasa, Honda Tadashige and the other leaders were ordered to collect three thousand men, and without show of flag or beat of drum to march thence at midnight of the 8th upon Obata. Takashige, seeing the enemy's superiority in number, recognised the danger of an engagement, and learning the disposition of Hideyoshi's troops in five corps, the first of which was under Nobuteru, the second under Nagayoshi, the third under Hidemasa, the fourth under Hidekadzu, and the reserve under Hidetsugu, counselled an attack upon the last-mentioned leader, against whom he felt a certain success might be achieved. The enemy's rear was accordingly closely followed. On the same night in the fourth watch (2 a.m.) Iyeyasu and Nobuwo, under cover of the darkness, marched from Komaki. The enemy's advanced corps, meanwhile, had attacked and reduced Iwasaki. Overjoyed at their success they at once sent news of it to the rear, and continued their march followed closely by the third corps and the reserve under Hidemasa and Hidetsugu respectively. On the 9th, at dawn, Hidetsugu reached Inabayama, where he halted and allowed his men to prepare a meal. While they were thus engaged they were attacked by Iyeyasu's vanguard and dispersed—news of which success was received with great joy by Iyeyasu and Nobuwo, who were not far behind.

Iyeyasu defeats Nobuteru at Nagakute.

Continuing his march the Mikawa chief arrived at Nagakute. Hidetsugu's force, unable to recover itself, hastened to effect a junction with the third corps under Hidemasa, who sending word of his brother-leader's defeat to the advanced body, wheeled round and offered battle. A sharp engagement ensued which ended in the repulse of the troops of Iyeyasu, who were pursued by the combined forces of Hidemasa, Nobuteru and Nagayoshi. The counsels of the fugitive leaders were divided, some seing no safety except in flight, while others were anxious to continue the struggle. Iyayasu, giving little heed to their debates, ordered an advance. Ii Nawo-masa took up a position on the flank of the hills south-east of Nagakute, on the further slope of which were displayed the hollyhock-leaf banners and gilt-fan horse ornaments of Iyeyasu, who had led his forces by a circuitous road to that spot. Nawomasu, descending the slope, opened a flank fire upon Hidemasa, and, compelling him to retire, occupied his camp. Iyeyasu, meanwhile, had to meet the continued attack of Nobuteru and Nagayoshi. The latter was struck by a musket ball and slain. Iyeyasu now advanced with his whole force, and pressed his remaining opponent closely. One of his followers, Nagai Nawokatsu, perceiving the insurgent leader seated on a campstool transfixed him with a cast of his javelin. The enemy therefore turned and fled pursued by their victorious adversaries, and vast numbers of them were killed or taken prisoners.

If was now past noon, and in accordance with the advice of Naitô Masanari and Takaki Kiyohide, who represented that Hideyoshi as a skilful tactician would assuredly take advantage of their men, being tried with the continuous fighting they had gone through since the dawn, to fall upon them with fresh troops whom it would be impossible to resist, orders were issued to discontinue the pursuit and retire upon Nagakute.

Hideyoshi goes to Nagakute.

Hideyoshi on hearing of the disaster that had befallen his arms threw his sleeves back with an angry gesture, and in the hope of finding his adversary thrown off his guard by his success, rode rapidly towards Nagakute accompanied by over twenty thousand men. Our forces retreated upon Obata, upon receiving intelligence of which movement Hideyoshi was anxious to make an immediate attack. Inaba Michitomo advised him not to hazard an engagement at night-fall and with tried troops and recommended a halt, but Hideyoshi would not listen to him and ordered his men to fall into their ranks, observing that by a piece of heaven-sent luck they now had both devils (Iyeyasu and Nobuwo) caged up in one fortress which, surrounded by their combined forces, could not but surrounded. Our leaders showed the greatest desire to meet the enemy but Iyeyasu would not yield to their entreaties, telling them that nothing was more dangerous than to look upon victory as an easy matter and that Hideyoshi was not a man to be beaten without a hard struggle. The same night he gathered his men together and retreated upon Komaki. Disappointed in his designs, Hideyoshi could not but admire the wisdom of Iyeyasu, and immediately withdrew to Gakuta, which place he quitted in the fifth month, leaving some of his principal officers to take charge of its defence. On the 3rd day of the month Nobuwo returned to Nagashima and Iyeyasu to Kiyosu, where however he did not long remain being called into the field by the news of the defection of Takigawa Kadsumasa and Kuki Yoshitaka, two vassals of the Ota house, who, joining the party of Hideyoshi, had made an inroad into the territory of Nobuwo and persuaded the garisons of the three castles of Kaniye, Shimochiba and Maida to give up possession of those strongholds. The united forces of Iyeyasu and Nobuwo at once attacked the rebels and put them to flight, after which they returned to Kiyosu. Hideyoshi could not arrive in time to assist his allies, and ordered his generals to march up and down the provinces of Ise and Owari, to erect forts in every direction, and to reduce the castles held in the Ota interest. Various skirmishes took place between the hostile forces, but without any decisive result. In the 9th month Hideyoshi occupied Moro, towards which place Iyeyasu and Nobuwo immediately advanced. The western

troops catching sight of the insignia of Iyeyasu as he manœuvred his forces, were terrified at the thought of the gilt fan being again the field, and Hideyoshi, alarmed at the panic, provided for the defence of the forts he had erected, and retreated under cover of the night upon Ogaki. Iyeyasu and Nobuwo likewise returned to Kiyosu, and in the 10th month the former, placing the government of that town in the hands of certain of his leaders, left for Okazaki.

Hideyoshi makes peace with Nobuwo.

Recognising the difficulty of putting down Iyeyasu by force of arms Hideyoshi, who estimated Nobuwo as a less serious opponent, determined to take advantage of the absence of the Mikawa chief to make overtures of peace to the son of Nobunaga, and then bring about a cessation of the struggle, which would allow of the perfection of his after designs. With these views he sent envoys to Nobuwo, with terms of peace to which the latter agreed. A meeting was then arranged between the new allies and friendship mutually sworn, after which Hideyoshi returned in haste to Ozaka. Full of wrath at the weakness of the Ota chief, Iyeyasu ironically congratulated him upon the peace he had obtained.

In the 11th month Hideyoshi made proposals of peace to the Mikawa chief, which Nobuwo recommended the latter to accept. Iyeyasu, however, rejected them, and in the twelfth month Noburo arrived in person at his camp, and after thanking him for his assistance during the late struggle, again exhorted him favourably to entertain the offer of Hideyoshi. Wearied out by his brother-leaders pertinacity Iyeyasu at last consented to send his son Hideyasu to Ozaka, at which Hideyoshi was greatly pleased, and upon the arrival of the youth adopted him into his own family and gave him the surname of Hashita.

In the 5th month of the 13th year Iyeyasu made a progress through Kai, and in the 6th month returned to Hamamatsu.

Peace between Iyeyasu and Hideyoshi.

Toyotomi Hideyoshi having reduced the Nankai and Hokuroku provinces to submission, became ambitious of getting the Government of the whole empire within his grasp. With this object, after consultation with Nobuwo, he again made overtures of peace to Iyeyasu to which the latter, however, refused to listen. These overtures were repeated in the first month of the 14th year (A. D.) and were again resisted and the envoys who brought them dismissed. Gamô Hidesato and Hori Hidemasa now urged Hideyoshi to march against the Eastern provinces. Their chief considered the matter for a whole day, and at nightfall sent in haste for Nobuwo, to whom he communicated a plan that had suddenly occured to him by which he hoped to induce Iyeyasu to accept the already so often proffered peace. The Mikawa chief had lost his wife Hideyoshi had but to bestow the hand of his sister upon him, and a marriage relation would be created between them that could not fail to bring about the desired result. Should Iyeyasu show any hesitation, the dowager lady mother (of Hideyosh) might be left as a hostage in his hands. In this way the tranquillity of the empire would be assured. In the 2nd month, accordingly, envoys were again sent to Iyeyasu, bearing Hideyoshi's offer of an alliance by marriage which the Mikawa chief accepted, and shortly afterwards received the congratulations of Nobuwo. The news of this alliance was most unwelcome to the Hôjô house, the head of which in the third month swore amity with Ujinawo, and in the fourth month presented gifts to the Emperor.

Hideyoshi sent his sister under the charge of Asano Nagamasa, and Iyeyasu began to think of going up to the capital. Sakai Tadatsugu endeavoured to dissuade him, representing that, although the marriage had been agreed upon, it was impossible to put trust in Hideyoshi, and that the journey should be deferred at least until some confidence should be felt in his intentions. In the same month —the fourth—Hideyoshi himself wrote to Iyeyasu earnestly requesting him to show himself at the capital, and in the 9th month sent his mother under the conduct of Asano Nagamasa as a hostage for his guest's safety. In the 10th month, at the entreaty of Hideyoshi, Iyeyasu was created a Sangi Chunagon. On the 18th day the mother of Hideyoshi arrived at Okazaki, and on the 27th Iyeyasu reached the capital and took up his residence at the house of the merchant Chaya Harunobu. In the 11th month a meeting was arranged between the two rivals at Shiuraku to the great delight of Hideyoshi.

In this year (the 14th of Tenshô, A.D. 1586) the Emperor Ogimachi died, and Goyôsei mounted the throne. In the 8th month of the 15th year Iyeyasu was advanced by Imperial rescript to the junior second rank. In the 12th month the post of Sakonye Daishô was bestowed upon him and he was appointed Colonel of the Left Cavalry. In the 15th month of the 6th year he resigned the post of Sakonye Daishô.

The power of Hideyoshi seemed now settled on a firm basis, and peace and tranquillity reigned throughout the empire. The Emperor was therefore prayed to make an Imperial Progress, to which request he gave a gracious assent. On the 14th day, accordingly, of the 4th month, the Imperial Car entered the palace of Hideyoshi at Shiuraku followed by the officers of state and of the Imperial household. The august cortége then moved forward preceded by Minamoto Iyeyasu and Taira Nobuwo, while Toyotomi Hideyoshi rode in the rear of the Imperial train, supported by twenty-seven lords on horseback, among whom were Maida Toshiiye, Oda Nobukane, Hashiba Hidekatsu, and Hashiba Hideyasu. Permission was given to view the passing procession, of which the people far and near did not fail to avail themselves.

On the 15th day Hideyoshi, arrayed in full court dress, took his seat on the right of the throne and Toyotomi Hideaki was deputed to claim the homage of Iyeyasu and his companions. This was rendered, and Iyeyasu with Nobuwo, Hidenaga, Hidetsugu and Hideyasu were, by Imperial command, assigned a high place in the Palace of Seikwa, whence after five days stay the Emperor returned to his usual residence.

The Hôjô chief meanwhile had not dared to approach Kiyôto, and in the 5th month envoys came to him at Odawara from Hideyoshi, requesting his presence at the capital. Upon learning the object of their visit he endeavoured to persuade Ujinawo to go, but the latter refused. At this time Ujimasa, who was an old man, had abdicated in favour of Ujinawo but still kept the direction of affairs in his own hands.

In the 7th month of the 17th year the Hôjô chief was again desired to present himself at Kiyôto and again refused, and in the 12th month Hideyoshi demanded and obtained permission to organise an expedition against him.

(To be Continued.)

FANTASIES AND FACES.

REALITY.

It would never do if life were all "cakes and ale," and nothing else. Such a diet would infallibly disagree with most of us in time, and the human race would sicken for a change. Give us nought but manna, and we'll soon cry out for quails. That May is a delightful season no one will deny, but were we certain of obtaining our wish, should we desire it to be always May? I hardly think so. The gentle gales of Spring would surely pall upon us, and drive us into longing for the bracing winds of bleak December. Who is there in the scorching heats of summer that does not now and then dress up a mental picture of the frosty air of winter (forgetting how he hates it when it's present), the crackling log, and snugly curtained room, and long to change his light apparel for a thick top-coat, and tread on icy pools which splinter with his weight; and *vice versâ* when the seasons change, and the winds blow from the north? No, no! perpetual May would never suit. We must have contrasts in this world of ours: we learn that truth on every side. An eye surcharged with one effect rebels, and paints a different colour on its retina, and so relieves itself. In view of which it would be out of harmony with all experience were I to present no faces but such as belong to the same sweet type as Koidzumi's. To encounter in one's morning rambles—however pleasant it might seem at first—none but such, were to run a risk of being bewildered by fair faces—nay, more, of being surfeited—so to speak—with beauties. "An incontinently long preamble, upon my word, a superfluous reassertion of old and well established commonplace" I fancy I hear someone exclaim. I know it, impatient sir! and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I crave your honor's pardon, but the fact is, like an undecided maiden, who postpones as long as possible an answer to the question whispered in her ear, I'm temporizing. I can't make up my mind. I've pulled my rose to pieces, and cannot remember what the last leaf said. I'll try another. "I will, I wont. I will, I wont." Yes, I will though, if you'll only have patience. Well, here's the honest truth for you, I am very loth to start my picture, for it is, indeed, a pitiful affair, such an one as is best painted in dull colors—a monochrome in fact—a smudge of sepia. But whilst I'm talking I'd have you know I've not been altogether idle, for my canvas is stretched and my brush is in my hand—the leaden sky is finished and I'm on the foreground: another dash or two and I'll come to outlines. I'm in the humour now. I won't draw back. I must and will complete the sketch, come what may, though you raise your eyebrows never so deprecatingly, my worthy friend, and play with your double glasses with such an "I wash my hands of it" kind of air! In Heaven's name wait till it's finished, and then if you don't like it, why turn it's face to the wall and pass on, and say no more about it. You see no good, you say, in depicting misery and wretchedness, and won't admit that the knowledge of another's evil plight is like—if nothing else—to make us thankful for, and more contented with our lot. Has pity lost its purifying power, I'd ask you, or is it out of fashion? Pity! that second best of human sentiments —Love's sister—a twin, but latest born. Well, well! I'll say no more. Indeed, I wonder why I've said so much. Perhaps, whilst I fain would rouse your sympathy for my subject, I cherish hopes that, when you're in that kindly frame of mind, you'll overlook such want of skill as may be apparent in the execution of my picture.

Who have we here? What slowly moving pair is deviously wavering along the road this morning. Only a blind man led by a little boy—an infant almost—likewise blind. Note well, I pray you. A tall old man, with body bent by age but still robust, and carrying, suspended from the porter's pole upon his shoulder, a pair of baskets in which is seen a stock of matches and suchlike trifles. Before him a little boy, who drags him onward by a rope passed from the old man's girdle across his infant shoulder, after the fashion of him who tows a boat, and who, with head thrown back and poor sightless eyes, and face small-pox seamed and scarred turned up to Heaven, bawls out in childish treble—bawls out with so much vigour in that shrill pipe of his, that the veins of his neck and face are swelled and knotted with the effort—an appeal to passers by to purchase his small wares. Both are stone blind! Here are no bright colours for you, for they are a mean and sordid pair—these two blind people—with ragged clothes begrimed by dust and weather till they have acquired a sere October hue, and unrelieved by any ornament. And yet there's something in the squalid group which irresistibly bespeaks attention, and little wonder too, I think, for the sight is full of a strange pathos. It's plain that these two damaged human beings can only be regarded when united by that conjunction, the tow-rope, as a single individual. Each gives to the other the quality he has not. The old man supplies the strength which is wanting in the son, whilst the son supplies the enterprise and courage to walk boldly onwards at a good round pace, and the voice to advertise the wares his father carries. They most resemble a compound word hyphen joined. Apart they have no meaning, together they become intelligible. They are not unlike, in that respect, to a pair of cripples, leper maimed, who were seen (through the eyes of a friend) in the garden of an eastern lazar house, sowing peas. One of them had no legs and the other had lost his arms. Each in his way was useless, for the wretch who could march at will beside the drills, had not the wherewithal to drop the seeds into them, and the man with arms was a torso incapable of locomotion. The result is obvious. With the remnant of the man of arms upon his back, he of the legs became in all respects a man. A little monstrous, certainly, two-headed and all that, but still a very capable kind of cultivator notwithstanding. And so it is with my two poor casuals. There is so much to be said about them that I am fairly bewildered. They are to me a sermon in the concrete, comprehensible in a glance, and yet full of a deep meaning, provocative of much reflection of a serious kind. Here may be seen in vivid contrast the timidity and irresolution of old age and the confidence and impetuosity of youth; for the old man's step is wavering and cautious and he feels his way to a certain extent with a stick, while his little leader, regarding neither impediments nor dangers, pushes boldly onwards without fear. The relations between the old and young are strangely changed, too, for the elder here is guided and guarded by what ought to be his little charge. Is there nought to say too upon the advantages of mutual help and confidence, and the pluck and energy displayed by two blind people, who desire to help themselves, and are not daunted by difficulties? Aye, that there is, and plenty more. With a judicious movement of the prism you can reproduce my sepia sketch in many lights and angles, and even throw a streak or two of colour from yon sunbeam where it passes through the glass, in such a way that it will brighten up the sombre picture for a moment. But don't forget that when the sun has set, and the prism is laid aside, it once more returns to what it was.

Good reader, what say you? Shall I take the picture down, or turn it's face towards the wall?

ASIATIC SOCIETY OF JAPAN.

The fourth annual meeting of the Asiatic Society of Japan was held in the Society's room at the Imperial University in Tôkiô, on Wednesday, the 14th July. The members present were: The Revd. Dr. S. R. Brown, Sir Harry S. Parkes, Professors Syle, Veeder, Grigsby, Summers, Ayrton and Perry, Mr. De Boinville and Mr. C. H. Dallas.

The Chair was occupied by the Revd. D. Brown, the President.

The minutes of the last general meeting were read and confirmed.

The substance of the Council's Annual Report and a statement of the financial condition of the Society were given by the President.

The latter was shewn to be comparatively flourishing, there being a balance at the close of the half-year, ending June 30th, of $240 in the Treasurer's hand.

Sir Harry Parkes moved that the Report and Treasurer's account to received as read, which was seconded by Mr. Dallas and carried.

The President announced that the proposal made at the last general meeting to amend the Rules of the Society, relative to the number of its officers, had been considered by the Council and the committee of ordinary members appointed for the purpose, and that they had agreed to submit the following recommendation to the present meeting.

"That Rule 10 be amended by substituting the words 'ten councillors' for 'five councillors' and 'two Recording Secretaries' for 'one Recording Secretary'."

Moved by Mr. Dallas and seconded by Dr. Veeder that this recommendation be adopted, and the Rule be amended accordingly. Resolution carried.

The election of the Council and officers for the ensuing year was then proceeded with, and the following gentlemen were found to be elected.

President.—Sir Harry S. Parkes, K.C.B.

Vice-Presidents.—Revd. Professor Syle, Mon. C. de Groote.

Councillors.—Resident in Yokohama; Dr. J. C. Hepburn, Revd. Dr. S. R. Brown, Messrs. Russell Robertson, W. G. Howell, A. J. Wilkin. Residents in Tôkiô; M. de Struvé, Mr. Arinori Mori, Rev. Dr. Veeder, Mr. W. G. Aston, Rev. Geo. Cochran.

Recording Secretaries: for Yokohama, Mr. C. H. Dallas.—For Tôkiô, Rev. Prof. Summers.

Corresponding Secretary: Prof. W. E. Ayrton.

Treasurer: Mr. John Wilkin.

Prof. Syle moved—"That the Council be requested to "consider the possibility of constituting an Historical "Section among the members of the Society." Dr. S. R. Brown seconded the motion, which was carried.

Prof. Syle their moved that the Council be also requested to consider the desirableness of establishing branches of the Society at Kobe and Nagasaki. Prof. Summers seconded the motion, which was carried.

Original from UNIVERSITY OF CALIFORNIA

After a few further remarks upon the hours of meeting in Yokohama and Tôkiô, and the difficulty experienced by members from either place attending the meetings at the other place, the session was brought to a close by a few appropriate complimentary remarks by Sir Harry Parkes to the President retiring, and by a cordial vote of thanks for the services he had rendered to the Society during the two years of his residency.

Dr. Brown, in reply, regretted that failing health from time to time had prevented his doing so much for the society or he had desired.

REPORT OF THE COUNCIL OF THE ASIATIC SOCIETY OF JAPAN FOR THE YEAR ENDING JULY 1876.

The Council has much pleasure in reporting the continued success of the Society, and the progress that has been made during the last year. They congratulate the Society on having had the use of a convenient room granted to them by the Director of the Imperial University. In this room the whole of the Society's property has been deposited. The Library and Museum are now open daily from two to five o'clock for the use of the members and their friends. The following donations have been made during the course of the past year :—

Enumeratio Plantarum, Vol. 1 Part 2, presented by the Author.

An Ancient Bell, presented by the Kenrei of Hiogo, through Sir Harry Parkes.

Numerous Specimens of Clothing, Shoes, &c., worn by the Peasants of the Yonezawa District, presented by C. H. Dallas, Esq.

A Collection of Japanese Butterflies, presented by H. Pryer, Esq.

Charts for Object Lessons introduced into Japanese Schools, presented by A. Hamao, Esq.

In Exchange for the Society's Journal the following Journals, Transactions, &c., have been received from England, France, Germany, Italy, India, China, and the United States.

The Royal Asiatic Society.—Proceedings.
The Royal Society.—Proceedings.
The Royal Geographical Society.—Proceedings.
The Philological Society.—Extra volumes and transactions.
The Anthropological Institute of Great Britain and Ireland.—Journal.
The Microscopical Journal.
La Société de la Geographie.—Bulletin.
La Société d'Acclimatation.—Bulletin mensuel.
Le Congres d'Orientalistes.—Notices.
La Société des Etudes Japonaises.—Annuaire.
Monatsschrift für den Orient, Wien.
Mittheilungen der Deutschen Gesellschaft.—Yokohama.
Cosmos: from Guido Cora.
The Royal Asiatic Society, Bombay Branch.—Proceedings.
The Royal Asiatic Society, Ceylon Branch.—Proceedings.
The Asiatic Society of Bengal.—Proceedings & Journal.
The Royal Asiatic Society, North China Branch.—Proceedings.
The China Review.
The American Oriental Society.—Proceedings.
The Boston Society of Natural History.—Proceedings.
The American Philological Society.—Proceedings.

THE FOLLOWING BOOKS HAVE BEEN PURCHASED.

Travels of Marco Polo, edited by Col. Yule.
Macfarlane's Japan, 1 vol.
Timkowski's Travels, 2 vols.
Basil Hall's Loochoo, 1 vol.
Barrow's Travels, 1 vol.
Ritter's Erdkunde von Asien, 13 vols.
Shaw's Tartary, Yarkand and Kashgar, 1 vol.
Life and Letters of Lord Elgin, 1 vol.
De Carne's Travels in Indo-China.
Life of Buddha Gantama (Bigandet), 1 vol.
Manual of Buddhism (Spence Hardy) 1 vol.
Abel's China, 1 vol.
Buddhagosha's Parables (Max Müller), 1 vol.
Cortambert's La Cochin-Chine, 1 vol.
Histoire de la Religion Chretienne au Japon, 2 vols.
Semedo's History of China, 1 vol.
Tavernier's Travels in the East, 1 vol.
D'Herbelot's Bibliotheque Oriental, 4 vols.
Rémusat's Recherches sur les Langues Tartares, 1 vol.
Ide's (Ysbrant's) Travels from Moskow to Peking, 1 vol.
Memoirs of Sir G. Staunton, 1856, 1 vol.
Bunsen's Philosophy of Universal History, 2 vols.
Elphinstone's History of India, 2 vols.
Titsingh's Illustrations of Japan, 1 vol.
Pfizmaier on the Aino Language, 1 vol.

The General Meetings, as well as the Council Meetings, have been held during the past twelve months alternately at Yokohama and Tôkiô, an arrangement which, although attended with some inconvenience, is considered the best at the present time for the general interests of the Society.

The number of new Members elected has been 15, making a total number of 174 Ordinary Members, and 9 Honorary Members.

During the Session seven papers have been read, viz.:

I.—On the Useful Metals and Minerals of the Japanese. —Quicksilver, by Dr. Geerts.

II.—On the Winds and Currents of Japan, by Captain D. Scott.

III.—Notes taken during a Visit to the Loochoo Islands, by R. H. Brunton, Esq.

IV.—On the Metallurgy of Gold, by Dr. Geerts.

V.—The Bonin Islands, by Russell Robertson, Esq.

VI.—On Cotton in Japan, by T. P. Poate, Esq.

VII.—Notes of a Journey from Yedo to Kiôto, viâ Asamayama, the Hoku-rokudo and Lake Biwa, by Professor Marshall.

Two Lectures have been delivered under the Society's auspices :—

On Indigo, by Professor Atkinson, at the Hall of the Horaisha.

On the Musical Notation of the Chinese, and its counterpart in Japan, by Professor Syle, at the University.

The following is the Treasurer's Report.

1st July to 31st December, 1875.

Dr.

To Balance in hand 1st July	317.32
„ Subscriptions collected from 7 members at $5 each	35 00
„ Sale of "Transactions"	41.00

„ Balance	207.75
	$523.59

To Balance deposited in the Hongkong and Shanghai Bank $207.75

JOHN WALTER,
Hon. Treasurer.

CUI BONO?

O what is the good of this ceaseless complaining,
This yearning and weeping and watching below,
These fast-flitting joys, and these sorrows remaining,
These laughters that lighten, and tear drops that flow?

Soon passes the rush and the ripple of being—
The glory of youth, and its wonderful zest;
And we, growing weary and sorrow foreseeing,
Look long for the hope of an infinite rest.

We know not the meaning of this strange existence;
We know not our place in the whole mighty plan:
We must needs follow faith without rest or resistance,
Content our own narrow horizons to scan.

But brother in deepest despondency toiling,
And deeming thyself but a cumbersome clod,
Remember that after the mist and the moiling
The blossoms burst forth in the sunshine of God.

K.

Law & Police.

IN H. B. M.'s PROVINCIAL COURT.
Before RUSSELL ROBERTSON, Esq., Acting Judge.
Monday, July 31st, 1876.

HERBERT AND AUGUSTA ST. GEORGE *vs.* EMMA LOCKYER.

This was a judgment summons to Mrs. Emma Lockyer to show cause why an amount of $1,600 paid to her account by Mrs. Sarah Smith, and now in the hands of this Court, should not be applied in part discharge of the judgment given in H. M.'s Provincial Court on the 13th January last, and by which James and Emma Lockyer were ordered to pay to Herbert and Augusta St. George $3,000.

Mr. Dickins appeared for plaintiffs; Mr. Ness for defendant.

Mr. Ness stated that Mr. St. George had obtained, in January last a judgment against Mr. Lockyer, but not against Mrs. Lockyer, ordering him to pay $3000. But the money now in Court is in satisfaction of a bill of sale given by Mrs. Lockyer, and belongs exclusively to her. Mr. Lockyer had instituted proceedings against Mrs. Lockyer to get possession of her money; these proceedings were compromised by Judge Goodwin in such a way, that against $1,000 being paid to Mr. Lockyer, the whole of the property in dispute between husband and wife was to be the *bonâ fide* and exclusive property of the wife. The $1,000 have been paid, and the compromise stands good; and in virtue of that compromise, Mr. Ness now demanded that the present proceedings against Mrs. Lockyer be dismissed. (The compromise, dated 5th January, 1876, was here read by Mr. Ness.)

Mr. Dickins objected to that compromise being brought in as evidence.

Mr. Ness went on to say that the only question with regard to this compromise would be: Was it a *bonâ fide* compromise? To prove that it was he would now call.

Mr. Lowder, who was sworn, and said: I assisted Mr. Lockyer in some proceedings instituted towards the end of last year by him against his wife; evidence was heard, and the proceedings resulted in a compromise, according to which all proceedings were withdrawn by Mr. Lockyer, on his being paid $1,000 by Mrs. Lockyer, but Mr. Lockyer insisted on the remainder of the property being settled on the children. The compromise was suggested by Judge Goodwin, it was resisted by the counsels both of Mr. and Mrs. Lockyer. It was taken down by Judge Goodwin and was identical with what has just now been read. The $1,000 were duly paid. (Papers produced). I recognise these documents to be in James Lockyer's handwriting. This compromise was quite *bonâ fide*. As far as I know the compromise had no ulterior view whatsoever than the final settlement of disputes between husband and wife. The relations between the husband and wife were sometimes good, sometimes bad. At the time of the compromise I should say they were on good terms. (Paper produced.) I have seen that document before.

Mr. Dickins objected to the document being used as evidence, as it was only a copy; in fact the document itself says on the face of it. "copy of a letter written from England in 1872."

Mr. Lowder explained to the Court that this document was written by Mr. Lockyer in the beginning of this year, during the proceedings which resulted in a compromise between Mr. Lockyer and his wife. I had heard of the letter written by Lockyer to his wife from England, and on my pressing Lockyer on the subject, he produced the present document, as being to the best of his memory a true copy. I heard that Lockyer had written from England in 1872 to his wife, in some way or another making over the whole of the business to her. As soon as I heard about that letter, I called for it, and Mrs. Lockyer said it had been burnt in the fire by which she had been a sufferer.

Mr. Dickins objected to all this evidence, as he had no opportunity to cross-examine the parties whose statements were quoted.

Mr. Ness opined that it was primary evidence, tending to show that the original of the document was lost, and thus justifying the production by him of the copy.

Mr. Lowder: When Lockyer brought me the copy now produced, he showed me that it was initialled by his wife, in proof that they both agreed as to its contents. This was before the compromise took place.

Cross-examined by Mr. Dickins: After receiving the copy, the proceedings between Lockyer and wife in Court went on. I did not look upon the contents of that copy as decisive. I do not know if the initials "E. L." were written by Mrs. Lockyer. Lockyer said they were. I cannot tell exactly when I received the $1,000, according to the compromise. Mr. Ness was personally responsible for the payment, but the cash did not actually come into my hands until a long time after the compromise. The settlement on the children was, as far as I know, never executed at all. (Paper produced.) I have had nothing to do with the preparation of that document. I know nothing about it. At the time it was drawn, 25th March, I was not acting for Mr. Lockyer. As far as I know, he may at the date of this document have had ulterior views. I never acted for Mr. Lockyer after the compromise. I acted for Mr. Lockyer during a judgment summons, which must have been anterior to the execution of this document. There was a judgment against Mr. Lockyer for over $8,000, and he was afterwards ordered, on a judgment summons, to pay that amount by monthly instalments of $50. I appeared for him at that time. That must have been in February. I do not remember to have told you that Lockyer acted very foolishly in entering into a compromise with his wife unknown to me. But certainly I highly disapproved of his doing so. I received an intimation from Judge Goodwin, as did also Mr. Ness, to hear judgment in the case. But judgment was not given; instead of that Judge Goodwin proposed a compromise, and finally my client accepted it.

Re-examined by Mr. Ness: I have no interest in aiding Mrs. Lockyer in this matter. I have generally acted in opposition to to her, as adviser of her husband. As I had your word for the $1,000, I considered them as good as paid.

Cross-examined again by Mr. Dickins: The document containing the compromise was explained by me to Mr. Lockyer. I cannot say that it was distinctly read out to him word by word. I know that he assented to it. No copy of that document was ever signed by Mr. Lockyer.

Mr. Dickins said that his learned friend had based his case upon the compromise made and carried out between Mr. and Mrs. Lockyer. But a few days after the compromise Mr. Lockyer became largely indebted to Mr. and Mrs. St. George; the compromise was made with the view of defrauding the latter of their due. The compromise is dated the 5th January, 1876. Such a compromise has not even the force of a voluntary settlement; it is really nothing more than a written recommendation by Judge Goodwin to the parties. The compromise has never been carried out by any tangible act. Its two principal clauses were that $1,000 should be paid within three days, and remainder of the property settled on the children. But the money was not paid,—no cash, no promissory note passed from Mrs. Lockyer to Mr. Lockyer. All that passed was a verbal promise from

Mr. Ness to Mr. Lowder, that the money would be paid. But that is not payment. The settlement on the children was never carried into effect; it was replaced by another document dated 25th March, 1876, stating that in consideration of Mrs. Lockyer having paid Mr. Lockyer's passage to England, the latter renounces the stipulation in the compromise dated 5th January, 1876, in favour of the children, and Mrs. Lockyer shall be free to dispose of the money and properties as she pleases. The fraudulence of this transaction is manifest and transparent. Lockyer's creditors had obtained a verdict against him for over $3,300; on a subsequent judgment summons in February last he had been ordered to pay them this amount in instalments of $50 monthly; he never paid a cent, but in the following month of March he thus transfered all his property to his wife.

Adjourned until 1.30 p.m. to-morrow.

Tuesday, August 1st.

Mr. Dickins continued: It was not necessary that he should call witnesses. Certain evidence had been put in by his learned friend who had relied upon the compromise, the document of March, 1876, and the copy of an extract from a letter which had not been admitted by the Court, and was therefore valueless, especially as the transactions recorded in that copy were made from memory, about four years after the original was written, which might then have conveyed an entirely different meaning. Mr. Lowder's evidence was only secondary as regards the transfer proposed to have been made by this copy, and before same could be accepted, it must be satisfactorily proved that the primary evidence had been absolutely lost. But even supposing the extract in question was original it does not by any means transfer property from Mr. to Mrs. Lockyer. The copy merely transfers the management of the business, not the business itself. Mrs. Lockyer was at that time in England, so that the motive is quite apparent. It could have no effect at the time, and it did not affect the property which Mr. Lockyer already held in his wife's name. Mr. Lockyer could only possess at that time in her own right, her own earnings made between 1870 and 1872, according to the Married Women's Property Act. In his evidence Mr. Lowder said that he did not actually receive the $1,000 until a considerable time after the compromise was arrived at. But Mr. Lowder's evidence cannot be relied on, for on the 12th or 13th of January this year, he stated in Court that the money had been paid to him. This shows that his memory cannot be trusted. The compromise was not voluntary on the part of the disputants; it was suggested by Mr. Goodwin, and accepted by them under very great pressure. And it should be remembered that the parties immediately concerned in this compromise were at that time interested in the case, St. George *vs.* Lockyer, then going on. Mr. Lowder had only given Lockyer an imperfect explanation of the compromise, which was practically of no value, as it was never carried out. The Court has no evidence that the $1,000 were ever paid. Judgment in the case of St. George *vs.* Lockyer was given shortly after the verdict, but no goods were found on the execution being tried, and on 5th February, Lockyer, on a judgment summons, was ordered to pay by instalments of $50 per month to satisfy the judgment. On the 7th March, attachments were issued, attaching money in the hands of Mr. Ness, of Mrs. Smith and of Mr. Lowder. All concerned knew of this, yet the stipulation in favour of the children in the former compromise was set aside because of Mrs. Lockyer having paid her husband's passage to England and having given him £100 besides, so that this is equal to an involuntary gift of some $17,000 from husband to wife after marriage, merely in consideration of £100 and expenses of a passage to England. It is impossible to say that it did not occur to the parties that they might put the property out of the reach of creditors. The document is void with regard to creditors. In this way it might be said that in connexion with the compromise of January, Mr. St. George was not a creditor of Mr. Lockyer's, since he had not obtained judgment yet; but this judgment having been given subsequently, the voluntary settlement in the compromise becomes invalidated. Altogether the transaction must be considered as one act, beginning on the 5th January, concluding on the 25th March. Unless some property had been conveyed, legally, from Mrs. Lockyer to her husband, and unless she could claim such property under the Married Woman's Act, Lockyer owned the entire property by right of his wife's possession. Mr. Dickins then enumerated the services rendered by Mrs. St. George to Mr. and Mrs. Lockyer, which had largely contributed to their realizing the great profit which had accrued to them, and for which Mrs. St. George had received no remuneration at all.

This closed Mr. Dickins case for the plaintiffs, when Mr. Ness claimed the right to sum up on the part of defendants. This proceeding was opposed on the part of Mr. Dickins, but after some discussion Mr. Ness was allowed by the Court to sum up.

Mr. Ness said that Mrs. Lockyer claimed the funds which were attached as earnings of her own, under the Married Women's Property Act and independently of the question as to whether or not these monies were earnings under that Act, she claimed them in virtue of a compromise of proceedings between her husband and herself in January last, by which her husband gave up all claim to these monies on payment of a certain sum. The evidence in the case before Mr. Goodwin in January, showed that she possessed certain property previously to 1870. This, Mr. Ness argued, belonged to her by vertue of a special agreement between Mrs. Lockyer and her husband, an agreement which was coroborated by his line of conduct up to that time. Apart from this special agreement, in respect that the money had not been asked for during more than six years, the Statute of Limitations barred the husband's claim for this part of her estate. The money earned from her business since 1870 was protected by the Married Women's Act, as earned from business conducted by herself alone. The whole of the testimony showed that the business was hers, solely, and that the husband never interfered with it directly or indirectly. Her name was over the door, bills were issued under her name, she entered into a partnership in her own name, and in her own name dissolved that partnership. She ordered goods from London in her own name which were invoiced to her in the same way. The house in which she carried on her business was held in her own name, and every transaction in the conduct of the business since 1870, coincided entirely with the view that she was carrying on the business independently of her husband.

This was further shown by the fact that her husband was absent in England for two years since 1871, and by a letter which, when there, he had addressed to his wife at her request, declaiming all interest in the business. But even if any doubt existed as to the ownership of the property held by Mrs. Lockyer up to the end of last year, that doubt was set at rest by the result of the action brought by her husband in January last. At the suggestion of the Judge proceedings were then compromised in the terms of the exhibits put in. Mr. Lockyer was to pay her husband $1,000 within two days after a certaint injunction was dissolved and execute a settlement on the children, while he was to relinquish all claim to the money held by her. Under this compromise $1,000 was paid on the day the injunction was removed. The settlement, however, was not executed, but that part of the compromise was by consent modified; she agreed to pay him certain money to enable him to take his passage home, and he dispensed with the execution of the settlement. They had a perfect right to modify the compromise, and this modified compromise was, if agreed to by both sides, as binding as the original. This arrangement of their differences left Mrs. Lockyear undisputed owner of the monies now claimed by Mr. St. George in satisfaction of his judgment against the husband. If this arrangement be a *bonâ fide* one the present proceedings must be settled in favour of Mrs. Lockyer. The only question that could arise would be,—was it made *bonâ fide*? The fact that it was suggested by the Judge and originally opposed by Mrs. Lockyer's counsel, as well as by her husband's counsel, at once settles the question of the good faith of the original compromise. The modification of that compromise, contained in the agreement of 25th March, is equally unimpeachable unless by that document. Lockyer placed beyond his control monies which were available for his creditors. The original compromise arrived at before Mr. Goodwin placed every cent of the property claimed beyond his control, and the modified arrangement could do no more. Indeed, it only substituted the wife as trustee for the children instead of a stranger.

Mr. Ness then submitted that all the property in dispute was earned by the wife under the recent Act of Parliament, and claimed it as her's upon the evidence which, he alleged, substantiated that position: and that independently of her rights in that respect, the *bonâ fide* arrangement for the settlement of their disputes in January was as binding on the creditors as on the parties themselves. He asked that the attachments on the funds in Court be dissolved.

Some discussion took place about Mr. Dickin's right to reply upon evidence in the Lockyer and Lockyer case which had been put in. Eventually it was agreed that his honour should at present deal only with the question of the validity of the compromise. If that question were settled in favour of Mrs. Lockyer the case would be

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

at an end, except that Mr. Dickins would have the right to appeal, but if settled against her, the ownership of the property earned since 1870 would be gone into at length.

Decision reserved.

Friday, August 4th, 1876.

Judgment was given in this case, as follows.

I am requested to pronounce as to the validity or invalidity of the compromise entered into on the 5th of January 1876, between the parties in the case Lockyer *vs.* Lockyer.

It is not, I think, to be assumed that at the date of that compromise the plaintiff Lockyer was in possession of property that he could settle on his wife, but looking at the compromise in the light of a settlement of property, it is possible that a Court of Equity, in view of the claim that was afterwards brought against the Lockyers, might set aside such settlement.

Further, does not the subsequent paper dated March 25th, 1876, signed by James Lockyer, put before me in the course of this hearing, and which varies the terms of the first mentioned compromise, tend to invalidate that compromise; regard, too, being had to the fact that it was made subsequent to judgment being given in the St. George *vs.* Lockyer case.

I am inclined to think it does so, and therefore hold the first compromise to be invalid, but I do not agree with the learned counsel, Mr. Dickins, who supports this motion, that there was anything in the circumstances which brought about that compromise to justify its being characterized as made with fraudulent views.

The parties in the case Lockyer *vs.* Lockyer are now in a position to apply for judgment in that case.

Each party to bear his own costs in the motion.

(Signed) RUSSELL ROBERTSON.

Yokohama, August 4th, 1876.

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Thursday, August 3rd, 1876.

J. Meldrum, who had completed his sentence of six weeks imprisonment, appeared before His Honour, but failing to find security for his further good behaviour as required, was sentenced to be deported.

Charles Weeks, Henry Mullings and James Gerard, seamen on board the British ship *White Adder*, were charged with refusal of duty and using abusive language.

John Betham, sworn, stated: I am master of the *White Adder*. The first offence occured while at sea, when the prisoner Weeks, who was ordered to keep the ship to the wind used abusive language and said the ship *was* to the wind. I entered a statement of the words he had used in the log book, and prisoner, upon being shown the entry, admitted having used the language complained of. Again, on the 26th May, prisoner was insolent to myself and the second mate; also on another occasion, on the 5th July, he made use of bad language to the second mate. This I entered in the log. On the 2nd August, when Gerard was refused leave to go on shore here, he used abusive language, which I entered in the log book, and prisoner admitted doing so. Mullings was standing close by at this time and said I required a flogging, and if I had not been an old man I should have got it. The men have not yet had liberty. Gerard, only, asked for it. I was awaiting orders by telegraph; the answer has not yet arrived. I was not aware that the line was out of order until a few days ago. Weeks used abusive language to me once, and on another occasion I heard him abuse the second mate. The mate heard him on one occasion.

P. T. Le Gros, first mate, sworn: I have signed the entries in the log book; they are correct.

A. Gregson, second mate, sworn: Weeks has used foul language to me on three occasions. Gerard has done so also.

H. Thompson, A.B., sworn: Mullings only said that if the captain was not an old man he would have had a good hiding. He did not use abusive language.

The prisoner Mullings denied having used the language attributed to him by the captain. Gerard admitted using abusive language, but said to did so under provocation. Weeks admitted the first offence but denied the rest of the charges.

His Honour said he could not but accept as a kind of condonation, the fact that the captain had permitted such a long time to elapse before bringing the charge against Weeks, but sentenced him to 7 days', and the others to 3 days' imprisonment, without hard labour.

Tuesday, August 1st, 1876.

OKUBO RIHEI *vs.* R. F. LIVINGSTONE.

This was a claim for repayment of a loan of *yen* 354.95.

Okubo Rihei, who was cautioned, deposed: I am a general merchant. My claim against defendant amounts to *yen* 394.95. I borrowed *yen* 4,500 from defendant and gave him in security the *Kaisei Maru*, which was duly transferred to him. I now hand in a document showing that Livingstone was responsible for the debts incurred on the account of the ship. The vessel was wrecked on the 10th July at Tokabon.

The *yen* 354.95 which I claim was money borrowed from the Kaitakushi Department at Hakodate, to defray the expenses of the ship-wrecked crew of the vessel from the scene of the wreck to Hakodate, and thence to this port,—in all twelve men. I hand in a document showing that the amount in question was so received. I have not pursued Coleman, the other owner, as I was advised that I could only proceed against Livingstone. The vessel originally belonged to Watanabe Ichiyo, of Tokió, and he sold her for *yen* 1,100, but the repairs which were required augmented the cost of the vessel to *yen* 4,500, which Livingstone paid, but I lent my name as the purchaser and gave Livingstone a bond as security for the amount of 4,500 *yen*. I have not yet repaid the amount borrowed from the Kaitakushi. Livingstone has, doubtless, lost the whole of the 4,500 *yen*, as the ship made no profit. She left this port on the 18th March, 1875, on a whaling cruise, the officers and crew having been appointed by Livingstone. Kimoto Shimpei was the Japanese captain, but there was also a foreign captain on board. The crew consisted of thirteen all told, seven being Japanese and six foreigners.

Kimoto Shimpei, having being cautioned said:—I am a master mariner. I commanded the *Kaisei Maru*. I went on board five days before she left this port. I was appointed by Mr. Livingstone. There was a foreign captain on board also, by name Goodspeed. I was to act as captain so far as the Japanese were concerned. I represented the ship at any Japanese ports she put into, the real navigator being Goodspeed. I did not actually borrow the money; the Kaitakushi proffered it. I reported the shipwreck and was afforded assistance in the shape of food, lodging, passage &c. The Japanese part of the crew were discharged at Hakodate, and only myself and five foreigners came down here at the expense of the Kaitakushi. The Japanese sailors received a small sum at Hakodate when discharged. Goodspeed was too incapable from drunkenness to attend to the wants of the crew. We all came down here in the *Kuroda Maru*. Goodspeed, Harris, Isaacson, Kule, Warren and another, name unknown, were the six foreigners. One shipped to California, on board a French man-of-war.

Adjourned until Saturday, 5th instant, at 10 a.m.

Saturday, August 5th, 1876.

This case was further adjourned for the appearance of witnesses, until Wednesday the 9th instant, at 10 A.M.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Thursday, August 3rd, 1876.

THE PEOPLE OF THE UNITED STATES *vs.* PATRICK O'BRIEN.

Patrick O'Brien was charged by J. Cavanagh with assault and battery and using a deadly weapon.

Prisoner pleaded not guilty.

James Cavanagh, sworn, deposed: I am a pilot. I stay at No. 136. On the 1st instant I was dining at the "Welcome Inn" when prisoner and myself had some dispute at table. I was speaking of his partnership with Wells. Prisoner told me to mind my own business; I reminded him that he would not have been in the house had it not been for me. It was he who had commenced this talk. He hit at me with the knife he had been using, but I eluded the blow by jumping up, and he struck at me again. I told him I would have him arrested.

To prisoner: (Table knife shown) This is the knife. You drove it at me as hard as you could, attempting to kill me. Some time before you refused to trust me for some glasses of beer.

Eugene Wells, sworn: I am one of the proprietors of No. 136. I was in the bar-room when Cavanagh and O'Brien were in the dining room. I remember some words passed between them. O'Brien came into the bar-room bringing his plate, knife, and fork; Cavanagh came to the doorway, and they kept on abusing each other. I parted them when they attempted to come together; O'Brien held his knife in his hand. O'Brien approached Cavanagh with his knife and Cavanagh jumped back.

B. F. Littlefield, sworn: I am bar-keeper at No. 136, and saw the altercation between Cavanagh and O'Brien. I was sitting along

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in the dining room when O'Brien first came in and sat down beside Cavanagh, who upbraided him with having refused to trust him for beer. O'Brien told Cavanagh he had been there long enough; he owed money, and yet was boarding there. He must either go or be put out. Cavanagh said "You would not have been here but for me; you can't put me out." O'Brien then took his plate and knife and fork to the bar-room, Cavanagh following soon afterwards. I then heard them using abusive language.

Patrick O'Brien, sworn: On the last day of July Cavanagh and McManus came to No. 122, another place kept by us, and I refused to give Cavanagh four glasses of beer he asked me for, telling him he owed me quite enough already. I met him again the next evening at No. 136, and he began to grumble at me for refusing the beer, speaking of the partnership. I told him to attend to his own affairs, and took my plate into the bar-room to avoid dispute. Cavanagh came after me, and abused me. He tried to strike me, but I jump back. I had the knife in my hand, and ordered him out. We were separated by Wells and I left the place. The black eye which I now have I got from another fellow of the same stamp.

James McManus, sworn: I am one of the partners in No. 136, and was in the bar-room on the 1st, when O'Brien came out with his plate, knife and fork; but I saw nothing of the dispute.

Prisoner was found guilty of a breach of the peace and fined $5.

Friday, August 4th, 1876.

Bernard Hayes was charged with assault on, and attempting to kill with a stone, Edward Manning, fireman on board H. M. S. *Modeste*.

Prisoner pleaded: Not guilty.

H. Bennett, sworn, stated: I am a gunner in the Royal Marine Artillery on board H.M.S. *Modeste*. I was in the "British Queen" last night between nine and ten o'clock, when prisoner came inside the door and aimed a stone at Manning, a sailor on board the *Modeste*, striking him in the face and causing the blood spurt out. Manning fell down senseless. Prisoner ran away and I went after him, at the same time crying for the police. A Japanese constable came. Some of my shipmates caught prisoner and brought him into the "British Queen." He had no bruises when he threw threw the stone, but the next time I saw him, after he was arrested, he was considerably cut up about the face. I had been in the British Queen for about an hour before this occurrence. I never saw prisoner to my knowledge before last night. I know of no quarrel between Manning and prisoner prior to this affair. Manning is now in the British Naval Hospital. (Stone produced in Court) That is the stone.

Prisoner stated to the Court: I belonged to the *Golden State*, but was discharged from her in Shanghai. I am not and never was a quarrelsome man. I threw the stone in self defence. A lot of sailors assaulted me in the "British Queen," one of them, Manning, taking off his shirt and commencing to pound me. I was not exactly sober yesterday, though not altogether drunk.

H. Bennett, recalled, to the court: No row could have occured without my seeing it whilst I was in the "British Queen." I am positive no words passed between prisoner and Manning whilst I was there. I heard nothing between them. Manning was sober. There was no drink given to him after the row.

Deputy Marshall Elmer stated: I saw Manning in the station and he was dead drunk.

Prisoner remanded until Manning is able to be examined.

STUART ELDRIDGE M.D.
Surgeon-in-charge.

LATE TELEGRAMS.

ARRIVAL OF THE ENGLISH MAIL.

London, 8th July.—The Hon. Mr. Scoble, formerly Advocate General of Bombay, is gazetted a Queen's Counsellor.

The Montenegrins are before Gatzko.

The Servian accounts state that General Zach crossed the frontier at Jawor, near Nova Warosk, where fighting was carried on for eight hours with indecisive results.

The Russian General Tchernaieff, in chief command of the Servian army, is advancing to Schfia.

Turkish details state that the Servian troops were repulsed at Oelina with a loss of 903 killed.

The Servians admit a loss of 200 killed.

July 8, Later.

The Servians have crossed the frontier at Raschkaa, and have driven the Turks back on Novibazar.

London, 10th July.—Severe fighting continues around the Servian frontier. Accounts are conflicting, but it is evident that the Servians have not been progressing, and that losses on their side are heavy.

The Turks announce that General Mahomet, with nine battalions, left Novibazar yesterday, and attacked fifteen battalions of the Servians who retreated on Yavor, leaving 1,500 killed.

Vienna, 10th July.—The interview between the Czar and the Emperor Francis Joseph, which took place at Reichstadt on Saturday, was a most cordial one.

Count Andrassy and Prince Gortschakoff were present.

London, 11th July.—The Mohammedans are repressing the rising of Christians in Bulgaria.

The *Daily News* published on Saturday some atrocious details, which Mr. Disraeli had doubted.

Replying to questions in Parliament, yesterday, Lord Derby and Mr. Disraeli both said that Government awaited an answer to the enquiry sent to Sir Henry Elliot at Constantinople. They hoped the details were overdrawn.

Meanwhile Government was urging the Porte to mitigate the severities practised by the Mohammedan populace on Christians.

Vienna, 11th July.—The Czar and the Emperor Francis Joseph have agreed on a policy of non-intervention, but reserve to themselves the right to mediate until the war shows decisive results.

London, 11th July.—Arrivals.—*Dornuda*, *Duke of Buccleuch*, *The Frederick*, and *Fairy*.

London, 12th July.—General Brownrigg, C. B. has been gazetted to the colonelcy of the 95th Regiment, *vice* General Sparks, C. B., who is transferred to the colonelcy of 58th Regiment, in succession to the late Lord Sandhurst.

London, 12th July.—According to the latest Servian accounts the Turks have evacuated the right bank of the Dvina, and the Servians have taken little Zvornik. The Turks have retreated on Widdin.

The inhabitants of the district are stated to be joining the Servians.

Some severe fighting has taken place at Podgoritza. Accounts are conflicting.

St. Petersburg, 12th July.—A commercial-political treaty has been concluded between Russia and Kashgar.

London, 13th July.—The Servians report further fighting without any serious result. Both sides are now reinforcing.

The position of General Tchernaieff is uncertain.

Montenegrin bands have occupied the ravine and interrupt the roads towards Klek. (*query* Ipek.)

The Great Powers have guaranteed the neutrality of the Danube.

There are three qualification which ought to be possessed by a man who aspires to fill the high offices of state: first, he must be well disposed to support the established constitution of his country; next, he ought to have a special aptitude for the office which he fills; and, thirdly, he should have the kind of virtue and love of justice which suits the particular state in which he lives.—*Aristotle.*

Busy readers are seldom good readers; sometimes everything pleases them, sometimes nothing; sometimes they half understand sometimes not at all—and sometimes (which is still worse) they misunderstand us. He who would read with pleasure or with profit, must have nothing else to do, nothing else to think of.—*Wieland.*

GEORGE SAND.

(The Times.)

The death of George Sand, whose funeral was solemnized on Saturday, must leave a melancholy break in contemporary French literature, and there was never a time when France could less easily spare a prolific novelist of original genius. In the course of a life of indefatigable activity she has seen the rise and decline of a host of clever writers. Men have written novels of the period that have brought them great ephemeral glory and popularity. Their books have been supposed to run through their dozens of editions in the captial, even before the sensational wave had had time to carry them to fame in the Provinces. Now success has been obtained by hitting off some novel effect, which did no little credit to the author's ingenuity, but would rarely bear repetition. Often the more vulgar expedient has been had recourse to of hazarding oneself with cynical assurance on most delicate ground and making literary capital out of disgraceful refinements of depravity. Writers of real talent have been running their busy course like Dumas; others, like Edmund About, have acknowledged in time that their fancy was failing and have abandoned fiction for politics. But all the while, and for four-and-forty years George Sand has been pursuing the even tenour of her way, throwing off her works with a free play of intellectual machinery that seemed to embody the secret of perpetual motion. The sale of her books must have fluctuated with the vagaries of their author and the caprices of the day. For a time she would seem to be forced into the background; yet her merit not only held its own upon the whole, but invariably recovered any ground it might have lost, and admirers who had been following the *feu follet* of some passing fashion kept returning, after an interval, to their early loves. It was inevitable that she should occasionally repeat herself; the apprehensions of that may have tempted her to some of her indiscretions; yet she never came near to writing herself out. The conclusive proof of this is that she has contributed, as we should imagine, some 50 novels to the fastidious pages of the *Revue des Deux Mondes*. It is true that for a time these intimate relations were suspended, but that was merely owing to a casual misunderstanding. Within the last year or two that periodical has been publishing for her as vigorously as ever, and the last four stories, which have been dashed off one after another with all the facility of her earlier years, will do nothing to perjudice her reputation.

In fact, a fertility that almost surpassed that of Lope de Vega, followed by the swift and steady flush of success, must always cause her to be remembered as one of the rarest of literary phenomena. If her genius never soared to extraordinary heights, it very seldom sank below a high standard of merit. This was the more to be wondered at, that she almost invariably sought her subjects in pure fiction, and did not make romance out of ready-made history, like Dumas—work which must always be comparatively easy for a fluent author with a tenacious memory and brilliant imagination. No doubt she had the advantages of a far more versatile training than generally falls to the lot of French woman, and her mind and her convictions passed through a succession of transmigrations which supplied her with the materials for an infinity of psychological studies. Brought up as a girl in aristocratic seclusion on the domain where she has been buried, she familiarized herself at the same time with the habits and ways of thinking of the peasantry in a very primitive Province. Sent for her education to a convent, her thoughtful mind received strong religious impressions, which she subsequently shook herself loose from, to resume them again—although with marked modifications. Her birth, connexion, and marriage brought her into relations with those forms of social respectability which always weighed upon her. When she betook herself to the pen, after her unhappy differences with her husband, she was launched in a new and more congenial world. She lived among the princes of literary Bohemianism, forming those intimate friendships with some of the chief among them which gave chameleon-like changes of colouring to different groups of her writings. Set free from embarrassing restraints, she asserted the extreme liberty of opinions which were more aggressive than independent. But it was characteristic of her irrepressible versatility that, in spite of the strongest influence of the moment, she never cramped her powers in any particular groove. Madame Dudevant had assumed the masculine *nom de plume*, which was suggested by her intercourse with Jules Sandeau, her early literary patron and *collaborateur*. She had even put on the dress of the other sex, partly, perhaps, as the visible symbol of her self-emancipation, but chiefly that she might follow up without embarrassment a somewhat unfeminine course of study of the phases of Parisian life. Yet all the time she never unsexed herself, as she never renounced for a moment her early devotion to the country. She gave up much of her time and thought to the education of her children, whom she loved tenderly, and she had her reward even in the literary point of view by keeping alive those holier and more innocent affections which inspired the engaging pathos of some of her most touching characters and passages. She would withdraw for months to the quiet solitude of the château in Berri where she had spent the days of her childhood, or with such companions as De Musset she would pass her summers in the most romantic scenery of foreign countries; and although she submitted successively to the influences of various minds, more or less commanding or congenial, yet showed herself as independent in her habits of thought as in her disregard of the social *convenances*. Living much among people who were either indifferent to religion or in antagonism to it, the momentous issues involved in the truth of the Christian revelation continued to occupy her earnest attention. At the time she wrote her "Spiridion" and "Les Sept Cordes de la Lyre," she seems to have given herself over almost entirely to theological speculation; and her admiring intercourse with the author of "Les Paroles d'un Croyant" made her a constant contributor to *Le Monde* so long as it was the organ of Lamennais. It followed almost necessarily, as much from the tendencies of her nature as from the times in which she lived, that she threw herself with ardour into political discussions, adopting ideas that were often extreme and impracticable. Her fervent imagination biased her judgment, and her wishes outstripped her sober expectations. Throwing off her works at a white heat, giving herself little time for consideration or revision, some of them have evidently been written in her moments of exultation, while other as clearly bear the traces of a more reasonable mood. They are always Democratic in their tone, but often they are actually revolutionary, and not unfrequently broadly socialistic. One may read the history of her life and opinion in the novels she has left behind; but, perhaps, it is fortunate for her literary reputation that when she became most feverishly in earnest she broke away from fiction altogether to ventilate her views in the daily journals.

These novels of hers are so numerous—at least 50 have, as we mentioned above, appeared in the *Revue des Deux Mondes*; we should fancy the sum total in the collected editions must amount nearly to twice as many—that it is impossible in the limits of a short article to do more than advert individually to even the most striking of them. The utmost one can attempt is a glance at their general characteristics, and what we have had occassion to say of the author already may help one to form a fair conception of these. She is always thoroughly French, which is, no doubt, one of her chief charms for her country people; but cultivation, thought, and travel have saved her from being narrowly or ignorantly French. Nothing can speak more strongly for the reality of her genius than the steady, though fluctuating, increase of her popularity, notwithstanding her fanciful views, her distorted ideas of life. Although she was too constant to her self-imposed task of disseminating her schemes for the regeneration of society, yet she had the instinct of the artist far too strongly to suffer her to injure her books very often by giving these projects offensive prominence. The theme, even as she handled it, was at best an unpleasing one to most people; but if she insisted on perpetually broaching it in one shape or another, it was more often incidentally or by way of insinuation. She taught in parables which found their illustration in the fortunes of her characters. She ingeniously adapted her fanciful dreams to the exigencies of every-day existence; assuming the certainty of her paragons of intelligence and virtue governing their happy lives on those communistic principles which would subvert existing society altogether. She wrote extravagances with a serene assurance very likely to impose on the careless reader, assisted as the illusion was by the fascinating realism of her detached episodes and the wonderful freshness of her style. For if she held impossible theories about man in the abstract, she more than redeemed herself by her extraordinary gift of comprehending and delineating individual character. She was versed in the ways of men and women of the world, although she would insist on operating marvellous transformations in them by the influence and example of their virtuous inferiors. She threw herself into the aspirations and mental struggles of the most sensitive natures with all the sympathy of melancholy experience. Yet, perhaps, she never showed herself so thoroughly at home as with the very humblest of her country people—with the rude peasant who had seldom passed the borders of his own commune, or with outcasts like the little Fadette, who had neither home nor family. No doubt she endowed such young girls with native tact and refinement that might have been the miraculous gifts of some good

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fairy; yet she managed to work out the development of their lives so that these qualities did not sit unnaturally on them. It was marvellous how she succeeded in bringing her imagination down to the level of their minds, and how she identified herself with the most delicate humour in their very modest ambitions.

It is difficult to explain the failure of her maiden novel, unless we may attribute it to the influence or co-operation of her experienced confederate, Mr. Jules Sandeau; for her second story, "Indiana," was evidently written with the full assurance of the success it was destined to obtain, although a thinly-covered vein of affected self-depreciation runs through the original preface. Nor was there any possibility of mistaking the extraordinary powers of the writer; while the conception of the book was admirably calculated to provoke the interest and admiration of French readers. She solemnly announced to them that she wrote in a period of "moral ruin," when civilization was in its expiring agonies. She disavowed all pretensions of setting up as a moral teacher, or of probing the hideous sores of society with any idea of healing them; but she gave herself up with the more freedom to her subject that she disclaimed all responsibility of the physician and moralist. If people found that the *denouement* of her stories encouraged a disregard of social laws by failing to inflict retribution for a breach of them, it was, she pleaded, no fault of hers. It pleased her to stick to actual facts in place of falling in with the conventionalities of moral fiction. That "argument," or defence, struck the key-note to the tone of "Indiana," of "Valentine" and of many of the fictions that followed. They were intensely emotional. Women with strong passions and sentiments were rebelling perpetually against those social restraints that they were often impelled to outrage. Although the genius of George Sand can scarcely be called dramatic, yet, unquestionably, these books contain dramatic episodes of no ordinary power. You feel, besides, that the author is writing from the overflowing fulness of experiences which have sorely troubled herself, and there are pages which have the interest of those candid "Confessions" which will make the memory of Rousseau immortal. In the searching and subtle psychological analysis which has become so familiar to the writer as to be almost instinctive, there is much to remind one of Balzac. But, so far as literary attraction goes, we believe most English readers will agree with us in infinitely preferring the series of subsequent stories, which brought out her gifts and tastes in a simpler and more practical aspect. "Consuelo" and the "Comtesse de Rudolstadt," are not to be passed over in silence. They are lyrical romances in prose, full of sympathetic appreciation of the most delicate refinements of the artistic temperament. Nor can anything be more characteristic in its way than the interview where the Empress Maria Theresa, in the plenitude of her commanding power, is calmly confronted and dominated by the obscure musical *débutante*. With the subdued strain of gentle melancholy which underruns those books, there is a subtle charm in them which it is difficult to define. But with many readers it will have been with the appearance of the "Mare au Diable" that the delight in George Sand will have really began. In "Valentine" and others that went before it she had transported us from time to time to her native Province of Berri. In the "Mare au Diable," "La Petite Fadette," "François le Champi," &c., her inimitable rural pictures become the background and framework of the whole story in place of being introduced incidentally. Thenceforward in most of her novels we find ourselves in the full freshness of woods and wild heather and sequestered meadows; of mountain streams brawling down their pebbly beds; of secluded farm-houses and elder-trees in their calm reaches of sedge-grown water. The people, too, become very real beings; if the idyllic pictures of country felicity are romantically coloured, they are scarcely the less fascinating on that account, thanks to the seeming absence of art with which they are most artistically drawn. Take, for example, the scenes between the little Marie and the labourer Germain, when the pack-horse has bolted and left them to bivouac with the little child of the latter on the banks of the lonely Mare au Diable. Or some of the passages between Marcelle, Rose, and the Grand Louis, in the "Meûnier d'Angibault." When we take George Sand in her idyllic vein, we might fill column upon column in merely indicating the beauties that crowd on our memory. They abound more or less in all her latest writings, and we remark anything rather than a diminution of her powers in those novels of hers that have appeared within the last year or two.

She failed comparatively as a dramatist. Notwithstanding, or on account of, all she has given us, her admirers will be inclined to regret the time she devoted to journalism and to detached articles on a variety of ephemeral subjects.

THE EASTERN IMBROGLIO.

(Pall Mall Gazette.)

Although Mr. Disraeli's little speech of Friday week was of a very conventional character, and though it would have been equally judicious and appropriate if he himself had doubted the stability of peace, there was a tone about it which banished many a fear; and just as it was read in England, so it seems to have been read in every capital in Europe. It has done much to restore confidence—so sorely shaken during the last fortnight; but it luckily happens that hope rests upon a surer foundation than the mollifying commonplaces of a Ministerial explanation. From all sides statements of fact are brought in which indicate that for a time at least the world will remain at peace. It is satisfactory to observe, too, that these statements not only bode well for the immediate future, but are at the same time explanatory of the past. We understand our danger better at the moment and by the very means of escape. Whatever doubt many have existed as to the main spring of these disturbances, and who kept them going, and what was their object, and how far the agencies that directed them had gone in plan and preparation—this is all but disposed of at the time we learn that peril is passing away. It being necessary that the tempest should cease, the managers themselves are compelled to come forward, and, while arresting it, to reveal the machinery that controlled the storm. Much more is popularly known now than even a week ago as to the real position of things in Servia and Montenegro. That the general population of those little States is moved by a most cordial detestation of the Turk, and by a furious desire to sweep him and all his works from the face of the earth, is so much well-confirmed belief. But while we see that old established fact in a newer and a clearer light, we also obtain broad views of the swarm of foreign incendiaries who infest the country, and also perceive that at head-quarters in either principality indignation is exploitation very much more than less. It is not all patriotism and Christianity against tyranny, polygamy, and Mahound. The armies that have been swept together for attack on Turkey (under certain circumstances) are not even Montenegrin and Servian armies, except as those States contribute raw material in men and in long-cherished wellearned hatred. So far as money, and equipment, and arms, and officering, and direction are concerned, they are the forces of another Power; and there can be no longer any doubt that same Power intended them for use in a far grander enterprise than the vindication of humanity in the insurgent districts. All this comes to us now in a swarm of little particulars of a significant kind; and above all we see that Russia had stopped at a word the toppling of a carefully prepared avalanche of troops over the Turkish frontier. There is, of course, a possibility that the word has been issued too late—though we do not think so; but in a general review of the facts that appears only as an accident. It has happened before now that a Government has carried threatening and preparation too far for its own native forces and populations; and in this case an alien people with its own proper passions and aspirations has to be restrained.

It is clear that these revelations are embarrassing not only to Russians and Servians, but to some Englishmen. Sentimental considerations have all along dominated a good many English politicians and journalists, and they still cling to views and opinions which are sorely shaken by recent events. They do not like the discovery that the rising against Turkey was by no means the spontaneous and purely generous movement they supposed it to be. The idea that it was a local movement, in which the various Powers of Europe could have only a benevolent interest in various degrees, was the more acceptable and pleasing one, but it has faded and is fading from every observant mind. The notion that it would be so good a thing to leave the malcontents to "fight it out" with Turkey, and (of course) beat her, and then form themselves into a confederation of independent States strong enough and patriotic enough to form a bar to Russian encroachment—that idea, always to our mind a foolish one, is also dissipated by the light newly shed upon the whole imbroglio. Supposing such a result probable, it is at least clear that it could not have seemed likely to Russian statesmen, or if so, they must have been very confident that they could easily break such a combination down or turn it to account at the proper moment; for it is impossible to imagine that they would have laboured and intrigued and spent of their scanty substance for the purpose of erecting this same barrier of patriotism and independence against themselves. That was never their intention we may rely upon it; and yet we see what their work has been. Moreover, it is a mere dream, this confederation. There is no likelihood that, even if it were established, it would last long without damaging contention for ascendency among the States themselves. Or if

Original from UNIVERSITY OF CALIFORNIA

such contentions did not break out spontaneously, we know what can be done by agitations and incitements from without, and what inducements there would naturally be to resort to them. Again, the warnings and groanings still vented over the extremely wrong policy of England in "bolstering up the Turkish Empire," have almost all their meaning washed out of them by the flood of recent telegrams. It was never a question of bolstering up Turkey at any time. That was never the original or governing intention of the English Government, and the suggestion that it is so becomes merely foolish and insulting when by "bolstering Turkey" complainants imply reckless support of oppression and cruelty. It is one thing surely to stand up for the maintenance of the Turkish Empire over all its present territories, from the balance-of-power point of view, and another to withstand a series of intrigues which, if they had passed into action, would probably have embroiled the whole of Europe in an exhausting war. It is not to prop up a fast decaying empire, for its own sake or even for our own sake too, but to stem the beginnings of a conflict in which much more than Turkey would go down, that our Government have done what they have done in the matter. They probably are as well convinced as any Slavophil abroad or any Mussulman-hater at home that the Turkish power is going fast to ruin; only they prefer that it should go down in easy stages if possible, and not by sudden onslaught and conflagration begun for the sake of a spoil which may not be so easy to snatch by-and-by. As for justice and mercy to the insurgents, we may be perfectly sure that no Government in Europe is more intent upon gaining it for them than the English Government. The supposition that the new Turkish rulers will only see encouragement to continue oppression in the action of our Cabinet seems to us almost absurd. The rulers of Turkey are half a dozen men who are certainly not left to their own benighted inferences. They must know and do know thoroughly what our action means; and we shall be surprised indeed if they do not well understand by this time that the conditions of English interference or support in any shape are moderation, reform, good government over the whole empire, and especially in the case of the insurgents. Nor can we suppose them blind to the necessity of such a policy on other accounts.

Shipping Intelligence.

ARRIVALS.

July 31, *William Mudgett*, American barque, Dickie, from Hongkong, July 8, with Chinese emigrants, to Captain

July 31, *Sekirio Maru*, Japanese steamer, Fukui, 380, from Hakodate, Mails and General, to M. B Co.

Aug. 1, *Tibre*, French steamer, De Girard, 1,100, from Hongkong, Mails and General to M. M Co.

Aug. 3, *Hiroshima Maru* Japanese steamer, Furber, 1,870, from Shanghai and ports Mails and General to M. B. Co.

Aug. 3, *Lothair* British ship Orchard, 794, from London, April 13, General, to Mouritan Heimann & Co.

Aug 3, *May Queen*, British barque, Nisbett, 283, from Takao, July 18 Sugar to Walsh, Hall & Co

Aug. 4, *Sumida Maru*, Japanese steamer, 690, Gorlach, from Shanghai and Ports, Mails and General, to M. B Co.

Aug. 5, *Sunda* British steamer, Lee, 1,689, from Hongkong, July 29, Mails and General, to P. & O. Co.

DEPARTURES.

July 30 *Willard Mudgett*, American barque, Dickie, 675, for Honolulu, Passengers, despatched by Captain.

July 31, *Hiogo Maru*, Japanese steamer, Vroom, 690, for Hakodate, General, despatched by M. B Co.

July 31, *Taihei Maru*, Japanese steamer, Hubenet, 500, for Kobe, General, despatched by M. B. Co.

Aug 2 *Malacca*, British steamer, Edmond, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.

Aug. 2, *Genkai Maru* Japanese steamer, Connor, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Steamship *Sekirio Maru*, from Hakodate—Messrs. Bell, Baker, Reid, Batchelor and Driscoll.

Per Steamship *Hiogo Maru*, for Hakodate.—Bishop Burdon and Mrs Burdon, Mr and Mrs Spooner and child

Per Steamship *Tibre* from Hongkong. Mr. and Mrs. Kasakichi, M Takamara, M Sarakisi and child, and Mr Kruse.

Per Steamship *Malacca* for Hongkong.—Messrs. Marcus, Hawkins and Day.

Per steamship *Genkai Maru* for Shanghai and ports—Mr. and Mrs R Rymer Jones, Mr and Mrs Spooner and child, Mr. and Mrs Arnold and 2 children, Messrs. Bougoir, Billet, Kreitmann, Reyeli, Pousset, Guyard, Colomb, Grösser, and 40 Japanese in the cabin.

Per Steamship *Hiroshima Maru* from Shanghai and ports—Mr. and Mrs R. V. Boyle, Mrs McQueen, Mrs. Johnson and 3 children, Mrs. Strome, Chevalier Castelli, Messrs. R. M. Johnson, J. Robertson, Miller, Marsh, Dowlam M. A. Watson Du Bosquet, Peltzer, Hall, Mr. and Mrs. Honda, M Masuda, Minami, and 34 Japanese in the cabin.

Per Steam-ship *Sumida Maru*, from Shanghai, &c.: Messrs. A Major, Hasé and Son, and 65 Japanese in the Steerage.

Per Steamship *Sunda* from Hongkong.—Mr. M. Ferrugia.

CARGO.

REPORTS.

The *William Mudgett*, with 300 Chinese emigrants from Hongkong anchored in the bay on Saturday afternoon to fill up with water and provisions, and after doing so will leave for Honolulu.

The *Lothair* reports:—Light wind in the channel—passed the Lizard April 15 From the 16th until the 24th experienced heavy weather with strong N Westerly gales; barometer falling to 28 80. Had fair N.E. trades; crossed the equator May 18th in 25° West, fresh S.E trades, passed meridian of the Cape June 2nd, 37° South. Ran Easting down in 38° South, and had moderate weather, passed St. Pauls June 16th. Spoke the British ship *City of Benares* from London to Adelaide, in 35° South and 17° West, 40 days out.

Passed Anjer June 29th, came up through China sea with light baffling winds and calms. Saw a barque unknown on the morning of July 23rd and in the evening observed the same vessels had lost fore top-mast After passing Van Dieman's Strait had pleasant weather into port, making the passage in 110 days from port to port.

The *May Queen* reports:—Had heavy weather from Takao till nearing the Japan coast; came into the Pacific to the south of Miacomiona group whence to port had fine weather.

The *Cremona*, from New York for this port, passed Anjer July 8th.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Though an active speculative demand for staple *Cotton Goods* and *Yarns* continues to exist, prices are far from being satisfactory, and in some instances sales at very low figures have been reported. Good 9 lb. *Shirtings* are saleable at firm rates, but all other weights and quantities, though not actually lower, are difficult to sell at quotations; it is, however, to be remarked that concessions in prices would in most instances lead to large transactions. The enquiry for *Yarns* continues at former rates, and good 28/32 spinnings may be reported even rather firmer. In *T. Cloth* there is little doing, at lower prices. *Velvets* are firm, but no further sales of importance are reported. In *Drills*, however, a considerable drop must be recorded, which refers especially to 14 lb., of which weight a lot was reported to have been sold at $2.40. Other *Cotton Goods* deserve no particular attention. We quote as follows, viz:

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce....	$1.70	to	$2.00
8 lbs.	38½ yds.	44 in.	„ ...	2.00	to	2.45
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1.90	to	2.50
9 lbs.	38½ „	44 in.	„ ...	2.20	to	2.75
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.45	to	1.70
„ 6lbs.	24 „	32 in.	„ ...	1.15	to	1.30

White Shirtings:—						
60 to 64 reed 40 yds. 35 in.	per pce.			2.20	to	2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...			0.75	to	1.00
Black Velvets				8.00	to	9.00
English Drills 15 lbs. 40 yds, 30 in.	... ...			2.90	to	3.05
Taffachelaes	12 yds, 43 in....		*nom.*	2.10	to	2.30

Yarns.—

No. 16 to 24	per picul..	$30.00	to	32.50		
No. 28 to 32	per picul..	$32.00	to	38.00		
No. 38 to 42	per picul...	$39.00	to	42.00		
Reverse Twist ... 16-24 ...	„ ...	32.50				

Woollens.—The activity in our woollen market has been well maintained, and during the past week sales of *Mousselines de Laine*, plain as well as printed, were made, but without any improvement in prices to be noted.—*Shimagoros, Black Orleans, Italian Cloth* and *Blue Union Cloth* are inquired for, but the very low prices offered have only permitted a very moderate business being done.

Plain Orleans	40—42 yds.	32 in....	6.50	to	7.50	
Figured Orleans	29—30 yds.	31 in....	4.75	to	5.25	
Shimagoro	30 yds.	30 in....	4.25	to	5.75	
Italian Cloth	—30 yds.	32 in....	0.25	to	0.33	
Camlet Cords	29—30 yds.	32 in....	6.25	to	7.25	
Camlets Asstd.	56—58 yds.	31 in...	18.50	to	19.00	
Lastings, Japan...	22—30 yds.	32 in....	13.00	to	14.50	
Plain Mousseline de Laine	—30 yds.	30 in....	0.17½	to	0.19	

Figured Mousseline de Laine...	30 yds.	30 in...	0.23	to	0.27	
Multicolored „ ...	30 yds.	30 in...	0.30	to	0.36½	
Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80	to	1.20	
Presidents	54 in. to 56 in...		0.60	to	0.70	
Pilots	54 in. to 56 in...		0.40	to	0.45	
Union	54 in. to 56 in...		0.40	to	0.65	
Blankets, scarlet & green 7 to 8 lbs....	per lb...		0.40	to	0.41	

Sugar.—Since the issue of our last report there has been rather more enquiry for *Formosa Sugar*, in consequence of advices received of an advance in price in Takao, and it is, besides, in some measure attributable to the necessity dealers now find of replenishing their stocks, which are nearly exhausted, in Yedo. There are no sellers at less than $3.75 for best *Takao Sugar*, and many holders will not accept anything under $4. *Refined Sugars* continue in small demand.

Quotations are firmer but unchanged, as follows.

Sugar:—Takao in bag	...per picul..	$3.50				
„ in basket	„ ...	$3.15				
Taiwanfoo do.	„ ...	$3.05				
do. in bag	„ ...	$3.20				
China No 1 Ping-fah	„ ...	$7.75				
„ No. 2 Ching-pak	„ ...	$7.10				
„ No. 3 Ke-pak	„ ...	$6.20				

China No. 4 Kook-fah	...per picul...	$5.50				
„ No. 5 Kong-fun	„ ...	$4.90				
„ No. 6 E-pak	„ ...	$3.80				
Swatow...	„ ...	$3.00				
Daitong	„ ...	$2.85				
Japan Rice	„ ..	$2.20				
Kerosene Oil	„ ...	$2.35				

Kerosene Oil.—Some few auction sales only have taken place, and quotations are $2.33 to $2.35.

EXPORTS.

Silk.—Transactions have again been very large. Prices remained unchanged for several days after the issue of our last report, but encouraging news having been telegraphed from China, the whole stock was soon after cleared at an advance of 30 to 40 dollars per picul. Telegrams which were received yesterday announce a further very important rise in Silk at London, and in consequence the market closes firm at the quotations given below, with an upward tendency.

Arrivals are 1,300 bales; settlements since 29th ultimo, 1,500 bales of Hanks, and 450 bales of Oshius and other sorts.

Stocks are reduced to about 150 bales.

	At Exchange 3/11½ in London.	*At Exchange 5.00 at 6 m.s. in Lyons.*	
Hanks.—Extra to No. 1	$800	29/10	83
„ Best No. 1 & 2	$760 to 780	28/5 to 29/2	79 to 81
„ Good No 2	$740 to 750	27/8 to 28/1	77 to 78
„ Medium No. 2½	$710 to 730	26/8 to 27/4	74 to 76
„ C'mon. No 3 / „ Inferior No 4 & 5	$680 to 700	25/7 to 26/4	71 to 73

	At Exchange 3/11½ in London.	*At Exchange 5.00 at 6 m.s. in Lyons.*	
Kakida.— Good	$780 to 800	29/2 to 29/10	81 to 83
Hamatski.—Good	$630 to 650	23/10 to 24/7	66 to 68
Soday.— Good	$550 to 650	21/ to 24/7	58 to 66
Hatchojee—(Tussah)	$530 to 550	20/4 to 21/	56 to 58
Tajuma.— (Tumba)	$510 to 530	19/7 to 20/4	54 to 56

Tea.—Our Tea market has been very quiet during the past week, settlements only amounting to 2,000 piculs, and stocks remaining unaltered. The recent rise in exchange seems to have prevented many operations, and prices close dull and with a downward tendency.

Common	$10.00	to	12.00
Good Common	13.00	to	16.00
Medium	17.00	to	19.00
Good Medium	20.00	to	22.00

Fine	$25.00	to	30.00
Finest	31.00	to	36.00
Choice	40.00		noml.

EXCHANGE AND BULLION.

Exchange.—There has been a very large business doing in Private Paper at daily advancing rates, and should settlements of Silk continue at anything like the past week's business, there is every probability of a further advance on the following quotations, as the present known amount of dollars on the way will scarcely suffice for immediate requirements.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 2d.
„ Bank Bills on demand	4s. 1d.
„ Private 6 months' sight	4s. 2⅛d.
ON PARIS—Bank 6 months' sight	5.20
„ Private 6 ms. sight	5.35
ON HONGKONG—Bank sight	2½ % disct.
„ Private 10 days' sight	Nominal.
ON SHANGHAI—Bank sight	75
„ Private 10 days sight	77 noml.
On New York—Bank Bills on demand	94½
„ 30 days sight Private	96½
ON San Francisco—Bank Bills on demand	95
„ 30 days sight Private	96½
Kinsatz	390
Gold Yen	384

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

NORTON'S PILLS

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,

To the Proprietors of L. S.

NORTON'S' CAMOMILE PILLS, London.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 33] YOKOHAMA, SATURDAY, AUGUST 12, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The publication of the measure for the capitalization of the incomes of the nobles and gentry has been the startling event of the week. The details of the measure, and some few comments which it suggests, will be found elsewhere.

We have much pleasure in announcing the promotion of Mon. de Struve from the rank of Minister Resident to that of Envoy Extraordinary and Minister Plenipotentiary for the Court of St. Petersburg to Japan. Baron Rosen has been appointed Secretary of Legation, and Mon. Pelikan has been confirmed in his appointment of Acting Consul at Yokohama.

Her Majesty the Empress will leave Tôkiô for Miyanoshita towards the end of the month, and will probably stay there until the great heat of the summer is over. Both Mr. Okubo and Mr. Okuma are suffering from sickness, and, in consequence, Mr. Kido's trip to Hakone has been postponed.

In our issue of the 29th ultimo we published the translation of an interesting article from the *Chôya Shimbun* on the subject of Loochoo, and to-day we lay before our readers another from the *Chôya* on the same subject. It calls for one or two remarks. In the first place it does not seem to be by any means so clear as the writer imagines, that the treaty between Japan and China recognises the right of the former to Loochoo. In the articles interchanged by Okubo and the Prince of Kung in October 1874, the following words occur: "Formosa having wilfully inflicted injury upon *people belonging to Japan*," and "the proceedings of Japan on this occasion having originally been taken for the rightful object of protecting *her people*, etc." From these expressions, and the fact of some of the shipwrecked people having been Loochooans, the writer concludes that China has tacitly conceded her interests in Loochoo to Japan. But it should be remembered that among those who were shipwrecked and badly treated there were several Japanese from Japan proper, and the injury inflicted on them by the Formosans was sufficient of itself to excite Japan to retaliation.

Again, we think that rather too much credit is given to Okubo for his action at Peking. The writer forgets that it was rather Sir Thomas F. Wade's "tongue" than Okubo's that brought about the result obtained, as Okubo had broken off relations when Sir Thomas intervened with complete success, as acknowledged in the certificate of joint agreement executed by the Japanese Commissioner and the Chinese Ministers.

The advance in the price of silk is now stopped, and it is more than probable that we shall soon have to record a considerable fall in quotations. Notwithstanding a rise of 10 per cent. in exchange since last Saturday, large purchases were made at an advance of about $60 per picul. The number of buyers has, however, fallen off, though arrivals have been large, and as native dealers are fully aware that the excitement among foreign purchasers cannot last long, they are anxious to realize at a decline of $10 to $20. We may be sure that at the present extraordinary rates native dealers are not desirous of holding their silk, and we imagine that, in some degree, they look upon the whole movement as a farce, the ultimate result of which, however, is entirely in their favour. No public telegrams concerning the silk market at home have been received lately, but we hear of private messages announcing firm markets in Europe, but yet not advising any further rise in quotations. The export since the 1st July has been nearly 5,000 bales, and another 1,000 bales will go forwared by the next mail, making a total export during six weeks equivalent to one half of the entire export of the season 1874-75, so that telegraphic advices of Japan and China shipments will set the minds of European dealers at ease as regards any fear of short supplies. If prices for good all round Hanks average $550 to $600 up to the end of the season, we may presume that the consumption by native manufacturers will be small, and every available bale brought to the market for sale to foreign buyers, so that it is quite posible that the total export may reach 18,000 to 19,000 bales. For the same reason the export from China may be greatly increased, so that prices in Europe will probably fall. We must not lose sight of the fact that the bulk of the silk disposed of in European markets during the spring has not gone into consumption, but has been bought up and held by speculators; and as manufacturers cannot afford to pay an advance of 100 per cent. for silk with which they could do but little good even when the market was extraordinarily low, it is safe to predict that these speculators will be forced to sell when news is received of large shipments from China and Japan. That they will be able do so on better terms than shippers from here at high rates must be clear to the meanest understanding. Those shippers who are sure of their classifications and can sell to arrive may be fortunate, but it is quite possible that the aspect of the European silk market may be greatly changed by the time the bulk of this season's shipments arrives there.

The money market continues in an anomalous position, and while the native Banks are suffering from a plethora of Mexican dollars, the foreign Banks have been forced to raise their rates another $4\frac{3}{4}$ per cent. during the past week. And still the demand for money continues, and there is no immediate prospect of any relief arriving. The notification of the native Banks, expressing their willingness to make advances to foreigners, has been availed of to a small extent only, in consequence of the difficulty of doing business with them, and the high rates of interest asked, viz. $1\frac{1}{2}$ to 2 per cent. premium on the best security. The native Banks have also invested in sterling exchange to a very moderate extent, and with an irredeemable paper currency which satisfies all their de-

mands, and which is at 5 per cent. premium (it touched 8 per cent.) over mexican dollars, it seems strange that they do not invest all their surplus funds in this way, as it would give them a certain return, and at the same time, by easing the money market, would strengthen the prices of silk, which are certain to decline unless cheaper money can be got.

In the article entitled "Progress in Japan," which appeared in our last issue, the following sentence occurred: "A curious "instance of thoughtless waste was lately mentioned in a "native newspaper. The Government some time ago ordered "from America a number of sheep, for which they paid $60 "a head, but when the animals arrived, the official fancy had "passed away, and they were sold for $3 each." This statement was based on the following extract from the *Hôchi Shimbun*, a leading Japanese newspaper which we deemed worthy of entire credit. "Some 150 sheep were lately imported from "America on account of the Government by a Mr. Jones, who "held an appointment under the Agricultural Department. "These sheep cost the Government nearly $60 a head, but yet "when they arrived here, no place had been prepared for their "accommodation, and not knowing what to do with them, the "Government sold them at auction for $3 a head." We find, however, that in this instance the information the *Hôchi* gave was not accurate, as Mr. Jones has explained to us the circumstances which gave rise to the report referred to. It seems that some time ago, by order of the Kaitakushi, a number of sheep were purchased at San Francisco. They were to be kept there, at the expense of the Government, until orders to forward them were sent from Japan, but these instructions the agents at San Francisco did not wait for, as they considered that freight would be saved by shipping the ewes before they lambed This, however, turned out to be anything but a happy thought, for some of the ewes had lambs on the way over, and some on their arrival in port, so that when landed in Yokohama the sheep generally were not in a fit condition to be taken delivery of, and as, by Mr. Jones' advice, the Kaitakushi Department declined to have anything to do with them, they were sold at auction by the Agent of the P M. S. S. Company. The loss caused by this error will fall upon the shippers, who will have to supply other sheep as originally contracted for, and some time during the winter, or early next spring, it is expected that the Kaitakushi will receive 400 good animals, costing laid down here about twenty dollars a head, in proper condition to be sent to the farm at Shimosa, where there is already a flock of sheep comprising Chinese, Cotswold, Southdown and Merino varieties, all of which are thriving and breeding well.

Mr. Nakayama, late Editor of the suspended *Hiôron Shimbun*, is now undergoing a sentence of six months imprisonment for a violation of the Press-laws. Quite lately, we learn from the *Hôchi Shimbun*, Mr. Nakayama has been convicted of a further offence of a similar nature, for which he was sentenced to eight months' imprisonment. Instead of it being ordered that this latter sentence should be carried out in its entirety after the former term of imprisonment had expired, we learn that only the difference between the two sentences—that is two months' imprisonment—will be added to the first term of incarceration, so that Mr. Nakayama will undergo eight months' imprisonment for two distinct offences, for which he was sentenced to fourteen months' confinement. We have no doubt that Mr. Nakayama has been more than sufficiently punished, but we should like to know whether the Government looks upon such administration of the law as a matter of leniency or absurdity.

We cannot allow the judgment rendered by the U. S. Consul-General in the recent case of "The people of the United States *vs.* Bernard Hayes" to pass without making a few brief remarks as to its purport, and the effect it is likely to produce. No one can sympathize more than we do with His Honor in the strong opinion he expressed, that something should be done to suppress several of the grog shops with which our settlement abounds, and to which are attributed at least nine-tenths of the police cases that are from time to time reported in our columns. Indeed we have before expressed our opinion fully on this subject, so that we must refrain from repeating it again now. But it appears to us, however, that in the present case, His Honor, after throwing the blame of the assault on the proprietors of 'those vile pot-houses' permitted a miscarriage of justice in allowing the prisoner to be discharged without any punishment whatever, for an offence that was, even if we judge him on his own admission, by no means a light one. Whatever perjury there may have been in parts of the evidence, it appears to be very clear that the prisoner was, in the first instance, somewhat roughly treated by the complainant Manning and his associates when in the 'British Queen'; that he escaped by the window; that as he passed the door he saw Manning inside, picked up a stone and threw it at him, striking him with considerable violence in the face and rendering him senseless. The prisoner attempted to justify his act on the grounds of self-defence, but he was then outside the house and in no bodily danger whatever; and there can be no doubt that the assault he committed was purely an act of revenge, and not one which the law justifies. Even if the prisoner had alleged, which he did not, that he was under the influence of drink and not answerable for his actions, we should still fail to reconcile His Honor's decision with what we believe to be established law, and we consider that it opens to crime a new and dangerous ground of justification, which, if adopted as a precedent, cannot fail to jeopardize greatly the public peace of our settlement.

The following extract from the *China Mail* only confirms the remarks we made in our issue of the 22nd ultimo, as to the detestation with which all right-minded men must look on the advocates of assassination for political ends. It says very little for the condition of the Japanese press generally, that the principles advocated by the writer in the *Sômô Zasshi* have not met with universal condemnation.

If a strong proof were needed of the undesirability of granting the native press of Japan perfect freedom of discussion on all subjects, political or otherwise, we have one in the fact that articles have lately appeared in one or two of the native papers at Yokohama positively advocating assassination of corrupt officials as a means of rectifying the mal-administration of a country by them. For instance a correspondent of the *Sômô Zasshi* commences a letter to that paper thus:—"I have read the article in your paper on assassination, which argued that, if corrupt officials are to be exterminated, three means might be resorted to; a rebellion, which would necessarily bring much misery on the people; self-immolation, which would have but a very small affect; and assassination with sword or pistol. I think this article may be supplemented, and I propose saying a few words about secret assassination, and will try to explain why, as rebellion is injurious to the nation, and martyrdom is ineffectual, secret assassination is better than open murder." It is rather too much for the conductors of native newspapers in Japan to expect that the Government of the country will not exercise some control over the contents of their papers so long as they permit the assassination of its members to be openly advocated in them. Years ago, when Japan was in a semi-barbarous state such articles as these would not have excited surprise, but most foreigners will be scarcely prepared to find assassination openly advocated in public papers in Yokohama at the present day, and will be almost inclined to lose confidence in the good influence of Western civilisation on the Japanese. Assassination is a thing which Englishmen hold in perfect abhorrence, and it is quite time that the Japanese had similar feelings in regard to it.—*China Mail.*

The young man Wych, who shot himself on the 8th instant, died at the General Hospital last night. An inquest was held to-day, when the jury found that deceased had destroyed himself while in an unsound state of mind.

From the "Japan Mail Daily Advertiser."

Monday, 7th.

The steamer *Quang Se*, when taking up her anchorage yesterday, got foul of the steamer *Madras*, carrying away that vessel's top-gallast mast and jib-boom, together with her own fore-yard and a portion of her bulwark on the starboard side.

From the *Kinji Hiôron.*

The Tôkiô *Fu* has ordered the *Kucho* and *Kôcho* to advise the people under their charge, to attend such Shintô or Buddhists services as may be held in their neighbourhood.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

From the *Chôya Shimbun.*

A notification has been issued by the Prime Minister, to the effect that bonds will now be issued for the pensions of the *Kuadzoku*, *Shidzoku* and *Heimin.*

From the same.

A naval station is to be shortly opened at Moroan, in the island of Yezo.

From the *Akébono Shimbun.*

His Excellency Kido was on the 3rd instant appointed a post of high rank in the *Kunaishô* (Department of Imperial Household).

From the *Hôchi Shimbun.*

A display of fireworks will take place in the gardens of the Imperial Palace, Akasaka, on the 13th instant.

From the *Mainichi Shimbun.*

A party of Chinese actors will shortly give performances at the Chinese theatre, Yokohama.

Tuesday, 8th.

The M. M. steamer *Tanais*, with French mails on board to 2nd July, left Hongkong yesterday evening at eight o'clock.

The arrival of the steamer *Oceanic* with but a small amount of dollars, and the reported scarcity of them in San Francisco, has again given an impetus to exchange, which has further advanced about 2½ to 3 per cent., with every probability of the rise lasting for some time longer, as silk buying continues active even at the advanced demands of the Japanese merchants.

From the *Hôchi Shimbun.*

The Jishu-Sha, or association to whom the *Sômô Zasshi* belonged, requested the Tôkiô *Fu* to point out which of the articles published in their issue were deemed to have a tendency to disturb the tranquillity of the nation, and so merit suspension. The Tôkiô *Fu* declined to discuss the question, but referred the applicants to the *Saibansho.*

From the same.

Though the crop of silk has been unusually good this year prices have increased rather than fallen, owing to the eagerness with which the article has been purchased by foreigners. Dealers have consequently raised the price of silk piece-goods.

From the same.

The silk producers in the province of Hida, not being aware of the great demand for that article in the Yokohama market, sold their stock to native merchants at cheaper rates than have ruled in any other province.

From the same.

Great drought prevails in the provinces of Bizen, Bingo and Mimasaka, there being even a scarcity of drinking water. The officials are exerting all their power, but in vain, to relieve the people.

From the same.

Most of the ice dealers in Tôkiô this year are men belonging to the *Shidzoku* class, but the business does not pay, perhaps on account of the great number of those who are engaged in it.

From the same.

The lotus plants at Shinobadzu-ike, near Uyéno, Tôkiô, are in full bloom, and form a very attractive sight.

From the same.

At the left hand side of the entrance gate of the Imperial Palace at Akasaka, a large building is being constructed in foreign style for the accommodation of meetings of the *Kuadzoku.*

From the *Nichi Nichi Shimbun.*

The lately suspended *Sômô Zasshi* has brought an action for damages against the Minister of the *Naimusho* (Home Department).

From the *Mainichi Shimbun.*

Yamamoto Kôsuke, an acrobat who was taken to Europe by a foreign speculator some ten years ago, after visiting England, France and Italy, got married in Germany, and has now returned home accompanied by his wife and an adopted son.

Wednesday, 9th.

A young man named Wych made a determined attempt at suicide early yesterday morning. He left the house, where he had been residing, after the inmates had retired to rest, and was discovered about 3 a.m. lying in the road close to the General Hospital, with a pistol shot in his ear, and two revolvers, each with one chamber discharged, on the ground alongside him. He was conveyed to the General Hospital, where he was attended by Doctors Simmons and Eldridge, Although throughout the day little hope was entertained of his recovery, towards evening more favourable symptoms set in, and he was in perfect possession of his faculties when Dr. Eldridge left him last night at half-past eleven.

The M.M. Steamer *Menzaleh* took away from this port the largest amount of Silk ever yet shipped from here by one vessel, namely 1922 bales, more than half of which goes to England.

The M. B. steamer *Nagoya Maru* met with continued bad weather between Shanghai and Kobe, and was consequently much behind time in her arrival at the latter port. She is expected to leave Kobe at noon to-day, so that we may look for her arrival here sometime on Thursday night.

About ten days ago indications existed of fire in some of the old workings of the Takashima coal mine, and in consequence of the difficulty of at once getting to the seat of it, as the working of that locality had for some time been abandoned, the fire obtained a greater hold than was expected. We are glad to hear, however, that the part on fire is shut of altogether from that side of the mine where work is going on is usual. It is hoped that flooding certain drives will check the conflagration, merely involving some extra expense on the part of the Agents in flooding and afterwards pumping dry some unused galleries of the mine. We are in a position to state that serious damage to the mine is not likely to result in any case.

The fire probably had its origin in an accumulation of gas in the old drives.

From the *Mainichi Shimbun.*

Great drought prevails in the province of Ugo, so much so, that the people of the district are praying for rain.

From the same.

Some trouble recently arose between the proprietor and the actors of the Imamuraza theatre, Isezaki chô, Yokohama, and the former, despairing of been able to settle the quarrel satisfactorily, preferred to order the demolition of the building.

From the *Hôchi Shimbun.*

Three foreign dogs, suffering from disease, were sent up to Ashinoyû for a course of the baths, and the treatment they met with there cured them with surprising rapidity.

From the same.

There are seven bathing establishments at Hakone, but only a few copies of second class Tôkiô newspapers are taken in by the proprietors, so that those who visit the place and stay there for any length of time, are quite unacquainted with what is going on in the world.

From the same.

Miyanoshita is generally free from mosquitos, but this year has suffered from these pests, in consequence of which there has been a great advance in the price of mosquito nets at Odawara.

From the *Chôya Shimbun.*

From the *Nichi Nichi Shimbun.*

A dog belonging to a foreigner living at Owari-chô, Tôkiô, was killed, on the afternoon of the 7th instant, by the gang of men employed by the Tôkiô *Fu* authorities to destroy stray dogs, in consequence of which the owner of the animal laid a complaint at the police station.

From the same.

The brigade of men, who are to be trained at the Chief Police station to render special assistance in case of accidents caused by floods, breaking of river embankments, etc., commenced their drill on the 7th instant.

Thursday, 10th.

From the *Nichi Nichi Shimbun.*

The iron Railway bridge, which crosses the Katzuragawa near Kiôto, was completed on the 31st ulto. The construction of the Kiôto Station is being rapidly proceeded with, and it is expected that the whole line will probably be opened on the 1st of October next.

From the same.

A large building, of foreign style of construction, is to be erected in the grounds of the Imperial Palace at Akasaka, Tôkiô, wherein foreigners presented to His Majesty will be received.

From the *Hôchi Shimbun.*

The Tôkiô *Fu* has notified that hitherto post mortem examination were not allowed unless the Tôkiô *Fu* granted special permission, but hereafter, when the families of the deceased may desire to have a post mortem held, or the doctors may think it desirable, the same may be carried out by merely reporting the fact to the local authorities.

From the same.

The Department of the Imperial Household is about to employ a Kiôto photographer to take views of the tombs of Jimmu Tennô and his successors.

From the same.

An agricultural school is about to be opened at Naitô Shinjiku, to be conducted under the direction of the *Kangio-rio* (Bureau of Agriculture).

From the same.

The directors of the Mitsu Bishi Company entertained the agents of the English, French and American mail steamers of Yokohama at the noted tea house of Nakamura, Riogoku, Tôkiô. Genl. Van Buren, Mr. Bryan and others were among the guests, and proceedings concluded with a display of fire-works.

From the same.

A person who recently visited Hakone informs us that the hotels are crowded with visitors. There are also many people visiting the hot-springs at Atami, in Idzu, but the heat is very oppressive there, so that Hakone is preferred. His Excellency Kido will visit the latter place about the 10th instant.

From the *Chôya Shimbun.*

A notification has been issued by the Bureau of Police, to the effect that the class of tea-houses called *Hikité-jaya* will not hereafter be licensed.

The young man Wych, who shot himself on the morning of the 8th instant, is now considered in a hopeless condition, as inflamation of the brain has set in.

Friday, 11th.

From the *Tekka Shimbun.*

Recently the Risshisha society of Tosa gave a great entertainment in that province, on which occassion many lanterns were used which were decorated with drawings showing a decided antipathy to the present government.

From the *Osaka Nippô.*

The office of the Kiôto *Fuchô* is to be built on the site of the former palace of the retired Mikados, while the castle of Nijô, at present occupied by the *Fuchô* will be converted into barracks for troops now in garrison at Osaka.

From the same.

New barracks, for the accommodation of the troops stationed in Osaka, are to be erected at a cost of 150,000 *yen.*

From the *Mainichi Shimbun.*

Silk-worm egg cards are three times as dear as usual at Matsumoto, in the province of Shinsha, in consequence of a large demand for them which has lately sprung up.

From the same.

A letter from Corea states that great drought prevails in that country, as scarcely any rain has fallen since February last.

From the *Nichi Nichi Shimbun.*

The meetings of the *Genrô-In* will commence again on the 14th instant, when the summer vacation will be finished.

From the *Eiri Shimbun.*

A newspaper is about to be published at Hamamatzu, on the Tôkaido, and another will also make its appearance in the Kumagai *ken.*

From the *Hôchi Shimbun.*

Photographs of the decorations which were put up in Hakodate in honour of the Mikado's visit, have been taken by someone in the British Consulate at that port and sent to England.

From the same.

A native broker, who was employed to purchase curios for a foreigner, recently came across an idol at Tôkiô, in the head of which were two stones which on examination proved to be diamonds, one of the value of 600 *yen* and the other of 200 *yen.*

From the *Kôko Shinpo.*

Some of the inhabitants of one of the provinces at the extremity of this island are showing feelings of dissatisfaction for the recent suspension of newspapers by the government.

Saturday, 12th.

We hear from the Agent of the Great Northern Telegraph Company, that the cable between Java and Australia is repaired, and that the Russian land lines are supposed to be in working order although no official information has been received to that effect.

From the *Akébono Shimbun.*

An interior gate has recently be built at the front entrance of the *Daijokuan,* and for the past few days has been closed promptly at sunset, for reasons unknown.

From the same.

The Tochigi and Kumagai *kens* (Yashiu and Joshiu) are now in a state of prosperity through the high price at which their silk has been sold, and many women of the lower orders have gone to those provinces from the capital in search of work.

From the same.

Ice is in great demand at Osaka, and has been sold at twenty *sen* a pound.

From the same.

The former *daimio* of Kaga is about to erect one hundred houses on the site of his former *yashiki* in Hongo, Tôkiô, and then let them out to poor people. Those who are unable to pay rent at present can enter into possession, and wait for better times to enable them to discharge their obligations to their landlord.

From the *Mainichi Shimbun.*

The people residing in the neighborhood of Noge hill being troubled by the scarcity of water caused by the recent drought, were delighted to discover a spring at the foot of the hill from which they could daily obtain water of good quality, but on the 9th instant the earth about the spring gave way and caused serious injury to some who were near, though fortunately no fatal accident occurred.

From the *Nichi Nichi Shimbun.*

The wife of Mr. Uyeno, the Japanese Minister in London, gave birth to a daughter on the 21st of last month.

Corresponding period last year	Yen 4,492·362

A beautiful eye makes silence eloquent, a kind eye makes contradition an assent, an enraged eye makes beauty deformed. This little member gives life to every other part about us, and I believe the story of Argus implies no more, than that the eye is in every part; that is to say, every other part would be mutilated, were not its force represented more by the eye than even by itself.—*Addison.*

Sound reason and good sense can be expressed with little art; and when you have anything to say in earnestness, it is necessary to search for words? Yes; your fine speeches, which are so sparkling, in which ye twist the shreds of human thought, are unrefreshing as the mist-wind, which whistles through the withered leaves of autumn.—*Goethe.*

When young, we trust ourselves too much; and we trust others too little, when old. Rashness is the error of youth; timid caution, of age. Manhood is the isthmus between the two extremes: the ripe and fertile season of action, when alone we can hope to find the head to contrive united with the hand to execute.—*Colton.*

THE CAPITALIZATION OF THE INCOMES OF THE NOBLES AND GENTRY.

IT has long been evident to all fairly intelligent observers of the condition and progress of this country, that serious if not hopeless embarrassment must overtake it unless some great measure of financial reform is passed. The yearly national expenditure has been out of proportion to the national resources, which, however potentially large, are actually very small. The greatest industry of the country is taxed so heavily as to prevent any possible extension of it. New aspirations on the part of the Government, if not of the people, have entailed a vastly increased expenditure; while few or no new sources of revenue have been developed. The creation of an army and navy, the remodelling of the whole educational and judicial system of the country, the construction of costly public works, and, above all, the formation of a Colonization Department, which, for whatever reason, has spent enormous sums of money with perfectly reckless prodigality, have combined to strain the resources of the empire to a very alarming extent. Nor was it unnatural that with two recent European examples of the grievous effects of financial embarrassment brought prominently to their notice, the Japanese Government should determine on some measure of financial reform which would relieve the nation from grave impending peril. To diminish the expenditure by abandoning those efforts which have been the great cause of its increase, and which must eventually conduce largely to the advantage of the nation, would have been to throw millions away for ever. Could the schools be left unsupported, the colleges for general or technical education abandoned, the reformed army left to fall to pieces, or the navy to illustrate how vain is the intention to build a tower, unless a man "first sitteth down and counteth the cost, whether he have sufficient to finish it"? All this could not be done. It would indeed have left men to mock, saying, "This man began to build, and was not able to finish." Even admitting that the navy, especially on the scale to which it threatens to grow, is a luxury which to a poor nation is a costly folly, was it in human nature to abandon it?

On the other hand, any large increase in the revenue was not to be hoped for. A protective tariff would kill that very trade from which the nation is deriving more benefit than is usually supposed, though not as much as many of us hoped. Increased taxation is practically impossible, and would be grossly unjust to the landed interest, already, as we have often stated, grievously overtaxed.

What then could the FINANCE MINISTER do? By some means or another the inevitable demands on him must be met; the only alternatives being, large fresh issues of paper money, or the repudiation of obligations affecting scores of thousands of the population.

The position amounts to a great national dilemma, in which some class or interest must be sacrificed. *Salus populi, summa lex*; and all nations have at some time or another gone through a crisis when every class has had to look this stern maxim in the face. A statesman's object under these circumstances must be to inflict the smallest possible amount of hardship and injustice; to offend no class capable of bringing about anarchy by its resentment; and to make the circumference of the incidence of this new hardship as small as possible, in view of the fact that the masses of the people are already bearing, and have long borne, another and an older form of it.

Now when we come to consider that nearly one third of the total revenues of this country, have, since the Restor-

ation, been paid to the nobles and gentry in commutation for the revenues formerly derived from their lands, we have an item in the Budget which, at all events, presents an object to deal with. When a great crisis arises, action must be taken, and, as just said, the smallest possible amount of injustice must be done in meeting it. The question is, has such a crisis arisen? and does the measure meet it without inflicting more injustice and hardship than is inevitable under the circumstances?

In regard to the first question, it is only fair to the reigning Monarch to say that his Civil List cannot be impeached for a moment as an excessive burden on the people. Of the enormous personal extravagance of the late SULTAN of Turkey or of the KHEDIVE, the Japanese Court knows nothing. It is studiously moderate in its expenditure, and we may hope that the public opinion which has been lately expressed in Europe, in connection with what cannot but be considered as superfluities wholly out of keeping with the general surroundings of the capital, will convince the Japanese that the comfort of the people, far more than the magnificence of their Ruler, is the standard by which the prosperity and wisdom of his reign will be estimated. Nor can anything like extravagant habits or excessive salaries be laid to the charge of the great officers of state. Their pay is very moderate, they are simply housed, their retinues are extremely small, their equipages modest and inexpensive. Perhaps less rigid in their lives than men living under a more severe code of morals, they are hard-working public servants, rarely away from their offices, and, if corrupt on a large scale, as is often lightly said, but has never been proved to us, their daily mode of living betrays no sign of it. The machinery of the administration is doubtless very large, clumsy and corrupt. But it will require a generation to reduce it to anything like the form or purity of a good European civil service, even if that be ever possible, and meanwhile it would be perfectly idle to look in this direction for help in any pressing emergency. As regards any great economies in the public departments, the estimates have been recently cut down unsparingly on all sides, and, unless at the expense of efficiency, they can hardly be further reduced.

On the other side, the taxation cannot be increased. It is already enormously high. About eleven sixteenths of the whole revenue is drawn straight from the agricultural class, and the future welfare of the country depends largely upon a reduction of the burdens at present imposed on the land.

Then: Does this measure afford the relief demanded, with as small an amount of injustice as possible?

We are inclined to think it does. From the taint of spoliation it is impossible to free it, and if it were adopted in order to gratify the extravagance of a Monarch or the rapacity of his Ministers, it would constitute an enormous iniquity. But it is wholly otherwise. It takes from a class of men, endowed with wealth out of all proportion to their usefulness to the commonwealth, their claim to a perpetual charge on the country, indemnifies them to a certain extent for the amortization of this claim, and promises the country an extinction within thirty years of a burden which experience has proved to be too heavy for it under its new conditions. It is no wholesale confiscation. The country burdens itself, so far as we can see, with a promise to pay from twenty-five to thirty millions of pounds sterling during the next thirty years, for the extinction of the claims of the nobles and gentry, and gives interest bearing bonds for the fulfilment of the obligation. Admitting the absolute necessity for some great measure of financial reform, and the imposition of a greater or less sacrifice on some class, we think the Government has dealt with the whole question with wisdom, courage, and fairness—so far as fairness can be predicated of a measure of the kind.

It is impossible without closer calculation than is possible to us at this moment, to estimate the amount of annual relief which the measure will afford to the country, but it cannot be less than from eight to ten millions of *yen*, or, say, roughly, from £1,600,000 to £2,000,000,—about a sixth of the whole revenue. A beginning in the same direction was made some four years ago, when £2,400,000 were borrowed in London, uncovered by any special security, but devoted specifically to this purpose, as has already been shewn in these columns. In 1874 the charge on the revenue on this account was 20,764,690 *yen*, but the sum has been reduced by the commutations rendered possible by this loan, to something like 20,000,000 *yen*. Presuming the interest on the bonds will amount to about 8,000,000 *yen* a year, and 2,000,000 *yen* are set aside yearly to redeem the bonds, which, with interest and compound interest, it would do in thirty years, the relief would be about the amount at which we have stated it.

It may be asked whether a portion or even the whole of this money might not better have been borrowed in London, and the obligations to the nobles discharged at once with it. Our own view is strongly that the Government has done well in trusting to its own resources. Thirty millions sterling is an enormous sum to ask for, even for application to the best possible purposes, and supposing that only the half of it had been forthcoming, the influx of so much gold into the country would have had the effect of causing a general rise of prices, and possibly producing the disastrous and demoralizing effects upon society wrought by the late payment to Germany of the French indemnity. The Japanese are rightly jealous of increasing their obligations abroad, and their restraint in this respect will certainly strengthen their credit. They do well to trust to themselves as far as possible, and they have been heavy losers in exchange and interest by the bullion operations incidental to their last loan. If well advised, it is possible that they might have saved money on this whole transaction by getting it from abroad. But many besides financial considerations come into the question, and we are satisfied that they have chosen the wiser course in trusting to themselves.

The measure is one of large proportions, and cannot fail to be very popular generally in the country. If the benefit of it is given to the agricultural interest, we shall not hesitate to claim for it the reputation of a great, just and very wise, though somewhat severe, measure. We refuse altogether to allow that it can be judged of with any approach to justice by supposing it proposed or enacted among ourselves. The conditions of the society to which it is applied, the views of men in regard to property as an institution, the antecedents of the Japanese aristocracy, their relation to the land and the State, all differ so widely from any superficially corresponding analogies which the condition of European society might offer for analysis under similar circumstances, that nothing but error could result from applying the same rule to both cases. We are writing at a distance from all authorities or works of reference, and the only fair parallel we remember to the case before us presented by European history is that of the Government of Denmark, which, at a comparatively recent period of its history, when strained by financial

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

pressure, took the lands of a large body of its subjects in perpetuity and paid them one-sixth of their assessed value. The domestic creditors of the State all suffered grievously by the crisis which necessitated this measure. But every farthing was paid to the foreign creditor, the reputation of the country was maintained, and indeed raised, in Europe, and the state was saved.

We cannot conclude these few words without repeating our hope that the relief which the measure will afford, may be given to the land. It is here that the burden lies too heavily—this is the true cause why Japan makes so little material progress. There is nothing to prevent a greatly increased prosperity to the country within the course of the next generation but the present enormous burdens which press on the land, and we ardently hope that the measure we have been discussing will be the precursor and the cause of this future prosperity. By the manner in which the relief afforded to the Treasury is distributed, history will pass judgment on the justice of the measure. If this relief is given to the land, men will say that it was a necessary, bold, wise and just act of admirable statesmanship. If it is ill applied, frittered and muddled away on showy but useless purposes, men will say that it was an unjust act of spoliation.

THE TEA SEASON 1875-76.

THOUGH somewhat later than usual, we now lay before our readers our usual annual report on the past Tea season of 1875-6.

The market opened earlier than it had done for any preceding season since the advent of foreigners to this country, so that by the middle of the month of May a brisk and important business was doing in the new crop teas. In spite of heavy arrivals, the eagerness of teamen to purchase kept stocks from accumulating, and the consequence was that prices were well maintained, to the sole benefit and delight of the native producers. A full supply of most grades down to "good medium" was on show, and the following scale may be taken as that of the actual opening of the Yokohama market for season 1875-76.

Medium and Low Good Medium	$30.00 to $36.00
Good Medium	36.50 to 38.00
Fine	39.00 to 42.00
Finest	43.00 to 45.00
Choice (in limited supply)	46.00 to 49.00

While the general character of the crop of all grades was fragrant and all that could be desired, the leaf of the first two was anything but well finished, and indeed all parcels showed signs of the hurried and imperfect manner in which the teas had been picked and cured. This is, in fact, an evil which we almost despair of seeing remedied, unless growers learn by sad experience that the advantage of placing their first crop teas on the market early is not compensated for by carelessness.

Teas too often appear in the market in such condition that their popularity must be imperilled; parcels not only consisting of various grades of leaf, but plainly showing ragged and imperfect finish. The present season has, to some extent, taught growers the impolicy of such course of action, which may, to their regret, be more forcibly demonstrated in the future.

A steady business was done during the month of May, prices slowly declining until about the opening of June, when "standard good medium" ruled $34 to $35 per picul. "Fine" teas were also in full supply at $37 to $40, and buyers were enabled to secure some very desirable lots, though at prices rather above the figures that ought to have been paid, judging from the general tenor of telegraphic advices from America.

During the month of June an ample busines was transacted, holders remaining pretty firm in their demands, but in some cases making slight concessions for financial or other reasons. Still "good medium" of standard quality kept firm at $34 to $35, whilst on the other hand "fine" grades were comparatively cheaper at $36 to $39. Settlements for the season to the close of this month amounted to 34 800 piculs.

With the commencement of July low grade "good mediums" of doubtful quality, and "mediums" being in heavy supply, settlements during the month averaged nearly 100 piculs per diem, and the holders, although inclined to be free sellers, were yet rather conservative on the question of price. For the first ten days, quotations for classes most in demand were $33 to 35 for "good medium," and $30 to $30.50 for "medium."

About July 10th, however, many telegraphic messages arriving almost simultaneously and reporting a very unsatisfactory state of the New York market, a reduction was at once established of $3 per picul on all grades in supply, and by the close of the month quotations were $26 to $29 for "medium," and $30 to $33 for "good medium." "Fine" and better classes were in small supply and rather firmly held.

The general character of the Teas, from "good medium" downwards, from this time became very unsatisfactory. The Teas offered showed too plainly the fault of careless and hurried picking previously complained of, and it was difficult to obtain a parcel free from being more or less heated. The second crop Teas were generally disappointing, being very poor and thin in the cup, the reason for which was accounted for by the assertion that the growers picked the plant too closely to allow of any chance of excellence in the second crop. The month of August calls for no special remarks; settlement amounting to 21,000 piculs and prices fluctuating according to the immediate demand, but rather tending upwards; "fine" teas being in small supply and higher classes very scarce.

In our issue of August 14th quotations were as under, the market being firm.

Common	$20 @ 23	Fine ...	$35 @ 38
Good Common ...	$24 @ 26	Finest ...	$39 @ 43
Medium	$27 @ 30	Choice ...	$45 @ 50
Good Medium ...	$31 @ 34		

In the same issue we expressed our opinion that, if buyers could be found, there was no reason why the total export from all Japan should not equal twenty-five million pounds for the season, and this remark has been fully verified, although at the time some were inclined to deride the notion. We were confirmed in this opinion from information derived from native sources; and also because we were aware of the strong desire on the part of many buyers to ship the very last leaf of the old crop out of the way of that of the new, evidently actuated by the fear that the character of the latter would become deteriorated by admixture with the former. The close of August found our market very firm, though prices were decidedly too high for the classes principally offering, say $29 to $32, for "medium," and $33 to $36 for "good medium." For the first few days of September, however, buyers rather retired from the market, and prices in consequence declined about $2, and this decline continued so to rule for the remainder of the month, especially as dealers seemed inclined to sell freely. Settlements

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for the month were 16,000 piculs, making a total to 30th September of 100,000 piculs for this port.

In October a semi-panic occurred early in the month, and "good medium" was for a time quoted nominally at $29, the general character of the parcels on show being very inferior. Prices, however, steadied towards the close of the month, when quotations "were medium" $24 to $27, "good medium" $29 to $31, and "fine" $33 to $36.

November affords little or nothing to report on, prices being unsteady and weak, and settlements only 9,000 piculs. In December "good mediums" touched the lowest point for the year 1875, being $26 to $29 per picul. About the middle of this month our expected sensation in the shape of a reimposition of Tea duty in the United States took place, and the market revived accordingly. It is much to be deplored that some arrangement cannot be made in the United States to settle duties on foreign produce for some fixed period, say three or four years. Foreign shippers of Teas are always in the long run sufferers by the uncertainty of the duty being imposed, for even if they do well by the exceptional chance of the opportune arrival of a cargo when the duty question has caused a rise in the New York market, they eventually suffer by the depressed and unsettled state into which that market invariably falls when the excitement so caused has abated, and when New York dealers, after looking more carefully into the probabilities of the re-imposition of the duty, determine to withdraw from purchasing altogether until the matter is definitely fixed. The result of this is an extremely dull and depressed condition of the trade for some three or four months. Prices showed considerable fluctuations during the month, though holders were firm, and settlements amounted to 10,000 piculs, making a total to the end of the year of 123,000 piculs for Yokohama alone.

There is little to be said about the business for the rest of the season. Teas continued to come forward slowly but yet regularly, and found purchasers until at last almost every leaf intended for the Yokohama market had been bought and shipped. Settlements from the 1st January to 30th April, 1876, amounted to 24,000 piculs.

The total settlements for the season from all the ports in Japan would be as follows :—

Yokohama	...Piculs	147,000
Kobe	... „	56,000
Nagasaki...	... „	12,000
Total ...	...Piculs	215,000
or avoir... ...		28,666,666 lbs.
From which if 10 per cent. be deducted for loss in firing ...		2,866,666 lbs.
Leaves, as available for Export...		25,800,000 lbs.

These figures are somewhat under the amount shown in the Export Table, but the deficiency may be accounted for by a smaller loss of weight occurring in firing, as 10 per cent. is rather a heavy allowance.

A word now concerning the crop. Apparently the experience of the season 1874-75 had led the Japanese to infer that "medium," "good medium," and "low fine" Teas would be the most profitable classes to produce, hence the short supply of "full fine" to "choice" Teas, which required more care and expense in their preparation.

The general character of the crop, as pointed out above, showed hurried and unskilled preparation, which may be accounted for by the rapid extension of the area of country under Tea cultivation, which required more skilled labour in attending to the shrubs, and curing, than was available. Another reason alleged is that the producers persist in plucking the trees so bare that their strength is affected, with the result that the produce of the following season is inferior. To which cause the deterioration may be owing we are not certain, but it certainly behoves the special Department interested in the welfare of the products of Japan to look closely into the matter, otherwise Japan Tea will undoubtedly fall in the estimation of the American consumer.

We endeavour to furnish, as correctly as possible, a table showing the amount of Tea produced during the past season in each district of Japan considered worthy of enumeration :—

Provinces.		No. of pcls. produced.
Yamashiro	...Pcls.	24,500
Inshiu	„	24,000
Goshiu	„	9,000
Suruga	„	35,000
Isé	„	41,000
Mino	„	10,000
Shimôsa, Kadsusa	„	11,000
Hajichô	„	3,000
Yamato, Kawachi, Kawami, Iga, Kishiu	„	11,000
Echigo, Echizen (North west coast) ...	„	4,500
Tamba	„	10,000
Kinsiu (Nagasaki leaf)	„	25,000
Sundry small unenumerated districts	„	12,000
Total piculs.	...Pcls.	220,000
Against similar return last season..	„	172,000

In summing up the result of season 1875-76, we find that the demand for Teas at moderate prices produced Teas of a very moderate quality, and such as we hope never to see again. If the Japanese producers desire to retain the favour of American consumers, they must show a reduction of 25 per cent. in the amount of Tea produced, and an improvement of at least 25 per cent. in quality, with a cost of $25 per picul at the highest for "good medium." These changes are necessary to restore prosperity to the Tea trade of Japan, both as regards foreigners and Japanese.

The season 1875-6 closed on the 30th April showing a total export as follows :

From Yokohama for the United States ...	18,885,743 lb.
„ Kobe	6,082,036 lb.
„ Nagasaki	
„ Canada, etc, say...	560,000 lb.
	25,527,779 lb.
From Nagasaki for London, say... ...	500,000 lb.
Total...	... 26,027,779 lb.

As to the present season, 1876-77, a word or two may be said. The market opened actively at full prices, but advices from New York soon after checked all operations, and prices speedily fell some $10 per picul. Even this reduction failed to meet the requirements of the New York market, which has since been in a most depressed and unsettled condition, so much so, that it is difficult to name a figure at which purchases would be safe.

The quality of the crop is much the same as that of the previous season, and the same lack of "fine"

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

grades is strangely apparent. It is said that the Japanese tea-men are withholding these, but, if there is any truth in the statement, such a course betrays bad policy on their part, as past experience has undoubtedly shown that shipments of "fine" teas made late in the season are dangerous. A few lots might meet a good market, but the experiment is one which it would be advisable to avoid.

THE CASE OF PASS *vs.* KONUMA HITOSHI.

THE sentence pronounced by the Kanagawa Court in the case of PASS *versus* the Customs tide waiter, KONUMA HITOSHI, has been received with deep indignation by all sections of the foreign community at this port. Notwithstanding that nearly half a year has since elapsed, the facts of the case are fresh within the memory of all, for they naturally attracted much notice at the time. They are briefly as follows. On the night of the 21st February last, as the P. & O. Str. *Bombay* was on the eve of sailing, the steward of that vessel proceeded to turn out of one of the second class cabins one of the two tidewaiters on duty on board, who was resting therein, alleging that the room was required for an invalid passenger, a distressed seaman who had just been brought on board by the Constable of the British Consulate. Three of the invalid's friends, PASS, BLACK and SUTHERLAND, had also accompanied him to help to have him comfortably berthed and to say farewell. The tide-waiter, who objected to have his rest thus disturbed, complained to his companion on deck, who reported the matter to the second officer. The latter promply remedied the grievance by ordering the steward to reinstate the evicted tide waiter in possession of the cabin. The invalid was put into the adjoining cabin, and PASS remained beside him to nurse and comfort him. Meanwhile the occurrence had given rise to some conversation between the steward's and the invalid's other friends, one of whom remarked to the steward "these d—d Japanese are always making a row." This remark was over-heard by KONUMA, who it seems possesses a small smattering of English. Flushed no doubt by his victory over the steward in the matter of the cabin, he saw fit to resent the remark as an insult to his dignity, and putting his face provokingly close to SUTHERLAND's, demanded to know what he meant by that remark. In vain was he answered by SUTHERLAND that the remark had not been addressed to him; in vain was he advised by HODGES to go on his way quietly and attend to his own duties; the tide-waiter's outraged dignity was not to be trifled with thus. He at once clothed himself with the position and powers of a magistrate trying a criminal charge, first angrily questioning one of the party and then furiously insisting on getting an answer from another. Naturally enough his jurisdiction was demurred to, and voices on both sides rose to a higher pitch, insomuch that the Captain sent for the would-be magistrate and demanded to know the reason of his kicking up such an unseemly row on board the vessel. On the removal of the irate tide-waiter to the Captain's presence a lull ensued, and the party proceeded quietly to return on shore.

During all this altercation PASS was not on the scene at all. He was in the cabin nursing his sick friend, and only left his side when word was brought to him that the rest of the party were about to return. He got into the boat without let or hindrance, and in a minute or so HODGES got in after him, and the four pulled off to shore. But the tide-waiter's wrath was hot and unappeased as ever, perhaps even aggravated by his having been summoned before the Captain, and in a Japanese sampan he started in pursuit, to intercept the party as they landed. HODGES and PASS scrambled up the side of the French hatoba; the other two took the boat round to its place in the creek. As the two former came up to the gate opening on the bund they found it closed, and on proceeding to go out of the side wicket, they were confronted again by the angry official, who demanded to know why he had been insulted—not indeed, he was pleased to admit, by HODGES himself but by HODGES' friends. HODGES very properly replied that they were not his friends, and brushed the man aside out of his path; whereupon without further parley the tide-waiter collared PASS, who is a much smaller and weaker man than HODGES, and proceeded to march him off in custody, not, be it observed, to the police station, but, of all places in the world, to the Custom House. PASS, conscious of his innocence of any offence, and resenting the indignity of an arbitrary and illegal arrest, endeavoured to shake off his assailant, and in the struggle was lurched over the bund-wall into the sea. There he lay stunned and senseless in two feet of water, until HODGES was able to scramble down to his rescue from imminent death. By this time a squad of police and Customs' officials, whom Konuma had summoned to aid him, appeared on the scene, and though not one of them lent the least assistance to HODGES in saving PASS's life, they were all prompt to assist in the arrest of the half-drowned man as soon as he was lifted on to the bund again. Half-stunned and dripping, PASS was marched off to the Custom House, and a long complaint against him was made by Konuma, first to one Customs, official and then to another, just as if they could entertain the charge. A foreigner in the employ of the Customs was able, after about an hour's delay, to impress on the officials of that department that they had no authority to deal with the alleged offence, and PASS was marched off to the Police station, where the same farce was gone through, and where, as at the Custom House, the remonstrances of foreign employés saved the department from the responsibility of illegal arrest and imprisonment. It was not till about two hours after midnight that the unoffending British subject was finally released from the hands of the official minions, and allowed to seek his own home and a doctor's care.

On this state of facts the sentence of the Japanese Court that tried the case is, in effect, this:—'KONUMA 'HITOSHI, for your impropriety in forcibly trying to find 'out the names of the men by whom you considered 'yourself aggrieved, you are reprimanded'!

A more scandalous travesty of judicial forms could hardly well be perpetrated. No attempt whatever is made by the judge to weigh the conflicting evidence. The accused's assertion that his only object throughout his infuriated proceedings was to ascertain the names of the men who had affronted him is unhesitatingly accepted as true, in spite of the overwhelming mass of evidence to the contrary. No doubt can remain in the mind of any reasonable man who reads the evidence given at the Kencho and in the English Court, as to what ideas and motives were uppermost in the tide-waiter's mind when he vindictively pursued the party ashore and lay in wait for them at the hatoba. Baulked in his attempt to play the magistrate on board the English ship, he determined to make his opponents feel the weight of his official authority and power on shore, where he could rely on the help of others of his own kidney and of the police as well. The whole course of his proceedings; the abandonment of his post of duty on board the steamer; the pursuit of the foreigners ashore; the sending for assistance; the lying in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wait at the hatoba; the closing of the gates; the forcible detention of PASS, all indicate unmistakeably the resolve of the infuriated official to humble his victims, in the very manner in which he ultimately, in the case of one of them at such imminent risk of life, succeeded, namely, by subjecting them to the indignity of arrest and of being hauled before the officials of his own bureau. All this is deliberately passed over in the judgment of the Court. Of the utter paltriness of the original cause of offence; of the tide-waiter's blameable want of discretion in taking any notice whatever of an expression not addressed to him, and uttered in a language he was not supposed to understand; of his arrogant assumption of magisterial authority on board an English ship; of his presumptuous conduct in making and procuring an unauthorised and illegal arrest; of his attempt to justify his insensate behaviour by the amply refuted falsehood that two of the party struck him on the face with a rope, and by the no less flimsy story of the broken tooth—of all this, not one word is uttered in the judgment by way of disapproval or rebuke.

The pernicious effects of this deplorable sentence will be two-fold. In the first place it will operate as a direct encouragement to the whole host of petty officials by which this country is over-run, to consider themselves as empowered to interrogate, to arrest, and to drag before the bureau to which they may happen to belong, any foreigner whose remarks respecting Japan or its officials they may choose to consider insufficiently respectful. And, in the second place, it will destroy for years to come any confidence which foreigners may have begun to repose in the disposition, or the competency, of Japanese tribunals to afford redress in cases where their dearest rights have been outraged by any of the officials in question.

The above remarks on the merits of the case are founded solely on the evidence given on the two occasions on which the circumstances of this affair were publicly investigated, namely, at the Kencho, and in the English Court. With the statements made or accepted in the course of the secret investigation at the Shihonsho we are in no degree concerned. It is to be presumed that they did not in effect materially differ from the evidence tendered by the same parties in open Court; and if they did differ, they are to that extent so much the less reliable. It must not be forgotten that the rule enjoining secrecy at criminal trials is one of the many rags of the old absolutism in which the nascent jurisprudence of this country is being swaddled; and there is a connection only too palpable between such a rule and the extraordinary miscarriage of justice on which it has been our painful duty to comment.

Desultory reading is indeed very mischievous, by fostering habits of loose, discontinuous thought, by turning the memory into a common sewer for rubbish of all sorts to float through, and by relaxing the power of attention, which of all our faculties needs most care, and is most improved by it. On the other hand, a well-regulated course of study will no more weaken the body nor will a strong understanding be weighed down by its knowledge, any more than an oak is by its leaves, or than Samson was by his locks. He whose sinews are drained by his hair must already be a weakling.—*Archdeacon Hare.*

It is not the variegated colours, the cheerful sounds, and the warm breezes, which enliven us so much in spring; it is the quiet prophetic sprit of endless hopes, a presentiment of many joyful days, of happy existence of such mainfold natures, the anticipation of higher everlasting blossoms and fruits, and the secret sympathy with the world that is developing itself.—*Novalis.*

Mixed wit is composition of pun and true wit, and is more or less perfect as the resemblance lies in the ideas or in the words: its foundations are laid partly in falsehood and partly in truth; reason puts in her claim for one half of it, and extravagance for the other. The only province, therefore, for this kind of wit, is epigram, or those little occasional poems that in their own nature are nothing else but a tissue of epigrams.—*Addison.*

SPIRIT OF THE JAPANESE PRESS.

RULES FOR THE CAPITALIZATION OF INCOMES.

("Nichi Nichi Shimbun" of August 7, 1876.)

NOTIFICATION No. 108.

Incomes, and Augmentations of Income (by way of reward), have hitherto been granted either in perpetuity, or for one generation, or for a certain term of years. These rules, however, are now altered, and such incomes will, from next year (1877) be commuted, and paid in Government Bonds, according to the annexed Regulations.

The above is hereby notified.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

August 5, 1876.

REGULATIONS FOR THE ISSUE OF GOVERNMENT BONDS FOR INCOMES.

Clause I.—The rules relating to the payment of the Incomes, or Augmentations of Income, of *ku'adzoku*, *shidzoku*, and *heimin* are now altered, and such incomes will be commuted and paid in Government Bonds in the following manner.

1.—*Incomes in Perpetuity.*

Incomes in perpetuity will be commuted according to the following scale:—

Original Assessment of Income, including augmentation also, if such exist.	*Number of years allowed.*
70,000 *yen* and upwards.	5 years income.
Above 60,000 *yen* but below 70,000.	5½ ,, ,,
,, 50,000 ,, ,, 60,000.	5½ ,, ,,
,, 40,000 ,, ,, 50,000.	5¾ ,, ,,
,, 30,000 ,, ,, 40,000.	6 ,, ,,
,, 20,000 ,, ,, 30,000.	6¼ ,, ,,
,, 10,000 ,, ,, 20,000.	6½ ,, ,,
,, 7,000 ,, ,, 10,000.	6¾ ,, ,,
,, 5,000 ,, ,, 7,000.	7 ,, ,,
,, 2,000 ,, ,, 5,000.	7¼ ,, ,,
,, 1,000 ,, ,, 2,000.	7½ ,, ,,

Interest will be paid on the above (commutation) at the rate of 5 % per annum.

Above	900 *yen*	but below	1,000.	7¾ years income.
,,	800 ,,	,,	900.	8 ,, ,,
,,	700 ,,	,,	800.	8¼ ,, ,,
,,	600 ,,	,,	700.	8½ ,, ,,
,,	500 ,,	,,	600.	8¾ ,, ,,
,,	450 ,,	,,	500.	9 ,, ,,
,,	400 ,,	,,	450.	9¼ ,, ,,
,,	350 ,,	,,	400.	9½ ,, ,,
,,	300 ,,	,,	350.	9¾ ,, ,,
,,	250 ,,	,,	300.	10 ,, ,,
,,	200 ,,	,,	250.	10¼ ,, ,,
,,	150 ,,	,,	200.	10½ ,, ,,
,,	100 ,,	,,	150.	11 ,, ,,

Interest will be paid on the above at the rate of 6 % per annum.

Above	75 *yen*	but below	100.	11½ years income.
,,	50 ,,	,,	75.	12 ,, ,,
,,	40 ,,	,,	50.	12½ ,, ,,
,,	30 ,,	,,	40.	13 ,, ,,
,,	25 ,,	,,	30.	13½ ,, ,,
Below	25 *yen*.			14 ,, ,,

Interest will be paid on the above at the rate of 7 % per annum.

2.—*Life Incomes.*

Persons holding Life Incomes will receive allowances calculated at the rate of one-half of the number of years allowed for Incomes in Perpetuity.

Note.—Interest on these will be the same as in the case of the Incomes in Perpetuity.

3.—*Incomes for Limited Terms.*

Persons holding Incomes for a certain Term of years will receive as follows.

	Proportion of Term allowed for Incomes in Perpetuity.
For 10 years and upwards.....	½
For from 8 to 10 years.....	$\frac{7}{10}$
,, ,, 6 ,, 8 ,, ...	$\frac{3}{10}$
,, ,, 4 ,, 6 ,, ...	¼
,, ,, 3 ,, 4 ,, ...	⅛
For 2 years only.....	$\frac{3}{20}$

Note.—Interest on these will be the same as in the case of the Incomes in Perpetuity.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Clause II.—The Interest due upon these Government Bonds will be paid, for the year 1877, in November of that year and May of the following year. The same rule will be followed in all subsequent years.

Clause III.—Should any difference be caused in the amount of the Interest, owing to the term of years for which the original assessment of the Income and Augmentation of Income is paid, the following rules shall be observed for issuing the Government Bonds, in view of such original assessment:—

Take, for instance

A.—Total amount of Income and Augmentation..... 10,000 *yen*.
Then, 6½ years allowance of this.... 65,000 ,,
Interest on Government Bond for same, at the rate of 5 per cent. per annum..... 3,250 ,,

B.—Total amount of Income and Augmentation..... 9,900 ,,
Then, 6¾ years allowance of this.... 66,825 ,,
Interest on Government Bond for same, at the rate of 5 per cent. per annum..... = 3,341 *yen* 25 *sen*.

It will be seen, on comparison of the above, that the interest due on the sum of 9,900 *yen* would be 91 *yen* 25 *sen* in excess of the other. In such case, the rule observed shall be that the amount of Interest shall not exceed the amount of that due upon the 10,000 *yen*. All other similar cases to be decided in the same manner.

Clause IV.—Although there may, on account of the rates of Interest, be some difference between the Government Bonds, the several issues of those Bonds shall always be for the following amounts; viz.—for 5, 10, 25, 50, 100, 300, 500, 1,000, or 5,000 *yen* each.

Clause V.—At the time of the issue of the foregoing Government Bonds any petty sums over and above the amount of the Bonds shall be paid in currency.

Clause VI.—The original sums for which these Government Bonds are issued shall be allowed to stand over for a period of 5 years. Commencing from the 6th year, however, they shall, according to the convenience of the Finance Department, be redeemed every year by lot. Within the space of 30 years, the whole of them will have been redeemed.

Clause VII.—In all matters relating to the procedure, &c., to be followed in respect to the issue of these Government Bonds, such not being mentioned in these regulations, care must be taken to act in accordance with the regulations for the Issue of Old and New Government Bonds.

NOTIFICATION No. 109.

It is hereby made known that until the notification of further orders on the subject, it is not permitted to enter into agreements for the mortgaging, pledging, or sale of the Government Bonds for Incomes, in regard to which Notification No. 108 has just been issued.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

August 5, 1876.

CAPITALIZATION OF INCOMES.

("Nichi Nichi Shimbun," of August 7th, 1876.)

The mode of dealing to be adopted in regard to Incomes and Augmentations of Income, the publication of which we have long and eagerly awaited, was on the day before yesterday, the 5th instant, notified by the Government, through the "Regulations for the issue of Government Bonds for Incomes." As we have published these Regulations to-day in our columns reserved for Government news, all the *ku'azoku* and *shizoku* must be already well aware ef the particulars of the same.

Prior to the issue of these Regulations, it was currently reported that in the case of a yearly Income of 70,000 *yen* or upwards there would only be granted an allowance of two or else three years income. Now, however, upon perusing the regulations, we find that there are 30 different items of allowances, the terms of years of the same varying from five to fourteen years, the interest thereon being also divided into three heads, namely, five, six, and seven per cent. In regard to life incomes and incomes granted for limited terms of years, these are other distinctions of class each of which receives a certain proportion of the original amount of the Government Bonds. The Bonds vary in amount from the sum of 5 up to 5,000 *yen*, being divided into 9 separate series. Thus, each individual's advantage is consulted, and a definite routine established. Ought we not indeed to say that no greater kindness than this could have been shown in regard to the *ku'azoku* and *shizoku*?

According to these Regulations, the said Government Bonds will be issued in the year 1877,—the amount for which they are made out will be allowed to lie by for the space of 5 years,—and they will be redeemed within 30 years time commencing from the 6th year after issue. To the holders of these Bonds there will be paid only the interest year by year, until 1879, from which latter year, again, up to the year 1909, they are to be wholly redeemed. The method thus is that the total amount at present experienced upon Incomes, and Augmentations of Income, will be received every year by the National Debt Department, and held as the fund for the redemption of these Government Bonds. Out of this sum the interest will first be paid, and the balance will then be laid by for the redemption of the original sums. Thus, by the redemption of those amounts which are determined by the yearly drawing of lots, the sums to be paid out of the fund as interest will decrease, while the fund for the liquidation of the original amounts will increase. Now, let the Finance Department at their convenience even abstain from establishing any special rule, but look upon these bonds as being similar to all other Government Bonds:—even then it is, in our opinion, clearly manifest that the total sums paid as incomes hitherto must be considered as going to augment this fund. With regard, however, to the grand total of the amounts of the Bonds to be issued under these Regulations, the total of the yearly interest—and the nature of the calculation by which the redemption is to be effected in 30 years time,—we are as yet ignorant, and therefore are unable to-day, to give information regarding these points.

The most important points to be considered by politicians, in respect to the recent alteration of the rules regarding Incomes, are as follows:—

1.—Will not the *people* murmur against this alteration?

2.—Will not an appearance of dissatisfaction become visible, on account of such alteration, on the part of the *ku'azoku* and *shizoku*?

Now, we too, upon considering these two queries in common with other politicians, are sure that the alteration in question will occasion satisfaction to the people. And why? We answer, because the people have hitherto had nearly one-half of the taxes paid by them spent on these incomes and were reduced to the greatest distress thereby. They were, however, fully aware, upon looking back for a moment, that if the *ku'azoku* and *shizoku* were once deprived of their means of maintenance they would, from the very next day onwards, be oppressed by poverty and become vagrants. Now it is from the ranks of vagrancy that turbulent bands are recruited. As, therefore, the Japanese people were neither desirous that they should become vagrants and in consequence wish to drown themselves, nor yet that they should become insurgents and in consequence fall by spear and arrow, they (the people) gave special attention to the question of Incomes, and allowed that these must be established a rule useful for the double purpose of guarding against the people perpetually paying an unprofitable pension to the others, and also against the latter becoming vagrants and insurgents. Now, in the present situation of affairs, the only plan feasible was to effect this very revision,—and therefore, we are of opinion that if we were now to summon together representatives of the people and submit this matter to a national assembly, it would certainly come to pass that, with one voice though with different mouths, they would all unite in favour of the revision, and would not be dissatisfied therewith. Again, as regards the 2nd point, we feel sure that the *Ku'azoku* and *Shizoku* will be exceedingly pleased at the revision of their incomes. And why so? Because the *Ku'azoku* and *Shizoku* are higher in rank than the common people, forming as they do the middle and upper class of society, and well comprehend the reason of general affairs. And, comprehending this, how can it be agreeable to them to incur the stigma of holding empty rank and of eating the bread of idleness, being supported the while by the common people? The fact of their being unable effectually to throw this aside is merely owing to the reason that, as they have no means of obtaining a livelihood, they are unavoidably forced to act thus. Now, however, owing to this revision, they will, in the place of their incomes on which they cannot confidently depend even for the needs of the morrow, become possessed of trustworthy Government Bonds which will be sufficient to provide them with a means of livelihood, and will thus cause them to be enrolled in the ranks of prosperous men. What reason, then, can they have for hatred, or dissatisfaction at this? We think then, that all the *Ku'azoku* and *Shizoku* will shed tears of joy over the exceedingly gracious measure of this revision. There may, however, be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

found people who argue that some bigoted adherents to the old régime, scattered here and there throughout the land, may possibly in their benighted liking for the old feudal system, wrongly deem that their Incomes are their family property, and, in view of the present revision, give way to discontent and end by showing it. This, however, is nothing else than yielding to over anxiety. No matter how bigoted men may be, how can there exist any who, under present circumstances, are ignorant of the dishonesty of living in idleness upon an allowance granted by others. And even supposing that there be one in a hundred or a thousand who is thus ignorant, we have no time to lament over the fact. Should it unhappily come to pass that symptoms of discontent should appear, persons guilty of this must be styled open foes seeking to disturb the national tranquillity, and insurgents endeavouring to overthrow our country and homes. They could never be pardoned by the Government for so doing. How, then, can there be formed any persons who wish, by such over-anxiety, to hinder this worthy measure of advancement.

Again, until further orders are issued by the Government, it is forbidden to enter into agreements for the mortgage, pledging, or sale of Government Bonds for Incomes. Some people may say, "This idea has originated from the Genrôin, and has been adopted "by the Government." It may be so; and yet it seems clear that the idea of the Government was not to endeavour to curtail the rights of the *Kwazoku* and *Shizoku* over goods possessed by them. Upon reflection, we find that when the government some time ago gave consent to the surrender of incomes, and, dividing into two parts the sum due as six years allowance thereof, paid one portion in cash and the other in Government Bonds, most of the *shizoku* who thus surrendered their Incomes had not any fixed intentions as to their future livelihood, and so sold off at will their bonds. The worst feature in the case was, that there were found some who even before they had receivedthe Bonds themselves sold to other persons the document certifying that the surrender of their income was permitted, accompanied by a deed of transfer. The reason therefore why Government has issued a notification prohibiting for a while the pledging or sale of the Bonds, probably is that they have felt pity for the thoughtless behaviour of these men, and are desirous of causing the *Shizoku* to take warning at the calamities of others, and to escape from such ill fortune as this. This action has originated merely from the kindly desire of protecting, for the sake of the *kwazoku* and *shizoku*, the possessions belonging to them. We, therefore, are confident that after the Government have at some future date, completed the issue of the whole of the Government Bonds in question, they will await the time when the *kwazoku* and *shizoku* shall eventually have found for themselves an independent livelihood and *then* cancel the prohibition against such mortgage or sale.

In this way, the new Regulations regarding the Public Debt for Incomes have perfected the mode of dealing with the *kwazoku* and *shizoku*, which is the most difficult question throughout the whole of Japan. This cannot but be styled a moment of the greatest progress both in regard to the Constitution and to Society. Thus, then, from the year 1877 onwards, all the *kwazoku* and *shizoku* will become possessed of like rights to those held by us *heimin*, will enjoy prosperity similar to ours, and will for every subsequent age form a part of the worthy people of Japan. As regards the populace also, even though from the year in question they will be burdened with a Public Debt amounting to thousands and tens of thousands of *yen*, they will nevertheless be freed from the perpetual payment of unprofitable allowances for maintenance. Will they not, therefore, rejoice!

A writer to the *Chôya Shimbun* yesterday made a statement in that paper, to the *kwazoku*, advising them not to squander uselessly the amounts of these Governments Bonds, and to avoid becoming mere speculators owing to desire of acquiring unlawful gains, but to exchange these sums for immoveable property such as land so to realise a perpetual source of means. This quite tallies with our own ideas on the subject. Our own desire already expressed that the *shizoku* should apply themselves steadily to agricultural pursuits arose from a precisely similar idea. All that we long for is that the *kwazoku* and *shizoku* should thankfully recognise such extraordinarily gracious favour, and apply these Government Bonds to the formation of a capital whereby to ensure a certain livelihood, and thus become worthy subjects of the country. Let them set up for themselves one single object. Then, if they ever swerve in the slightest degree from this path, they will on the one hand render of no avail the beneficence of the Government, and on the other cause the kindliness of the people to lose all effect,—and thus, in the end, they will present the lamentable appearance of a state of vagrancy or of insurrection. The prosperity or calamity of the future posterity of their houses depends merely upon the good or bad nature of the object which they now may each set up for themselves.

Loochoo.

(Chôya Shimbun, August 8th, 1876.)

In our issue of the 23rd of July last we recorded a street rumour to the effect that our envoy Mori had discussed the Loochoo question with the Tsung-li yamên during his stay in Peking. Further inquiry has now shown us that this rumour was entirely groundless and unworthy of the smallest belief; but before we had time to publish the result of our inquiry, writers in the foreign newspapers at Yokohama had with some strength given expression to their several views on the subject. While, however, we now make known the falseness of the above rumour, we cannot but differ with the opinion that have been expressed in regard it by other writers and we are unable to withdraw entirely from our previous argument. In now considering the subject we will go somewhat further than we previously did, and survey it from a wider point of view. The arguments that we have seen in the Yokohama newspapers concerning it were entirely confined to asserting that the people of Loochoo were very conservative of their old customs and to urging the Japanese Government to establish clearly its claims to the proprietorship of those islands; we have not seen a single assertion in any of them to the effect that the islands were not a han of Japan but the property of China.

The Loochoo question is one which does not affect foreigners in any way and they are entirely unconcerned as to whether the islands prove to be the property of Japan or China. The arguments which they publish on the subject may therefore be considered to be devoid of partiality and favor, and although they have all spoken of the islands as being tributary to Japan, not only have they not discussed the question of their proprietorship by China but they have even advised our Government to adopt a liberal policy in its dealing with them; their doing so amounts to a declaration of their opinion that Loochoo is unquestionably ours, and what has brought them to this opinion is nothing else than the expedition to Formosa which we undertook on behalf of those islands.

In the spring of 1874 our Government commenced the expedition to Formosa on behalf of the Loochooans; it despatched a force of 3,000 excellent soldiers to a place so distant and unhealthy: the Botan savages were slaughtered, their villages destroyed and there was none who was not brought to dread our strength and to surrender to us at discretion. The alarm of the Chinese Government was then provoked, and the expedition became the source of a complication between us which seemed likely to end in war between the two nations. Our Minister Okubo, however, succeeded by means only of so small an instrument as the tongue in humbling the Emperor of China and in convincing the Government of that country that we had undertaken the punishment of the Formosans on behalf of the Loochooans. The value of the camps that our soldiers had constructed in Formosa, as well as an indemnity to the families of the Loochooans who had been lost, was paid to us. The celebrated treaty by which these results were effected has conclusively shown to the world that Loochoo is a tributary of Japan, and not the property of China, and has entirely dissipated the old indistinct notion that it was the joint possession of both countries. Are not these the reasons which have influenced foreigners in coming to the conclusion that Loochoo is unquestionably ours?

While impartial foreign writers on this subject thus admit that Loochoo is our property, Japanese writers on the other hand, through compassion for the conservative fondness which the Loochooans entertain for their old customs, urge that we should give way to their wishes and allow the old double proprietorship to continue, or even that we should abandon them altogether. These views are shallowness itself. Had such a line of conduct as the Loochooans now ask for been adopted by the nations of the earth from antiquity down, it seems to us that the remembrance of many of the great exploits and achievements that are now recorded in history would not have continued to the present time.

Disregarding, however, the long past, let us consider things of a modern date. A few years since Germany, after having conquered France in war, seized the two countries, Alsace and Lorraine, the people of both of which were for the most part unable to divest themselves of the feelings of attachment which they held to the Government of France. Suppose Germany had, in compassionate deference to their wishes, allowed them to continue French subjects, where now would have been the evidence of the victories gained by her at that time? The case as regards England and Ireland is precisely similar. Had England yielded to the wishes of the inhabitants of the latter country, it would not

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

now have been part of the former's dominions. It is not alone to foreign countries that we are to look for examples of this kind. When we survey the present condition of our country, we see everywhere numbers of persons from poor *shidzoku* down, who look back with fondness to the old feudal Government, but let the kindly feelings of our Government be what they may, it could not yield to the wishes of those persons. Did it do so, the glorious exploits which effected the revolution would in one morning be rendered as vain as froth. And in what way can the desire of the Loochooans to remain, as they have hitherto been, the property of both China and Japan be said to differ from the wishes of the above *shidzoku* to revert to the old feudal system? Will writers refuse to take pity on and give way to the wishes of the latter, and yet pity and grant the prayers of the Loochooans? It is surely not the way of the world to disregard the feelings of one's own countrymen and consult those of outsiders. Fortunately our Government has disregarded the advice of these writers, and has despatched officers to Loochoo, and is constructing a military camp there. Police have also been recently sent there, and measures are being taken for the due protection of the islands. In addition to all this, several students have been selected from their inhabitants and placed in the Normal Schools of Yedo. The result of these proceedings will be to impress the Loochooans with admiration of our kindness, to attract them by our civilization, and finally to do away with their old conservative habits, and take away from them all shame at the idea of becoming Japanese. We shall look forward to this with outstretched neck and on tiptoe with expectations, and we, in the meantime, beg writers to give up all anxiety on the subject.

Popular Rights and Liberties.

(Chōya Shimbun)

In the editorial columns of the *Nichi Nichi Shimbun* of yesterday there appeared a letter from Mr. Umichi Hatashi, who is prominent among the opponents of the popular views, to the effect that those who hold these doctrines are incited thereto by men animated by bitter personal feeling against the present Government. He quotes the story of Oanseki and Riosan, and speaks of steps which brought the Parliament of England to its present perfect form. In a few words his argument seems to be, that the people of Japan know nothing of political affairs, or what duties they owe to the country, or for that matter, anything else, and thus had better be digging potatoes; that whatever may occur is no matter to them; that he is quite capable of arranging any affairs which concern the nation; and after the lapse of some thousands of years, the people may perchance wake up and do what they can in this direction.

Now this is very much what the officials say. It would give me sincere pleasure to agree with Mr. Umichi, but I cannot do so, and I will say a few words here about his views.

Does Mr. Umichi mean to say that the people of Japan are incapable of any other feeling than that of dependence, and are by nature slavish? I think it quite unjust to say this of the mass of the people, and not of the officials, who are nutured under the same customs as the people themselves. Does Mr. Umichi mean to say that such feelings have disappeared from among the officials, and yet exist among the people? that the officials are equal in political perception to the English and Americans, while the people remain in no more advanced a condition than in the Tokugawa period? The proofs adduced by Mr. Umichi are like the sword which a man wore for his protection, but with which his own throat was cut. Oanseki was deceived in the manner narrated, because he was careless of the true welfare of the people, and did not understand his duties towards them. Were such a man in existence at the present moment, his fate might easily be worse than having been only deceived.

The constitution of the English parliament has been so frequently spoken of that it is hardly necessary to allude to it here. But its strength and substantiality are such that it is idle now for any man to say he would oppose all ideas of rights and liberties for the people. If Mr. Umichi had lived during the times when the (English) people were in danger from the tyranny of their Kings, and rose up against them for the preservation of their rights and liberties, suffering every imaginable hardship in the cause, it may be presumed that he would have accused the popular leaders of cunning, of being personally inimical to the government, and of playing, like gamblers, with the happiness and prosperity of the people as stakes.

I think that the government ought to make some concession to the rights and liberties of the people as early as possible, and I do not see why it should take us hundreds of years to acquire these. It has been sufficiently shewn by the events of the past ten years that rapid reforms can be effected in this country. Our national dress has been greatly modified, and even the old mode of levying the land-tax has been changed, which conclusively proves that it is idle to say that the Government alone has advanced while the people have remained stationary. It seems to us most arbitrary to say that all other reforms must come first, and then an extension can be made of the rights and liberties of the people.

As Mr. Umichi has made a comparison to illustrate his argument, I will do likewise.

In my province there live two persons, Mr. Allworthy and Mr. Flatterer. The former shows partiality in the management of his household and is strictly economical. He loves all the inmates of his house equally, and consults them on the management of his affairs, by doing which he conciliates all, his servants and family admire him and he has acquired and maintains an excellent reputation.

Mr. Flatterer on the other hand, is not the real master of the house which he controls. He has been requested by the master to manage it for him, and treats all the inmates in the most arbitrary manner, calling them, and vowing that they are, fools and slaves. He is a man of no great talents or attainments, and only holds his position by flattering his master, whose fortune he squanders recklessly. He is frequently told by members of the family that his management of such or such a matter is faulty. But he dislikes this, flies into a passion, and bids them hold their tongues. They, however, refuse to do so, and great trouble comes upon the real master in consequence.

A verse of Chinese poetry says, "A wise ruler is the parent of his people; he loves what they love, and hates what they hate." Thus the Government is the parent and the people the children, and what reason can be given for withholding rights and liberties from them, so long as they honour and obey him? For a parent to make the ignorance of his child an excuse for withholding liberty from him, is utterly wrong, and it is inconceivable that any one should praise a parent who acted thus.

I cannot waste my precious time in arguing against such an idea, and I must here conclude what I have to say. But before doing so I desire to ask Mr. Uchimi one question. I will not discuss whether the people are slavish or not. But did not the Mikado in his proclamation of the 14th April last call on the people to assist him? Does Mr. Uchimi mean to say that words like these can be compared to "a rootless flower or a sourceless stream which withers or evaporates immediately?"

Amano Michinari.

(Note by the Editor of the Chōya Shimbun.)

Unlike the *Nichi Nichi Shimbun*, we agree in every respect with Mr. Amano, and have therefore published the above letter in our leading columns.

The Same.

(Chōya Shimbun.)

How surprising it is that Mr. Wakaye, whose name has not appeared for a long time in the columns of the *Nichi Nichi Shimbun*, should come out in the place of Mr. Umichi and argue against the letter of Mr. Amano published in our issue of the 11th instant! First, Mr. Wakaye expresses doubts as to the real date of Mr. Amano's letter and his sending it by the post, but as we have no record of the actions and proceedings of Mr. Amano we do not wish to deal with such subjects within the small limits of our columns, and we care nothing whether or not Mr. Wakaye supposes that we wrote the letter ourselves. This he may decide as he pleases. For our own part, looking at Mr. Wakaye's style of writing, it appears to us very much to resemble that of the writers on the staff of the *Nichi Nichi Shimbun*.

The Editor of the *Nichi Nichi Shimbun* and Mr. Umichi are said to differ somewhat in their opinions. Yet if they do, no more is to be seen of it than of the transit of Venus with the naked eye. For our part, we see no difference at all. But all this is unimportant, and we shall do better to pass at once to the more serious aspects of the question.

Although Mr. Amano deals with this matter in a very lengthy manner, his article, condensed into a few words, simply comes to this; That because Mr. Umichi wishes that the people should hold their peace in regard to rights and liberties, which are merely the mania of the present time, and wait quietly digging potatoes meanwhile, until they are not only fit to acquire but also to maintain their liberties, therefore he is not one who opposes the cry for popular rights, but deserves honour for his support of them.

If Mr. Wakaye has become befuddled with the words of Mr. Umichi, it will probably avail us nothing to repeat what we have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

previously said on this matter. But we would ask him to look at Mr. Umichi's statements once more. He says "I cannot understand how it is that learned men should say that the Government is not liberal, and argue for rights and liberties and representative institutions."

Now we will place ourselves in the position of these learned persons and reply thus:—Mr. Umichi says "Until the people possess within themselves sufficient power to maintain their rights, the Government should not concede them. The people, on the other hand, should never speak of their rights and liberties and of representative institutions, until such concessions have been made to them by the Government. Let the people go to the Public Schools and get education, and after the lapse of some five hundred years or so, they will very possibly be in a position to claim and use their rights beneficially. During the interval they will probably have to undergo some trials, because it is at times necessary to attack the Government or to kill the rulers, for it took many centuries before the English Parliament assumed the form in which we now see it."

We ask, could such language be held by anyone who is an upholder of popular doctrines? The Japanese are very different from the English. It is not necessary to shed blood in order to acquire these rights. We can with much more of meekness urge the Government to grant us these rights; and our Government, being again different from that of England, might make the concession without any unnecessary strife. There can be no reason why the people should attack the Government, or why, until they do so, they should be deprived of these rights. Any one who argues that the Japanese of the present day are too slavish to demand such rights and therefore must wait five hundred years for them, as the English did, cannot be called a real lover of popular doctrines.

If Mr. Wakaye thinks that anyone holding such views can fairly be called a lover of liberty, and is ready to praise him as one who should be honoured, we do not think any good purpose can be served by any further argument with him on this point.

He further says:—"There are very many discontented men in this country, and those who argue for the rights of the people are instigated thereto by these men." We quite admit the existence of this discontent, and that these men have no desire to do the country good—on the contrary, indeed, would do it a great deal of harm. But surely the discussion of these rights is not to be postponed until there is no longer any discontent in the country!

Had the Government acted in accordance with the Imperial decree of last year, and instituted a National Assembly, the members of which should be elected by the people, there would no longer be any discontented men in the whole Empire, and no necessity for appointing these discontented men to offices in order to appease them, as the *Nichi Nichi* appears to suggest. Yet Mr. Wakaye detests these men, as a cross step-mother hates her husband's child and wishes they could be got rid of by one means or another! Surely this cannot be right.

Lastly it is said that we are firing where there is no enemy, and may therefore be making an indirect attack upon the Government, in which case Mr. Wakaye says he would not care to argue the point, and we may fairly decline to do so on the same grounds.

If Mr. Wakaye would throughly examine the mind of Mr. Umichi, he would probably come to the explanation of all this without any great labour.

We have only answered Mr. Wakaye cursorily, and should be very glad to deal with the question much more minutely and deeply. But we have no wish to lose our lives in these wars, and will stop here. Messrs. Umichi and Wakaye's position is to make the Government their fortification, the powers of the State their ammunition, the golden sign of the *Nichi Nichi Shimbun* their ensign, to place their troops in rank and file, and beckon to us to come on. But were we to go recklessly to war, we should certainly become poor helpless captives, so that we shall conclude here and decline their challenge.

The Same.

(Hôchi Shimbun.)

A certain Mr. Umichi published a rather curious article in the *Nichi Nichi Shimbun* on Popular Rights and Liberties, and was replied to by Mr. Amano in the columns of the *Chôya Shimbun*. This was again replied to in the *Nichi Nichi Shimbun* by Mr. Wakaye, and a rejoinder appeared in the *Chôya Shimbun*.

Now it is not my wish to strangle myself in this war, nor do I wish to lean to either side. Thus I will impartially record my opinion upon the question at issue.

Both the disputants seems to me to be men who are favourable to the doctrines of popular rights, but the different light in which they view them arises apparently from their being men in different stages of life. One of them writes as if connected with the Government; the other as if sympathising more with the people. Mr. Umichi is said not to be connected with the executive, but is a *hoimon* of the Niigata *ken*. It may seem strange therefore that he should side with the Government, not being an official. Yet there is nothing strange in this. It is not unusual for an ordinary man, that is, one unconnected with the Government, to ask himself how, in case he were an official, he would deal with some given question, and in this mood to discuss it. Mr. Amano says that Mr. Umichi's views very closely resemble those held by the officials, and this is true. But it may be accounted for by the above supposition.

I do not, however, agree with Mr. Umichi. He says the people cannot be placed in possession of their rights until they have a knowledge of their duties*—in other words, that their rights flow from the discharge of their duties. I think otherwise. It is my opinion that the people cannot discharge their duties properly until they are in possession of their rights, and, when thus endowed, they can do their duty. The rights are anterior to the duties, and it appears to me unreasonable in Mr. Umichi to say that the people are intelligent in not doing exactly that which is desired of them by the Government, and that, on this account, no rights can be conceded to them. The *Chôya Shimbun* writes as if siding with the people, but there is a part if its argument which I do not quite like. It entreats the Government to *concede* these rights to the people. But every man is naturally endowed with them, and it is the Government which has deprived them of this precious possession.† It is not therefore necessary to entreat the Government to grant it, but return to the people that which naturally belongs to them. Thus the people are not to wait for it to be given them, as a beggar waits for something to be given him to eat.‡

The Necessity for and Advantage of Publicity.

(Akebono Shimbun.)

We understand that the statistics for the 5th year of Meiji (1872) have recently been completed by the Government, but have been kept in the Okurasho and not given to the public. Now these statistics record the revenue and expenditure for the year, the births and deaths, the rewards and punishments and many other like important particulars of all the *ken* in the Empire. These are papers of no slight moment. So much weight is attached to statistics in Europe and America that they are not only compiled by the Government, but by private associations. Why, then, should one Government limit the circulation of these paper to the official departments, and not diffuse copies of them among the people?

The custom so prevalent in the east of keeping all these things back from the people seems an evil contrivance, and certainly tends to alienate them from the government. There is no profouned meaning in this policy, but it springs from the view that the farmers and merchants should attend only to their crops and their merchandize, and pay no attention of the affairs of the Government. If the Government of this country were as oppressive and arbitrary as it certainly was some years ago, the continued existence of this feeling would be intelligible enough. But the people have made great advances of late years, and if the administration keeps all these things back from the people, they will mistrust the Govern-

---

* The old story from the Greek seems to come in here. A fool, desirous that his son should be a swimmer, took him to the water, but was so distressed by the lad's terrors, that he vowed he never should enter it again until he could swim.—[Ed. *J. M. W.*]

† Here is the old *à priori* view we have so often combatted. If politics are to be looked at from the point of view of experience, and not of metaphysics, all this seems to us idle. To say that men are endowed by Nature with certain things which neither they nor their fathers ever possessed, is absurd. With legs and arms, lungs and brain, they are endowed, nor is the idea inconceiveable—from a purely philosophical point of view—that a king, standing in terror of his subjects, should order the right hand of every male child to be cut off. It might be claimed by anyone under such circumstances that his subjects were deprived of rights with which they were endowed by nature, and the claim would be unanswerable. But rights and liberties have to be won, if universal history is to be trusted. Of course wise governments may concede them out of faith in liberty. But they are not the less a portion of the power acquired held by one side and parted with to the other. They do not come to men by nature, but by inheritance, or the fears or wisdom of their rulers.—[Ed. *J. W. M.*]

‡ Why did Charles the First agree to the Petition of Rights? Because the party opposed to him was strong enough to compel him to do so. What would have been the value of the Declaration of Independence but for Washington's sword. These cases are worth a ton of metaphysics, Rousseauism and "endowments of nature."—[Ed. *J. W. M.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ment, and find arguments in support of this feeling—much to our regret.

The declaration of war, or the making of peace or treaties, is not made known to the people even in Europe and America previously to the performance of the act itself. And as ours is but a poor and weak country, we do not wish to be understood as urging upon the Government to make known all its intentions to the people. But if the Government hides from the people all that it can avoid showing them, great harm will come of it. Representative institutions have not yet been established in the country, and the people are not yet sufficiently advanced to interest themselves in political affairs, and thus everything is entrusted to the officials. Yet the process of political education has begun, and the people are commencing to take an interest in the proceedings of the Government. The Government, on the other hand, still persists in the old method of keeping its proceedings in darkness. This begets doubt instead of confidence in the minds of the people, and they secretly discuss the acts of the administration, the state of the country &c. This critical spirit may seem improper,* but it arises from an active interest in the affairs of the country, and while this spirit increases, the Government inflicts punishments upon the exponents of it, thinking by this means to exercise it. But, without doubt, this course of action has greatly stained the honour of the present administration.

Now all this arises from the secresy which surrounds the acts of the Government. We do not refer to statistics alone, but if the Government were to make public as much of its course of action as is possible, the doubts of the people would be dispelled, and the Government and people instead of being repelled would be mutually attracted. The punishment inflicted on the public writers would decrease, and the honour of the administration would contract no stain. We therefore entreat the Government to give as much publicity as possible to the national affairs.

REVIEW.†

WE have just received the annual volume published by the Shanghai Branch of the Asiatic Society, which much exceeds in bulk the ordinary issue. That for last year had only about 200 pages and preceding volumes even less. The present volume has over 600 pages of matter. We must admit indeed that a large portion of the contents is not of a readable quality, being in fact a set of meteorological observations made during the year 1874-75 by the Jesuit fathers at Sikawei, near Shanghai. The Society nevertheless does good service by the publication of such tables as these, produced by incessant and sleepless labour, but little likely to be made available to science unless by the help of such an institution as the Asiatic Society. We are extremely sorry to hear that this chivalrous patronage of the devoted observers of Sikawei has left the Society in debt to the extent of more than $1,000 to their printer, and we can only hope that the sale of the journal may go some way towards lightening the burden. The price of the volume is $3. The papers which make up the rest of the Journal are of considerable interest. Article I. is entitled 'Elucidations of Marco Polo's travels in North-China drawn from Chinese sources,' by the Revd. Archimandrite Palladius. The great work of Col. Yule has already gone far to explain much that was dark in Marco Polo's narrative, but the extraordinary learning of the Russian Archimandrite enables him to afford the most interesting illustrations of many pages. Readers of Coleridge will recollect his dreamy poem beginning:

> In Xanadu did Khubla Khan
> A spacious pleasure dome decree;
> Where Alph the sacred river ran
> Through caverns measureless to man,
> Down to a sunless sea.

Where Coleridge got his hint about Khubla Khan and his doings we do not know. Alph the sacred river is pretty clearly a coinage of the poet's own brain, but Xanadu has a Chinese look about it, and in Marco Polo we find an account of a city called Chandu, which is evidently the place in question. The Archimandrite quotes the passage from Col. Yule's translation as follows:—

> "And when you have ridden three days from the city last mentioned, between north-east and north, you come to a city called Chandu, which was built by the Kaan now reigning. There is at this place a very fine marble Palace, the rooms of which are all gilt and painted with figures of men and beasts and birds, and with a variety of trees and flowers, all executed with such exquisite art that you regard them with delight and astonishment."

Further on he remarks:—

Chandu,—Shangtu, i.e. "the upper capital," called also Loan king, *i.e.* "the capital on the *Loan* river." Mangu khan having in 1256 committed to Khubilai the task of building a residence near the limits of China proper, had in view to establish a southern *ordo* (residence), and in it a fair for the trade between China and Mongolia; but violating the will of his predecessors whose plan was not to leave the steppes, but to govern the subjugated populations from the depths of Mongolia, Khubilai preferred a settled abode in Peking and made of Shangtu a summer residence.

> "The Lord abides at this Park of his, dwelling sometimes in the Marble Palace and sometimes in the Cane Palace for three months of the year, to wit June, July, and August; preferring this residence because it is by no means hot; in fact it is a very cool place. When the 28th day of [the Moon of] August arrives he takes his departure, and the Cane Palace is taken to pieces."

The khans usually resorted to Shangtu in the 4th moon and returned to Peking in the 9th. On the 7th day of the 8th moon there were libations performed in honour of the ancestors; a shaman, his face to the north, uttered in a loud voice the names of Chingis khan and of other deceased khans, and poured mare's milk on the ground. The propitious day for the return journey to Peking was also appointed then.

> "Moreover [at a spot in the Park where there is a charming wood] he has another Palace built of cane, of which I must give you a description. It is gilt all over, and most elaborately finished inside. [It is stayed on gilt and lackered columns, on each of which is a dragon all gilt, the tail of which is attached to the column whilst the head supports the architrave, and the claws likewise are stretched out right and left to support the architrave.] The roof, like the rest, is formed of canes, covered with a varnish so strong and excellent that no amount of rain will rot them. These canes are a good 3 palms in girth, and from 10 to 15 paces in length. [They are cut across at each knot, and then the pieces are split so as to form each two hollow tiles, and with these the house is roofed; only every such tile of cane has to be nailed down to prevent the wind from lifting it.] In short, the whole Palace is built of these canes, which (I may mention) serve also for a great variety of other useful purposes. The construction of the Palace is so devised that it can be taken down and put up again with great celerity; and it can all be taken to pieces and removed whithersoever the Emperor may command. When erected, it is stayed [against mishaps from the wind] by more than 200 cords of silk."

The Palace of canes is probably the Palm Hall of the Chinese authors, which was situated in the western palace garden of Shangtu.

Another passage from Marco Polo about the introduction of Bank notes may be found amusing at the present time.

> "Now that I have told you in detail of the splendour of this City of the Emperor's, I shall proceed to tell you of the Mint which he hath in the same city, in the which he hath his money coined and struck, as I shall relate to you. And in doing so I shall make manifest to you how it is that the Great Lord may well be able to accomplish even much more than I have told you, or am going to tell you, in this Book. For, tell it how I might, you never would be satisfied that I was keeping within truth or reason! The Emperor's Mint then is in this same City of Cambaluc, and the way it is wrought is such that you might say he hath the Secret of Alchemy in perfection, and you would be right! For he makes his money after this fashion. He makes them take of the bark of a certain tree, in fact the Mulberry Tree, the leaves of which are the food of the silkworms,—these trees being so numerous that whole districts are full of them. What they take is a certain fine white bast or skin which lies between the wood of the tree and the thick outer bark, and this they make into something resembling sheets of paper, but black. When these sheets have been prepared they are cut up into pieces of different sizes. The smallest of these sizes is worth a half tornesel; the next, a little larger, one tornesel; one, a little larger still, is worth half a silver groat of Venice; another a whole groat; others yet two groats, five groats, and ten groats. There is also a kind worth one Bezant of gold, and others of three Bezants, and so up to ten. All these pieces of paper are issued with as much solemnity and authority as if they were of pure gold or silver; and on every piece a variety of officials, whose duty it is, have to write their names, and to put their seals. And when all is prepared duly, the chief officer deputed by the Kaan smears the Seal entrusted to him with vermilion, and impresses it on the paper, so that the form of the Seal remains stamped upon it in red; the Money is then authentic. Any one forging it would be punished with death. And the Kaan causes every year to be made such a vast quantity of this money, which costs him nothing, that it must equal in amount all the treasure in the world. With these pieces of paper, made as I have described, he causes all pay-

* Why does the writer take this apologetic tone? Why not say, on the contrary, that this interest is most proper?—[ED. *J.W.M.*]

† Journal of the North China Branch of the Royal Asiatic Society. New Series No, X., 1876.

ments on his own account to be made: and he makes them to pass current universally over all his kingdoms and provinces and territories, and whithersoever his power and sovereignty extends. And nobody, however important he may think himself, dares to refuse them on pain of death. And indeed everybody takes them readily, for wheresoever a person may go throughout the Great Kaan's dominions he shall find these pieces of paper current, and shall be able to transact all sales and purchases of goods by means of them just as well as if they were coins of pure gold. And all the while they are so light that ten bezants' worth does not weigh one golden bezant. Furthermore all merchants arriving from India or other countries, and bringing with them gold or silver or gems and pearls, are prohibited from selling to any one but the Emperor. He has twelve experts chosen for this business, men of shrewdness and experience in such affairs: these appraise the articles, and the Emperor then pays a liberal price for them in those pieces of paper. The merchants accept his price readily, for in the first place they would not get so good an one from anybody else, and secondly they are paid without any delay. And with this paper-money they can buy what they like anywhere over the Empire, whilst it is also vastly lighter to carry about on their journeys. And it is a truth that the merchants will several times in the year bring wares to the amount of 400,000 bezants, and the Grand Sire pays for all in that paper. So he buys such a quantity of those precious things every year that his treasure is endless, whilst all the time the money he pays away costs him nothing at all. Moreover several times in the year proclamation is made through the city that any one who may have gold or silver or gems or pearls, by taking them to the Mint shall get a handsome price for them. And the owners are glad to do this, because they would find no other purchaser give so large a price. Thus the quantity they bring in is marvellous, though those who do not choose to do so may let it alone. Still, in this way, nearly all the valuables in the country come into the Kaan's possession. When any of those pieces of paper are spoilt—not that they are so very flimsy neither—the owner carries them to the Mint, and by paying 3 per cent. on the value he gets new pieces in exchange. And if any Baron, or any one else soever, hath need of gold or silver or gems or pearls, in order to make plate, or girdles or the like, he goes to the Mint and buys as much as he list, paying in this paper-money."

Article II consists of Notes made on a tour through Shan-hsi and Shen-hsi by the Rev. C. Holcomb. The writer remarks at the conclusion:

As illustrating the peaceful nature, and kind disposition, of the people, it should also be remarked that throughout the entire journey no trouble of any sort was experienced from them, and as a rule, to which there were at most but few exceptions, cordial greetings and a pleasant reception were everywhere met with. Landlords were for the most part courteous in their treatment, and moderate in their charges; officials showed no disposition to place obstacles of any sort in the traveller's way: and the people, few of whom had met with foreigners before, were curious, but as a rule, not rude.

Mr. T. W. Kingsmill contributes 'Short notes on the identification of the Yuèti and Kiang tribes of ancient Chinese history.

A learned and very lengthy paper by Dr. Bretschneider is entitled 'Notices of the Mediæval Geography and History of Central and Western Asia,' drawn from Chinese and Mongol writings, and compared with the observations of western authors in the middle ages. This article is a mass of densely-packed information upon the subjects of which it treats, but does not present much of a quotable kind. It contains many illustrations of the history of the Ouigours and of the country called Sogdiana, two subjects which we see are among those proposed for discussion at the approaching meeting of Orientalists at St. Petersburg.

The contributions close with the usual retrospect of events in China, from the pen of Archibald J. Little, F.R.G.S.

Liberality does not appear in its true lustre when it is the hand of the sovereign that is liberal. Private individuals have most right to it; for, to speak correctly, a king has nothing of his own: he owes even himself to others. Authority is not given to him for his own advantage, but for the advantage of his subjects. A superior is never made for his own profit, but for the profit of the inferior; and a physician for the sick, and not for himself. Every magistracy, as every art, has its end out of itself.—*Montaigne.*

He has his Rome, his Florence, his whole glowing Italy, within the four walls of his library. He has in his books the ruins of an antique world, and the glories of a modern one.—*Longfellow.*

The surest means to convince one's-self of a life after death is so to act in the present that one must wish it. Whoever feels that, if there is a God, He must look graciously on him, seeks for no reasons against His existence, and requires none. Whoever has offered up so much for virtue, that he ought to expect indemnifications in a future life, such an one requires no proof of, nor does he merely believe in, the existence of such a life; he feels it within himself.—*Fichte.*

HISTORY OF THE TOKUGAWA DYNASTY.

(*Continued.*)

Hideyoshi marches against the Hôjô Chief.

The levies of Suruga Yechigo and the forty-five western provinces were concentrated at Kiyôto in the 3rd month of the following year (18th Tenshô A.D. 1590), with the exception of the troops of the more distant provinces, who were ordered to march into the Kwantô by the most convenient route.

In the 2nd month of the 18th year Iyeyasu assembled his retainers and demanded their support. Ota Nobuwo, Uyesugi Kagekatsu, and Maida Toshiiye joined him. Mori Terumoto was left in charge of Kiyôto, while to Toyotomi Hideaki was entrusted the defence of Ozaka.

On the first of the 3rd month Hideyoshi presented himself at Court in full war panoply and received a baton and sword from the Emperor. Having suitably acknowledged the gracious gift he left the Palace, and mounting his horse lost no time in setting out on his march eastwards at the head of one hundred and seventy thousand men. Nothing could exceed the precision of the serried ranks of his army, and the equipment of the soldiers was all that could be desired. The people flocked along the route to view the martial array and were not prevented from watching the columns pass by.

Meanwhile Ujimasa assembled the whole of the troops of the eight provinces that owned his authority at Odawara, and put his garrisons into the various castles. On the 27th day Hideyoshi arrived at Shimadsu. The next day, avoiding the enemy's works by a circuitous path, he reached the camp of Iyeyasu, and representing to the latter that his (Hideyoshi's) leaders were persuaded that Ujimasa's not venturing to offer battle with so many tens of thousands of valiant soldiers at his back, showed his intention to draw the western forces into a disadvantageous position, and demanded the opinion of the Mikawa chief. Iyeyasu replied that he though the policy of Ujimasa was simply due to fear, and advised that their forces should be divided into three corps, one of which might attack Nirayama, another Yamanaka, and the third, which he specially requested he might lead in person, occupy the Hakoné pass, while if both father and son had to be met the reserves might be brought up.

Hideyoshi returned to his own camp, and under cover of the night Hidetsugu commenced his march upon Yamanaka with fifty thousand men, while Nobuwo set out to attack Nirayama at the head of thirty thousand men, and Iyeyasu, taking with him twenty-five thousand troops, moved with all possible speed upon the Hakoné pass. On the 29th, after an early meal, the whole of the forces were ordered to advance. Hori Hidemasa reduced the castle of Yamanaka, Nobuwo destroyed the outworks of that of Nirayama, and Iyeyasu, making his way over the Hakoné pass by a secret path, compelled three castles to surrender. Ujimasa did not venture to offer any opposition. In the 4th month Hideyoshi, penetrating deeply into the enemy's country, presented himself before Odawara. The garrison of the castle were panic struck, while the principal officers of the Hôjô chief, together with many of those to whom he had confided the defence of his castles, dispersed in flight. The town of Odawara was then occupied, and Hideyoshi received secret overtures from some of the principal retainers of the Hôjô chief—a proceeding with which both Ujimasa and his son had nothing to do. Hideyoshi caused his troops to invest the castle and Toshiiye and Kagekatsu, with fresh levies raised in the provinces of Musashi, Kôtske, Kadsusa, Shimosa and Awa, attacked and reduced numerous castles in the vicinity. The citadel of Odawara was the only place that held out, and Hideyoshi, by causing his troops to be well supplied with *saké*, so that night and day they kept up the feast, gave the besieged to understand, to their consternation, that he intended to persevere with the siege however long it might detain him. Meanwhile Date Masamune, who had hitherto offered an obstinate resistance, being made aware by his spies of the real state of affairs, was seized with a panic, and hastening to the camp of Iyeyasu proffered submission to Hideyoshi, which the latter after some demur accepted, and reprimanding the suppliant for having so long delayed his coming, banished him to his own province.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

About this time the siege of the citadel of Odawara having lasted some months, a large party among the Hôjô leaders began to make overtures to Hideyoshi. The garrison, too, began to despair, and thoughts of surrender were more and more indulged in, until at last in the 7th month Ujinawo proffered submission which was accepted, and Ujimasa was forced to deliver up the castle, and shortly afterwards was put to death by order of Hideyoshi. Ujinawo and his principal adherents were then banished to Kôya (in Kishiu), after having been first generously supplied with what they required. Thus was brought about the complete downfall of the Hôjô house.

On the 13th day Hideyoshi made his entry into the citadel of Odawara, and profusely rewarded his principal officers with grants of land.

The eight K'wantô provinces are bestowed upon Iyeyasu.

The territory which had owned the sway of the Hôjô house, namely the eight provinces of the K'wantô, was to added the dominions of the Mikawâ Chief. Ninety thousand *kokus* out of the assessment of Omi, and ten thousand *kokus* out of the assessment of the seabord provinces, were assigned to defray the expenses of attending at court, and to provide for the cost of the grand hunts. The whole assessment of the K'wantô was reckoned at about two million, five hundred and seven thousand *kokus*.

Iyeyasu, accordingly, sent his lieutenant to reduce the castles and districts that had not yet given in their submission, and finally brought the whole of the eight provinces into complete subjection to his authority. He then made a progress through his newly acquired territory and established the seat of government at Yedo.

In the 8th month the vigour of military rule was abated, and a due apportionment of lands among the retainers was effected, praise and reward being at the same time betowed upon those who had shown special merit.

In the 9th month Hideyoshi returned into the West, and presenting himself at court reported to the Emperor the mode in which the Imperial commands had been executed.

In the 10th month Iyeyasu sent envoys to the capital to place the court in full possession of the five home provinces that had always constituted its appanage, and the extraordinary rapidity with which he had successfully executed the task confided to him, gained even the applause of Hideyoshi.

On new year's day of the 19th year Tenshô (A. D. 1591) the vassals of the eight K'wantô provinces presented their congratulations to Iyeyasu at the citadel of Yedo.

Hideyoshi organizes an Expedition against Korea.

In the same year (the 19th Tenshô) Hideyoshi resolved to invade Korea, and ordering transports and war-ships to be got ready, commanded the provinces of Kiushiu and Shikoku, with those of the Sanyô and the seaboard, to furnish a sufficient supply of ships of war, for the building of which Iyeyasu contributed timber from the woods of Idzu. A large army was organised and the first month of the following year was fixed as the epoch at which the expedition was to set sail. Head-quarters were established at Hizen and Nagoya, and an invading force, some hundred and forty thousand strong, was embarked and occupied the Korean territory. Over a hundred thousand men were left encamped at Nagoya, and in addition sixty thousand troops were formed into reserves, to be employed in the event of the Ming Emperor assisting the Koreans.

Everything being now ready and the place of the campaign decided, Hideyoshi appointed Hidetsugu his lieutenant, laid down his office of K'wambaku and adopted the style of Taikô. The administration of the Empire civil and military he kept in his own hands, and the office of K'wambaku was deprived of all power. The following year the style of the year period was changed to that of Bunroku.

In the 2nd month Iyeyasu, leaving the government of his territories in the hands of Hidetada, marched westwards at the head of fifteen thousand men, and assembled the leaders of Daté, Sataké, Nambu and Mogami in Hizen. About the same time Hideyoshi quitted the capital, and the fourth month found him at Nagoya. The forces there collected were divided into eight corps, and the Hachido district in Korea was selected as the point of attack.

The leaders of the expedition marched through Korea laying waste the country as they advanced. In the second year the Ming Emperor sent troops to the assistance of the Koreans, and a number of engagements followed, without, however, any decisive result. Kuroda Yoshitaka attributed this want of success to the incapacity of Hidetsugu, and pronounced Iyeyasu and Maida Toshiiye as the only commanders capable of conducting the war to a successful issue; which task, should they decline it, he thought himself able to undertake. Hideyoshi, who got wind of all this, could not deny the justice of Kuroda's views.

In the 8th month another son, Hideyori, was born to Hideyoshi, to the great joy of his father, who at once turned his face eastwards. Iyeyasu quitting Hizen, and Hidetada the K'wantô, paid him a visit of congratulation.

In the third year Hideyoshi being at the height of his power, caused a castle to be built at Fushimi. After the birth of Hideyori he began to wish to get rid of Hidetsugu, and chose Ishida Mitsunari and Masuda Nagamori to assist him in effecting his desire. In the fifth month of the fourth year Iyeyasu returned to K'wantô, leaving Hidetada at the capital, with instructions not to side with Hidetsugu in the troubles which threatened him, and above all to not to afford him any assistance. Hidetsugu soon after arrived, as had been expected, and endeavoured to enlist the sympathies of Hidetada, who, however, retired at once to Fushimi and informed his Chief of Hidetsugu's movements. Iyeyasu immediately quitted Yedo, and hearing on the journey of the death of Hidetsugu doubled the speed at which he was travelling. Hideyoshi, delighted at finding his wish fulfilled, caused the palace of Hidetsugu at Shiuraku to be levelled with the ground, and ordered the barons, whose residences were grouped round their lord's seat, to remove to Fushimi. The possessions of Hidetsugu were then confiscated and partitioned out among the vassals of his enemy.

Previously to these occurrences Hideyoshi had taken up his residence at Fushimi. His consort, a daughter of the Asai house, he had lodged at Yodo, where he had built a county seat, and took a pleasure in going to and fro by water in a state barge between the two places. His consort who, from the place of her residence, was known as the Lady of Yodo, had two sisters, one of whom became the wife of Kiyogoku Takatsugu, and the other, who had been adopted by Hideyoshi as his daughter, was on the 9th month married to Hidetada, the heir of Iyeyasu, both thus becoming sister-in-law of the late Ota Nobunaga.

In the 1st year of Keichô Konishi Yuki-naga returned from Korea with the news that peace had been made. The leaders of the expedition had for some time been weary of the war, and, secretly desrious of peace, had indirectly, and in spite of their lord's policy, negotiated a cessation of the struggle.

Hideyoshi refused to ratify the peace, and in the second year fresh forces were despatched to Korea under Kuroda Yoshitaka, who was invested with the command, and instructed to spare no exertions to bring the war to a successful issue. Previously to the departure of the expedition, and since in all for a period of some seven years, Hideyoshi, wearied with the exercise of power, fell into the habit of daily drinking and feasting with Hideyori and a troop of his women, and came to apply himself with less and less vigour to the administration of the country. For the first time he devoted himself to pleasure instead of business, squandered money and indulged in dissipation. In the 5th month of this year (2nd of Keichô) he fell ill, and the government of the empire became everywhere relaxed, his barons and vassals engaging in all sorts of disputes among themselves. His malady increasing, he sent for the five *Bugiyo*, Asano Nagamasa, Ishida Mitsunan, Masuda Nagamori, Nagatsuka Masaiye and Masuda Geni, and after adverting to the probability that advantage would be taken of his illness to foment disturbances, gave his son into their charge with the earnest prayer that they would defend him to the utmost of their power against every enemy.

On the 16th day of the 6th month the five *Bugiyo* convened a large meeting of the vassals of Taikôsama, and informed the assembled barons, both those who resided

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

within and those who resided without the five home provinces, of the wishes of their lord. They replied that they would willingly, so far as they were able, comply with their lord's desires, but that as to settling their disputes among themselves the thing was impossible, and they could not promise that it would be done.

Hideyoshi therefore sent envoys to Iyeyasu, and most earnestly entreated him to come to his assistance and persuade the barons to promise obedience. Iyeyasu complied with the request, and addressed the assembled barons and vassals, but they still declined to give the promise required from them. Iyeyasu on this fell into a rage, and exclaimed in an angry voice that thus to deny what was asked of them, and to refuse to compose their differences with each other, was neither more nor less than flat rebellion, and that loyalty to one's lord seemed to have disappeared from the face of the earth. This invective produced its effect, and the barons at last bound themselves to observe the wishes of their lord. Iyeyasu at once sent word to Hideyoshi of the success of his efforts, who was overjoyed at the news, and ordered the five *Bugiyo* to prepare a feast, the consequences of which were disastrous, for as the *saké* went round confusion ensued, and disturbances arose which the *Bugiyo* were unable to quell. Iyeyasu, however, presented himself, and with his hand upon his sword demanded whether it was intended to break word with him, and whether it was a mob of enemies he saw before him, adding that he had fully made up his mind how to act.

He then turned round to the *Bugiyô* and ordered them to close the gates, whereupon the tumult subsided and the rioters asked for forgiveness.

These disorders caused Hideyoshi to reflect how uncertain the condition of affairs might become in the event of his death, and in his mind he pitched upon Iyeyasu as the only man he knew capable of putting down any disturbances that might arise. Thus persuaded, he determined to entrust him with the high duty of administering the government after his death, in the hope that, not only would the continued tranquillity of the country be thus assured, but that the interest of his family would also be sufficiently cared for. In the 7th month, accordingly, he privately sent for Iyeyasu and offered him the direction of affairs after his death, entreating him at the same time to continue to assist his successor Hideyori, after the latter should have attained his majority, with his experience. Iyeyasu, however, positively refused to accept the task and left the castle. Mitsunari and Nagamori, who had designs of their own they wished to carry out, remonstrated strongly with Hideyoshi against appointing Iyeyasu as regent after his death.

Previously during the nengo Tenshô, Hideyoshi had established five governorships and placed the administration of the country in their hands. In addition he now created, after due deliberation, five *Tairô* (Chief Elders) and three *Chiurô* (Mediate Elders).

To the *Tairô* was intrusted the discussion of the more important questions of state, while the *Bugiyô* (governors) were charged with the superintendence of administrative details. In the event of differences of opinion arising between the *Tairô* and the *Bugiyô*, the *Chiurô* were to intervene as umpires. At the same time, Katagiri Katsumoto was appointed governor to Hideyori.

In the 8th month Hideyoshi again sent for Iyeyasu, and telling him that his refusal had necessitated the creation of the *Tairô* and the regulation of the duties of the *Bugiyô*, and that it was useless to regret what had been done, ended by declaring that there was no man in the empire so fit to undertake the direction of affairs, both civil and military, as his visitor. He then ordered his vassals to be assembled and made them swear fealty to his house. This accomplished he directed Asano Nagamasa and Ishida Mitsunari to proceed to Korea to bring back his army thence. On the 10th day Hideyoshi died at the castle (of Fushimi). As the last breath was passing out of his body he suddenly opened his eyes wide and exclaimed, 'Do not let my armies be destroyed in a foreign land.'

In the 11th month the leaders of the Korean expedition brought back their forces to Nagoya. Nagamasa and Mitsunari made public the last wishes of Hideyoshi, upon hearing which few eyes were dry among the leaders of Taikôsama.

Finally they went in a body, accompanied by the vassals of their late lord, to Fushimi, where they did homage to Hideyori.

Chapter III.

From the death of Hideyoshi to the victory of Sekigahara.

Iyeyasu assumes the government. Disputes occur between him and Toshiiye.

In the first month of the fourth year of Keichô, Maida Toshiiye, in obedience to the last wishes of his lord, carried Hideyori with him to Ozaka. Iyeyasu remaining at Fushimi and taking up with his own hands the reins that had fallen from the grasp of Hideyoshi, rewarded the *Tairô* and the leaders of the Korean expedition—each one according to his merits. He became, however, an object of hatred to the barons of the empire, who, constantly seeking their own advancement and jealous of the development of his power, were anxious to get rid of him. Toshiiye was disgusted with the position attained by Iyeyasu, and both refused to make the slightest concession one to the other. Mitsunari, with his associates, began to talk slightingly of the Mikawa chief, and indeed in a hundred quarters similar language prevailed, and a desire was expressed to put an end to his sway. Toshinaga, son of Toshiiye, spoke of the designs of his party to Hosokawa Tadaoki, who with tears in his eyes recommended him to think well before taking a step that might involve the ruin of his house. They both then went to Toshiiye and talked over matters with him, the discussion ending in Toshiiye determining to have nothing to do with any rising against Iyeyasu, to whom he at once went borne in a litter on account of his illness at Fushimi, and revealed all that he knew of the intentions of Mitsunari and his brother *Bugiyô*. Having thus disburdened himself he entreated Iyeyasu, in the event of his death, to extend his protection to his son Toshinaga, a request which was graciously accorded. Tadaoki at the same time counselled his master to return the visit of Toshiiye, and in the third month Iyeyasu went to Ozaka and had an interview with him there, in the course of which, refering to the fact that he might die any morning or evening, he earnestly besought his visitor to exert himself to the utmost to guard the interests of the heir of Hideyoshi. Iyeyasu promised compliance.

Mitsunari plots against Iyeyasu.

Mitsunari and his associates, noticing the intimacy that had grown up between the Ashô (Toshiiye) and the Daifu (Iyeyasu), deliberated as to what their policy under these circumstances ought to be. Yukinaga angrily exclaimed that the Daifu's assumption to do what he chose in the Empire disgusted everybody, and that he ought to be made away with without any delay. The discussion turned daily upon the means of injuring the Daifu. Mitsunari persuaded himself that without the coöperation of Hosokawa Tadaoki the designs could have no chance of success, and endeavouring to gain him over by lavish promises of reward, told him all their plans, which Tadaoki immediately imparted to Iyeyasu, recommending the latter at the same time to place himself in safety within the walls of the castle of Unkôjima, the original citadel of Fushimi. The *Bugiyô* came to know that their designs had leaked out, and clothing themselves in priests' garments sought pardon for their offence.

Katô Kiyomasa, Kuroda Nagamasa, Fukushima Masanori and Hosokawa Tadaoki, angered by the conduct of Mitsunari, joined in a petition in which they demanded that he should be put to death. Iyeyasu, however, refused to accede to their request. Meanwhile Toshiiye's illness had became serious. Mitsunari consequently went to Ozaka to see him, and shortly afterwards Katô and others visited the dying man and begged him to use his influence to hurry about the condemnation of Mitsunari. Toshiiye refused and soon afterwards died. Katô and his companions then determined to lie in wait for Mitsunari and slay him. Now between the houses of Môri, Ukita, Uyesugi, Satake and Shimadzu, and the house of Mitsunari, a friendship of longstanding had existed, and the chief of the latter, seeing the dangers which threatened him, sought refuge with Ukita and asked for the protection of the five

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

houses. Satake Yoshinobu, on hearing of his position, hastened to discuss it with him, and advised him to return to Iyeyasu, which he did and was kindly received. He was, however, closely followed by his enemies, who again entreated their lord to put him to death; whereupon Iyeyasu, after explaining the necessity he was under, deprived him of his offices and sent him to his own country. He then called his enemies together and persuaded them to abandon their intentions against Mitsunari.

Uyesugi Kagekatsu now concerted with Mitsunari a plot against Iyeyasu, and the two conspirators swore, under an oath sealed with their blood, to march against the Mikawa chief the next year and attack him simultaneously from the east and from the west.

In the 6th month the leader of the Korean expedition Môri, and Ukito together with Maida, Uyesugi and Satake visited their estates. Nagamori and Masaiye counselled Iyeyasu to throw himself into the western castle at Ozaka, and entreated him to look to the safety of Hideyori. Iyeyasu followed their advice, and found himself treated by the barons just as Hideyoshi himself had been during his residence at the castle.

In the first month of the 5th year Hideyori was placed in the central portion of the citadel of Ozaka, while Iyeyasu occupied the western half, and the barons came there to present their new-years congratulations.

Kagekatsu, under pretence of illness, refuses to visit the court of Iyeyasu.

In the 2nd month Kagekatsu was ordered to lose no time in presenting himself at the court, but he refused upon the pretext that he was ill, alleging at the same time that he had gone to his eastern command at the behest of Taikôsama, and he did not understand why he should now be called upon to render obedience to the Daifu (Iyeyasu). Iyeyasu, angry at the contempt with which his orders were treated, determined to march eastwards himself.

In the 6th month he accordingly took leave of Hideyori and of the latter's mother, and leaving Sano Masayuki in charge of the western portion of the castle, advanced at the head of a considerable body of men to Fushimi, the command of which place during his absence he entrusted to Torii Motomasa.

In the 7th month he arrived at Yedo, and after entertaining his chief followers who had assembled there from all parts far and near, issued his orders for the van of his forces to put itself in movement. Kagekatsu was at this time in Aidzu, anxiously considering what line of action offensive and defensive he should adopt, resolving at last to garrison his castles with detachment of his troops.

Ishida Mitsunari, who was at Sawayama, on hearing of Iyeyasu's march eastwards rubbed his hands with delight, and forcing Ôya Yoshitaka to join his party, confided to him the designs he had formed against Iyeyasu.

Correspondence.

POST MORTEM EXAMINATION IN JAPAN.

To the Editor of the "Japan Weekly Mail."

Yokohama, 9th August, 1876.

Sir,—A government notification has appeared within the last few days which may probably not excite any very strong feeling anywhere, but which, to all who are interested in the progress of this country, must appear on reflection to indicate more real and solid advancement than many others which may receive greater attention.

I refer to the permission, under very fair and reasonable restrictions, granted to medical men to perform post mortem examinations on the bodies of Japanese subjects. The rising medicos of Japan are wont to lean a little too much upon foreign descriptions of foreign diseases, while there are in this country local modifications of diseases, and even slight anatomical variations, which will only be scientifically appreciated after a wide induction has been made, and hitherto the path has not been altogether free by which alone this result can be attained. The people themselves are freer from prejudice on this subject than most other Eastern nations, and the Government have wisely left details to be regulated by good sense and humane feeling. It remains for the medical profession in this country, through their magazine and society, to gather up and generalize the fruits of such investigations for the benefit of posterity.

In seeking this I am sure they will have the sympathy and co-operation of many.

A FOREIGN DOCTOR.

WILL ADAMS.

To the Editor of the "Japan Weekly Mail."

Yokohama, 12th August, 1876.

Dear Sir,—Some two or three years ago there was considerable excitement here and in Yedo over Mr. Walter's discovery of the grave of Will Adams, the pioneer English settler in Japan. Visits were made to the neighbourhood of Yokoska to see the grave, and the more enthusiastic English residents amongst us undertook pilgrimages to Yedo, to see with their own eyes the house in "Anjin-cho" where their countryman, the hardy sailor, had lived in peace and honour two centuries and a half ago. Newspaper articles were written about Will Adams, his life and death, and as far as was possible the various incidents in his eventful career were dug out of the oblivion of centuries, and given to the public as matters of much interest.

It may not, therefore, be uninteresting to your readers even now to learn, that a gentleman residing in this neighbourhood has discovered, and now has in his possession, a small earthenware jug, on which the words "William Adams China" are distinctly legible. The jug is white, of coarse material and rough workmanship, stands about four and a half inches in height, and is about three and a half inches in diameter.

I do not at this moment recollect having seen any account of Will Adams' residence in China, but it is probable that some of your readers may be able to throw light on that part of his history; if so, I hope you will be good enough to publish their communications on such an interesting point.

I am, Dear Sir,
Yours obediently,
R.

THE IMPERIAL COLLEGE OF ENGINEERING, TOKEI.

To the Editor of the "Japan Weekly Mail."

August 9th, 1876.

Sir,—On looking over the matter for publication in the forthcoming number of the journal of the Asiatic Society, I find this communication from Mr. Dwars. As it is of general interest at a time when so many people make trips into the country, and either as visitors or investigators go to the various mineral springs of Japan, you may probably desire to publish it in your newspaper.

I remain, Sir,
Your's obediently,
W. E. AYRTON.

Osaka, Tsumi-machi, 23rd Nov., 1875.

To Mr. Ayrton,

The Corr. Secretary of the Asiatic Society.

Dear Sir,—Some months ago I was requested by the Japanese Government to make an analysis of the hot chalybeate water of Arima, and now kindly beg of you to have my result inserted in your periodical of the Asiatic Society. It is as follows:—

Properties.—The water is almost clear, colourless, without scent; the taste indicates the presence of much salt and chalybeate; exposed to the air it loses some carbonic acid, while at the same time its surface covers itself with hydroxcide of iron, afterwards found at the bottom as a brown-red flocky powder, mixed with silicates, indissoluble in acids. Tincture of litmus is slightly reddened by it, which indicates the presence of a little free carbonic acid; the quantity of which I could, however, not determine, on account of my not having been at the spring myself. The water was sent to me at the laboratory in two portions, the first in the month of September and the second in October 1875.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The specific gravity of the water is at the temperature of 23° Cels. : 1,0115. One liter=1000 C. C.=1011,5 grm. at 23° C. contains 19,56 grm. solid matter, 0,022 grm. of which are lost through a moderate ignition. Before the ignition the residue gives with water a slightly alkaline solution.

The solid substances contained in *one liter* of this water are principally as follows:—

Chloride of Sodium	$NaCl$	14,717 grm.
Bromide of Sodium	$NaBr$	0,105 ,,
Chloride of Potassium	KCl	1,281 ,,
,, Ammonium	NH_4Cl	0,013 ,,
,, Lithium	$LiCl$	Traces.
,, Magnesium	$MgCl_2$	0,241 ,,
,, Calcium	$CaCl_2$	2,896 ,,
Sulphate of Lime	$CaSO_4$	0,014 ,,
Chloride of Aluminium	Al_2Cl_6	0,029
*Protosesquioxide of Manganese	Mn_3O_4	0,055
†Sesquioxide of Iron	Fe_2O_3	0,246 ,,
Silicic Acid	$Si O_2$	0,058 ,,
Organic Matter		Small quantity.

Liebig's analysis of the principal spring of Kreuznach, "die Oranienquelle," proves there exists much resemblance between the two waters, although the hot water spring of Arima contains still more salt and almost eight times more iron than that of Kreuznach, which contains in one liter 0,032 grm. sesquioxide of iron.

Believe me to remain,

With due respect,

Your obedient Servant,

B. W. DWARS.

Law & Police.

IN H. B. M.'s CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Wednesday, 9th August, 1876.

Okubo Rihei, *vs.* R. F. Livingstone.

(*Continued from Tuesday, 1st instant.*)

Ishi Reokei stated: I am engaged at the Mitsu Bishi Iron Works. I recollect this transaction about the *Kaisei-Maru*; Mr. Livingstone employed me as interpreter on that occasion. Livingstone paid about $1,100 on account of the schooner. The vessel was wrecked; it belonged originally to a Japanese named Watanabe Ichiyo. Okubo Rihei borrowed some money from Livingstone and bought the schooner from Watanabe Ichiyo.

To Livingstone: Mr. Coleman paid me $25 for my services. I did not know that the ship was bought for Captain Kennett. I know that Coleman paid $500 on a account of the schooner.

R. F. Livingstone, sworn, deposed: I was asked by Mr. Coleman and Captain Kennett to advance some money for Captain Kennett and four other men to buy the schooner. I consented because I knew Captain Kennett. I advanced nearly $3,000 to purchase the vessel and to fit her out. It was bought in Okubo Rihei's name in order to be under the Japanese flag. She went away on March 18th. Captain Kennett and four others were part owners. The profits were to be paid to Mr. Coleman and myself until the amount of $4,500 was made up, and after that we were each to have two shares in the vessel. She put into Sendai in distress, and they sent for money, and we advance $100 to cover expenses of repairs. A steamer had run into her in the meantime and $100 were paid as damages. Okubo Rihei now demanded $30 as percentage. Mr. Coleman finally gave him $15, not knowing where the vessel was. Okubo wanted to make over the vessel to Coleman and myself, and asked me to go to the Saibansho with him for that purpose. The Saibansho informed us that as the vessel was away they could not proceed in the matter. Okubo wrote vote Sendai to tell the nati part of the crew that as they would have no wages they had better leave. They all left with the exception of the one who acted as captain. Another crew was shipped, and they had been on board the vessel one month and eight days when she was lost. They received one month's wages before they left Sendai. Okubo Rihei never applied to me for any money whatever until I received notice through the Court. Mr. Coleman told me that he had once asked for money, but on what plea I do not know; that is the only time I know of his asking for money. (Document shown in Court) I signed that document; it binds me to pay all the expenses of the schooner. Mr. Coleman and I would eventually have paid it if Captain Goodspeed had incurred the liability. Isaacson, a German, shipped by a schooner to Hakodate. Goodspeed, Warner and Harries were Americans. The man who went to California by the French man-of-war was an Englishman.

His Honour observed that it was a point in defendant's favour that the vessel was under the Japanese flag, and it is a question whether the respective Consulates should not bear the expenses incurred by the sustenance and transfer of their shipwrecked countrymen.

Judgment reserved.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. Thos. B. Van Buren, Consul-General.

Thursday, August 10th, 1876.

The People of the United States *vs.* Bernard Hayes.

Examination resumed from August 4th.

Edward Manning, sworn, deposed:—I am stoker on board the *Modeste*. On the 3rd of this month I was at the "British Queen" in the evening, and was going towards the door when a stone struck me in the face and I fell on the floor; that is all I know. I was struck in the face on the right side of my nose where I now have plaster. I never saw prisoner before. I don't know who threw the stone. I came ashore about seven o'clock and this took place about nine. I had had two or three glasses of Old Tom and lemonade. I had been in no other house that evening, and had no words with any one before this occurred. I heard no row or difficulty, but saw only dancing and heard singing. I heard no row outside. I have been in the Hospital over since, on account of my wound.

James Osmond, sworn:—I am an A. B. on H. M. S. *Modeste*. On the 3rd inst. I was at the "British Queen." While I was dancing prisoner was sitting near the fiddler, and I saw him get on the stage and out of the window. I was at this time talking to Manning. A stone was thrown in at the door and knocked Manning down. Two shipmates picked him up. I told the landlord to fetch a doctor and he went for one at once. I do not know who arrested prisoner. When the prisoner went out he was sober enough. He might have had a couple of glasses. I did not speak to him. I did not hear him speak to any one. When he went away his face was not injured. When I next saw him he looked the worse for drink. This was one hour or so after. His eyes were then closed up and one was cut and bleeding. Before this I heard no row in the house. To prisoner:—I do not know why you got out of the window; it was near to you. I saw no one strike you previous to your getting out of the window.

John Sampson, sworn: I am an A.B. on board the *Modeste*. I was at the "British Queen," on the evening of the 3rd inst. I came on shore with Manning about 7 o'clock; we went first to the "British Queen," where we sat drinking for about an hour and a quarter. The prisoner came up to the bar, asking us for a glass of liquor. I told him to leave the house; he went out of the door without saying a word to anyone. Shortly afterwards, prisoner re-entered and flung a stone at someone (I don't know for whom it was intended), and hit Manning in the face. When I looked round Manning was on the floor insensible. I picked him up and put him on the table, at the same time calling for some one to go for a doctor, and offering to go in search of the man, whom I thought I could recognize The doctor came: I don't know his name. We went after prisoner but could not find him. Some one else captured him. I had spoken to him twice during the evening before this row occurred, but we had no quarrel. I did not see prisoner go out of the window, nor did I see him in dispute with any one during the time I was in the house. I saw him struggle with those who had caught him. I cannot say how he was hurt. I was not dancing. I saw Osmond. We had three drinks together. Manning was perfectly sober at the time he was struck. I recollect quite clearly the occurrences of that night.

James Mc. Manus, sworn, stated: I am landlord of No. 176, Yokohama. I was in the "British Queen," when Manning was struck. I saw prisoner dancing at No. 81; he came down from the stage, and sat on a bench close to the musicians. A man-of-war's man, in a checked shirt, came up and struck him in the face. Two more men were running at him when he jumped on the stage. A coloured man struck him in the face and he jumped out by the window. I do not recognize either of these men as having had anything to do with it. Two or three of the foreigners cried "go for him" but for what reason I cannot say;

* Presents itself as bicarbonate of protoxide of manganese.
† Ci-carbonate of protoxide of iron.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

he had not been disturbing any one before that. I went away, and have not seen him since, until now.

William Angell, sworn: I am a mahster living at No. 151. I saw the prisoner at the "British Queen" on the night of the 3rd, sitting down near the musicians; I was standing by the bar. I heard a few hard words over there; some one struck the prisoner, but who, I cannot say. When struck he jumped upon the stage and went out by the window, being too smart for his assailants. After that McManus and myself were standing at the bar, and Manning walked up to McManus and struck him across the face with his open hand. I asked him what he struck that man for and he said "Oh, you are another of them, I know you of old." As he said these words something passed over my shoulder and struck Manning. I never know prisoner before.

Prisoner, sworn: I went to the "British Queen on the 3rd of August, and was standing looking at the dancing. I went on the stage and danced, then came down and sat or stood by the musicians. Manning came up to me and ordered me out of the house. Not feeling inclined to go I sat still, and Manning, taking off his shirt, struck me in the face. Some others cried out "go for him," so I thought I would clear out as quickly as possible. I went by the window as I could not get by the door, getting on the way several more slaps in the face. In running towards the Bluff from the window I passed the door. I saw Manning come towards it, as I thought with hostile intentions. I picked up a stone in self-defence. I did not ask anyone for liquor and had money of my own. There was a screen inside the door, and Manning was coming before it when I struck him with the stone. I was standing at the corner of the street afterwards, when some men who had been in there came up. I ran away, but being pursued, by them, I was overtaken and knocked down and beaten. I was taken to the "British Queen" again, and they there continued ill treatment of me. I came from Shanghai by the *Golden Age* on that their day or the day before. I was a sailor on board the *Golden State* and was discharged in Shanghai. I lost my discharge in the row, having had all the clothes torn off me.

William Toms, police-constable, sworn; On the 3rd instant I was called to the "British Queen" at half past ten in the evening. A number of men-of-war's men had hold of prisoner, and the landlord gave him in charge for hitting Manning with a stone. I took him in charge. He was badly bruised all over and had most of his clothes torn off. Manning was lying on the settee.

His Honour remarked that this is one of the usual drunken rows which occur in those vile pot-houses whose proprietors deserve more punishment than those whom they drug with what they call liquor. Prisoner must either have been actually set upon by the companions of the injured man, or he must have been made crazy by the drink which had been supplied to him, otherwise he would not have rushed out of the house by a window when there was a door through which to make his exit. This, however, did not justify him in throwing the stone except in self-defence, but he could come to no decision with such conflicting evidence as had been brought before him, and therefore must discharge the prisoner, who has already been in prison for a week. He should send the papers of this case to the British Consul, who he hoped would join him in trying to suppress these disgraceful public houses.

August 6th, 1876.

INQUEST AS TO THE CAUSE OF DEATH OF JAMES KELLY WHO DIED IN YOKOHAMA ON THE NIGHT OF THE 5TH INSTANT.

THOS. T. B. VAN BUREN, U. S. Consul-General,—*Coroner.*

JOHN MIDDLETON & GEORGE HURLBUT,—*Assessors.*

The Jurors being first duly sworn, the following evidence was taken:

Dr. T. H. Tripler, sworn, stated: I am a Doctor of Medecine practising in Yokohama. I was roused about half-past eleven last night and called to the house of Mr. Clausen, at No. 82, to see a man who had recently died there. It was the man whose body has just been viewed by the Court. His name is James Kelly, and the proprietor of the house told me that he had been a boarder there for several months and was of very intemperate habits, particularly so for the past few days. I was told that he had tried to purchase poison, and that a cat had been poisoned in an adjoining house. I found nothing from examination that would indicate cause of death. I, with the assistance of Dr. Eldridge, held a post mortem examination on the body this afternoon, but I have not had time to complete analysis of the stomach, which will take another day. The cause of death I find to be congestion of the brain, but whether this congestion was caused by poison or intemperate habits I am at present unprepared to state.

Peter Clausen, sworn, deposed: The deceased man, Kelly, died in my house. I have known him for five years. He belonged to Massachusett, U.S.A., and was an engineer by profession, but has been out of work for several months. I noticed he fretted a good deal about being without employment; he drank rather heavily. Mr. Bailey having called to me that there was a noise upstairs, I went up to Kelly's room and found the door locked. I cried out to Kelly, asking him what was the matter; he answered that he had the cramps, and could not get to the door to open it, but begged me to come in. Mr. Kill and I burst open the door and found Kelly lying on his back under the bed. He called for water but could not take it when it was brought. We dragged him out but he appeared to be unconscious of our presence. He had fits two or three times, his hands and feet striking out. We went for Mr. Bailey, but when we came back Kelly was dead. I cannot tell the cause of death. A dog had bitten him and he had spoken of poisoning him; but when he was dying he never said anything about poisoning himself, he only said he had cramps and asked me to go for Dr. Eldridge. Dr. Eldridge was from home, but another man met Dr. Tripler, who attended. By this time Kelly was dead.

John Kill, sworn: What Mr. Clausen has stated is exactly what took place. I saw Kelly about five o'clock, but noticed nothing out of place about him. I know nothing of the cause of his death.

John White, sworn, stated: I live at No. 136, at the "Tennessee House" and have known the deceased some six years. The last time I saw him was between 2 and 4 o'clock yesterday afternoon at my house. I sent a note to Messrs. North, Thompson & Co's, the druggists. It was returned to me. (Note produced). That is the note. I had sent for poison to kill a Chinaman's cat which annoyed me, and they requested me to send some fish which they would doctor for me. The boy returned with the fish just as I was talking to Kelly, and after I told him what I intended to do with them, he asked me if I would not give him part of them as he wanted to poison a dog. I gave him two fish, weighing probably about an ounce or an ounce and a half each. They had been cooked, and Kelly took them away in a piece of paper. He was sober at the time. I heard of his death this morning, and the rumour that the Doctor thought poison had been taken to cause his death, and I thought it my duty to come to the Consulate and state what I knew. The deceased was a pretty hard drinker, lately more so on account of his being out of work. I never saw him with del rium tremens. He was always willing to work.

Adjourned until next day at 5 P.M.

Monday, 7th August, 1876.

Dr. Tripler, re-examined: I have completed the examination of the remains, and in connection with Dr. Eldridge, have made a thorough analysis of the stomach. I found strychnine in the upper part of the small intestines and the stomach, and also some undigested fish. Sulphate of strychnine produced the state of the brain which caused his death.

Dr. Stuart Eldridge, sworn, deposed: I am a practising physician here and made a chemical examination, assisted by Dr. Tripler, of the stomach of deceased and found strychnine well marked, and indubitable evidence of the presence of strychine in the upper intestines; the stomach was empty. The intestines contained a small portion of food, consisting party of fish. Strychnine was unmistakably shown by chemical as well as physiological tests. The cause of death was from strychnine.

Peter Clausen, re-examined: Deceased came into my place about five o'clock, very much the worse for liquor, and when I remarked that he had been drinking again, he made no reply but went out.

A. T. Watson, sworn: I am an assistant chemist with North, Thompson & Co. (Exhibit A. shown.) I saw this paper in our establishment on the 5th instant about 3 p.m. A Japanese boy presented it, and the reply at the bottom was written by me. In answer to this, three small fish were sent me. I put between two and three grains of strychnine in two of the fish. I ascertained the quantity not by weighing, but judged it was about that amount. I wrapped the fish in paper and stuck two labels on, one in the inside of the wrapper, the other on the outside, both marked "poison." It is not the habit of our firm to sell poison to everyone, but it is a rule amongst chemists to dose fish or other food for persons whom they know well. I do not remember supplying White before with poison. I think I saw deceased in our establishment on the 3rd inst. He came asking for some strychnine to poison a dog which had bitten him. We told him simply that he could not have it, and repeated the same words when he asked the reason. He used angry and abusive language. Our reason for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

refusing him was because we did not know him; in fact, we never supply the raw material to any one.

Dr. Tripler, re-called: I have no means of knowing the exact quantity of strychnine in the body. I cannot absolutely say how much strychnine will produce death. The smallest quantity recorded in the United States to produce death is two grains. A person addicted to strong drink, and consequently enfeebled in constitution, would be more susceptible to the poison. Strychnine in a solid form is rather light. The circumstances described by the witness when the deceased was dying, indicate poisoning by strychnine. He died in convulsions.

Dr. Eldridge, re-called: I have no means of knowing the quantity of strychnine present in the stomach; but I am certain it was very small, and from the condition of the stomach and intestines it is evident that digestion had gone on for some time. The smallest dose of strychnine to produce death ranges within wide limits, owing to the peculiarity of the individual and the state of the stomach. Being under the influence of liquor would have no influence upon the effect of the strychnine. This closed the evidence, when the jury brought in the following verdict:

We the jury, are of opinion that the deceased, James Kelly came to his death from the effects of strychnine, administered by himself in fish poisoned for the purpose of destroying cats, he knowing said fish to contain poison. We are also of opinion that more care should be observed by chemists in the sale of poisons than was shown in this case.

(Signed) JOHN MIDDLETON.
GEORGE HURLBUT.

Approved
THOS B. VAN BUREN,
U. S. Consul-General.

August 7th, 1876.

IN H. M. F. M.'s CONSULAR GENERAL COURT.

Before J. J. KESWICK, Esq., Acting Consul-General.

ALEXANDER CAMPBELL *vs.* F. DA ROZA.

August 7th, 1876.

This was claim for $25,000, damages for alleged breach of contract.

Plaintiff appeared personally; Mr. G. P. Ness for defendant.

Mr. Ness objected to the reading of a document which Mr. Campbell had commenced, and the objection was allowed.

A. Campbell, sworn, stated: I had appointed a meeting with Mr. Da Roza on Good Friday, 1874, to talk about a contract for the importation of some candle-making machinery invented by myself, and I gave him samples of the candles, explaining the concern to him. Mr. Da Roza said that the would find the capital, $50,000, within a month. On the 6th of April I gave Mr. Da Roza, in the presence of another person, a prospectus, to which he agreed. This is a copy of that document. One of the clauses secures to me a monthly salary of $800 as manager of the candle manufactory. I received note from Mr. Da Roza on the 17th July, 1874, asking me to call on him; at that meeting he promised to carry out our intentions, and I wrote to him on the subject a few days afterwards, receiving as answer that I should hear from him in a day or two, but that he was very busy at that time. On the 22nd August I saw him at his own special request, and as he had not carried out his previous promises, I asked him if there was any difficulty about the money, but he showed me his bank book with $150,000 to his credit. In September I went to him again, in company with Mr. A. G. Thompson, when Mr. Da Roza agreed again to everything that had been previously arranged, and asked me to call again in a day or two, when he would call in Mr. Ness and have a final contract settled.

I went on the 10th September, but Mr. da Roza said the lawyers had not come, and he wished me to go with him to see Mr. Goto in the evening. I grumble at the delay, and Mr. da Roza told me not to speak in such a manner or he would have nothing more to do with me or my Company. I then left.

Cross-examined by Mr. Ness: I sue *in formâ pauperis*. The agreement on Mr. da Roza's part, was to have been to furnish $50,000 to start a company for the manufacture of Japanese candles by machinery, and by a clause to be inserted I was to have a salary of $800 per month. The agreement was never signed. Mr. da Roza has not, as far as I am aware, derived a cent of profit from our transactions.

A. G. Thompson, sworn, said in answer to Mr. Campbell: I went with you to Mr. da Roza's on Good Friday, 1874, and have since been with you repeatedly on the same business.

Cross-examined by Mr. Ness: An agreement was concluded between Mr. Da Roza and Mr. Campbell on the 6th April. I believe the business was concluded when I went with a letter from Mr. Campbell on the 7th August, 1874. The agreement which was to have been signed in September, was exactly the same as that of April 3rd. I am not aware that the written agreement was ever signed. Everything was concluded on the 13th September, and it was then agreed that the document would be signed on the 16th.

Mr. Da Roza, sworn, in answer to Mr. Ness: I am defendant in this action, and never entered into an agreement with plaintiff. He asked me to aid him in floating a candle making scheme, but I eventually abandoned the idea of meddling with it, because I thought he was trying to impose upon me. I have given no other reason for breaking off our negociations to any one.

Mr. Ness, in summing up, said that the only difficulty in this case was to treat it seriously. When Mr. da Roza found that Campbell wished to compel him to enter into a contract he turned round and threw Mr. Campbell off. There was never any agreement in writing. Plaintiff and his only witness do not agree in their evidence. Mr. Campbell was the whole time urging Mr. da Roza to come to a definite arrangement, but this was never arrived at, as Mr. da Roza broke off the negociations when he found Mr. Campbell becoming importunate.

Mr. Campbell argued that it was not requisite for an agreement to be in writing unless it was for a year; he was entitled under a verbal agreement to eight months' salary.

Judgement reserved.

Wednesday, 9th August, 1876.

JUDGMENT.

The plaintiff sues for $25,000 as damages, said to have been sustained by the defendant's failure to carry out a contract to furnish $50,000 for the establishment of a Company for the manufacture of candles, and to engage the plaintiff as manager at $800 per month, with a share of profits. The defendant denies that any such contract ever existed.

After hearing and weighing the evidence on both sides, I find that the plaintiff has failed to establish the agreement on which his claim is based. It is true that a promise, or an agreement amounting to a promise, by the defendant to furnish $50,000 and to engage the plaintiff is testified to, both by the plaintiff and his witness Thompson, but they furnish no evidence of a consideration to render such a promise (had it been made) binding. Looking, however, at the verbal and written evidence generally, I have little hesitation in concluding that no definite promise or agreement binding on him was made, or entered into by the defendant.

There doubtless was a request for pecuniary aid on the part of the plaintiff, and it may be that the defendant, by not at once rejecting the scheme, caused the plaintiff to entertain hopes which were not afterwards realized; but the evidence satisfies me that no definite agreement was arrived at. In this view I am confirmed by the letters from the plaintiff and Thompson before me, and also by their evidence as to what took place at the two interviews in September, immediately preceding the breaking off of all negociations. The first were evidently written with a view to urging the adoption of the scheme on the defendant, and plainly indicate that, at the time they were written, no agreement had been concluded. Indeed, in one of them appears the expression "I must now ask you to conclude the business," and another states when these words were used a great favour was being asked, not a demand made. The result of the interviews in September was that an agreement should be concluded in a written document which a lawyer was to prepare, but which, as a matter of fact, never was drawn up. This again shows that nothing was to be considered final until the terms were reduced to writing and signed.

The plaintiff's petition is accordingly dismissed.

(Signed) JAMES JOHNSTONE KESWICK,
H. M. F. M.'s Acting Consul-General.

Tuesday, August 8th, 1876.

Joaquim Riberio was brought up on a charge of having entered and stolen from the house of Nakagawa Kiuta, jeweller in Ichome, Homura, several articles of jewellery, on the night of Friday last, the 4th instant.

Nakagawa Kiuta deposed: About ten o'clock on Friday night last, a thief entered my house in Ichome, Homura, and stole some jewellery, I being absent at the time. A girl named Uraya came to my place on the day following about two o'clock, and showed me a ring, which I at once recognized to be one of the missing articles. I went to the Police Station, taking the ring with me, and informed the police of the robbery.

Sergeant Lockston stated: On Saturday evening, about half-past nine, Mr. Takebayashi, the police interpreter, told me that a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

foreigner was in the police station on the Bluff. I went there and found prisoner, who told me, when I asked him where he had got the ring, that he had bought it in Yokoska. I tried to put the ring on his finger but it was too small, and when I pressed him to tell me where he had got it in Yokoska, he said he brought it from a place several miles beyond Yokoska. I asked him why he had not given the ring to the girl before he had been some 15 or 20 days here, and, in reply, he said he had it tied for safety to a string in his pocket. I thought it looked suspicious, seeing he had been to this woman's house so frequently, so I had him taken to the station. After getting a warrant I had his boat examined next day, and all the rest of the stolen property was found in the locker.

Constable Jerry Mansbridge, and Takebayashi, interpreter, confirmed Sergeant Lockston's statement.

Uraya deposed: On Saturday, near my own house, I gave prisoner something to drink and he gave me the ring in return, saying "thank you." I afterwards went to Mr. Nakagawa's, the jeweller's shop, in order to ascertain the value of the ring, when he told me the ring was his own, and that he had missed it the night before, so I gave the ring up to him.

Joaquim Rebeiro, prisoner, stated: On Friday afternoon, about 4 o'clock, I went to Nakagawa's house and went to sleep there. Some time afterwards I went out to get some food, returning at night, but found the place deserted. I supposed they were frightened at seeing me, as they had tried to fight me before. I saw the box with the jewellery on the shelf, and I took it away to take care of it. I saw the girl Uraya soon after and gave her a small ring. The constable arrested me in the afternoon, saying he was going to search my boat, for I was suspected of having stolen the jewellery. The girl Uraya told them I had given her the ring. I said I bought the ring at Yokoska, but that was untrue, and I admitted afterwards that the ring had been taken out of the stolen box.

Adjourned until this morning, Wednesday the 9th instant, at 10 a.m.

Wednesday, 9th August, 1876.

Joaquim Riberio, accused of having entered and stolen from the house of Nakagawa Kintaro, jeweller in Ichome, Homura, several articles of jewellery on the night of Friday last, the 4th instant, was brought up for judgment.

His Honour, after reading over the evidence of yesterday and finding that no further evidence was forthcoming, ruled that the charge was merely one of petty theft, as prisoner had not actually entered the house with burglarious intent, and therefore sentenced him to one month's imprisonment in the British Consular jail.

SILVER.

(Pall Mall Gazette.)

The passage by the French Senate of the bill authorizing the Government to limit or suspend the coinage of five-franc pieces marks a fresh stage in the progress of the silver question. In the course of the present year that question has occupied the attention of no fewer than four great Governments. Shortly after the meeting of Parliament the House of Commons appointed a Committee to consider the subject. Almost as soon as the new French Legislature assembled notice of an interpellation on the question was given, and in consequence the bill to which we have referred was introduced. In the United State Congress the matter has been under, we might almost say, constant discussion; and in his budget statement Sir W. Muir gives to the topic great prominence. At the same time Germany is preparing to demonetize the last of her old silver coins; and Switzerland is chafing under the restraint imposed upon her by her association in the so-called Latin Union. The simultaneous attention which the question is attracting in so many countries, so wide apart and so differently circumstanced, affords sufficient evidence of its urgency. The bill passed by the French Senate does not attempt any solution of it. It merely allows the Government to preserve an expectant attitude, to use M. Léon Say's own phrase. When the measure was introduced in March last, two amendments were moved to it. Those, with the bill itself, were referred to a Committee composed of all the distinguished economists in the House. They entrusted to M. Rouland, the governor of the Bank of France, the task of drawing up the report. As a matter of course the document was favourable. The Governor of the Bank is of opinion that the causes of the fall in silver are temporary, and that it would be rash, therefore, to demonetize the metal. But, at the same time, he approves the caution of the Minister of Finance, who asks for power to protect the country from serious loss. The bill came before the Senate again last week, and a two day's debate took place upon it. M. de Parieu, whose interpellation first raised the question, is wholly dissatisfied with the report of the Committee, of which he was a member. He sharply criticized M. Rouland's report, which, he said, was based on a number of ifs. M. Léon Say defended his bill. It is impossible to decide at present, he contended, whether the fall in silver will last or not. In such uncertainty it would be folly to incur the expense, inconvenience, and danger of a monetary revolution. But, at the same time, the bill recognizes that all this may have to be done, and consequently it asks for powers to prevent the change from becoming more difficult than it already is. But, he added, it might be that he would not use those powers after all. Ultimately the bill passed the Senate.

The position of France in this matter is very difficult. Apart from the enormous loss that she would have to incur if she were obliged to get rid of the immense mass of silver coin in the country and the formidable cost of providing gold enough to take its place, there are political and international difficulties in the way. In 1865 she formed with Italy, Belgium, and Switzerland what is called the Latin Union, and to this union Greece has since been admitted. The alliance was to last for fifteen years—that is, till 1880; and these countries bound themselves to maintain the same money. Until 1880, therefore, France can make no change without the consent of her allies; and even then she is not likely to break up the union. But the difficulty will be to preserve it; for Switzerland is in favour of the single gold standard, while Italy is opposed to change. Up to the present, France and Belgium are undecided. In 1873, however, all the members of the union, in consequence of the depreciation of silver, felt compelled to limit the coinage of that metal, and the arrangement has been renewed from year to year. Switzerland last year did not avail herself of the permission to coin the quota allotted to her; and France appears to be following in the wake of Switzerland. But her public men are as yet unable to make up their minds. Among ourselves the difference of opinion is scarcely less. The evidence taken before the Committee of the House of Commons is strangely conflicting even as to matters of fact. Thus bullion merchants whose circulars are quoted as authorities on the subject differed in their estimates of the annual production of the mines by several millions sterling. In India, again, Sir W. Muir, while mourning over the loss to the revenue caused by the depreciation of silver, has no opinion to offer as to whether the phenomenon is to be regarded as permanent. And in the United States there is equal uncertainty. One school points out that silver is now as depreciated as greenbacks, and that consequently resumption in that metal might be effected without loss. The demand thus created, they argue, would raise the value of silver, the example would then be followed by France, and thus the old purchasing power of the metal would be restored. The majority, however, is opposed to the proposal, so far, at least, that it will not make silver a legal tender for all amounts. Yet an Act was passed last March substituting silver for the fractional currency, and last week a bill passed the House of Representatives which is expected to pass the Senate also for the coinage of silver to the value of £6,000,000 sterling additional. Congress, it will thus be seen, is coquetting with the plan, yet afraid to commit itself. Opinion being thus uncertain in the principal countries of the world, we will refrain from offering any speculations of our own on the subject. We shall perform for our readers a better service by tracing briefly for them the history of the question.

Although the value of silver changes less than that of most other commodities, and on that account, among others, the metal has been selected as a medium of exchange or standard of value, at certain periods of history its purchasing power has undergone very great alterations. Between the reign of Edward III. and the accession of Elizabeth silver rose steadily in value; at the end of the period its purchasing power being double what it was at the beginning. In other words, one ounce of silver at the accession of Elizabeth would buy almost as much as two ounces in the time of Edward III. The causes of this extraordinary rise seem to have been the gradual exhaustion of the old mines and the growth of wealth and trade in Europe. The discovery of the mines of Mexico and Peru caused a still greater and more rapid fall, so that at the accession of Charles I. the purchasing power of silver was only about one-third of what it had been at the accession of Elizabeth. During the following two centuries and a half there was little alteration. The working of the Spanish American mines thus so reduced the value of silver that it took three ounces to buy what one ounce previously would have bought. Silver thus became thrice as cheap as in the middle of the Tudor period, and fifty per cent,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cheaper than at the time of Crecy. The mines of Mexico and Peru yielded gold as well as silver, but the latter far more abundantly. Gold, therefore, also fell in value, but not so much as silver. In the Middle Ages one ounce of gold exchanged for ten of silver; in 1792, when the United States adopted the dollar coinage, they fixed the proportion at one to fifteen. In other words, the silver dollar was to weigh as much as fifteen gold dollars. By this Act, silver was overvalued, and, accordingly, in 1803, when France adopted the franc system, the Minister Gaudin fixed the proportion at one to fifteen and a half. Gaudin undervalued as Hamilton overvalued silver, and the consequences were very curious. Fifteen dollars' weight of silver in the open market and as bullion would not buy one dollar's weight of gold, but when coined it would. Consequently it was profitable to every person who had silver to get it coined. Furthermore, it was profitable to every person who had to pay money to pay it in silver, for the silver passed for more than it was intrinsically worth. Silver, therefore, was alone sent to the mint, and silver only passed from hand to hand. What became of the gold? It was legal tender just as silver was, for the United States adopted the bi-metallic system. Either gold or silver, therefore, would discharge debts to any amount, but to pay gold would be to incur loss. Consequently, it disappeared from the American circulation, and was exported to France. France also adopted bi-metallism, but as she undervalued silver it would have been a loss to send it to the mint. Accordingly, silver was exported from France to the United States in return for the gold sent by the latter. The United States, finding their gold gone, decided upon getting it back; and in 1834 they revalued the metals, fixing the proportion then at one to sixteen. They thus passed from one error to another. As they had previously overestimated silver, they now under-estimated it, and the result was precisely the reverse of what had before occurred. The whole of the silver was exported, and gold took its place. So complete was the substitution, indeed, that since 1854 not a single silver dollar has been coined by the American mints, although the law making silver a legal tender equally with gold remained upon the Statute Book until 1873. Here we have a double illustration, as complete as if it had been intended for verification, of the influence of mere coinage laws on the movement of the precious metals. In the course of half a century we find gold expelled from the United States and silver from France, and then silver swept away from the former and gold from the latter. The fact is worth bearing in mind at a time when Germany is demonetizing a silver coinage and substituting for it a gold one

The discovery of gold in California and Australia had a considerable effect upon the monetary systems of the world, but to a far less extent than the discoveries of the sixteenth century. M. Juglar has compiled a series of tables which show what that effect was, and which are both instructive and curious. From 1850 to 1864 the excess of gold imported into France over that exported amounted to the enormous sum of £136,000,000 sterling. On the other hand, the exports of silver exceeded the imports by as much as £63,000,000. While, therefore, the amount of the precious metals of France was increased by £73,000,000, not only was the total augmentation in gold, but also a not much smaller value in silver was displaced by that metal. The first effects of the gold discoveries was thus to undo what had taken place between 1834 and 1854, and to replace gold in the French circulation. But the exported silver was sent, not to the United States, but to the East. The public works policy initiated by Lord Dalhousie, the Mutiny, and the demand for Indian cotton caused by the American Civil War, the opening up of China and subsequently of Japan, all created an extraordinary demand for silver, which the abundance of gold enabled Europe to spare. In the period 1864-74 a change takes place. The excess of the imports of gold over the exports in this period is less than £68,000,000, or about half the former excess. But in the case of silver, instead of an excess of exports, we now find an excess of imports amounting to £49,000,000. Thus in the latter period there is an excess of imports of both metals, but the imports of gold have greatly fallen off, whereas those of silver have taken the place of a much larger deficit. And this, be it remembered, occurred in spite of the large sums of silver exported to Germany to pay the indemnity! Another fact to be borne in mind is that the change set in before the war, consequently before the demonetization of silver in Germany, before the depreciation of silver showed itself, and before the increased production of the American silver mines. None of these causes, therefore, can have produced the change of current in the imports and exports of silver, which, without going in detail through the figures, we may say, is noticeable in the case of England as well as in that of France. In the spring of 1866, it will be remembered, the American Civil War came to a close. The Southern ports were then opened; American cotton began to arrive in Liverpool, and the demand for the Indian article fell off. The original source of the evil would thus seem to be the cessation of the Indian demand for silver. Europe had become fully supplied with gold, and had no use for both metals. At the same time, it must not be forgotten that most of the great nations are under a régime of inconvertible paper, and that resumption may prove a complete remedy.

Let us now in the first place inquire what is the amount of the depreciation of silver, and when did it begin. From a table published by Messrs. Pixley and Abell, the well-known bullion merchants, we learn that in the London market, which, we may say in practice, takes the price for the world, the price of silver from 1833 to 1850, both inclusive, was a fraction over 59*d.* per ounce. It never fell to that figure, and never reached 5*s.* In 1850 it passed 5*s.*, in 1851 it reached 61*d.* From that year to the end of [illegible] it ranged above that figure, occasionally rising to 62*d.*, and even 63*d.* per ounce. From 1867 to 1872, both inclusive, the price fell to a fraction over 60*d.* In the two following years it stood [illegible] the average of last year we are unable to state, but [illegible] the price of bullion indicates the fall has been constant and rapid, the price last week being about 51¾*d.*, or say a fraction under 52*d.* Between 1850 and 1872, it will thus be seen, the price averaged about 61*d.* an ounce. At the end of 1874 the fall had brought the price only to the level of 1845, thirty years before. But during the past eighteen months the fall has been fully 10*d.* from the highest prices, and about 7½*d.* from the average of 1874; that is, a fall of about one-sixth, or 3*s.* 4*d.* in the pound from the highest price, and about 13 per cent. in the last eighteen months.

LITERARY SUCCESS.

(Saturday Review.)

Wordsworth went a long way towards adopting the doctrine that the immediate success of a writer is normally in the inverse proportion to his merits. The attractions of such a doctrine for the unpopular founder of a new school are palpable. Even Wordsworth's grand self-esteem required some plausible explanation for the indifference or ridicule which greeted the *Excursion* in the generation which went mad over Scott's Lays and Byron's *Childe Harold*. We need not at this moment speculate upon the causes which delayed the wider recognition of Wordsworth's poetical significance, nor discuss the relevancy of the examples brought to justify his theory. Undoubtedly many great works have only shown their true proportions after passing the ordeal of more than one generation of critics. And yet, though contemporary reputation is not an accurate measure of permanent fame, we should be inclined to hold that the divergence is considerably less than Wordsworth chose to maintain. Meanwhile the doctrine is naturally regarded with favour by a good many people who have thus much in common with Wordsworth, that nobody cares for their poetry. It would be almost brutal to tear away the transparent device by which this palpable fact is reconciled to their vanity. If a man is seriously convinced that his want of popularity measures the degree by which he is too good for the world at large, we should not care greatly to undeceive him. Let him rejoice in the consolation which cannot be taken from him—the imaginary applause of future generations. Conceit of this kind need not excite much resentment, for it is mischievous only to its proprietor.

Sometimes, however, the sentiment takes another form. Instead of quietly wrapping himself in the consciousness of his own merits, the unpopular author takes to abusing the world. He denounces his fate, and holds that either some strange combination of accidents, or the jealousy of his brethren, or the malevolence of critics, has prevented him from obtaining the reputation which is his due. He does not hold that temporary obscurity is a natural incident of genius, and therefore a cause for some secret complacency; but that fame is distributed capriciously to good and bad writers alike. His excellences would be comprehended by the world if only the world could once be got to look at them; but he is mocked by fortune, or possibly ill treated by his publishers. This theory is a really mischievous one. Its victim, thinking that publicity is the one thing needful, tries to obtain it by unworthy means. In some cases, though the expedient is too expensive to be common, he takes to advertising of the ordinary kind. More frequently he tries to advertise himself indirectly by adopting some oddity of manner and sentiment or advocating some absurd paradox, purely for the sake of forcing himself into notice. Men of really fine abilities have fallen into such errors often enough to make it worth while to inquire how far does mere accident—this is, some cause

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

independent of the real value of a book—determine its acceptance with the public?

We may begin by assuming one principle. Every writer who is at all entitled to be a writer—every one, that is, who has something to say or a new mode of saying something—has what we may call a natural circle of readers. There is, that is to say, a certain number of persons scattered up and down in the country who are prepared to receive his teaching, and are attracted towards him by a spontaneous affinity. They are so many potential disciples who will appreciate him, if he is once fairly brought before them. A writer, of course, has, as Pope said of Johnson, to be *detecté*. His writings may circulate in such obscure channels that they may not come to the notice of his spiritual congeners. Sometimes, as in the case of Bunyan, the circulation may of itself create a prejudice against him in the minds of the official dispensers of praise. Critics of the Addison and Pope school had a good deal of positive prejudice to surmount before they could see much merit in the favourite of an ignorant set of Dissenters. Or, again, it is possible, and, in the case of a very original writer, it is probable, that he may have to form the taste which he is to gratify. His style may repel at the first glance, as was the case with many readers of *Sartor Resartus*, though a more familiar acquaintance with it may convert the disgust into enthusiasm. The love of any very novel form of expression must be an acquired taste; and people are slow to acquire a taste until they have been assured on very good authority that the labour will be rewarded. Such difficulties have undoubtedly retarded the growth of many high reputations. But they are difficulties inherent in the case. A man who chooses to adopt a new language, or to write for a non-literary class, has only himself to blame if his admission to high honours is slower than in the case of less ambitious writers. Hume complained bitterly of his want of recognition by his contemporaries; but it was obviously unreasonable in a man who wrote upon obscure metaphysical questions, and took the side most opposed to the prevalent beliefs, to count upon speedy success. If we would alter men's habits or principles, we must have the reformer's virtue, the power of waiting patiently for the growth of the seed sown upon uncongenial ground.

Such obstacles to fame may be regretted; but it is unreasonable not to be prepared for them. We may add, however, that they are less troublesome now than of old, and that they are less aggravated by those accidental hindrances which would form a more legitimate ground for some annoyance. Very few writers, in fact, of any moderate power have much difficulty in reaching their readers. The means of publication are too easy, and the circulation of literary knowledge is too rapid. We are much more inclined to be surprised at the speed with which any promising author becomes known to the world. Two or three articles in a magazine suffice to make a name known to all readers interested in the writer's subjects. Almost every book of the slightest pretensions is certain to be reviewed in a dozen journals. The reviews, it is true, are often such as not to flatter the vanity of the author; and we need not deny that they are often careless or unjust. But the damnatory power of critics is greatly exaggerated. If a book is condemned on account of its opinions, the condemnation acts as an advertisement to the opposite party. If its purely literary qualities are unjustly condemned, the criticism has less of this indirect utility; but even in such cases it is a fact that the book which suites a general taste very soon gains a circulation in defiance of the most authoritative condemnation. Indeed the real misfortune is of the opposite kind. The chance that a good book will meet with no recognition is far less than the chance that a bad book will be absurdly overpraised. The commendations of thoughtless critics do incomparably more mischief than their attacks. The worst of all services to a rising author is to flatter his vanity and encourage him to relax his efforts. It might be invidious to bring forward examples; but our memory must be very short if it does not present us with many instances of men of high promise who have been corrupted by premature adulation, and have gone on trying to repeat an early success when they should have been pushing forward to more arduous attempts.

Of all complaints, in short, the least founded seems to be the complaint that a man has not been able to bring himself into contact with his natural circle of readers. The means of publicity are so abundant, the art of advertising has been brought to such a pitch, the very assaults of critics are so often indirectly useful, and the silent or, as we may say, the underground, spread of reputation is so rapid and certain, that a writer may count with almost complete confidence on being brought into contact with all who are competent to appreciate him. The one real danger is that a great man may be for a time lost in the throng of factitious reputations, or that the public taste may be preverted by the reckless adulation of third-rate writers. The last danger is indeed a serious one; but it does not imply individual injustice; and no man of real power need grudge the temporary participation of his glory by inferior writers. The grain will be sifted from the chaff soon enough, when they are brought into real competition amongst tolerably intelligent consumers.

When a man has once found his audience, he has little more cause for complaint. It is true that the kind of reputation which is most flattering to the vanity and most profitable to the purse comes at a later period; but it is a reputation of more questionable value. Every considerable writer is in some sense a prophet. He has a doctrine to preach and a sect to form. The sect, as in other cases, consists in its first stage of genuine believers and persons who can really appreciate his merits. But after a time the sect makes its fortune, and then begins to attract more worldly elements. The admirers of any great man, a Shakspeare, or a Goethe, consist of three classes. There is the innermost circle of those who read and appreciate; beyond these is the more numerous circle which reads and only affects to appreciate; and, finally, there is the very much larger body which affects to appreciate without taking the trouble to read. A man of mark is surrounded by such bodies of disciples during his lifetime. When his name becomes the object of a literary cult, the readers who are really in sympathy with him propagate their creed with all the energy of new proselytes. "Not appreciate the great Smith or Jones! You must be devoid of the philosophical spirit or the æsthetic faculty." People are for the most part cowardly beyond description in matters of taste, and a devoted band of literary janissaries soon spreads the new doctrine which, as it assimilates heterogeneous elements, speedily degenerates into a superstition. Up to this period the name of the author has been made popular by his books: after it the books are made popular by the name. Praise turns into flattery and fame into notoriety; and another illustration is given of the truth of the famous maxim that nothing succeeds like success. It would be very pleasant, we have sometimes fancied in a cynical mood, to be a celebrated author, because we could then find a market for so much unsaleable *trash*. We could almost find in our hearts to wish for the premiership with a view to publishing a novel.

It is natural, nay, it is almost inevitable, that a man who is weak enough, as everybody is, to care for fame at all, should be anxious to gain such a position. In fact, it is the proof that he has really made an impression upon the world. It means that his writings have become a true, spiritual force, and therefore, as is inevitable, are stirring up a good deal of mud besides setting up more desirable currents of opinion. A man cannot set his mark upon an age without producing much questionable adulation as well as much groundless abuse. But a wise man should school himself to be as little anxious as possible for these inseparable incidents of all good work. For it is such anxiety which produces a spurious imitation of the genuine process. A popularity which overflows the bounds of genuine appreciation may be attained in more ways than one. It may be, as we have said, the result of the zeal of genuine disciples impressing their belief upon others. But it may also be the result of pandering to the ephemeral tastes of the day. The great man is admired by many who do not understand him, his because praises have been sung by those who do. The charlatan is read by thousands who do not really care for him, because he is the fashion. The gregarious tendency of human beings leads them to worship at the shrines of false deities as well as at the more sacred temples. To flatter the taste for literary tinsel, to indulge in bombast or tall talk or sentimentalism, and to succeed in thus winning a wide reputation, requires very great dexterity, which is easily taken for more serious talent. The transitory nature of many great reputations, the vast success which has been followed by utter oblivion, shows undeniably that the feat has been accomplished. And, as a rule, it has been due to the postitution of real genius. A true teacher of men has abandoned his function and condescended to discount his success in consideration of immediate popularity. That is precisely the danger which underlies the ordinary complaints against the injustice of readers and the unpopularity of great authors. The true meaning of such lamentations is too often that the complainer is prepared to succeed by foul means as he cannot succeed by fair. The best antidote is the recognition of the fact that a man of true literary force is at the present day in little danger of being kept in obscurity by accidental causes: and that so far as his fame is retarded by intrinsic causes, that is, by the imperfect culture of his audience, he has no right to complain of a difficulty upon which every man must reckon who dares to be

Digitized by Google

original. A man may be tolerably certain of finding full appreciation of all his genuine merits; he has a good chance or runs a great risk of finding sham admirers of his merits and flatterers of his faults; if he has any cause for complaint, it is for complaining of the temptation, not of the inadequate appreciation.

Shipping Intelligence.

ARRIVALS.

Aug. 4, *Sumida Maru*, Japanese steamer, 690, Gorlach, from Shanghai and Ports, Mails and General, to M. B Co.

Aug. 5, *Sunda*, British steamer, Lee, 1,689, from Hongkong, July 29, Mails and General, to P. & O. Co.

Aug. 5, *Chili Maru*, Japanese steamer, Drummond, 800, from Osaka and Kobe, Aug 3, Mails and General, to M. B. Co

Aug. 5, *Bengal*, British steamer, Douglass, 1,338, from London viâ Hongkong, General, to Wilkin & Robison

Aug 6, *Quang Se*, British steamer, Jones, 1,778, from Hongkong, July 29, General, to Jardine, Matheson & Co.

Aug. 6, *Oceanic*, British steamer, Parsell, 3,700, from San Francisco, July 18 Mails and General, to O. & O. Co.

REPORTS.

The *Cremona* reports pleasant weather throughout the voyage

The *Sunda* reports: Left Hongkong 29th July, 4 p.m., had light variable winds to Oksu, thence strong S.W. monsoon to north end of Formosa; barometer falling to 29.45. Off Tamsui the glass osc, wind veering to the North East, moderate with heavy S. E. swell; near Yokohama had strong E S E winds and heavy easterly sea; thence up had moderate easterly winds and fine weather. Passed the S S *Quangse* off the north end of Formosa on the 31st ultimo and a three-masted steamer this morning at 2 o'clock.

The *Bengal* reports:—Left Hongkong 30th July, at 10 a.m.; had fine weather to Chapel Island, where a gale set in from the N. E, veering to the westward, blowing a hurricane, barometer down to 22 deg A quantity of cases of acid stowed on deck, breaking adrift, through the heavy seas which broke over the ship, were jettisoned, but the wind shifting to S. W. the gale abated, having lasted 24 hours. Thence strong E. N. E. winds and heavy swell to Oosima; afterwards moderate Easterly winds to port, arriving at moorings 5 h August, 2h, 45m. p m., making the passage in 6 days, 4 hours, and 45 minutes

The *Gaelic* reports having had a very rough passage all the way up and having been on the edge of a typhoon on the 4th inst.

The German schooner *Helene* reports:—A very rough passage from Liuchoten Islands; E.N E. and N.E winds with heavy sea.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley or the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Since the last weekly report a good general business has been done, and in some instances prices show an improvement. Exchange has gone up to 4 4⅜ for 6 months' Bank Bills on London, which, of course, even without any advance in prices, makes them considerably better for importers. For *Yarns* the demand runs chiefly on medium 16 24 and good 28 32, for which an advance of about 50 cents per picul may be quoted; low 28 32 being almost unsaleable. In 38/42 little is doing, and only best qualities are saleable. *Shirtings* 9 lb. good chops continue in request, and have further improved in price; 8¼ lb. good makes keep firm, but other weights and qualities have not yet reached a satisfactory point, though they are not any longer in the same depressed state in which they were some time ago. In *Velvets* only small sales have been made, but prices keep firm. In *T. Cloth* little is doing. *White Shirtings* are quiet and *Turkey Reds* dull. Of *Drills* some sales of 14 lb. at lower prices are reported, and quotations must be reduced. *Taffachelass* are saleable in small lots at about $2 per piece. At the close a general demand still continues and prices are very firm.

Grey Shirtings:—

7 lbs.	38½ yds.	39 in.	per pce...	$1.70 to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	2 00 to 2.45
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1 95 to 2 50
9 lbs	38½ „	44 in.	„ ...	2 30 to 2 80
T. Cloth 7lbs.	24 „	32 in.	„ ...	1 55 to 1.75
„ 6lbs.	24 „	32 in.	„ ...	1.15 to 1.25

White Shirtings:—

60 to 64 reed	40 yds.	35 in.	per pce.	2.30 to 2.50
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb...	0.75 to 0 97½
Black Velvets	... ...			8.00 to 9.00
English Drills	15 lbs.	40 yds,	30 in.	2.80 to 3.00
Taffachelass	12 yds,	43 in....	*nom.*	2.00 to 2.20

Yarns.—

No 16 to 24	per picul..	$30 00 to 33 00	
No. 28 to 32	per picul..	$32 00 to 38 50	
No. 38 to 42	per picul...	$39.00 to 42.00	
Reverse Twist ... 16-24 ...	„ ...	33.00	

Woollens.—In consequence of the sudden rise in exchange transactions in this staple have been on a larger scale for the last week, principally in fancy Bradford goods and *Black Orleans*, which have been in good demand, but prices remain as last quoted. *Mousselines de Laine* continue also saleable at former prices.

Plain Orleans	40—42 yds	32 in....	6 50 to 7 50
Figured Orleans	29—30 yds	31 in....	4 75 to 5.25
Shimagoro	30 yds.	30 in....	4.25 to 5.75
Italian Cloth	—30 yds	32 in....	0 25 to 0 33
Camlet Cords	29—30 yds	32 in....	6 25 to 7 25
Camlets Asstd.	56—58 yds.	31 in....	18 50 to 19 00
Lastings, Japan	22—30 yds.	32 in....	13 00 to 14 50

„ No. 6 E-pak	„ ...	$3 80	
Swatow...	„ ...	$3 00	
Daitong	„ ...	$2.65	
Japan Rice	„ ...	$2 27	
Kerosene Oil	„ ...	$2.20	

Kerosene Oil.—There have been fair sales at prices varying from $2.20 to 2.30.

EXPORTS.

Silk.—Business has continued active at advancing prices up to the 10th instant, but in consequence of a rise in exchange of about 10 per cent., buyers have not been so eager, and since the close of the American mail the market is decidedly weaker. We give below the highest quotations, on which concessions of 15 to 20 dollars per picul have been obtained.

Settlements since the 5th instant are 1,070 bales of Hanks, and 360 bales of Oshius and other sorts. Arrivals amount to 1,890 bales, leaving a stock of 600 bales.

Total export up to date 4,923 bales against 560 bales last season.

	At Exchange 4/1¾ in London.	*At Exchange 5.56 at 6 m.s. in Lyons.*	
Hanks.—Extra to No 1...	$840 to 860	32/3 to 33/	90 to 92
„ Best No. 1 & 2 .	$8.0 to 830	31/3 to 32/	87 to 89
„ Good No 2	$790 to 8.0	30/6 to 30 10	85 to 86
„ Medium No 2½	$770 to 7.0	29/9 to 30/1	83 to 84
„ C'mon. No 3...	$750 to 760	29/ to 29/5	81 to 82
„ Inferior No 4 & 5 .	$730 to 740	28/4 to 28/9	79 to 80

	At Exchange 4/1¼ in London.	*At Exchange 5. at 656 m.s. in Lyons.*	
Oshiu—Good & best ..	$790 to 810	30/6 to 31/3	85 to 87
Medium	...$750 to 770	29/ to 29/9	81 to 83
Kukida.	$820 to 900	31/8 to 34/3	88 to 96
Hamatski.....	$630 to 710	24/8 to 27/7	69 to 77
Soday.	$600 to 650	23/7 to 25/5	66 to 71
Taysaam sorts.....	$480 to 550	19/2 to 21/9	53 to 60

Tea.—Our Tea market continues very quiet settlements only amounting to 1,100 piculs, and stocks remaining unaltered. The rise in exchange has almost checked business and prices close dull shewing a decline of $2 per piculs.

Common	...$10.00 to 12 00	Fine	...$23 00 to 29.00
Good Common	... 13.00 to 14 00	Finest	... 30 00 to 35 00
Medium	... 15 00 to 17.00	Choice	... 40.00 noml.
Good Medium	... 18 00 to 21 00		

EXCHANGE AND BULLION.

Exchange.—There has been again a very large business doing during the past week at daily advancing rates, which still look firm at quotations.

Rates close as follows:—

STERLING—Bank 6 months' sight.....	4s 4¾d.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. tf.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 34.] YOKOHAMA, SATURDAY, AUGUST 19, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

A descent from the summit of Fusiyama was made on Thursday last as follows:—

	h.	*min.*	*a.m.*
Left the summit	5	50	
8th Rest-house	5	58	
Tea-house, entering the wood on the descent	6	30	
Maga-ishi,	7	00	
**Waradji* tree	7	15	
Porch outside Shubashiri	7	40	
Tea-house at ,,	7	45	

Total time occupied in the descent from the summit to the Tea-house at Shubashiri, 1 h. 55 min.

In a short note written about this time last year giving a few particulars of a descent of the mountain, the place then erroneously called Chuchikiba is that now properly designated Maga-ishi. It will be recognized by all visitors to Fusiyama as the resting-place at the end of the straight road leading from Shubashiri to the actual foot of the mountain, beyond which no horse or *kago* is allowed to go. Chuchikiba is at some distance above this point. The correction makes, of course, no difference in regard to the time occupied in the descent, but it relieves the details of any possible perplexity which might occur to any one who knows the two stations and their exact situations on the mountain.

As the visit to the mountain here referred to was not without one or two incidents of passing interest, we will give a few details regarding it in our next issue.

During the last week the planet Venus has been visible at mid-day, we believe we might say all day, only that the cloudy state of the sky has prevented her being so conspicuous as she otherwise would have been. We believe her appearance was first observed at about 1 p.m. on Friday, the 11th, and by some the brilliant planet was thought to be a comet. On Wednesday, the 16th, we were fortunate enough to obtain a glimpse of her as she appeared about mid-day between the sun and the moon. The only previous case of this phenomenon which has happened in our recollection was at Newchwang six or seven years ago, when Venus was seen by several persons there at the zenith about mid-day. What the particular conditions are under which this unusual visibility takes place, we are not astronomers enough to say. Our impression is that many cases are on record. The planet, as seen in the night at three or four o'clock a.m., has been remarkably brilliant during the last week.

Another astronomical phenomenon has also to be recorded, namely the appearance of a comet, which has been visible during the week, after nine o'clock p.m., in the north-eastern region of the sky. At present it is a very nebulous, obscure little object, its position some way lower than, and to the right of, the constellation Cassiopea. We have been told that it is approaching the earth, and may probably be expected to become more brilliant and conspicuous shortly.

Amidst all the persecution of the press which is going on in this country, and the complaints of hard times which reach us from all sides, it is pleasant to hear that the circulation of the *Osaka Nippo* has increased to such an extent that the printing press which was amply sufficient to do the work of the periodical while in an embryo state of existence, has proved unequal to the task now demanded of it, and has, therefore, been abandoned for a larger press, which the editor informs his readers has been purchased at Hiôgo. The editor, not unnaturally, rejoices over this state of prosperity, and announces that his issue will be suspended for a day while the new press is being erected.

We call attention to an article from the *Nichi Nichi Shimbun* published elsewhere, touching on an industry which is apparently just finding development in Japan, namely, the manufacture of indigo. In aiding its development the Government have assisted, as far as lies in their power, by allowing the export of indigo from this country duty-free.

We are much afraid that Mr. Godai, who appears to have entered largely into the manufacture of indigo, hardly knows the dangers and difficulties which surround this trade. It is said that he is purchasing hundreds of acres of land in order to cultivate the plant, but is he aware of the precarious nature of the crop, and the skill and care which is required for its cultivation? It is a crop which frequently fails to yield fifty per cent. of the production of the previous year, and it too often fails altogether. Planters in India have over and over again been crippled, or utterly ruined, by over-confidence in this particular business.

Considering the doubtful nature of the undertaking we cannot as yet echo the jubilant strain of the *Nichi Nichi* on the introduction of this industry, though we have no wish to say a word in discouragement of useful enterprise. We would, however, caution Mr. Godai and others engaged in the business, against being too sanguine of a favourable result when operations are of an extended nature, and recommend the utmost caution in pursuing this undertaking. Knowledge of the peculiarities of the culture of the plant, and skill in the economical preparation of the article for exportation are particularly needed. The cultivation of indigo was given up in the Southern States of America simply because it was found infinitely more advantageous to replace it by cotton; and surely no one will accuse the American planters of want of forethought and patient skill in the development of their agricultural resources.

Judging from the samples of Japanese indigo *(ai)* which we have seen, we should certainly conclude that, compared to the Indian dye, its commercial value is very small, and

* This is a prominent tree between a third and half of the way to Shubashiri, on which many of the pilgrims hang their *waradji*. The name is used quite arbitrarily here in order to recall the position to foreign readers.

Original from UNIVERSITY OF CALIFORNIA

never can form an important article of exportation; but if Japanese planters are determined to persevere in the cultivation of indigo for the purpose of export, we should strongly recommend them to procure good seed from India, and the assistance of experts skilled in the growth of the plant and the production of the marketable commodity.

We publish elsewhere an interesting letter from a correspondent concerning certain agricultural improvements in this country. The writer, Mr. Tsuda, is not only a practical farmer, but has had the advantage of personal observation of the systems of agriculture carried on in Europe, having been appointed by the Government of this country a Vice-Commissioner of Agriculture to the Vienna Exhibition. It was during his visit to Europe that Mr. Tsuda became acquainted with Hooibrenk's method of artificial fertilization, which he has since introduced here with the favourable result stated in his letter. It is evident that Mr. Tsuda is smarting under a sense of injury because the improvements he advocates have not met with universal acceptation. But we would bid Mr. Tsuda be of good heart. Rome was not built in a day, nor was any inventor ever able to bring about the general use of his invention, however much it might benefit humanity, without having to contend with innumerable disappointments, continual failures, and jealous interference and depreciation on the part of rivals, all of which had to be overcome by patient determination to succeed. If Mr. Tsuda perseveres in his laudable endeavours to improve agriculture in this country, and during the course of his life succeeds in effecting only a tithe of the increase in the crops of which he writes, he may consider that a life-long labour has not been thrown away, and the pleasant reflection will be left to him that, while he has distinguished himself, he has undoubtedly benefited his country.

The money market remains in much the same position as reported by us last week. Little or no outside relief has arrived, and every fresh transaction in silk is heralded by an advance in rates, until we have almost arrived at the good old fashioned rate of 4s. 6d. for the dollar. The Native Banks have done little to relieve the market, or benefit themselves, but a Chinese Bank, with a keen eye to business, is reported to have taken the old Deutsche Bank premises with a view to sharing the good things enjoyed by the Foreign Banks.

When the summer is nearly over and there is a prospect of the long continued dry weather being broken by rain, our Consuls take in hand the question of watering our streets, and after discussion with the native authorities, propound a scheme whereby the Japanese will defray one half of the cost if the community can be induced to subscribe a sufficient sum to cover the other half. This work was, until the end of June last, undertaken by Mr. Davis, who was remunerated by subscriptions paid by only a few of those who benefited by its accomplishment, and was given up by him on account of the trouble involved in collecting the subscriptions, and also because the uncertainty of depending on such means of remuneration would not justify him in repairing his water-carts, which had nearly all broken down, or providing himself with new ones. It is for this reason that for more than a month past we have had to endure the hot glare of the unwatered roads, and the consequent discomfort of dust. That it is desirable the streets should be watered regularly during the hot and dry weather there can be no question, not only for the comfort of residents, but for the better preservation of the roads—now that these are gravelled and not macadamized, and it is for this latter reason that it seems but fair that the Japanese should defray part of the cost of so doing. The difficulty is how to raise the quota which the public should pay for their participation in the benefit, so that a few liberal residents are not called upon to pay for the comfort of those who positively refuse to subscribe. It seems a pity that a fixed rate cannot be levied, to be assessed on the value of rentals, so that none should escape their just share of payment for what is almost a necessity and undoubtedly a comfort, and yet that the burden of the tax should not fall heavily on anyone. But whether any scheme of this sort can be attempted, or dependence is to be placed entirely upon voluntary subscriptions as the Consuls have decided, we are afraid that the time has altogether gone by this season for any good result to be obtained. The estimated cost of $460 per month for watering all the streets of the settlement is not too high, we believe, if the whole of the Swamp streets are included, but even this might be greatly reduced, if instead of making an estimate for one year only, a contract was given out for doing the work for, say, five years. By this means the cost of the requisite plant would be extended over a lengthened period, and not over one season only, and it is this necessary cost of outlay which must always make a short contract a heavy expense to those concerned. But it is clear that a voluntary subscription list could never be depended on for a long contract, considering the continually changing nature of residence here, and nothing but an equitably assessed rate will ever properly meet the case. There can be no difficulty in levying this if all the Consuls agree as to the necessity of doing so, and there should be still less difficulty in collecting it, as the amount to be paid by each householder would, after all, be but a trifle.

Since the above was in type we have received the following notice, which effectually disposes of the question for the present, but we hope it has not entirely dropped.

NOTICE.

With reference to the notice of the 12th instant the undersigned has to inform the Foreign Community that the subscriptions for the watering of the settlement amounted to $358.

The undersigned has endeavoured to obtain a modification of the original scheme with the object of securing to the community the same advantages for the above sum as if the full amount of $460 had been subscribed. It has been found impossible to do this in any way that would give general satisfaction to the subscribers, and the scheme has therefore for the present been abandoned.

C. BRENNWALD,
Senior Consul.

Yokohama, 19th August, 1876.

We ought, perhaps, to apologise to our readers for again referring to the anonymous author of "*Is the Decalogue a Myth*," but we extract the following remarks from the *Shanghai Courier* to show that our strictures on the publication are fully seconded by our contemporary.

We have received a copy of a pamphlet strangely entitled as follows:—*The Decalogue a Myth*?! "What saith the Scripture?" "He that hath ears to hear, let him hear." It purports to be a rejoinder to the review of 'Tu Quoque's' book on Biblical cosmogony which appeared in the *Japan Mail*, and has been already noticed at some length by that journal. The paragraph which seems to have given such offence to the anonymous author is as follows:—

"Man may measure the gravity of infractions of the various commandments in the Decalogue by their effects upon society. But we have not the slightest certainty that the Deity does so, and for all we know, there may be as much sin, using a theological term, in bearing false witnes, as in breaking any of the other commandments."

This strikes us as being a very sensible remark, and one which any clear-minded believer in revealed truth would have but little hesitation in subscribing to. Nothing is truer than that men may, and probably do, gauge sin by its social effects; nothing is less certain than that the Deity does so. Indeed the view of sin here repudiated on behalf of the Supreme Being is in every way a base and an unworthy one; the idea of God measuring offences against His holiness according to the standard of a stipendiary magistrate! Yet there is some one in Japan who seems to think otherwise, and this misguided man has published a brochure addressed to readers of the *Japan Mail*, which for misrepresentation—if we know of a stronger word than this we would use it—inconsequence, narrowness, and sanctimonious affectation of zeal for the Truth, transcends anything we ever met with. The remark of the *Japan Mail* is either egregiously misunderstood, or wilfully caricatured. We regret having to use hard words, but there is a spirit manifested in the tract before us which is inexpressibly odious, and we do not hesitate to condemn it strongly. The falsification of the Reviewer's meaning is simply unblushing, while the unctuous sorrow lavished over his alleged obduracy to revealed truths, and so on, is sufficient to disgust anybody with a head upon his shoulders or an ordinary amount of respect for his fellow-creatures in his heart.

From the "Japan Mail Daily Advertiser."

Monday, 14th.

There are but two newspapers published in the Osaka *Fu*, and yet, according to the *Osaka Nippô*, special officials have been appointed to act as censors, and so endeavour to keep the editors within what are considered proper bounds.

From the *Hôchi Shimbun*.

Mr. Nabeshima, the Governor of Tochigi *ken*, having for some years past discharged the affairs of his office with great skill and promptitude, has been informed that hereafter his salary will be increased 50 *yen* per month.

From the same.

The weather during the summer is generally cool in Akita *ken*, but this year the heat is reported to be excessive, and it is said that the thermometer has registered over 100° Fahr.

From the *Akébono Shimbun*.

We have already reported that police constables who desire to marry must give three days notice to the Chief Office of their intention so to do, and we now find that these regulations apply to all officials belonging to the Bureau of Police.

From the same.

A great festival will take place at the temple of Hachiman, Fukagawa, Tôkiô, on the 15th instant.

From the same.

Hospital buildings, which will cover an area of 8,000 *tsubos*, are about to be erected on part of the site of the late *daimio* of Kaga's *yashiki*, and will be completed in one hundred days.

From the same.

It is said that the Chief of a certain Department desires his subordinates to read no other newspaper than the *Nichi Nichi Shimbun*, and those who are not careful to submit to their Chief's wishes in this respect, find their promotion very slow.

From the *Osaka Nippô*.

A chief priest of the West Honganji sect of Buddhists is going out to Loochoo to preach.

From the same.

Government bonds of the value of 5,281,050 *yen* are in the hands of the Osaka merchants, acording to returns made on the 30th ultimo.

From the *Mainichi Shimbun*.

Kato, the editor, and Maida, writer on the staff of the *Mainich Shimbun*, were summoned to appear at the Police Station on the 12th inst., to be questioned, it was supposed, about an article written last month on the condition of the police force.

From the same.

The accountants of the *Okurasho* are collecting statistics of the old style of coinage, and also making enquiries as to how much of it still remains in the country.

Tuesday, 15th.

The P. & O. steamer *Zambesi*, with English Mails on board to the 7th July, left Singapore on the 6th instant. The arrival here of the *Malacca* may be looked for during the night of Saturday next, the 19th instant.

The *Thabor*, with Mr. Sanjo and party on board, arrived safely at Hakodate at 10 a.m. on the 11th instant.

An enquiry was yesterday made at the Kanagawa *kencho*, into a charge of assault brought by Mr. A. Cohen against Sergeant Loxton, of the Municipal Police. According to the custom of Japanese Criminal Courts, the enquiry was conducted with closed doors.

We learn from the *Eiri Shimbun* that its editor, Mr. Maijima, was summoned to the Saibansho yesterday.

From the *Nichi Nichi Shimbun*.

The inhabitants of Tokushima *ken* have for some months past been complaining very much of the dull state of trade, but quite lately their silk and silk-worms' eggs have found a ready sale at very remunerative prices, and this they attribute, not to a special demand on the part of foreigners, but to the beneficial effects of the late visit of the Mikado, and are incited to loyalty in consequence.

Mr. Iwakura, the *Udaijin*, has notified that both paper manufactured by Japanese in foreign style, and indigo, may be exported free of duty. Should it hereafter be deemed advisable to impose any duty on these articles, two months' notice of such intention will previously be given.

From the *Hôchi Shimbun*.

A letter received from Sapporo, dated the 29th of July, states that the weather has been extraordinarily warm this year throughout the island, and at times the thermometer has registered 98 or 99 degrees. No rain has fallen since the snow melted, and vegetation has suffered in consequence.

From the *Kofu Shimbun*.

Recently foreigners were met with in the city of Kofu, which they probably visited in order to purchase silk.

The *Kinji Hiôron* says that Mr. Nakajima, the editor of the *Akébono Shimbun* who recently disappeared, is said to have gone to Satzuma by the order of one of the *Sangi*.

Wednesday, 16th.

A farmer, while at work in a paddy field in the valley which lies between the Rifle range and Homoko, was bitten by an adder and died half-an-hour afterwards.

The *Chôya Shimbun* hears the rumour that the force of marines is to be reduced, but that a corresponding increase is to be made in the number of sailors and stokers in the Imperial Navy.

From the *Chôya Shimbun*.

Thirty two firemen are continually keeping watch at the Bureau of Police every night, to be in readiness for any alarm of fire in the capital.

From the *Nichi Nichi Shimbun*.

A meeting of the *Genrô-in* was to have taken place on the 14th instant, but for certain reasons was postponed.

From the same.

Our editor, Kubota, was summoned to the *Saibansho* yesterday, but on information being given that he was absent on a visit to his native province, it was ordered that he should appear at the *Saibansho* immediately on his return.

From the same.

A Shintô priest has requested and obtained permission of the Commandant of the Osaka garrison, to preach in the barracks every Sunday to the troops stationed in that city.

From the same.

Mr. Suzukida, the editor of the *Yomiuri Shimbun*, was summoned to the *Saibansho* yesterday.

From the same.

Mr. Hokiyama, our former editor, was released from jail on the 14th instant, after undergoing his sentence of three months' imprisonment. He asserts that the sentence of imprisonment inflicted on him by the *Saibansho* was an unjust one, and having declared his intention to appeal, has been confined to his house in charge of his relatives.

From the same.

We hear from Mr. Hokiyama that there are sixteen men now in the prison which he recently left, all of whom are confined for violation of the Press-laws, but that they are all, fortunately, in a sound state of health.

From the same.

The Shintô priests at the temple at Ki-oi-cho are daily offering up prayers for rain, and are faithfully hopeful that the same will be heard and responded to.

From the same.

At Maibashi, in the province of Jôshu, the amount of silk examined at the Inspectorate in that city this year, from the 4th of June to 29th of July, was 19,251 *kuan-me* (about 160,425 pounds).

From the same.

Mr. Godai is gradually enlarging his indigo manufactory,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and has bought a large piece of land in the province of Awa, on which to erect another factory.

From the *Hôchi Shimbun.*

A Mr. Davis, in the employ of the Kiôto *Fu*, desired to spend the hot days of summer at a temple of note on Hiyeizan, in the neighbourhood of Kiôto, but the priest in charge of the temple declined to accommodate him because he was a Christian. Mr. Davis and his family were consequently obliged to camp out on the hill side in a tent, which they so occupied for one month.

From the same.

Mr. Okuma will leave the capital to-day on a trip to the provinces of Idzu and Sagami. He will be absent for three weeks, and so avoid the hot weather.

From the *Kôko Shinpô.*

In Awomori *ken* some the farmers are showing signs of disaffection, and have armed themselves with bamboo spears preparatory to causing some trouble.

From the *Kofu Shimbun.*

The drought which has been afflicting the town of Kofu and the neighbourhood for some time past, was relieved on the 9th instant by a heavy down-pour of rain, accompanied by thunder.

Thursday, 17th.

Mr. A. F. Tyree, who lately established himself at this port as a ship-broker, was yesterday arrested on a warrant from the U. S. Consul-General, on a charge preferred against him by Mr. Bohm of forcibly entering the premises at No. 114 Creek, and attempting to set fire to them.

The *Hôchi Shimbun* reports that on the 28th ultimo five or six Chinamen proceeded in a boat to a yard on the river-side at Shanghai in the occupation of the Japanese Naval Department, attempted to steal some lumber which was stored there, and attacked and severely wounded the man in charge who endeavoured to stop their proceedings. An alarm was raised and the thieves took to their boat and escaped, but not before they had been observed by Mr. Soné, a Japanese Naval officer, who happened to have been in the yard at the time, and who at once started in pursuit. The thieves landed at a jetty on the English bund and escaped, with the exception of one of their number, who was arrested and taken to the Japanese Consulate. The matter is now being enquired into by the Chinese Authorities.

From the *Hôchi Shimbun.*

A fire broke out at Minato-mura, in the province of Kaga, on the morning of the 6th instant, and was not extinguished until noon, when, owing to a scarcity of water and the high wind which prevailed, some three hundred houses were destroyed.

From the same.

The inhabitants of the province of Kaga have for a long time suffered from drought. On the 8th instant torrents of rain fell at Kanazawa, the river was quickly flooded, and the result was that three bridges and about forty houses were destroyed, and it is feared that there has been some loss of life in consequence.

From the same.

Mr. Peshine Smith was entertained at a farewell dinner by the officials of the *Gaimusho*, previous to his leaving his employment under Government.

From the same.

We hear from the Gifu *ken*, that although advices have been there received of a decline in the prices of silk at Tôkiô, the staple still maintains its position in that *ken*, and no fall in price has yet taken place.

From the same.

The residents on the island of Hachijô have failed in their silk crop this year, unlike their neighbours on the mainland, and have had to bear heavy losses in consequence.

From the *Chôya Shimbun.*

One hundred and fifty men presented themselves at the Bureau of Police on the 14th instant, and applied to be enrolled as police constables. This is the largest number of applicants at one time ever known.

From the same.

The *Kanayomi Shimbun* of Yokohama will, after the 17th instant, be issued daily instead of every other day as heretofore.

From the *Nichi Nichi Shimbun.*

A notification has been issued by Mr. Okubo, the Minister of the Interior, to the effect that the Government office for the inspection of drugs and chemicals will be removed from Kiôto and established at Yokohama, with a branch office at Nagasaki.

From the same.

A special meeting of the *Genrô-In* will take place to-day, the 17th instant.

From the same.

Mr. Higo, formerly editor of the suspended *Kokai Shinpo*, has been sentenced to imprisonment for eighteen months, for having published an article in the above paper entitled "Freedom must be bought with blood."

From the same.

The amount of Japanese articles sold at the Philadelphia Exhibition, from the 10th of June to the 30th of the same month, —with Sundays excluded being in all 18 days—amounted in value to $24,963.64. Of these, goods exhibited by the Japanese Government were sold to the extent of $779.39, and the balance represents the sale of goods exhibited by Japanese merchants and others.

Friday, 18th.

The following movements of the Mitsu Bishi S. S. Company's steamers may be of interest to our readers:—The *Nevada* left Shanghai on the 14th instant and is due here on the afternoon of the 21st. The *Genkai Maru* left Shanghai on the 16th instant and is due here on morning of the 24th, according to schedule time.

From the *Osaka Nippô.*

Ten officials are to be selected from the Shihôsho (Department of Justice), who will proceed to various parts of the country and enquire into the general condition of the people.

From the same.

On the 10th instant heavy rain, accompanied by thunder, fell at Osaka, when three persons were killed by lightening.

From the same.

The recent drought has greatly affected Lake Biwa, as many parts of it are now nearly dry, and has also caused a rise of one *yen* per picul in the price of rice in the Kagawa *ken.*

From the *Nichi Nichi Shimbun.*

Mr. Wakabayashi, the former acting editor of this paper, made a voluntary explanation at the *Saibansho*, which had the effect of causing the exculpation of Mr. Kubota, our present editor.

From the same.

Application has been made to the Tôkiô *Fu* for permission to publish a newspaper to be called the *Giokuseki Bunko.*

From the same.

It is rumoured that the Railway fares will be raised on the 20th instant, at which date the Tôkiô and Yokohama line will pass into the hands of a number of the *kuadzoku.*

From the *Shichi Ichi Zappo.*

On Sunday, the 6th instant, nine converts to Christianity were baptised at the Kobe Church.

From the *Naniwa Shimbun.*

The Governor of Nagasaki *ken* wishing that the people under his jurisdicture should read newspapers, at his own expense sends two copies of the *Saikai Shimbun* to various places in his *ken.*

From the *Tekka Shimbun.*

The chief Judge of the *Saibansho* of the Kagoshima *ken* has been violently assaulted. It appears that his appointment by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the *Shihôsho* has given offence to some people, as it has necessitated the administration of the law in that *ken* in the same manner as prevails throughout the country, and so greatly interfered with the absolute power which the *Kenrei* formerly possessed.

From the *Hôchi Shimbun*.

The *kuadzoku* have recently held frequent meetings, probably to discuss the question of the Capitalization of Incomes.

From the same.

On the 10th instant three foreigners passed through Yotsuya, Tôkiô, dressed exactly in the same manner as Japanese pilgrims, and having Japanese servants following them leading a donkey carrying their provisions. They were very likely going to Fujiyama.

From the same.

Some enterprising person having seen a snake at Sekiya, Mukôjima, Tôkiô, about 30 feet in length and 3 feet in circumference, is now trying to capture the monster. In this endeavour he has already spent one hundred *yen*, but we can only wish him success, and the realization of a rapid fortune by exhibiting the reptile—when he has caught it.

From the *Chôya Shimbun*.

Three students from the Law College will leave for France on the 23rd instant, in order to study law for three years in that country.

From the same.

The priests of the Kirishima sect have lately made many converts to Shintôism in the Kagoshima *ken*, where they already number upwards of 100,000 followers.

Saturday, 19th.

From the *Kôfu Shimbun*.

The managers of the Government silk reeling establishment have sold their silk at such good rates, that the profit has nearly covered the original cost of construction of the factory.

From the *Chôya Shimbun*.

H. E. Iwakura, the *Udaijin*, has issued a notification to the effect that those who are desirous of sending goods to the Exhibition to be held at Paris in 1878, should apply for permission to the Home Department.

From the *Mainichi Shimbun*.

Five officials belonging to the Department of Agriculture left for China a few days ago, where they proceed for the purpose of purchasing sheep. It is expected that by the introduction of sheep and the subsequent establishment of woollen manufactories, all necessity for importing foreign woollen goods will eventually be done away with, and the 11th year of Meiji, at least, will see the accomplishment of this desirable end.

From the *Nichi Nichi Shimbun*.

Only officials have hitherto been allowed to pass through the front gate of the Bureau of Police, and merchants and others were prohibited doing so. Newspaper reporters, however, who had constant business at the office, found it was so inconvienent to be obliged always to go round to the back gate, that they applied for and obtained special permission to be able to make use of the front gate.

From the same.

The Government has already settled the taxes on various vehicles. Those belong to the Army and Navy Department are exempted from all tax.

From the same.

The *Tôkio Maru*, when approaching Yokohama on the evening of the 10th instant, collided with a fishing boat and sank it.

From the *Hôchi Shimbun*.

A *sake* seller named Yeikawa, living at Matzushima-chô, Tôkiô, has invented some powder by which rice can be cleaned with ease, and the invention has been inspected by the authorities and pronounced to be a useful one.

From the same.

The *Shiramine Maru*, a sailing vessel which has been built by the Kaitakushi at Hakodate, was successfully launched on the 28th of last month. The cost of construction was under 10,000 *yen*.

From the same.

The inhabitants in and about Hakodate were greatly pleased at the visit of the Mikado, and they are further pleased that Mr. Sanjô and other officials have appeared among them. A paper called the *Hakodate Shimbun* is about to be published.

IMPERIAL GOVERNMENT RAILWAYS.

Total.	$8,772.86

The Japanese Government intend to try to acclimatize the cinchona in Japan, and have, according to the *Madras Mail*, applied for young plants for that purpose. Supplies of the varieties that yield the most alkaloids were furnished them; a box containing officinalis and succirana plants was also forwarded to the island of Bawean. From several flourishing Ledgeriana trees pieces of bark have been cut for chemical examination. Since many of the seed-yielding trees that had been formerly examined had died after having flowered abundantly, it becomes continually necessary to analyze bark from fresh and flourishing specimens. Also from British India Ledgeriana seeds have been applied for. An experiment to prepare sulphate of quinine from parings of cinchona officinalis yielded 2.50 per cent. of sulphate of quinine and 0.50 per cent. of cinchonidine. This quinine in salt is more coloured and less pure than that obtained by the same process from parings of Ledgeriana bark.—*Pall Mall Gazette*.

At Versailles on Saturday the anniversary of the birth of General Hoche was celebrated by a banquet, at which various political speeches were made. M. Gambetta was one of the speakers. He referred to the struggles the Republican party had to undergo, and of the triumphs it had won by its discipline and moderation. He should be sorry, he said, if no opposition existed, for it was in combating opposition the party developed its strength. The Republic was a Government of order and liberty, and its programme was one of peace, education and concord, while its impersonal character inspired a feeling of security which no monarchy could impart. "We have enough to do," said M. Gambetta in conclusion, "to look after ourselves, without thinking of other people's affairs."—*Pall Mall Gazette*.

A Roman Catholic bishop took his seat for the first time in the Italian Senate on Wednesday. The right reverend senator was Monsignor di Giacomo, Bishop of Piedimonte Alife, in the Neapolitan territory. The Roman correspondent of the *Times* telegraphs:—He was created senator shortly after the liberation of Naples, on the recommendation of Count Cavour, but has never taken part in the deliberations of the House since the capital was removed from Turin to Florence. He is the first of the episcopal senators who has taken his seat in the House since Rome became the capital. On entering he was informed by the officials that he must have made a mistake, but on quietly answering, to their great surprise, that he was a senator, he was ushered forward with all possible deference.—*Pall Mall Gazette*.

MURMURS.

WITH thirty writers for the press undergoing various terms of imprisonment and three journals suppressed by a sudden ukase, it would be idle for the present rulers of the Japanese nation to try to shut their eyes to the fact that a large amount of discontent prevails. To some extent this is what was to be expected; for a revolutionary government that energetically sets itself to sweep away the abuses which centuries of usurpation and misrule have bequeathed to it must necessarily draw upon itself the secret dislike, if not the active hostility, of the persons and classes who feel that their doom is sealed. The opposition, however, which the government has experienced from the classes that have suffered most severely from the movement of the age, the nobles and gentry, has, we venture to say, been much less than might have been expected. Indeed, those two classes might reasonably claim for themselves the credit of a high degree of patriotism, for their ready acquiescence in the series of changes which has shorn them of most of their inherited privileges.

Beginning with the surrender of the fiefs to the Sovereign in 1869, these changes have now culminated in the measure for the capitalization of incomes promulgated a fortnight ago. In the extent of interests affected by them and in the quiet thoroughness of their operation, they are probably without a parallel in modern history. The end was a logical and necessary consequence of the beginning; and the latter was as imperatively demanded for the sake of the commonweal as was the former. An important difference, however, is to be noticed as regards the manner in which the two stages of this great question were respectively dealt with. The first was preceded by much discussion, and the parties concerned were allowed full opportunity of giving expression to their views. Had the same courtesy been exercised in regard to the measure for the capitalization of incomes it is probable that the inevitable would have been accepted with as good a grace as before, the bitterness of the sense of spoliation would have been largely mitigated, and it is morally certain that of the many thousands of educated and able minds that would have intently devoted themselves to the consideration of the measure, some few at least would have been found capable of contributing valuable suggestions towards its improvement in details.

But the prevailing discontent is of wider extent and more deeply rooted than these considerations will account for. Unless we are much mistaken the lower classes also think they have causes for complaint. What these are has been indicated with unmistakeable emphasis by several of the articles translated from the native press, which have lately appeared in our columns. Briefly they amount to this;—the Government is carrying matters with too high a hand in defiance both of the Sovereign's pledges and of the national aspirations. It is to be feared there is only too much truth in the accusation so persistently reiterated by the journals of all shades of opinion, that the foes most bitterly hated by the administration are those two indispensible requisites of good government, publicity and discussion. Nothing is allowed to be made known which the Government can possibly keep secret. Measures most vitally affecting the commonweal are launched forth undiscussed with all the suddenness of a thunder-bolt. The consequences are altogether harmful. Take for instance the recent change in the mode of levying the land-tax. Of the excellence of the measure itself there cannot be two opinions. That it is more economical for the Government, and in the end more advantageous for the people, that the land-tax should be paid in money than in kind, requires but little argument to show. But nearly everything depended on the mode in which the change was to be accomplished. The minds of the people should have been first accustomed to the idea by discussion of it in their village assemblies. That it should be favourably received at first was not to be expected, for the agricultural mind is proverbially averse from change; but with patience and by dint of repeated argument and explanation of the advantages of the measure its universal acceptance was merely a question of time. This mode of politically educating the people, however, was not in accordance with the official traditions. A notification from the central Government, with instructions to the local authorities to enforce it, was all that was considered necessary. Hence the deep dissatisfaction of the farmers, and many a local out-break which it has required bloodshed to quell.

But a still more general cause of dissatisfaction is the resistance of the administration to the newly awakened national spirit. With the expanded intelligence of the people has come a deeper interest in political questions than has ever before been aroused in the minds of any oriental race. From time to time the holders of power have been forced to recognize the strength of this feeling, and even temporarily to bow before it. One such crisis occurred in the spring of last year, and resulted in a renewal and part fulfilment of that all important oath taken by the Sovereign on his assumption of the power, which will be prized by after ages as the great charter of the Japanese nation. The cardinal article of that solemn engagement was that measures affecting the commonweal should be submitted to public discussion. Has this engagement been faithfully kept? The efforts to hush the voice of public opinion by the infliction of savage penalties on the writers for the press and by the despotic suspension of independent journals; the refusal, on a most miserable pretext, to convene the assembly of local officials; the withholding of the proceedings of the senate from publication; and the uncontrolled expenditure of the national revenue at the discretion of a few departmental chiefs, supply an answer to the question far from creditable to the advisers of the Sovereign. This is really the grievance which lies closest to the root of the prevailing discontent. The complaint of the people, in so far as they may venture to speak openly, is that their rulers are not keeping faith with them; and the distrust thus engendered is constantly being fed by the unexplained proceedings of the Government. What reasons of state or of national benefit dictate the transfer of the railway to a company of nobles? At whose expense, and for whose benefit is the unprofitable annual outlay of the Mining Department to be increased? When is a stop to be put to the reckless waste of the national revenue by the Kaitakushi? What arguments can be advanced to justify, or even to palliate, the continuance year after year of the omission to account to the nation annually for the actual expenditure of the taxes which it pays? These and a hundred other similar questions the people are daily asking; and the answer of the Government is to throw the publicists who formulate the questions into prison. So long as the human mind continues to expand, so long will the interest felt by men in matters of government continue to deepen and extend; and it would ill beseem the present administration to ignore the strides in the path of enlightenment which, under its leadership, all classes of the nation have made within the last few years. Still less would judicious Ministers be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

disposed to undervalue the experience, the knowledge of the people, of their wants and weaknesses, acquired by the Provincial Governors of their own appointing. Of the rich reserve fund of political ability which the nation possesses in these men, ample proof was given on the occasion of the first and as yet the only assembly which they have been allowed to hold. A milder mode of introducing constitutional government into a despotically ruled country could hardly well be devised; and a political experiment of richer promise has never been attempted in Japan. Why has it been nipped in the bud? Owing, say the officials, to His Majesty's trip to the North. But His Majesty has returned to his capital, and the year has several months yet to run. Is there not still time to summon the assembly before winter? Is the Finance Department prepared to submit its accounts and vouchers to it when it meets? Nothing short of some such measure of publicity as this will silence the murmurs which seem only to deepen with the efforts made to stifle them by persecuting the press.

SPIRIT OF THE JAPANESE PRESS.

Rights and Liberties.

(Mioó Zasshi.)

Some one has expressed the following opinions.

A rigorous Notification was issued by the Prime Minister on the 4th July last, to the effect that should any registered newspaper or magazine publish any matter which may be deemed calculated to disturb or destroy the peace of the nation, the further publication of such newspaper or magazine may be suspended at and during the discretion of the *Naimusho*. But I find that not only do the journalists not obey this supplementary law, but they oppose it, and denounce the oppression and corruption of the Government without the least fear. They have determined to use all the force of their pens to shake off this oppression, and vow that if this do not suffice they threaten to take up arms against the Government and offer up themselves as marytrs to freedom. Now, should all the discontented men in the Empire make common cause with them and a civil war arise, not only will this notification be of no avail, but it will have produced the worst possible effects upon the country. Whether this supplementary law, and the purposes to which it has been put, are leading to national misfortunes or not, I cannot say; but it has certainly disposed the minds of men towards rebellion.

It is a law of nature that every thing must give way if more than a breaking strain is applied to it. And this is true in respect of oppression, which, if pushed to an extremity, becomes the root iof freedom. The steam engine which moves large vessels is a comparatively small thing, but when an excessive pressure is used, the boilers explode and shatter the ship to atoms. Streams, however usually insignificant, swell under the long continuance o rain, until the channel can no longer contain them. The overf flowing waters then burst their banks and cause destructive floods. And if it is thus with inanimate objects, how much more is it the case with men, whom nature teaches to rebel against the yoke of excessive oppression! From the remotest times history tells us of revolutions caused by the oppression of Governments, and I shall here try to give two or three examples.

When the Emperor Shin-no-Shikô conquered China and began to administer the Government with his own hands, he, thinking that the dynasty of his predecessor had been destroyed owing to the excessive power of the aristocracy, deprived the nobles of all their power, and absorbed it into his own. Then, fearing that he could not carry out his policy of oppression unless the people were kept in ignorance, he imposed excessive taxes on them, condemned to death all who criticized his acts, burnt all the existing books, and did many other like arbitrary acts. He imagined that his policy was successful, but, immediately after his death, a farmer raised the standard of rebellion, all brave patriots joined him, and his dynasty was extinguished.

The same thing took place in France. The government of Louis XIV. was very oppressive. He levied excessive taxes, invaded the rights of the people, was shamefully prodigal in his court, and took no real heed of the welfare of the people. It is true that he died before any misfortune came upon him personally. But the great revolution which took place in the reign of Louis XVI. had its true origin in the arbitrary acts of his predecessors, and fearful carnage resulted from its outbreak. The bodies of the dead formed mountains and their blood rivers. But the castle of oppression fell.

If we examine these events, we shall see that the Governments of those days brought on these evils by their own acts, and they are thus solely to blame.

When the Press- and Libel-laws were issued by this Government, the spirit of the journalists, torpid up to that time, were inflamed by the severity of those laws, and from that date they have been perpetually clamouring for extended rights and liberties for the people in an undaunted manner. The power of their arguments has so impressed the national mind, that however oppressive the Government may hereafter become, those arguments can now never be extinguished in Japan, and the greater the oppression so much more vigorous will be the resistance to it. The Press- and Libel-laws should have been so modified that nothing remained in them to obstruct the people in the acquisition of their rights and liberties. Yet, wonderful to tell, a supplementary law, increasing the severity of the previous code, has been issued. Every official animated by loyal affection towards our Emperor ought to listen to suggestions which proceed from the mind of the people. But the present officials seem profoundly indifferent to this voice, and seek only to suppress it, in order that they may the better conceal their own misdeeds.

Knowing that oppression was not the true road to follow, our Emperor expressed his desire to unite his happiness with that of his people, and last year declared his determination to make the form of his Government that of a constitutional monarchy. I say, therefore, that in enacting these severe laws to protect themselves in their own misdeeds, these officials are acting adversely to the Imperial will.

Although the promulgation of the Press- and Libel-laws has to some extent prevented the free expression of the views of the people, yet the fines and imprisonments have only affected the public writers; and all that the proprietors of newspapers have had to do in these cases was to find other editors. Although the Press was far from free, there was a narrow road yet open by which the people could make their mind known to the Government. But when the officials saw that even this narrow road remained open, they made this phrase "destructive of the peace of the nation" their weapon, and took another step against freedom. This is the grossest injustice conceivable, and most assuredly it will throw an indelible stain upon the history of the Meiji period, to the great grief of my thirty-five millions of brethren.

In China there is no slight degree of oppression, yet from the most ancient times the administration has always listened for and been guided by the voice of the people. Japan is said to be now the furthest advanced of the Asiatic nations, and yet we are in this respect worse off than the ancient Chinese! Oh! the oppression of the officials in this country is to-day at its highest point, and it behoves the people to seek the increase of their own power, guided by the bright rays of liberty. If all this severity weakens the struggles of the writers, it will only prove that they are but half-hearted partizans of Liberty, and this supplementary law will prove whether they are steadfast or wavering.

As I have said before, when the strain comes to the breaking point, something must give way, and thus it is with the officials. The next point in the road on which they are travelling will be one at which posterity will point to the monument of their overthrow.

A Short way with Religion.

(Hokoku Zasshi.)

When a country arrives at a state of enlightenment and the minds of its people are well developed, religion becomes a superfluity and may fitly be discarded.*

Religion took its rise in the darker ages, when men were little bound by social ties and were perpetually fighting with one another. It was taught by brave men who feared not to risk or lose their lives, or to suffer hardships of every conceiveable nature in order to win their fellow-men to the paths of righteousness, and to deter them from evil by showing the dangers which beset it. But the doctrines of all religions are mingled with legends and asserted miracles. They are well enough for the uncivilized people of darker ages, but now that the world has acquired so much enlightenment and such an extensive knowledge of science, it is impossible to say that religion can be of any service to a nation,

* It is impossible to read this essay without being forcibly reminded of the talk of the jaunty little Atheist in 'The Pilgrim's Progress.'

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

or assist the Government in the administration of its affairs. If we examine the doctrines of Christianity or Buddhism, which are said to be the two best religions of the world, we find them so absurd that we cannot sufficiently wonder how men possessed of any sense can believe them.

It is said by some that religions cannot be dispensed with, and are, in this respect, like wars and punishments. But though it would be an excellent thing to abolish these, the world is not yet sufficiently advanced to enable us to do so, while the time has certainly arrived when religion can be dispensed with.

The foundation of Christanity is the crucifixion of Christ, for when the disciples saw the death of their Lord, they began with great zeal to persuade people of the truth of their faith, and the minds of the Caucasian race embraced their doctrines so eagerly, that it seemed as if no force or influence could ever uproot them. But, of late years, unbelief has been rapidly on the increase.

The founders of the Buddhist faith misled the mind of the East far more than did the Christian disciples the Caucasian race. But belief in Buddhism is also on the wane.

It is idle for men to be arguing now-a-days whether Shintô or Buddhism is the better religion, or to be clamouring that the best faith in the world should be selected and made our national religion, or that Christianity should be prohibited or tolerated in Japan. All religions should be left to work as best they can. In our opinion whether it is Christianity, Buddhism, fetishism, idolatry, fox or snake worship, there is not a pin to choose between them, and one is just as good as the other. Thus it is wholly unnecessary for our learned men to be disputing which religion is the best, or which they like best.

If people assemble in large numbers and make a disturbance on religious grounds, or if the teachers of religion try to lead people astray by telling them that certain diseases of which they are suffering can be cured by praying to the gods, of course it is then the duty of learned men to take some decisive steps. Some say, again, that religion and science are like the two wheels of a cart, and that one is of no use without the other. "If a man," say, they "pursues science alone, he deifies knowledge, and cares nothing about truth, morality or propriety; he will soon begin to argue that cunning denotes advanced intelligence and that only fools are honest." Thus they plead that religion is necessary to man.

We are, however, of a different opinion. It seems to us that religions not founded on facts can have no good effect either on the minds of men or on the administration of government. If society becomes corrupt, laws can be enacted to purge it, and immorality can be attacked by teaching Moral Philosophy. Thus there is obviously no necessity for religion.

The Samurai.

("*Chôya Shimbun*" August 21, 1876.)

When our Government notified the regulations under which bonds should be issued to the nobles and *samurai* for their pensions we at once published the same, and in doing so we commended the step as a highly praiseworthy one. We congratulated the people in general in respect to it, and we ventured also to give a word of advice to the nobles (*Kwazoku*). Carrying the idea which prompted us to do so a step further, we will now consider this question as it affects the *samurai* (*Shizoku* or *samurai*).

At the time of the revolution a general reduction was at once made in the incomes which the *samurai* had formerly received from the *Han* (there were some whose incomes were not reduced but these were special cases), and general distress was caused to them in consequence, by the difficulty which they had in providing for their families. The case as regards the nobles was different. They all received one-tenth of the incomes which they had been in receipt of up to that time, and, as they were released from the necessity of maintaining their numerous retainers, they had even more money for their subsistence than they had had previously. They had besides accumulated immense sums of money. In accordance with the rules that have now been made for the issue of bonds, the principle is to be laid up for the space of five years, and interest in proportion to its amount is to be paid yearly. The pensions of the *samurai* being, however, all small in amount, the interest which they will receive cannot of course be very great, and will, when compared with the pensions they have hitherto enjoyed show a very large reduction. By this further reduction fresh distress will be caused by the increased difficulty which they will experience in providing for their families. Many of them will no doubt be now roused up to give their thoughts to the provision of their means of livelihood in future, but even though they may have every desire to take the spade in hand and become tillers of the soil, they have no farms whereon they may work; though they may be eager to take up the abacus and devote themselves to commerce, they have not a sufficient amount of capital to enable them to do so. We cannot, therefore, say that there will not be among them many who, destitute of the means of supporting father, mother, wife and children, will fall hopelessly into the distresses of poverty. The feelings of those who do so would indeed be deserving of every compassion.

What however is now the state of the times? Is it not a time when all classes of the people should alike discharge duties suited to their several positions, and labour with all their strength of mind and body in the interests of their country's power and wealth; in promoting civilization, and in emulating countries beyond the sea by making the might of the Emperor glorious and the fame of the empire to shine brightly? Those who are actuated by such wishes should strive to shake off the habits of drones, and do away with the burdens that at present oppress the real workers among the people. And what is the nature of our nobles and *samurai*? Ever since the reformation of our military system they have discharged neither duty nor service towards the Government, and have felt no shame in idly subsisting by the sweat of the brows of the remaining classes of the people. Looking at the principle of justice in the question, had they been deprived of their pensions in a single morning no wrong would have been done. Our Government, however, having profoundly considered the question, has not only not followed this course, but has decreed that these pensions be collected for some years and public bonds issued for them, and that they be all paid off within the space of thirty years. This course is one that must be commended both for its great kindness and clemency.

This being the case, the *samurai*, even though they may not have the means to carry on trade or farming, and though their means may become more straitened, should not a second time revile both God and man for their misfortunes, but should use all their energies to provide for their own maintenance and prevent themselves reverting to the position of hangers-on of the Government and parasites of the people. Among them there are some who preserve the old haughty feeling of their class, and who fancy that they would be degraded were they to follow an humble calling, and who will, by this fancy, be led to rashly embark in great enterprises, forgetful of the means at their disposal and of their capacity. Many days will not elapse before accumulated losses shall terminate in their being proclaimed bankrupt, and in auction bills being affixed to their houses. Others again among them will quietly fold their arms and slumber idly, and do nought but foolishly squander their means of livelihood. Such persons as these cannot be guaranteed not to fall on the hands of the Government again. No person who is not possessed of means sufficient to enable him to carry on farming or commerce, or who is not gifted with mental or manual accomplishments which will enable him to maintain his family, need be ashamed of supporting himself by any calling, no matter how humble. Let those who are in this position become servants or chair-coolies, and if they can only succeed in effacing the great disgrace of being drones which has hitherto attached to them, no leisure will be left wherein they can feel the slight shame attendant on their new position. It is therefore our duty to earnestly beg of you *samurai* that ye will pay no regard to the slight shame of which we have spoken, and that ye will wipe out that great disgrace which has hitherto attached to you.

We have, of course, no wish to argue with those lawless and discontented persons that may be among the *samurai*, who though they have eyes are yet unable to appreciate the changes of the spirit of the times, and who, bigotedly attached to their old droning habits, will look upon the praise-worthy step which the Government has now taken on behalf of the nation as arbitrary and despotic, nor do we proffer to them our friendly advice. Such persons as those must be pointed out as "evil doers who interfere with the peace of the country," and will any one deny that they are such?

Class Privileges.

("*Chôya Shimbun*" August 13, 1876.)

We have already published articles applauding and commending the step which our Government has determined upon—namely to abolish the paying of hereditary pensions to the nobles and *samurai*, and, instead, to issue to them in bonds during the space of thirty years, such sums of money as will serve as a capital whereby they may acquire a livelihood; and we have at the same time given some advice to these two classes. We will to-day carry our argument further than we have hitherto done, and see whether or

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

not both nobles and *samurai* will henceforth be on a perfectly similar level with us commoners.

The chief impediment which has hitherto existed to prevent a standing of equality as between the nobility and *samurai* on the one side, and the commoners on the other, is the payment of these hereditary incomes. The system under which these payments were made has, however, now been altered, and public bonds will be issued in lieu of them. These bonds can be held by the humblest commoner, and they cannot, therefore, be regarded in the same light as were the hereditary pensions. Even granting that it has been forbidden for the present either to pledge or mortgage them, what has given rise to this prohibition is simple the apprehension that the thoughtless nobles or *samurai* would recklessly squander or dispose of them and thus bring themselves into straits for their future livelihood. We would venture to say that the present bonds can not be considered as being in any way different from those previously issued by the Government, or as being a hereditary source of income. The chief distinction which has hitherto existed between the nobles and gentry and us commoners has thus been removed.

The second distinction is the rank which attaches to the former. Careful consideration shows us that no rules authorizing this rank have existed from antiquity, and it was owing to the absence of such that even confectioners assumed the names of Yamashiro Daijo and Yamato Daijo,* and sword-makers those of Kaga-no-kami and Musashi-no-kami. At the time of the revolution the false assumption of these names was forbidden, and we see no difference between the case of those who then took them and that of the nobles and *samurai* at the present day. We earnestly hope that henceforth the rank that the unofficial nobility and *samurai* now hold will be taken away from them, that they will be reduced to a level with the commoners, and that the justness of equal rights to all classes will be made known throughout the empire. If, however, our Emperor, on account of very kindly feelings which he entertains towards the nobles and *samurai*, cannot bring himself to deprive them of their rank, we will allow this subject to lie over for the present and make it our object to beg for the reform of the third distinction which exists between us.

What is this third distinction? A most serious one: to wit the system of "intercalary punishment"† This system was devised as an indulgence on the part of the Government towards both nobles and gentry, but when viewed by us commoners it seems to be an act of partiality limited to those two classes. Just let us see. When a member of either commits a crime his rank is taken away from him and he is made a commoner. To make commoners who have been guilty of no crime, and who can look both towards heaven and upon earth without any sense of shame, associate on equal terms with *samurai* and nobles who by their disgraceful conduct have outraged decency, should this be called oppression or not? Within recent years commoners have been permitted to ride on horseback and to assume surnames, the nobles and *samurai* not being, at the same time, deprived of those privileges which they alone had previously enjoyed. These precedents should now be followed and the intercalary punishments to which nobles and *samurai* are liable abolished, the same punishments ordained for them as commoners and the infliction of corporal punishment entirely done away with. If these steps be taken the feelings of the nobles and *samurai* will be assimilated to those of the commoners, all will become equally industrious and all equally watchful over their conduct; both the former classes would for these reasons regard such a step with feelings of rejoicing instead of as a grievance, and, as regards us commonners, we should be freed from the injustice of having to associate on equal terms with nobles or *samurai* who had for disgraceful conduct been thrown into our ranks. This is but what strict justice demands, and is it not besides gaining two ends by one action?

Every one knows that in savage countries, such as India, there are many distinctions of class between people of the same country, and that the bad custom of separation of high from low cannot be got rid of, a matter which affords great ridicule to the civilized countries of Europe and America. Now when our Empire is advancing with such rapid strides towards the attainment of public justice, is there one of us would rejoice at seeing the custom of barbarians maintained among us for a single day? There may, however, be some who may advocate a procrastinating and dilatory policy—who may say that though the pensions of the nobles and *samurai* should be abolished, their rank should be left, or that though their rank be taken away, intercalary punishments should be preserved. If the Government approves of such a line of argument as this and extends its principle a little, the conclusion will be arrived at that the pensions should never have been abolished, and that the feudal system should still be maintained, —a very startling and deplorable one. We are, accordingly, eagerly desirous to see the securing of like privileges with all speed to all classes of the people. What say ye, ye learned men?

---

* Lord of Yamashiro and Lord Yamato—fanciful titles formerly very generally assumed by confectioners.

† Intercalary Punishments is the term applied to those designed for persons on whom, by reason of their rank as noblemen or *samurai*, the ordinary punishments provided by the law cannot be inflicted. They are called intercalary because the law which provides for them is interposed between the main laws, just as in the old calendar an additional month used occasionally to be interposed between those in the regular series.

The Intercalary Punishments prescribed by "The New Criminal Code," (1871) for nobles and samurai were.—

1.—Confinement inflicted for a period of from 10 to 50 days for crimes which in the case of commoners were punishable by whipping. (Light bastinado from 10 to 50 blows.)

The offender was simply ordered to remain in his house for the period of sentence, but allowed to hold communion with the members of his family and with outsiders.

2.—Seclusion, for a period of from 60 to 100 days, in lieu of flogging. (Heavy bastinado of from 60 to 100 blows.)

The offender was in this case confined to his house, the doors being closed and only servants bringing daily necessaries admitted.

3.—Restraint, for a period of from one to three years, in lieu of imprisonment with hard labour.

In this case the offender was closely confined in one room.

4.—Frontier duty, for a period of from one to three years, in lieu of banishment.

The offender was sent to do garrison duty in Yezo, his pension, if a life one confiscated, and at the end of his term he was permanently domiciled in Yezo, obtaining official employment, however, if his abilities entitled him to it.

5.—Seppuku (suicide) inflicted in lieu of decapitation or strangling.

The above were the punishments to which nobles and *samurai* generally rendered themselves liable. In cases, however, where they committed "peculiarly disgraceful crimes which showed that they entirely disregarded what was due to their rank" such as gambling, theft, rape, etc., the intercalary punishments were discarded and, if the offence were such that a commoner would have been punished for it by any sentence not exceeding 100 blows, they were punished simply by being deprived of their rank and reduced to the level of commoners. If, however, the offence were such that a commoner would for committing it have been punished by any sentence of one year's imprisonment with hard labour and upwards, not only was the rank forfeited but the legal punishment was also inflicted.

The latter provision has been re-enacted in substance in the "Revised Criminal Code" (1873), but the five intercalary punishments above detailed have been abolished and "Restraint" for the same periods has been substituted in their place, except in the case of "frontier duty," where the periods of from five or ten years have been adopted. Thus a man who under the first code would have been sentenced to ninety days seclusion would, under the revised code be punished by restraint for a similar period, and the man who under the first code would have been sentenced to three years frontier garrison duty, would, under the new code, be punished by ten year's restraint.

The punishment of suicide was replaced by restraint for life.

What is to be done with the "Samurai"?

("*Chōya Shimbun*" August 15, 1876.)

The Prime Minister together with several of the councillors of state and members of the senate have, undeterred by the grilling heat of the dog-days, set out for Yezo. Is the object of their journey merely to investigate the condition of development which characterizes that island, or has it been brought about by some deep and profound plan which is not as yet apparent to the people? We have been unable to arrive at even a vague idea of the object, and have therefore not rashly expressed any opinions on it. However, within the last few days the following street rumour unexpectedly came to our hearing.

It is said that though our Government has already determined to issue bonds for the pensions of the nobles and *samurai*, still, when they give their attention to the after results which may attend this measure, they see that by it many of the *samurai* throughout the country will be thrown into great straights as to their means of livelihood, and that some of them may even be unable to escape dying of starvation upon the highways. The Government, therefore, having thoroughly discussed every plan by which good employment might be provided for them and a future means of livelihood opened up to them, secretly decided that they should be tranferred to Yezo and caused to work at the colonization of that island. The advantage that would be gained by carrying out this plan would not be limited to the provision of a means of livelihood for the *samurai*, it being apparent that the work of colonization would also greatly benefit by it, and two highly commendable ends would thus be attained by one step. The object, therefore, of the Prime Minister and the high officials who accompany him in making this journey, is nothing else than to investigate, with the view above described, the actual condition of Yezo.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Of course we cannot say whether or not this rumour is perfectly trustworthy, but still when we quietly consider the publication of the rules for the issue of these bonds, followed by the hasty departure of the Prime Minister and the other officials for Yezo, it does not seem unreasonable that the existence of some such deep and profound plan as we have described should be suspected. Since, however, only a general idea of this plan is known and no particulars have as yet been made clear, we have no means of inquiring into the system and method under which the Government proposes to remove a number of the *samurai* to Yezo, and we shall therefore, on this occasion, confine ourselves to wasting a few general remarks on this vague rumour.

If, by the transfer of large numbers of destitute *samurai* who are on the mainland to Yezo, they will be made useful inhabitants of that island and the danger of future starvation be removed from them, and if, in addition to this, the work of colonization will be promoted, then indeed a most fortunate result will be attained for our country. An estimate, however, of the immense number of *samurai* in Japan, shows that they amount to fully 400,000, and such a task as the general removal of so great a number to Yezo is not to be so easily accomplished as the removal of the inhabitants of Kato to Katai‡ during a famine in the former. The *samurai*, with the exception of those among them whose learning and accomplishments remove all danger of future distress from them, generally preserve their old droning habits, and are unfitted by their selfishness and sloth for work. If the intention be that such persons be removed to an undeveloped and cold region such as Yezo, and there set to the toilsome labour of woodcutters, fishermen and farmers, to which they are utterly unaccustomed, unless a very careful and judicious mode of dealing with them be adopted, the hope of accomplishing a great work by their means will not be attained. We will reserve the discussion of the feasibility of colonizing Yezo for a future article, but, in the meantime, if this removal of the *samurai* is undertaken, their travelling expenses must be apportioned to them, houses wherein to live must be built for them, and implements wherewith to carry on their several avocations provided. The money necessary for these purposes will perhaps be lent to them by the Government on the security of their pension-bonds, but even our Finance Department will find some difficulty in readily supplying the many millions of dollars that will be required for this purpose. Is it possible that the object of Mr. Inouye Kaoru's journey to America and Europe is to raise large foreign loans to be applied to the above purpose? We must not, however, give a too ready belief to vague and undefined gossip.

All the 400,000 of our *samurai* do not consist of purposeless fools, destitute of accomplishment and ability. Many among them are possessed both of learning, accomplishment, and talent, and others again have considerable accumulations of money, by which all danger of them experiencing any difficulty as to their livelihood s removed. Would such persons as these like to be put to manual labour in Yezo, or is it likely that our Government would care to remove them there along with the rest of their class? What regulations and byelaws will the Government then frame by iwhich they will decide who have a definite means of future liveli hood and who have not, and under what system and routine will the latter class be removed? We have not yet been able to discover what are the ideas of the Government in this respect.

If, as we have shown above, by the removal of numerous destitute *samurai* to Yezo, not only will the apprehension of their falling into starvation be removed but the colonization of that island greatly promoted, most fortunate results will have been attained for our country. Unless, however, wise regulations and byelaws, and a good system and routine under which the removal is to be carried out be devised, the prospect which now seems likely to prove of such advantage to our country may, so far from doing so, only result in misfortune. Success or failure entirely depends on the rule and system that may be adopted.

We shall revert to this subject as soon as we obtain any definite information in repect to it. We will not now venture to assert hastily that the street rumour on which we have based our article is true.

A PLEA FOR DUTY-FREE EXPORTS.

(Nichi Nichi Shimbun, August 15.)

What thoughts are aroused in the minds of our readers by the Daijoku'an Notification No. 110, of the 11th of August? This Notification was published by us in our issue of the 12th instant, and runs as follows :—

"Foreign paper manufactured by Japanese subjects, and indigo "(*totei*) manufactured in Japan, may for the present, be exported "free of duty."

"*Note.*—Should duty be levied thereon, such will be notified "two months beforehand."

Up to the present moment these two articles, foreign paper and indigo (*totei*), are the first ones that have been allowed to be exported free of duty, apart from those (duty free) goods definitely laid down in the tariff of customs dues, that forms a part of the Treaties. The reason for this is that the Japanese Government, in regard to those two articles, have not received the slightest pressure from the source of foreign relations, and so have, by the exercise of their own sole and individual national rights, made such export free. Now, while reflecting, in connection with this matter upon the possibilities of the future, we eventually extend the limits of our thoughts and become desirous of stating our opinions respecting the Revision of the Import and Export Tariff. And this we believe to be by no means too precipitate a proceeding on our part.

Those places in our country at which the manufacture of foreign paper is now being effected are, in Yedo, at Ôji, Akabané, and the Hama-chô.—and in many places, too, in the different *Fu* and *Ken*, this business is being carried on. From our personal observation, and from what we have heard from others, it would appear that if we do not grudge the expenditure of large sums abroad, for the purchase, from foreign countries, of the requisite machinery or the engagement from other lands, of instructors in the mode of manufacture, we shall,—owing to the plentiful supply in Japan, at cheap rates, of the rags or hemp necessary for the making of the pulp,—certainly be able, if we make full use of machinery and instructors, and avoid delays, to manufacture paper at a price lower than that at which it is imported. The quantity of paper already manufactured at the above-mentioned places is sufficient to prove clearly the diminution in the import of foreign paper. There may, however, be some people who take the fact of the yearly increase of the quantity of foreign paper shown in the Import tables of the various ports, to prove that our paper manufactories are utterly useless. But this is, in truth, merely a very one-sided view of the matter. Persons who make such an assertion would seem not to have noticed the true fact that for several years back the quantity of foreign paper used in Japan has undergone an almost daily increase, owing to the newspapers, books, memorandum-books, &c. We are sure that if there did not exist in Japan a single paper manufactory, the quantity of paper now imported would be double that of former days, and that the price thereof would also be proportionate. How, then, can we say but that they have diminished the import!

We have heard it stated that more than one-half of the materials needed for the making of the pulp to be used in the European paper-manufactories is procured from other lands, and that for this purpose there are used bark from the paper-mulberry of the islands to the South of Europe, and rags from the Eastern seas. [At the present moment rags are exported from Japan for this purpose.] If in our country, on the contrary, we make use of our own hemp and rag pulp wherewith to set on foot paper-making operations, it is perfectly clear that ere many years elapse we shall put an end to the import of foreign paper. If, after so doing, we had a surplus for ourselves, why should we not export it and so, in the East, under-sell European paper? And the most important source of such cheapness of price consists in permission for export free of duty.

The article alluded to in the Notification as "indigo" *(totei)* must, we think be what is popularly styled *ai-dama*. The export of Japanese *ai-dama* to other countries had never yet taken place until, during the past year, Mr. Godai Tomo-atsu, for the first time, imitated the rules of its manufacture in Europe, and made from *ai* grown in the province of Awa some very excellent *ai-dama*, which he sent to England. He asked for an analysis and a report thereon :—when it most unexpectedly appeared that the properties of the Japanese *ai-dama* were far superior to those of Indian *ai*. The estimated price, too, was beyond all expectation, and it is therefore that Godai made petition to the Industrial Department, with the hope, by carrying on the manufacture on a more extensive scale, [vide our "Miscellaneous News" of to-day"] to promote the export of a valuable article. We

‡ Ancient names of contiguous provinces or districts in China.

* We hear that Mr. Godai Tomo-atsu's manufacture of *ai* is going on prosperously, and that he has already purchased, at Yazô-mura in the province of Awa, and under the jurisdiction of the Miyôdô Ken, a piece of land measuring more than 5 *chô* square, where he is now erecting a large manufactory. It is said that on this account the *ai* merchants of Awa intend to raise the market value of *ai* from the present time.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

trust that this Japanese *ai* may obtain a favourable report in Europe and so be a product that will always be a source of gain. As this *ai* is cultivated principally in Awa, next in Kodzuke and Musashi, and also in various localities in Mutsu, Dewa, the five Home Provinces, Buzen, Bungo, and Hiuga,—we shall if no accident occur, feel not the least inconvenience no matter how great a quantity we may in future export, and over and above this, too, it is beyond all doubt that there will accrue to our country great profit from the development of a product that can rival those of tea and silk. Now, if it be well understood that the future rise or fall of this export will depend upon the fact of its price being low, is not a duty-free export an exceedingly important plan!

And yet we, upon reading this Notification, do not by any means give praise merely to the minor point that the export of these two articles, paper and indigo, is permitted free of duty. Their manufacture is as yet but young in Japan, and they have not as yet sufficed for export,—nor have the light or heavy rates, the levying or not levying of export dues on them availed to further the commerce of our land. Why, then, should we now indulge in such special thoughts about this Notification? The reason for our joy is because our Government, consequent upon the public opinion, have clearly comprehended the fact that the most important cause whereby to render prosperous the export of our produce consists in abolishing the export dues,—and have, by this Notification, plainly demonstrated to us their own ideas. The important point,—always upheld by us as the chief precept for success,—of establishing a due balance between export and import in our commerce, has been by us stated to be closely connected with the question of these export dues, and we have argued that products of Japan, of no matter what nature, should all be freed from duty; and have not these views of ours met with the approval of every intelligent man? If, then, we now make a beginning in regard to these two articles, paper and indigo, we must, at the time of the revision of the Tariff, arrive at the excellent measure of making all exports duty-free. But should we, at the time of such revision, apply to all articles of export the dues now levied on them, and unhappily be too intent upon the small amount of our Customs dues, the present remission of duty upon paper and indigo will not, even though it be of great advantage, have any influence upon the rise or fall of our commerce.

Again, as regards the note which states that "should duty be "levied, such will be notified two months before hand," seeing that such a case has not yet actually come to pass, we are unable to form beforehand a clear estimate of the advantage or ill that would result therefrom. According, however, to public opinion, there would appear to be some doubt as to whether the limit of time above-mentioned be not too short. We have heard that amongst foreign lands that somewhere, without any prior notification being issued, orders for the immediate alteration of the Tariff have been given,—but, upon due reflection as to facilities of commerce, there would seem to be nought more useful than the early issue of such previous notification. If two months time be considered sufficient, could all those persons who may have bought and sold under the impression that no duty is to be levied,—when once the notice of the payment of dues is given, and is promulgated throughout the East and West,—become acquainted therewith in two months time, or not? This is a matter that we cannot at all guarantee. If, however, the advantage or disadvantage of this limit of time be perceived by actual observation at some future period, there would not arise any difficulty even from an alteration therein. Perhaps this, too, is the idea of the Government.

The War Office officials have issued a detail of the corps to be present at the review in Hyde Park on Saturday afternoon. The review is to be held as a congratulatory demonstration and welcome home by the volunteers on the return of the Prince of Wales from his Indian tour. The applications to attend the review are more than 30,000, and if employers give the necessary facilities, no doubt this large number will be reached. The regiments will muster in the park at five o'clock, and will be formed into fourteen brigades and five divisions. Enclosures, but no stands, will be set apart for members of both Houses of Parliament and for the friends of the volunteers, who will be admitted by ticket. None but the royal carriages will be allowed within the enclosures. There will scarcely be time or space for more than a march-past.—*Pall Mall Gazette.*

The *Academy* states that a project has been set on foot to erect a monument at Pesth to the Hungarian statesman, and patriot, Francis Deak. Foreigners as well as native artists are invited to compete for the construction of this monument, and three prizes are offered for the best designs. The costs is not to exceed 100,000 florins.—*Pall Mall Gazette.*

TRAINING NOTES.

It is much to be feared that nothing that can be said to the contrary will ever induce the Yokohama community, *i.e.* the racing portion of them, to cease quarrelling amongst themselves and becoming a reproach to the outer world; and although we have no hope of being able to cleanse this Augean stable, yet while there is life there is hope, and there is not only life but signs of robust health left in the Yokohama Race Club, notwithstanding its many internal dissensions and the suicidal efforts on the part of a few of its members who have been unable to get everything their own way. To the Committee, therefore, we would give every encouragement to do as they have done formerly, relying on the approbation of every right-thinking member of the Race Club. To their detractors we would give a word of warning that the professions which they make will be fully exposed to the daylight of public opinion and criticism, so that both sides will be fairly judged.

With the result of last spring meeting still fresh in our memories, and the certainties which were then so confidently predicted utterly unrealised, we have some hopes that, with the greater prosperity of this season over last, and brighter prospects for both exports and imports, that discontent will have greatly diminished, and that more smiling faces may be seen in the paddock than were visible last season, when the ghost of a laugh or the echo of a joke were utterly unknown. With more disposition on the part of the members to partake themselves, and at the same time let others enjoy, the amusements catered for them, feelings of natural goodwill and friendly rivalry will increase, and any advantage which one member may by chance get at one meeting, will be viewed, not through the evil eye of envy, but as something which may be another's good fortune next time. If the members possessed these friendly feelings and raced in the proper spirit, the duties of the committee would be much lessened and their exertions become a pleasure instead of an annoyance to them. There are plenty of materials here to make good competition at our next meeting, and it will be hard indeed if we are balked of enjoying our half-yearly holidays.

There have been numerous fresh importations from China and more are still expected.—The Tartan Stable have weeded out their non-winners at last meeting, and imported new blood, viz, *Wild Moor* and *Hereward*. The former brings an excellent record both from Tientsin and Shanghai, and the latter's running in the Shanghai Derby stamps him as a good horse. Of the old ponies *Braemar* seems to have suffered nothing from the summer heat, and *Tallapoosa*, although smaller than we like, looks in good form to commence training, while *Lintie* we know to be good although his shape is not racing looking.

The Mystery stable have also imported two new ponies, *Satz* and *Nibookin*. The former broke down in his Shanghai training and never ran, so little is known about him, but the latter showed well up in the Tsatlee Cup in Shanghai, beating good ponies; and he has also thriven well since his arrival here. *Dibs* and *Gladiateur* also look well, and the latter seems to have completely recovered from his lameness. *Favori* looks thin and out of condition. *On dit*, it is not true that these ponies are going back to China; their noble owner has resolved to ship their trainer instead, and this will have the double advantage of stopping the agitation about the riding of non-members and giving his ponies a chance of winning here.

The *Mongolian* stable has also been increased by two fresh importations. *Consolation* did good work in the Shanghai Jockey Cup, beating a fair field, while *Ravenslee*, although he did nothing to distinguish himself, looks a good pony. The old ponies have been weeded out, only *North* and *South* being retained. The former looks well but that is all he will ever do; the latter has filled out greatly since last meeting, and if he retains his old form will add to his former laurels.

Mr. Saville is reported to have strengthened his stable by an alliance and also by purchase, and if so, *Crusader*, backed by the fresh importation *Little Fish* and the newly purchased *Grasshopper*, should make their mark at our next meeting.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Mr. John Peel's stable is weak at present, consisting simply of the old ponies *Bonito* and *Grey Friar*. The former's leg is still bad, and we do not know if the latter's temper has improved. It is rumoured, however, that something *good* is coming from Shanghai.

Mr. *Sinbad* has kept the *Minister* and the *Judge*. The latter will never make a racer, but the other, if he has recovered from his lameness, should do some good at next meeting, as he possesses both pace and staying power; and having youth on his side should improve in time. *Dixie* is also said to be looking very well.

We regret to say, for the sake of the old colours which have so often lost and won on our course, and whichever way fortune went ever manfully contended for the sake of sport, that the Cherry and Black have utterly collapsed. There are more China ponies than mentioned above which will doubtless be candidates for turf honours, and the Committee will, perhaps, bear this in mind, and regulate the events in accordance. In comparison with Japan ponies China ponies were rather hardly dealt with at last meeting, and, if they had not fortunately won nearly all the mixed races, their condition would have been sad indeed. There is a growing feeling amongst the racing men here of a desire to leave off altogether trying to procure Japanese ponies and depend entirely upon the imported China ponies; and so long as the present difficulty of obtaining good Japan ponies exists, we fear this feeling will increase, to the great detriment of good Japan pony racing. That an effort will be made to counteract this growing tendency we most earnestly hope, as a concession to it would be a anomaly, considering the country in which our sad lot is cast.

Until now no griffins have made their appearance, and with the exception of the old ponies in the charge of Mr. Nicholas, *Typhoon*, and two in the Mystery stable, viz., *Doctor* and *Oyama*, there are none to race against each other. Our old friend "The Doctor" has withdrawn for the present from any active interest in the turf, but his sympathies we are certain remain with the Club, and when his professional duties admit of it, we fully expect to see him still encouraging the struggling trainer with his presence in the paddock, for as a true and energetic lover of sport he has left no equal in the club, where he will be greatly missed both for himself and the blank caused by the withdrawal of his stable.

Before closing the above few remarks, we must add that too much praise cannot be awarded to the extremely painstaking and energetic Clerk of the Course, to improve which has been his daily care, and in which he has certainly succeeded, so that he deserves more than the grateful thanks of the pony-owners.

The Government have (the *Morning Post* understands) expressed their willingness to allot to the Zoological Society in the Regent's Park a small portion of land on the northern bank of the canal not available for the enjoyment of the public, provided the society will open their gardens free for one day in each week. This proposal the society cannot accept, and their determination has been arrived at with reluctance, simply because the council are satisfied that the gardens would not contain the crowd who would avail themselves of the privilege of gratuitous admission. On Whitsun Monday the gates must have been closed but for a timely shower of rain which checked the ingress of visitors.—*Pall Mall Gazette.*

An accident, which created great alarm, occurred on the 23rd of June at the Royal Gun Factories, Woolwich. Colonel Younghusband, R.A., was escorting a party of sixty visitors, most of whom were from the South Staffordshire iron districts, through the establishment, and while they were in the new rolling mills there was suddenly a loud crash and the machinery broke up into fragments which flew in all directions. Colonel Younghusband and two or three others were thrown down, but the rollers were fortunately working at only half-speed at the moment, and no one was seriously hurt. The mills have been at work for more than a year, and were supposed to be unsurpassed in strength and durability. Just before the accident they had been subjected to a heavy strain in rolling a large bar of iron, and it is supposed that the breakdown originated in a defective pin or bolt some three inches thick, which appears to have been imperfectly welded.—*Pall Mall Gazette.*

A new Holy Family by Raphael has, it is said, just been discovered at Lavagnola, in Liguria. A peasant of that place recently took an old picture which had long been lying in a loft to hang before some broken squares of glass in a window in order to keep out the wind. M. Disegni, professor of music at Genoa, saw it by chance, covered with dust and dirt, and purchased it for 70 f.; he afterwards sold it for 2,500 f. to M. Peirano, a connoisseur, who having had it restored, discovered that it was an authentic Holy Family by Raphel; and the Academy of Urtidono has confirmed this decision.—*Pall Mall Gazette.*

AT HAKONÉ.

Summer, the stately youth with golden hair floating around him,
Waving his gleaming sword and burnished shield as he wanders,
Strides o'er the hills like a god, and gladdens the earth with his beauty.
Oh! to be always here where life is so fair and so favoured—
Out all day on the lake with a sweet face smiling upon me,
Sleeping in mossy cell within sound of the musical water,
And ever touched by the Real as lilies are touched by the sunshine.
Floating and floating and floating, and dreaming like Rousseau in Vienne;
Floating and floating and floating in silence that melts into sadness,
Sweet as the glance of a maid from whose cheek the roses have faded.
Flowers for companions, and poets, the blossoms and buds of the Human:
Shelly, the sensitive plant, his nerves all trembling with music,
Fit for a better sphere when he came, more fit when he left us:
Wordsworth, cowslip pale, but sweet as the rarest in gardens,
And, if a common flower, with an Ariel's voice in the calyx:
Byron, the thorny rose whose delicate petals have made men
Almost forget the thorns in the might of their magical beauty:
Tennyson, passion flower, soul-laden with love and with sorrow,
Leaving the vulgar laugh to the fool, and the clown, and the mimic:
Shakespeare, garland of all the flowers of the field and the forest,
Amorous, tragical, gay, or grand as the thunder of heaven
Breaking with truculent force 'mid the cliffs and the crags of the mountains.
Glories have opening Spring, and Autumn, and surly old Winter:
Spring shows the rippling woods in a blaze of emerald splendour,
Autumn with fiery glow and tremulous clusters of yellow,
Winter in far-shining light of diamonds flashing and falling.
But none has the deepening blush and infinite richness of summer,
Crowned with the crown of peace, as a mother who sees all her children
Rising in honour around her, to love and protect and support her.
Fast-flitting days stir the woods with echoes of innocent laughter,
Until the fading sunlight is shattered by murmuring branches,
And the pale moon looks down with a passionless glance from the heavens.
If Madoc failed in his voyage, I have come to the Gwerdonnan Lian,
Peopled by fanciful fays that airily dance to the music
Blown from the trees, as the wind strikes their chords in mellifluous cadence.
But, alas! with a sigh I awake to the thought of the turbulent city.

Correspondence.

AN ASCENT OF FUJIYAMA.

To the Editor of the "Japan Weekly Mail."

Yokohama, 16th August, 1876.

Sir.—At the close of last summer several questions were raised respecting the time required to descend from the summit of Fujiyama to the village of Subashiri, and in a letter addressed to you I explained the terms of a small wager into which I had entered, backing myself to make the ascent and descent in ten hours. As you have been good enough to say that an account of the trip may prove interesting to some of your readers, I will attempt to describe it.

One of a party of three, I left Yokohama at eight P.M. on the 8th instant and reached Mianoshta early on the following morning, weather clear and bright; thermometer 84°. On the 10th I took a preliminary canter to Hata, up the Hakone pass and back to Mianoshta viâ Ashinoyu. On the 11th proceeded viâ Otometoge and Gotemba to Subashiri; weather dry and sultry; thermometer at Subashiri 5 P.M. 79°.

To the pedestrian who has just arrived from a four-and-twenty mile walk with the prospect of "doing" Fujiyama on the morrow, Subashiri is not a tempting place; a long street of dirty hovels; two strings of white-clothed, dusty, weary pilgrims going to, and returning from, the sacred hill; an appearance of poverty and squalor more marked than in any other Japanese village I have visited, are its distinguishing features, redeemed only by a fine background Fujiyama. We selected a fairly clean-looking tea-house

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

with an upper story, where we made arrangements for passing the night as comfortably as circumstances would allow. My intention was to leave Subashiri about 5 A.M., and having settled for two guides I retired at 8 P.M., but not to sleep;—an enemy, not altogether unexpected, made his appearance. We were stormed and beset by vast armies of fleas; they came upon us out of the walls, out of the mats; out of the woodwork; the *futons* swarmed with them, they had complete possession of the place, and were determined to exterminate foreigners. Three or four hours of restless dozing was all I could obtain, and at midnight rose and endeavoured to solace myself with a book. At length the first breath—"The breezy call of "incense-breathing morn," stirred the still, close night air, and banished the irritation, and the almost intolerable sense of weariness, resulting from want of sleep. Breakfast, consisting of a bowl of Liebig's extract, was quickly dispatched, our forces mustered in strength, and as the first indications of twilight appeared we arrived at the gateway of Subashiri, remained one or two minutes, and started exactly at 4.25 a.m.; time taken by three watches, a course which was followed throughout. As day dawned Fuji stood out clear and sharp-cut against the grey-blue background; the air clear and bracing and not a cloud visible in any direction.

From Subashiri, 2,544 feet above the level of the sea, the path is good; it varies from two to eight or ten feet in width, is scoriaceous, and is excellent walking ground after rain; the present dry season, however, made it very heavy and dusty. The rise is gradual for the first four miles until Uma-ashi is reached (4,339 feet above the sea) which took us one hour and five minutes. Here we remained for ten minutes, for a reason given by the guides which I could not understand. Left Uma-ashi 5.40 and arrived at Chujikibe at 6.40 a.m. (6,206 feet above the sea). On the previous night it had been arranged that one servant and one guide should leave an hour in advance of me, in order to have some breakfast ready on my arrival at Chujikibe; this was not done, my orders having been neglected, consequently I arrived in advance of the breakfast, and had to wait forty-five minutes instead of fifteen as I had laid down for myself. Left Chujikibe 7.25 a.m; at 7.40 headed the "guides" (whom I did not see again until 1.18 p.m.) quite forgetting that one of them carried a cold chicken and a pint of champagne, on which I placed considerable reliance. At 8.10 a light wind sprang up and the clouds rapidly floated upwards, lifting at intervals until 8.40, when we, (my two servants and self) were in their midst, and all before and behind us was obscured. The track on this part of the mountain is fairly marked and there is not much difficulty in following it even during a thick fog. At 8.45 a.m. arrived at the third station, where I was recommended to wait for the guide instead of going without him, as the lesser of two evils, the path thence being tortuous and indistinct. At 9.18 no guide appearing went ahead; kept on a steady course with several short breathing rests, until arrival at the sixth station. Here I remember taking the time, but have no note of it; so far as I can remember it was about ten o'clock. A cup of tea and we were about to resume our route, when a sharp squall of wind and rain swept over the mountain, causing several of the pilgrims who had gone on before to return for shelter; the weather now had a lowering, threatening appearance, and in response to my inquiries the old station-keeper shook his head doubtfully. Twenty minutes elapsed before we left this station to resume the upward track. From the sixth to the seventh stations the path is over a very steep whale-backed ridge of lava, with numerous crevices and ledges, in no place affording a secure foothold; progress over this is therefore slow and laborious. Arrived at eighth station at 12.05, wind freshening with thick fog, thermometer 58°, summit and lower portion of the mountain invisible. At this stage eighteen hours abstinence from solid food began to tell, and when the station-keeper informed me that no person could reach the summit from thence in less than one hour, my resolution began to waver, but the difficulty gave me fresh courage and we proceeded immediately. For about six minutes we were on the wrong path, when fortunately the mist thinned sufficiently for us to be seen by some pilgrims, whose friendly voices warned us of our error and enabled us to gain the right track by an oblique cut across a very insecure bed of soft scoria. Thirty-three minutes of patient toil landed us on the summit at twenty minutes to one o'clock. Time from Subashiri eight hours, twenty-five minutes. Barometer 19.15.; thermometer 57°; hypsometer 190.9. Weather thick and moist, wind fresh, and unfortunately no view

The summit of Fujiyama presented the appearance of a village in Lilliput. The huts, some fifteen or more in number, are about the size of cottage pianos, with a depth of from eight to ten feet, mostly well filled with travellers, while without them the usual number of idlers were visible, with a fair sprinkling of children from four to ten years of age carrying the inevitable babies strapped to their backs. At 12.50 the mist cleared a little and permitted a view of the crater, which is lined with frozen snow. At 12.55 the sun's rays came through the wet fog; the mist cleared, the clouds rolled away, and as if by magic a splendid view was spread out before me. Eastward as far as the eye could reach lay a beautiful tract of country; the hills in the near vicinity of Fujiyama presenting the picturesque appearance seen in birds-eye view maps, with Hakoné lake and a similar piece of water of smaller extent nestling in their midst, combined to form a peaceful and really beautiful landscape. Almost before I had time to realise the charm of the scene, the "envious cloud" rolled up silently but rapidly, and as suddenly as the view had been opened in all its glory, it faded, became indistinct, and finally dissolved.

"like the borealis race
Which flit ere you can point their place;
Or like the rainbow's lovely form
Evanishing amid the storm."

And, to continue the quotation

"Nae man can tether time or tide
The hour approaches Tam maun ride"

for my allowance—thirty minutes—was well night exhausted. At 1.10 I began the descent. At 1.18 reached the eighth station, where I had the pleasure of looking upon the grim countenance of a friend who had started with me but, wisely preferring to take his own time, had only just arrived. By his side the "guide" had placed a chicken and a bottle of champagne * * * * * Minutes pass quickly when one is pleasantly occupied. At 1.40 my friend, in reply to my question if he intended to go further, remarked irreverently "I am going to the top of this old hill if it takes six months to get there." From that moment I looked upon him as a desperate character whom it would be unsafe to reason with. Left number eight station at 1.48 accompanied by one servant only and without a guide; fog increased to such an extent that the downward track was scarcely visible for a greater distance than could be covered in three strides; followed the line of cast off shoes, lost it three times and tried back on each occasion; halted for about two minutes to allow my native companion to put on new shoes; resumed the march; fog very thick but clearing a little in advance; the ground had an unfamiliar appearance and I felt sure we had taken the wrong path, there having been several branches from that we had followed. However, to return was impossible, so we went on, and in a minute or two came to a long shed full of pilgrims also on their way down. The brief question "Chujikibe *doko*" was as briefly responded to by an astonished motion of several hands; a few seconds more we passed through the temple where we had obtained our staves; another few seconds and Chujikibe was gained. Time 2.35 p.m.; 47 minutes from eighth station and fifty-five from summit. And here let me pause. At Chujikibe station, was the familiar form of a friend of *long standing;* in one hand he held a flask; in the other an instrument which beings of mortal race call a pipe, from which was emitted the fragrant odour of the divine weed * * * * * * * I stopped. * * * * *Humānum est errāre!*

Left Chujikibe 2.55, and arrived at Uma-ashi at 3.14; waited there four minutes for my companion, upon whom the pace was beginning to tell; left at 3.18 and arrived at Subashiri gateway (starting point) at 4.02 p.m. Total time 11 hours 37 minutes.

My undertaking was to complete the whole trip in ten hours, including stoppages. This I failed to accomplish owing to a combination of petty troubles, which proper

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

care would have prevented. I calculated upon fifteen minutes detention only at Chujikibe; at the third station half an hour was wasted, and some minutes were unfortunately lost at the sixth station. Half an hour was spent on the summit according to agreement, and another half hour at the eighth station to enable me to do that which I should have done on the summit. The stoppage at Chujikibe on return was not at all necessary, and would not have been made if alone. To these delays must be added the facts of having no guide at all from the first moment a guide would have been useful; and my left heel being very severely chafed and cut by an ill-fitting boot, into which the gravel on the downward path penetrating caused positive torture. Of these minor evils, however, I do not complain. I merely mention them as experiences worthy the attention of others under similar circumstances.

An analysis shows

Subashiri 4.25 a.m. to Summit	12.40 p.m.		8.25

Summit 1.10 p.m. to Subashiri	4.02 p.m.	2.52	—
Allowance 8th station for luncheon which should have been taken on summit.....	30 minutes.		—
Chujikibe.....	20 ,,	50	2.02
Net time occupied inclusive of thirty minutes stoppage on summit... ..			9.17

Last year a correspondent of the *Herald* thought proper to reflect upon the statement of a well-known resident here, to the effect that he had accomplished the descent in two hours and a quarter. I have accomplished it in two hours and two minutes. I was told last year, when for several reasons I did not feel justified in accepting an undertaking a year in advance, that I could get thousands of dollars laid against me for two hours and fifteen minutes. If the gentlemen who were then so anxious to "put their money on" are still of the same opinion, they may find an investment on application to me upon terms varying according to odds, from two hours and a quarter, inclusive of *all* stoppages, to one hour and fifty-five minutes for the descent. I cannot say fairer than this.

The following is a memorandum of the elevations between Odawara and Fujiyama, viâ Mianoshta, taken by two very exact instruments which were kindly lent me by Mr. Benson.

W. H. TALBOT.

To the Editor of the "Japan Weekly Mail."

Dear Sir,—That portion of the "History of the Tokugawa Dynasty" which appears in your issue of August 12th, has many points of interest which relieve the usual routine of clan-fights, and party-conspiracies. The best written histories are tedious, when nothing but "the Court and the Camp" are discussed; but when all the other great interests of a nation are ignored, and nothing is given but mere annals of court intrigue and military manœuvres, the result is dreary in the extreme, and does not deserve the name of History; any more than the records of a police-court could claim to be a picture of general society.

In this Tokugawa History we are beginning to see some touches of human interest: Hideyoshi's conduct on the birth of his son Hideyori; the Alexander-like "daily drinking and feasting with a troop of women;" the unmanageable "disputes of barons and vassals," and Iyeyasu's pronounced way of dealing with them; the last exclamation, a sort of "*Tête d'Armée*" cry of the dying Hideyoshi—these, and other points, relieve the narrative from the preceding monotony of blood shedding. But my object in taking up the pen was not to review but to inquire. I observe that "90,000 *kokus* out of the assessment of Omi, and 10,000 *kokus* out of the assessment of the seabord provinces were assigned to defray the expenses of attending at Court and to provide for the cost of grand hunts; while the whole assessment of the K'wantô was reckoned at about 2,507,000 *kokus*."

Now what is to be understood by this "assessment?" Was it the actual amount of government revenue, derived from the land? And if so, what proportion did it bear to the annual yield of those provinces? These are the questions to which I should be very glad if I could elicit an answer from some one versed in the subject.

Foreign readers of Japanese history are much perplexed how to understand the statements of so-many *koku* of rice being the revenue of certain *Daimios* in the olden time. Do the numbers usually given represent the whole agricultural yield of the several provinces, or only that portion which was the *Daimio's* share? And, on what principle was an "assessment" made?

Hoping some well-instructed correspondent will enlighten me through your columns,

I am,

Yours, &c.,

HISTORICUS.

To the Editor of the "Japan Weekly Mail."

Dear Sir.—I notice in your issue of the 8th ultimo some erroneous statements about "a certain Mr. Tsuda" coming from the *Kenrei* of the Chiba *ken*—one Naruto Yoshitomi—and the *Kangiorio*.

As one of the many farmers of the country, on my return from the Vienna Exhibition, where I held the post of one of the Vice-Commissioners of Agriculture, I attempted to teach my countrymen to develope some of the neglected agricultural resources of Japan, and introduce some of the new methods of scientific agriculture, such as I found being taught by the learned professors of the universities and colleges of Europe and America, and adopted by the farmers there.

Since my return to Japan I have published several agricultural books, also the *Agricultural News*, wherein I have attempted, as far as my limited education and means will permit, to show our farmers how to develope many new agricultural industries, amongst which was Hooibrenk's method of using an artificial fertilizer for wheat, barley and rice, which, as I introduced it into Japan, is known in this country as the *Tsuda-nawa*. This process was used in many of the sheltered fields of France as well as the Indian colonies, and is also described by His Excellency Mr. Rochusan, a Cabinet Minister of Holland, as a decided success. Mr. Hooibrenk received, furthermore from the hands of the Emperor Napoleon III., a decoration for his introduction of the system.

Now, this method of cultivation is peculiarly adapted to this country, where wheat and barley are sown in rows, and may therefore easily be fecundated by the *Tsuda-nawa*.

Most of the arable land in Japan is too much sheltered and does not get the needful advantage of the breezes, so that the use of the *Tsuda-nawa* is beneficial, especially as the cost of same is small, say from *yen* 1.25 to *yen* 5, and can be used for many years. Farm labour is cheap, also, so that the use of the *Tsuda-nawa* does not entail any cost which is not fully compensated for by the return. Experiments have been made with it in nearly every *ken* in Japan, and while in some cases the result has shown an increase in the crop of 40 per cent., the average may very fairly be stated at 15 per cent. I can authenticate this statement by reports from *ken* officials and farmers now in my possession, which are the result of hundreds of experiments. The unfavourable statements made by the *Kenrei* of Chiba *ken*, are based on a trial made under direction of the *Kencho* officials, which in some cases, indeed, showed a loss, but taken together showed an average improvement of 4 per cent., while experiments made in the same *ken* by farmers who were skillful in the use of the *Tsuda-nawa*, showed an improvement of 20 per cent. This will prove that the *Kenrei* was wrong in advising the people not to use the *Tsuda-nawa*, and his

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

statement that it is not a success is opposed to facts, as borne out by actual experiments.

Such statements have caused me personal loss. Before they were made I could hardly fulfil the orders for the *Tsuda-nawa* which I received from the farmers in the various *kens* in Japan, but after the publication of the remarks of the *Kenrei* of Chiba *ken*, the farmers, naturally, were chary of trying the experiment.

It is my opinion, based on the result of numerous careful trials, that if the system I advocate were generally adopted as regards only one half of the grain crop in Japan, it would be increased annually to the value of 11,000,000 *yen*.

Now, if such is the case, those officials who, through jealousy, do all they can to prevent the introduction of the system, are preventing the advancement of prosperity in the country and deserve punishment, or deprivation of their office.

Mr. Naruto Yoshitomi, who, through the medium of the press also attacked my agricultural improvements, asserts that the system which I have also advocated, namely that of the inclination of the branches of fruit trees, has never yet been tried in Japan. This assertion is incorrect, as this method of cultivation, which is in great favour in Europe and America, has been tried in many parts of this country with undoubted success, and to my certain knowledge the growth and bearing of apple, pear, mulberry and persimmon trees, and the grape vine, have greatly benefited by it. In the province of Isé some fruit trees, which had not borne for a whole generation, produced large quantities of fruit when so treated.

By the increased knowledge of the art of agriculture to be derived from acquaintance with the methods adopted in foreign countries, particularly by more attention to proper drainage and subsoil ploughing; by a more careful cultivation of cereals, flax, tobacco, sugar-beets, alfalfa clover, grasses and fruits, and by the raising of stock, I hope to see the resources of this country in a fair way to be doubled within the next generation, and it will be a source of great pleasure to me to think that any efforts of mine have tended towards such improvement. The true progress of this country is to be looked for in this direction. In conclusion I would beg to thank the Government officials, the press and the people of my country for the attention which has been paid to my endeavours to improve Agriculture in Japan, and for the kindness and assistance rendered me; and I feel confident that my endeavours for improvement will ultimately result in benefit to the Government and the country.

Yours faithfully,

S. TSUDA.

Tôkiô, August 7th, 1876.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, August 18, 1876.

DEAR SIR,—In your last weekly issue you had a short leader on the case of the assault committed on Mr. Pass.

Whilst agreeing with your remarks, I must say that they are by no means so severe as the case demands, and I notice one very important point which has, perhaps, inadvertently escaped your notice.

In the judgment delivered on the offender, the judge, either through malice or innate stupidity, names the entire of the party who were on board the *Bombay*, individually and severally ashaving used abusive language to the defendant, whereas it appears distinctly by the evidence, that the remark which caused offence was only made by one of the party to his friends, and was overheard by the defendant.

Now most persons do not care to have their names dragged into a police court row, and it either shows great ignorance, or wanton malice, on the part of the Japanese judge to have implied, in the entire absence of any evidence bearing on that head, that the four persons named in his judgement were guilty of conduct calculated to lead to a breach of the peace, especially as one of the party is an English Consular official, and generally well known and respected amongst residents here.

Yours faithfully,

TRIBUNE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, August 18, 1876.

DEAR SIR,—I read with much pleasure in your paper of the 12th instant a letter from your correspondent "R" giving some account of a very interesting relic of Will Adams which he says has been discovered, but I regret to note that he does nothing to bring about a public exhibition of this treasure. If this valuable specimen of ceramic art could only be seen and admired by those countrymen of the stout old mariner now resident here, who knows what a field of research and enquiry it might not open! Enthusiasts might be led to seek for other relics of Will Adams, and such a collection might in a short time be made, as would prove incontestably the artistic taste of the first English settler in Japan as a collector of old china, and might, through the liberality of the collectors, greatly enrich the somewhat scantily furnished museum of our Asiatic Society. Only encourage residents to make strict search, and I have no doubt that lots of relics will be forthcoming, and, of course, there will be no difficulty in satisfactorily tracing the former ownership of them to Will Adams. Perhaps some particularly diligent seacher might discover the cup which Will Adams brought with him from England, and cherished because it was the gift of a fond mother or a dear sister, and which might turn out to bear in old English characters the inscription "For ye good ladde" or "Brightheimstone 1576."

Your obedient Servant,

ANTIQUARY.

Law & Police

IN H. B. M's. CONSULAR COURT, KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Friday, August 18th, 1876.

KENNETH MACRAE was charged with having, on the evening of the 8th instant, assaulted and beaten a Japanese basket maker named Chokichi, in the public street.

The accused admitted having committed the assault complained of, but only under great provocation in the first instance, and in self-defence afterwards.

The complainant and other witnesses were duly examined and proved the assault, and a medical certificate was handed in giving particulars of the injuries received by the complainant.

His Honour characterized the assault as entirely out of proportion to the provocation received. He was doubtful whether this case would properly be met by imprisonment or a fine, but was loath to inflict the former sentence on account of the social disgrace that it would carry with it, but marked his sense of the aggravated and cowardly nature of the assault by fining accused $25, of which $10 would be paid to defendant. In default of payment one month's imprisonment. The fine was paid.

IN THE U. S. CONSULAR-GERERAL COURT.

Before Gen. T. B. VAN BUREN, U. S. Consul-General.

Thursday, August 17th, 1876.

His Honor yesterday heard an *ex-parte* motion made by Mr. Montague Kirkwood on behalf of the accused A. F. Tyree, who was on the 15th ulto. committed to trial on a charge of arson. By the motion His Honor was requested to order that the complainant, Mr. P. Bohm, being neither a citizen of the United States nor a Japanese subject, do give security for costs in the sum of $100 within two days, and that in the event of his not so doing the charge be dismissed as frivolous. His Honor, after hearing Counsel in support of the motion, ordered the complainant to show cause at 2 p.m. to-day.

Friday, August 18th, 1876.

The complainant, Mr. Bohm, appeared to show cause why he should not deposit the sum of $100 as security for costs of the action brought by him against A. F. Tyree. Mr. Kirkwood appeared in support of the motion.

His Honour read the rule in the Consular Court regulations, requiring security from persons who are not citizens of the United States.

P. Bohm stated that he was a German subject. He had no ill-will towards the prisoner, neither did he derive any gain or suffer any loss from the pending action. As a private individual

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

it was a matter of indifference to him whether the case was proceeded with or not, though he considered that as a member of the community it was his duty to press the matter, after having heard the evidence of five or six witnesses. The Court having committed the prisoner for trial on the evidence brought forward, relieved him of monetary liability and the charge of bringing a frivolous accusation against the prisoner. On these grounds he prayed the Court to dismiss the motion.

Mr. Kirkwood argued that the only discretion left to the Court by the Rule, appeared to be that it had power to waive the demand for security if justice would miscarry by its being enforced. This could only refer to the case of a complainant whose means were proved to be insufficient, and who could not comply with such an order. The complainant had not alleged poverty. What he had stated applied to every complainant not a citizen of the United States or a subject of the Japanese Empire. The evidence so far was only *ex-parte*, and very insufficient, certainly not sufficient to warrant conviction. By this rule complainant was always liable for costs and also for an action for false imprisonment.

His Honour stated that it had never been the practice in this Court to demand security in public prosecutions, but no action of the Court could deprive defendant of his right to ask for security. If the accused is acquitted he has no remedy in this Court against his prosecutor, he being of another nationality. It is properly said in the motion that the evidence upon which the accused has been committed is *ex-parte*, therefore, while desirous of doing his duty to the community, His Honour declared himself compelled by the rule quoted to demand security. Mr. Bohm asked for the necessary time to consult his Consulate. This was granted, and the case adjourned till to-morrow at 9 a.m.

Saturday, August 19, 1876.

Mr. Bohm again appeared and pleaded that he had not had sufficient time for consultation in the matter. His Honour therefore adjourned the case again until Monday, the 21st instant, at 10 o'clock, but ordered that the prisoner should in the meantime be discharged on his own recognizance of $500, to appear and surrender himself for trial on Monday.

The rule cited by Mr. Kirkwood, in support of his demand for security against costs from the complainant, is No. 19 of the Regulations for the Consular Courts of the United States of America in Japan.

"Any complainant may be required to give security for costs of the prosecution, including those of the accused, and every complainant not a citizen of the United States of America, or a subject of the Japanese Empire, shall be required to give such security, unless in the opinion of the Court, justice will be better promoted otherwise. When such security is required by the Court, and refused, the proceeding may be dismissed."

PROPRIETARY CLUBS.

(The Field.)

Any habitué of London during the last dozen years can recall a long list of clubs which have come, flourished, and burst into the air. If he will take the trouble to inquire into the history of these most ephemeral societies, he will find in each case that the club entered into life under the auspices of what is called the "proprietary system." There are always a large number of men, young ones especially, who have not the *entrée* of the more leading clubs, and yet pine for the comforts and independence of club life. An amalgamation of these, duly organised, could form a society as sound as the New University or Junior Carlton (both self-proprietary, and conspicuous as successes among the many failures of modern organisations in the club line). But to organise in this manner requires time, trouble, and perhaps some risk on the part of the moving spirit. Co-operation fails while ambition remains, and the outcasts clutch eagerly at any offer to provide them with the luxuries of club life without any risk of responsibility by possible failure of the speculation. Some-one is to be responsible for the butchers' and bakers' bills, rent, furniture, servants' wages, rates and taxes; but the members are absolved, and the burthen taken off their shoulders, by an obliging proprietor, who comes forward in the nick of time, and who, in consideration of receiving all entrance fees and subscriptions, engages to farm the club, under certain regulations and tariffs to be approved of by the committee.

There is now a demand for club life which did not exist or was not realised fifteen years ago. Then, during the London season, and especially during the Derby week, the dining rooms of the Wellington and St. James's Hall might have been seen crowded with an element now conspicuous by its absence. Subalterns by the hundred, captains not a few, undergraduates *ad lib.* and many a master of arts, students of law in profusion and barristers of years' standing, might be seen at these restaurants. The old clubs could not take in all these, and till their turns came they were content to dine at the leading restaurants. Then came an era of new clubs, some few of them successes, a majority failures. The Naval and Military, Junior Carlton, and New University have stood their ground, being founded upon the rock of self-proprietorship; but where, we may ask, are the Volunteer, Argus, Hanover, Pelham, Corinthian, Public Schools, Junior Oxford and Cambridge, and the first editions of the Country, Raleigh, Junior Army and others? One and all they have "burst up" under the proprietorships which brought them to the fore, and in that wreck have gone the entrance fees which were fondly paid under the delusion that the funds so subscribed were forming a solid foundation for the future success of the infant institutions. These new societies abstracted from the old restaurants a large proportion of the customers who used nightly to dine there previous to the *furore* for new clubs. When these new clubs came in force, the Wellington became extinct, one proprietor of the St. James's failed, and keepers of restaurants became aware that they must look in future to some other source to supplement the patronage thus lost to them. It having thus begun to be unfashionable for the rising generation of future clubbists to bide their time for admission to old standard clubs, and they being ambitious to enjoy club life from the outset, the supply became more fully equal to the demand. No sooner did one mushroom club and its proprietor collapse than another sprang up in its place; and even if some of those who had already burnt their fingers held aloof, and contentedly waited their turn for sound clubs, there were still to be found as many fools and flats in the sea of youth of the period as had already come out of it. Of all these proprietary clubs which have thus failed, it would be hard to point to one which did so from internal weakness and want of custom. The causes will be usually found to have been that the club, as a property, was overwhelmed under the failure of the proprietor from other causes. One proprietor bolted with all the funds; another speculated in the City, and so failed, dragging his club with him in his fall; another kept a brougham and a *chère amie* upon no income but such as the club afforded him, paid no rent, gave bills of sale upon the furniture, and fared sumptuously every day, till an execution was put into the house, and the members, asking the name of the strange waiter, were told that he was the "man in possession."

It is curious that each of these clubs—which, so far as income was concerned, was paying its way, and bringing profit and no loss—should have severally been owned by a proprietor whose fate was to figure hereafter in the Bankruptcy Court. It can hardly be supposed that club keeping is such a really bad speculation; else, why do new proprietors so promptly come forward to fill the vacated ranks, but from the knowledge that, if failure had overtaken their predecessors, the insolvency was due to any cause but that of club proprietorship?

There are several old-standing clubs on the proprietary system, whose stability is under no suspicion. There are also some of the newly founded ones whose character sounds good from all that we know of them; but the curious coincidence that so many proprietors should have failed after a short time of proprietorship, while their clubs paid all working expenses with a profit, and while entrance fees paid in addition should have formed a substantial reserve fund, seems to point to this conclusion—that the facility with which a club of this sort can be got up, and the command of ready money which it offers to speculators short of cash, induces many a City man who finds himself involved from other causes to start a club as a final speculation, which may recoup his tottering finances, but which, as history shows, is generally swamped in the foundering of other ventures. The proprietor can get credit for months or a year from his butcher and baker; he may hire his furniture, and no rent be due for six months; his painter and decorator are also long-suffering; but the members of the club pay cash for entrances and subscriptions, and the wind is raised at once, without any immediate demand for outlay. The way in which some of these clubs are got up is a sort of parallel to some of the recent revelations as to fictitious directorships, with which the law courts have made us lately acquainted. It shows that it is the clubbists who are to be found for the proprietors, and not the latter for the former. The great thing is to procure a well-sounding committee for the prospectus, and a decent name for a secretary. The latter may do as little work as he likes, and leave his labour to the proprietor, so long as he lends an air of respectability by his name. The committee are assured that they "incur no responsibility," and are

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

carefully impressed with the idea that their sole duty is to elect new members, pass bye-laws, and report upon complaints indorsed on the dinner bills. Their duties are nominal; their virtual function, even if they themselves are not aware of it, is only as decoy ducks. To exemplify the manner of formation of clubs in embryo two curious facts have recently come to our knowledge. A colonel was solicited to allow himself to be put forth as secretary, fifty pounds a year being offered him for the use of his name; his duties to be only nominal, and a real drudge to do his work for him. Again, while a committee was being framed for prospectus, a young gentleman barely of age, but a younger son of a nobleman, was requested to allow his name to figure on it, upon the promise that if he did so he should be allowed the free use of the club, without payment of either entrance fee or subscription. The youngster, with flattered vanity, at first assented, but very soon after withdrew his name, upon the advice of his friends. The club is still upon its trial and may turn out, for all that we dare prophesy, a success; at the same time it is well that those who contemplate joining new clubs should, after these revelations, make themselves well aware beforehand of all the circumstances under which apparently high-sounding committees have been placed in office, and should not take it for granted that the respectability of the name of an individual on the list is any proof that he has such faith himself in the venture as to risk his own cash in it.

In all proprietary clubs it would be a sound principle that a certain portion or all of the entrance fees should go to members themselves. If a club pays its way at all, it does so with the aid of subscriptions and the cash paid for refreshments. The entrance fees should be funded as paid in. If the income of the club requires augmenting, so as to give the proprietor an adequate return for his outlay, he might be allowed some or all of the interest upon the funded entrances, but the capital should belong to the members. The proprietor should stand in much the same light as a messman to a regiment: he should take the business, and farm it from year to year, or for a longer date, taking all risk of profit or loss upon himself. The subscriptions, in whole or part, should go to him, and, in certain cases of special outlay, or alterations, some disbursements might be made to him from the entrance fees fund; but the latter should be held by the members as a capital account, distinct from the ordinary income which they farm out. This is the only safe basis upon which a new club of this sort can be worked. If the members hand over entrance fees to the proprietor, they have no guarantee for his solvency, nor security for their deposit. If he fails, they are homeless: whereas if they retain their entrance fees they have always capital to take new premises, and can find some new proprietor to stand as "messman" and to form the club. But so long as clubbists placidly hand over entrance fees, in their eagerness to grasp at an offer to absolve them of all pecuniary responsibility, so long will club-keeping be a popular resource among a certain class of speculators, and so long will the name of proprietary clubs be associated with ephemeral existence.

Shipping Intelligence.

ARRIVALS.

Aug. 12, *Burmese*, British steamer, Luck, 1,284, from Hongkong, General, to Jardine, Matheson & Co.

Aug. 12, *Cashmere*, American ship, Norton, 936, from London, April 7, General to E. Moulron.

Aug 13, *Cathaya*, British ship, Matthews, 790, from Nagasaki, Aug 3, Coal, to P. M. S. S. Co.

Aug. 13, *Carl*, German brig, Thomsen, 215, from Takao, July 23, Sugar, to Chinese.

Aug. 14, *Tanais*, French steamer, Reynier, 1,010, from Hongkong, Aug. 6 Mails and General, to M. M. Co.

Aug 16, *Wallace*, British steamer, Brand, 1,753, from Shanghai, Aug. 11, General to Jardine, Matheson & Co.

Aug. 17th, *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai and ports, Mails and General, to M. B. Co.

Aug 19, *Sumida Maru*, Japanese steamer, Gorlach, 690, from Hakodate, Aug 17, General, to M. B. Co.

DEPARTURES.

Aug 14, *Ada*, British barque, Asals, 686, for Kobe, General, despatched by L. Kniffler & Co.

Aug. 15, *Etta Loring*, American barque, Loring, 716, for New York, Tea and Sundries despatched by Smith, Baker & Co.

Aug. 15, *May Queen*, British barque, Nisbett, 283, for Chefoo, Ballast, despatched by Captain.

Aug. 16, *Sunda*, British steamer, Lee, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.

Aug. 16, *Nago a Maru*, Japanese steamer, Young, 1,914 for Shanghai and ports. Mails a d General, despatched by M. B. Co.

Aug 17 *White Adder*, British ship, Betham, 965, for Kobe, Coal, despatched by Wilkin & Robison.

PASSENGERS.

The American barque *Etta Loring* for New York has moved outside the shipping.

The *Cathaya*, from Nagasaki, experienced strong N. E. winds with heavy rain and squalls for the first two days after leaving port, during which time some light sails were lost, but afterwards had fine weather until arrival

The *Carl*, from Takao, met with heavy easterly winds and rain squalls after leaving port, and among the islands, on the 5th and 6th inst., lost one or two sails. During latter part of voyage had fine weather and light winds.

The *Cashmere*, from London, reports heavy S W. and Westerly winds until beyond soundings. Passed the Start, April 11th; had good N.E. trades, crossing the Equator in 25° 40 South on 6th May, and carrying the S.E. trades up to 15° South. Passed the Cape on the 7th June, and experienced some heavy weather in that vicinity. Ran the longitude down in same parallel, with moderate winds and fine weather, and arrived off Anjer on 19th July. Spoke the American ship *Maumie*, July 18th, from Algoa Bay to Anjer for orders, and the ship *Princess Louisa* from Cardiff to Singapore, July 20th. Met with steady winds and pleasant weather up the China sea. Passage 4 months from the Start.

Per Steamship *Tanais* from Hongkong.—Messrs. Montono and son, Hondo and Madame Zitelman.

Per Steamship *Sunda* for Hongkong.—Dr. Hilston, R.N., Mrs. Hilston, Messrs Gough, Lewis, and Muller.

Per *Nagoya Maru*, for Shanghai and ports.—Mr. and Mrs. Carruthers, Mrs. Black and 2 children, Messrs. Kemperman, Moncrieff, Alson, Schepell, Joseph, Kavanagh, Ribeiro, Coops, Jenkins, Miss Winn, Mrs Ferguson, and 32 Japanese in the cabin.

Per Steamship *Tokio Maru* from Shanghai and ports.—Prince and Princess Higo, Paymaster Skelding, Mrs. Skelding, Miss Skelding, Mr. M. Skelding, Mr. F. Skelding, Mr and Mrs. Scott, and child, Mrs. Flowers, Miss Kirby, Messrs Geo. Lewis, A. A. Farrar, Ed. Pereira, John Steadman, Cirault, E. C. Kirby, Hunt, Parsons, Piquet, S. Endicott, Dr. Painter, and 51 Japanese in the cabin; 4 Europeans, 11 Chinese, and 381 Japanese in the steerage.

CARGO.

Per Steamship *Sunda* for Hongkong.—

Silk for England	585 bales.
France	148 „
Italy	32 „
Total	765 bales.

Per Steamship *Nagoya Maru*, for Shanghai and ports.

Treasure to Kobe	$267,100
„ to Nagasaki	22,200
„ to Shanghai	72,000

Per Steamship *Tokio Maru* from Shanghai and ports.—

Treasure	*yen* 100,594.25
„	$9,160.00

REPORTS.

The *Tanais* reports strong N.E. winds during the passage.

The *Gaucho* was towed up from Yokoska to Shinagawa, where she will load rice for England or the continent.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The business done in *Cotton Goods* and *Yarns* during this week has again been a fair one, but prices in general are not so firm as they were a week ago. Exchange has further advanced to 4/5½ for 6 months' Bank Bills, and no doubt it must be a great temptation for importers to secure such a favourable rate, even by slightly sacrificing on the prices. Regarding the position of the various articles there is no new feature to report to-day, and we quote as follows, viz:

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce....	$1.70 to $2.10	
8 lbs.	38½ yds.	44 in.	„ ...	2.00 to 2.45	
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1.95 to 2.50	
9 lbs.	38½ „	44 in.	„ ...	2.30 to 2.85	
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.55 to 1.75	
„ 6lbs.	24 „	32 in.	„ ...	1.15 to 1.25	

White Shirtings:—				
60 to 64 reed 40 yds. 35 in.	per pce.	2.30 to 2.50		
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...	0.75 to 0.97½		
Black Velvets		8.00 to 9.00		
English Drills 15 lbs. 40 yds, 30 in.	... ...	2.80 to 3.00		
Taffachelass	12 yds, 43 in....	*nom.*	2.00 to 2.20	

Yarns.—

No. 16 to 24	per picul...	$30.00 to 33.00	
No. 28 to 32	per picul...	$32.00 to 38.00	
No. 38 to 42	per picul...	$39.00 to 42.00	
Reverse Twist ... 16-24 ...	„ ...	33.00	

Woollens.—There is not much change to report in this staple since our last. Transactions continue to be favoured by the constant rise in exchange, and sales are reported in *Black Orleans* and *Black Italian Cloth* at quotations. Plain *Mousselines* are more quiet, some special shades only readily finding buyers, and prices have a downward tendency.

Plain Orleans	40—42 yds.	32 in....	5.00 to 8.00	
Figured Orleans	29—30 yds.	31 in....	4.25 to 5.00	
Shimagoro	30 yds.	30 in....	4.25 to 5.50	
Italian Cloth	—30 yds.	32 in....	0.27 to 0.35	
Camlet Cords	29—30 yds.	32 in....	5.75 to 7.00	
Camlets Asstd.	56—58 yds.	31 in ...	16.50 to 17.50	
Lastings, Japan...	22—30 yds.	32 in....	12.00 to 13.00	
Plain Mousseline de Laine	—30 yds.	30 in....	0.17½ to 0.19	

Figured Mousseline de Laine...	30 yds.	30 in...	0.23 to 0.27	
Multicolored „ ...	30 yds.	30 in...	0.30 to 0.36½	
Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80 to 1.20	
Presidents	54 in. to 56 in...		0.60 to 0.70	
Pilots	54 in. to 56 in...		0.40 to 0.45	
Union	54 in. to 56 in...		0.40 to 0.65	
Blankets, scarlet & green 7 to 8 lbs.		per lb...	0.40 to 0.42	

Sugar.—Buyers still continue to offer lower rates than holders are inclined to accept, and there are, in consequence, few transactions to report. Quotations have slightly declined.

Sugar:—Takao in bag	per picul ..	$3.30	
„ in basket	„ ...	$3.10	
Taiwanfoo do.	„ ...	$3.15	
do. in bag	„ ...	$2.90	
China No 1 Ping-fah	„ ...	$7.60	
„ No. 2 Ching-pak	„ ...	$6.80	
„ No. 3 Ke-pak	„ ...	$6.00	

China No. 4 Kook-fah	per picul...	$5.30	
„ No. 5 Kong-fun	„ ...	$4.70	
„ No. 6 E-pak	„ ...	$3.80	
Swatow...	„ ...	$3.00	
Daitong	„ ...	$2.55	
Japan Rice	„ ...	$2.26	
Kerosene Oil	„ ...	$23.0	

Kerosene Oil.—A few eager sellers at auction have kept the market low, at $2.23 to $2.29. Consumption is steady, and but for these sales prices would advance.

EXPORTS.

Silk.—On account of heavy arrivals and the continued rise in exchange same purchases of Hanks were effected at the beginning of the week at a further decline of about 20 dollars per picul, and large rejections were made. Lately, however, a good demand has sprung up again; prices have consequently advanced and close very firm at quotations.

Settlements, since the 12th instant, are 1,000 bales of Hanks and 200 bales of Oshius and other sorts. Arrivals amount to 1,980 bales. Stocks are 1,400 bales. Total export up to date 5,703 bales, against 841 bales at the same time last season.

	At Exchange 4/5¾ in London.	*At Exchange 5.67 at 6 m.s. in Lyons.*		
Hanks.—Extra to No. 1	$810 to 830	31/10	to 32/7	89 to 91
„ Best No. 1 & 2	$780 to 800	30/9	to 31/6	85 to 88
„ Good No. 2	$750 to 770	29/8	to 30/5	82 to 84
„ Medium No. 2½	$720 to 740	28/6	to 29/3	79 to 81
„ C'mon. No 3	$690 to 710	27/5	to 28/2	76 to 78
„ Inferior No 4 & 5	$660 to 680	26/3	to 27/	73 to 75

	At Exchange 4/5¾ in London.	*At Exchange 5. at 5.67 m.s. in Lyons.*		
Oshiu—Good & best ...	—	—		—
Medium	$750 to 780	29/8	to 30/9	82 to 85
Kakida.....	$800 to 900	31/6	to 35/3	88 to 98
Hamatski.....	$630 to 680	25/2	to 27/	70 to 75
Soday.	$520 to 680	21/1	to 27/	58 to 75
Taysaam sorts.....	$480 to 540	19/7	to 21/10	54 to 60

Tea.—Despite the advanced rate of exchange a large business has been done in Tea during the past week, settlements amounting to 6,000 piculs. The demand has run principally on the lower descriptions, and Teas from *good medium* downwards have recovered from $1.00 to $1.50 per picul. *Fine* grades continue scarce, and rumours about these classes are very conflicting, some native dealers asserting that there is a great deficiency in the amount produced this season, whilst others say that they are only withheld for the purpose of getting high rates as the season advances.

To-days quotations are as under, the market ruling rather irregularly.

Common	$10.00 to 12.00	Fine	$23.00 to 29.00
Good Common	13.00 to 15.00	Finest	30.00 to 34.00
Medium	16.00 to 18.00	Choice	Nominal.
Good Medium	19.00 to 21.00		

Reports as to the total amount of the crop for the season 1876-77 are very diverse, but the general opinion leads decidedly to a short export.

EXCHANGE AND BULLION.

Exchange.—In the early part of the week rates remained pretty steady, but, with larger transactions in Private Paper, rates at the close have suddenly advanced to present quotations.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 5½d.
„ Bank Bills on demand	4s. 4¾d.
„ Private 6 months' sight	4s. 6d.
On Paris—Bank Sight	5.45
„ Bank 6 months' sight	5.55
„ Private 6 ms. sight	5.70
On Hongkong—Bank sight	6 % disct.
„ Private 10 days' sight	8 % noml.
On Shanghai—Bank sight	74½
„ Private 10 days sight	76 noml.
On New York—Bank Bills on demand	103½
„ 30 days sight Private	106½
On San Francisco—Bank Bills on demand	104
„ 30 days sight Private	107
Kinsats	382
Gold Yen	375

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. tf.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 35.] YOKOHAMA, SATURDAY, AUGUST 26, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The measure for the Capitalization of the Incomes of the nobles and gentry has been the theme of much discussion in the native press, and is regarded with warm approval by the people generally, as was to be expected. The victims of it are passive and powerless, and it is extremely difficult to discover with what feelings they regard it. That it will create any of the active opposition or indignation with which such a measure would be regarded in any country of Europe, must not be imagined for a moment; and we are inclined to believe that if the nobles and gentry could rely upon the conditions of the measure being observed by the Government, they would allow that they have been treated with as much consideration as they could expect in view of the altered condition of affairs in the Empire. The opinion of foreigners on the question is based on more serious views of national obligations and of property as an institution, and a measure which is undoubtedly tainted with repudiation and savours more or less of communism, is necessarily viewed with serious misgiving. That the burden of the extravagances and excessive expenditure of late years has been thrown upon the aristocracy, whose claims on the country have now been dealt with in a high-handed manner in order to meet these excesses, cannot be denied, nor can those who believe that a monarchy demands the support of an aristocracy feel otherwise than alarmed at the thought that another blow of a most crushing nature has been struck at the supports which surround the throne of Japan. How far the measure will be justified by history must depend, as we have previously urged, upon what is done with the money thus saved to the country, but unqualified approbation or disapprobation seems to us at present alike unsuited to it.

If a loss may ever be said to be a gain, the Japanese Government has received a solid addition to its credit by the retirement from its service of Mr. E. Peshine Smith, who was chosen some five years ago by the Government of the United States for the post of International Adviser to the Foreign Office at Yedo, at the request of the Japanese Minister at Washington. That Mr. Seward or Mr. Fish—for we are uncertain which of the two recommended Mr. Peshine Smith for this appointment—had any conception of the grievous discredit he was inflicting upon the U. S. Government or the American community in Japan when he advised this nomination, is not for a moment to be supposed. It is also conceivable that he imagined that merely a person who had some legal knowledge was required by the Japanese Government, and thus sent over Mr. Peshine Smith, who undoubtedly possessed that qualification. But why the Secretary of State should have lent to this government, for the purposes required, a man in other respects like Mr. Peshine Smith, will ever remain a profound enigma. What the Japanese wanted was a large-minded man, free from small national prejudices, with something like a statesman-like view of the steps they should take in entering upon their new relations with the powerful states of the West, a travelled, cultivated and high-minded gentleman, whose knowledge, antecedents, bearing and character would have made him a respected denizen of Yedo, the sagacious and impartial adviser of his employers, the welcome associate of all who are interested in the advance and consolidation of friendly feelings between this Government and the governments of the West. But instead of a man of this class, Mr. Peshine Smith was sent here; and if we refrain from saying all that this implies, it is because he embodied the exactly opposite characteristics to those which the circumstances demanded and we have named. We have been informed by credible persons, that Mr. Peshine Smith showed some traces of ability of a certain kind, during such lucid intervals as confirmed habits of inebriety permitted him to enjoy. But it is dangerous for a Government to act in momentous questions upon advice which has no better foundation than a fortuitous sobriety, and the intrusion into its archives of opinions which betray delirium of any kind, is neither creditable nor safe. If Mr. Peshine Smith went about Yedo in the national dress of the Empire under whose jurisdiction he placed himself on a memorable occasion, it was his own affair, although every Japanese might fairly have resented the act as an insult. His apostacy relieved his own country indeed, from something of the odium of maternity, but it visited with a special and cruel bitterness the Empire of his adoption.

The following are translations from the *Chôya Shimbun* and *Nichi Nichi Shimbun* respectively, but we have every reason to believe that the announcement made is entirely premature.

Our foreign mails have hitherto consisted merely of the American one, but it is reported that in a short while mails will be sent by our Government to England, France and other foreign countries.

Our exchange of mails with foreign countries up to the present time has merely been that with America. It is, however, said that an exchange of mails will soon take place with the two countries of England and France. We also hear that Mr. S. M. Bryan, an American in the employ of the Postal Department, who is attached to the Yokohama Post Office, has received orders to negotiate the said conventions, and left for San Francisco on board of the American Mailboat *City of Peking* which sailed yesterday morning. He was accompanied by Mr. Midzushima of the above-mentioned Post Office.

We have received from Messrs. Trübner & Co. a book entitled "Pidgin-English Sing-Song," by Charles G. Leland (Hans Breitmann), the publication of which we announced some short time ago. We cannot say that we are much impressed with the brilliancy of the songs and stories it contains, and although the volume shows some ingenuity, it is written in such pidgin-English as was never yet spoken in China. Readers at home who are weary of guessing acrostics or solving chess problems, may be satisfied to puzzle out, with the aid of the vocabulary attached, the meaning of these

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

compositions, but those whose sad lot has brought them into daily connection with pidgin-English as an unavoidable necessity, will, we think, pronounce the book to be a collection of vapid nonsense. Although the author takes the trouble to explain with authority the origin of pidgin-English, and its peculiar construction, the following quotations—the first being rather below, and the second above, the average of merit of the volume's contents—will show the peculiar words and phrases which are boldly made use of. The first is an extract from a poem entitled "Wang the Snob."

"Coolie makee too much bobbely,
"Catch one piecee stick an' floggee
"Mr Wang, till Wang half die-lo;
"Nebba catchee one such floggum
"Allo he life—he nebba tinkee
"Any man hab catch such floggum.
"Wang go homee, Wang go beddy,
"An' in beddy too much weepee,
"'Cos he be such too-much foolo."

The second is a complete version in pidgin-English of the old nursery rhyme of "Little Jack Horner."

"Littee Jack Horner
"Makee sit inside corner,
"Chow-chow he Clismas pie;
"He put inside t'um,
"Hab catchee one plum,"
"*Hai yah!* what one good chilo
my!"

We cannot, however, close these few remarks without thanking the author for certain information which is entirely new to us, notwithstanding a lengthened residence in China, viz, that a school had been established in the Yangtsze-Kiang, and that taels and mace are "coins very seldom seen." Very seldom indeed, we should say!

From the "Japan Mail Daily Advertiser."

Monday, 21*st*.

From the *Nichi Nichi Shimbun*.

Yesterday His Majesty the Mikado presented the *kuadzoku* in attendance at the Imperial Palace with some fans and porcelain ware, and to each of the *Sangi* two peices of linen, in recognition of their services during the hot season.

From the same.

A *kuadzoku* named Shinjo committed suicide a few days ago. He was a man of studious habits who devoted all his time to books, and there is no doubt that his reason gave way in consequence. He was only 28 years of age.

From the same.

The Frenchman recently employed by the Shihôsho is said to be instructing Japanese detectives in their peculiar duty.

From the same.

We recently stated that the marine force of the Imperial Navy was to be decreased and the number of sailors and stokers increased, but now hear that many of the marines, objecting to become either sailors or stokers, have applied to the Bureau of Police for situations as constables.

From the same.

On the 22nd of this month a swimming race will be held by the cadets of the Imperial Naval College, the course being from the Riogoku bridge on the Sumida river to the fortifications off Shinagawa.

From the same.

A fire broke out at Toshima-mura, near Tôkiô, on the morning on the 17th instant, but was soon got under.

From the same.

Mr. Makita, the acting editor of the *Hôchi Shimbun*, has been fined 80 *yen* and sentenced to imprisonment for five months, for having violated the Libel-laws in writing about the Governor of Tamanashi *Ken*.

From the *Eiri Shimbun*.

At Netanai, in Yezo, the sulphur mines caught fire on the 21st of last month.

From the *Mainichi Shimbun*.

We have heard the rumour that His Excellency Sanjô, the Prime Minister, will resign office on his return from Yezo. It is said that during his late illness the Prime Minister expressed his desire to resign, but that through the advice of other high officials he agreed to retain office for a certain fixed term, which has now nearly expired.

Tuesday, 22*nd*.

From the *Ôsaka Nippô*.

A hospital, covering an area of three thousand *tsubos*, is to be erected at Ôsaka, on the site of the former Hosokawa *yashiki*.

From the same.

Offices for the inspection of drugs and chemicals are to be established at Tôkiô, Ôsaka, Nagasaki, Niigata, Nagoya, and Sendai.

From the same.

The Ôsaka Mint, after being closed for the summer vacation, was reopened on the 16th instant, and work is now going on actively from six o'clock in morning to one in the afternoon.

From the *Hochi Shimbun*.

Mr. Sanjo and other high officials visited the various Government offices, etc., at Hakodate. They intended to start off to Mororan by steamer on the 15th instant, but owing to the illness of Mr. Sanjo the trip was postponed until the 18th or 19th instant.

From the same.

Some farmers living in the neighborhood of Tôkiô, being greatly distressed by the continued drought, visited the temple of Sekison, on Oyama, to obtain some water from a sacred spring which is to be found there, as they believed that their pilgrimage to obtain it would so far find favour with the gods that the drought would cease. It appears, however, that this sacred water has been in such request, and no rain has fallen for so long, that the spring has dried up, so the disappointed pilgrims were obliged to return without their object being accomplished.

We have advices from Nanking. Our correspondent says he has reason to believe that the Viceroy Shên has, as might have been expected, responded in a proper spirit to the energetic reclamations of the Vicomte Brenier de Montmorand, and no doubt severe punishment will be meted out to the instigators and accomplices of the Ning-kuoh massacre. We are promised further details by and bye, but the agreement between the two high officials is not yet made known, for obvious reasons. We hear that the two French priests were in great danger for some days, but managed to effect their escape, and are now in safety, after great sufferings. The whole circumstances of the affair are horrible, and cannot be printed. There is reason to fear, too, that the occurrence was only one of many that were planned to extirpate Christians in Ngan-hui. The Catholic Mission had done vast good to the people of the province. Schools had been founded, medicines were freely dispensed, charities to the poor were on the most liberal scale in times of distress, and we are distinctly assured that there had been in this instance not the slightest tentative interference on the part of the missionaries with the temporal power. The damage done amounts to about $70,000, which the Chinese will have to make good. The entire devilish work is the act of a secret society, which is tolerably comprehensive in its aims. It wants to abolish Christianity, to kill all foreigners and overthrow the Ta-Tsing Dynasty.—*Shanghai Courier.*

A NEW COURT OF APPEAL FOR CHINA AND JAPAN.

WE are informed that it is in contemplation to institute a new intermediate Appeal Court between the British Courts of First Instance in China and Japan and theJudicial Committee of the Privy Council, or whatever Judicial body may, under the legal changes pending in England, replace the highest Court to which colonial and ex-territorial disputants can at present carry their litigation.

Our readers are aware that under the existing system a suitor dissatisfied with the judgment of any of the Provincial Courts of China or Japan—and in many instances no doubt he has reason to be dissatisfied—must appeal to a single Judge sitting at Shanghai before resorting to the Privy Council. An intermediate appeal of this nature has been long felt to be wholly inadequate to the wants of the British community in the East, and the enormous expenditure, and waste of time, temper and energy involved in an appeal to the Privy Council has practically prohibited resort to that tribunal.

Thus the impossibility, in a practical sense, of appealing to the Privy Council, and the unsatisfactory nature of the existing intermediate appeal—so unsatisfactory that the average of intermediate appeals even from so important a commercial centre as Yokohama is hardly one a year—has hitherto forced the litigant to put up as best he might with the judgment of the court of first instance to which his claim or defence has been submitted. In other words, British residents in the East have been deprived of, or rather prevented from enjoying, their right to have questions of commercial or general importance submitted to the consideration of a strong and competent tribunal. They have been compelled to content themselves with the decisions, however these might affect their rights, their purses or their comforts, of men, anxious no doubt to do their duty, but without either the training or the learning necessary to give them a fair chance of doing it satisfactorily, and hindered, besides, by their multifarious duties, in the discharge of their judicial functions. In Yokohama, it is true, we have been fortunate enough to possess a Court presided over during the greater part of six years by judges who had at all events been educated as lawyers, and, so far, have less cause of complaint than our brethren in the other ports. But there are certain considerations which apply to all local courts in the East, not exclusive of our own tribunal. It is extremely difficult for a judicial functionary living in a small community, constantly in contact with a large proportion of the very persons who come before him as disputants or witnesses, and sure from public rumour and table talk to be more or less acquainted with the merits of any case of importance brought before him, to discharge his high duties without bias and without partiality, though commonly indeed the bias and partiality will be half unconsciously entertained. And where the existence of such a bias is fully recognised, the struggle against it may, and very frequently does, lead to the opposite extreme, and the consciousness of a latent desire to favour or believe Jones rather than Smith produces an over weighting of the scales of justice in a direction contrary to the distrusted predilections of the holder of the balance, rather than in that of the law. A well known instance of this occurs to us, where a judicial officer most conscientiously, and indeed painfully anxious to avoid all semblance of partiality, was credited, or rather discredited, by the public with the very fault he so earnestly strove to avoid the imputation of. Further, many legal points of considerable difficulty

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and importance have to be decided by untrained judges, or under the comparative hurry and excitement of a trial in first instance, and, under the existing system, these decisions, from which practically there is no appeal, form a kind of precedents constituting a body of extremely faulty and defective judge-law.

Enough has been said to show the necessity for and justify the creation of, a new Court of intermediate appeal, which shall be from its constitution strong enough and impartial enough to meet the reasonable demands of suitors, and prevent on the one hand the need, except in rare instances, of carrying litigation up to the Privy Council, while on the other it shall afford every one an inexpensive mode of obtaining such a decision on his claim or defence as ought to satisfy him, even in the event of the decision being adverse, that the law of England has been fairly and adequately administered. The new Court is to consist of the chief judges of the Supreme Court at Hongkong, the Supreme Court of Singapore and the Supreme Court for China and Japan. The details of the proposed arrangement are not yet known, but it is believed the Court is to sit alternately in Singapore, Hongkong and Shanghai. A better plan, we venture to think, would be that the appeal court should make a circuit, including not only Singapore, Hongkong and Shanghai, but Yokohama also, once or twice a year, or perhaps thrice in two years. We do not suppose that this amount of sea-travelling would be anything but beneficial to the health of the three legal luminaries, although perhaps an objection to it might be founded in some cases upon the age of one or more of the members of the Court. But it ought not to be possible to found such an objection, for we are of opinion that as a rule no judge of any one of the three Supreme Courts should be appointed after the age of forty-five, and fifteen years of service, exclusive of furlough home, should, we think, give a right to a fair pension.

We believe we are correct in ascribing the idea of the new appeal Court to Sir JULIAN PAUNCEFOTE, whose light, long modestly hid under a bushel, has blazed forth lately with uncommon lustre, and now illuminates the more obscure legal nooks of the Foreign Office.

We need hardly add a hope that advantage will be taken of the creation of the new Court thoroughly to remodel and recast the order in Council of 1865, and the Rules of Procedure made under it. No dimmer mass of perplexing rubbish ever emanated from the brains of the most determined advocate of the celebrated 'How not to do it' doctrine, and though ordinarily we are of distinctly anti-revolutionary tendencies, we cannot avoid in this instance expressing an emphatic wish that the whole existing edifice may be utterly destroyed and replaced by a new and fairer fabric. *Ædificium ruat ne justitia pereat.*

While on these topics we venture to add a word or two which we dare to hope will not be altogether unworthy of the consideration both of those who preside over and those who seek redress at our local tribunals. The latter habitually expect from a court of law more than it can give, and the former too often mistake their functions, and either afford a relief which ought not to be sought from a legal tribunal, or do not sufficiently exercise the powers they are invested with.

Law is not, and from the imperfection of human affairs —so much the most imperfect portion of the kosmos— cannot be synonymous with justice as understood in the abstract by the ethical philosopher. Nor does a court of law profess to render justice between man and man but simply to administer the law, that is, to apply to the question at issue the rules of a code written or unwritten, which society in its own interests and not in the interests of the individual merely—or at least not in his temporary or passing interests—has judged fit to enact. Into the enactment of this code, in modern times at least and in the most civilised nations, moral considerations either do not enter at all or enter only to a very slight and constantly diminishing extent, and from the ideal code would be altogether absent. A little reflection shows the propriety of this system. Every decision, even in a civil case, involves a punishment of some sort. Some one is ordered, and, if necessary, forced by violence or imprisonment to pay something he would rather not pay, or to do something or refrain from doing something he would rather not do or refrain from doing. All systems of ethics admit that certain offences, even though from a moral point of view very heinous, should not be punished by the State, but left to the castigation involved in the social deconsideration to which their commission may expose their authors. Thus, ingratitude even of the most revolting kind, deceit however great if not practised under circumstances making it fraud in law, acts of selfishness, covetousness, unkindness and the like, though they cause infinitely more misery in the world than any number of broken contracts or broken heads, are not even noticed by the law. You may treat a parent with the basest ingratitude, you may inflict upon those who are wholly dependent upon you any amount of unkindness short of legal cruelty, you may stand by and laugh at a fellow-creature while in peril of death from which a word or a movement might extricate him, and the law simply takes no notice whatever of your conduct, refuses even to entertain a complaint based upon it, while if you contract to sell a perch of land for ten pence you may be forced to carry out your contract by fine, imprisonment or violent dispossession.

How then with any justice can a party to a civil cause reproach the tribunal with not taking into consideration circumstances, which, if pleaded by themselves, it could not even take cognizance of? The defeated party often complains of the want of equity shown in the decision adverse to him, intending not what lawyers term equity, which *en somme* is nothing than a more or less conventionally fair mode of interpretation of the written and common law, but fairness according to the current conceptions of the time in which *moral* much more than *legal* ideas are involved. In no instance can a tribunal render even perfect law, much less perfect justice; and in cases where considerations of a moral nature largely enter, a decision approximately just from a legal point of view may, from a moral point of view—sure to be that of the defeated party—be altogether unsatisfactory. There are, indeed, two kinds of human justice, that recognized and administered by the law, and that recognized and administered by society; and as a large proportion of cases brought before the tribunals involve more or fewer circumstances cognizable only in the social forum, the decisions of the legal forum are certain to that extent to be received with dissatisfaction.

Now our local judicial officers commonly err precisely in the same direction as the litigants in their courts err. They do not always remember that their duty is to administer the law, or what they, after giving their best consideration to the matter before them, may suppose to be the law. In lieu of following this simple rule, they too often sit as a kind of arbitrators, and oblivious of the fact that they represent the State and ought to inflict punishment, whether civil or criminal, sanctioned by the State and *none other*, turn themselves into legislators, usurp the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

functions of the State and administer what they suppose to be justice; what they suppose the law ought to be, not what it is; what they conceive to be fair morally between the parties before them; inflicting such punishment as they, not the State whose servants they are, deem fitting; or qualifying a proper legal punishment by a kind of mercy which the law does not justify them in extending to the defeated party, as instanced in the amusingly common practice of depriving the successful party of his costs—a most rare proceeding in Westminster Hall.

Arbitration, be it remarked *en passant*, is in ninety-nine cases out of a hundred the most unsatisfactory mode conceivable of arriving at the settlement of a dispute of any importance. It is something like submitting a serious bodily ailment to the treatment of a person who had never studied physic, in order to save the fee of a proper medical practitioner. Every judicial officer should recognise the law as being wiser than himself. It is the distillation of the wisdom of a thousand years, and with all its faults and shortcomings an infinitely more trustworthy guide to justice than the conceptions of any individual, however great a man he may be. Let the proceedings in the Bravo and Franconia cases be studied. Points of the utmost importance and perfectly novel were raised in both. In the latter case the whole of the Judges of the High Court sit. Neither the Bench nor the Bar for a moment dream of ventilating, even in argument, their opinions as to what the law ought to be, but simply as to what it is. If the law is not what it ought to be, that will be remedied, not in the wrong place—a Court of Law, but in the right place—a Legislative Assembly.

With these remarks, which the importance of the subject has induced us, at the risk of some misconception, to lay before our readers, we must conclude, feeling assured that the contemplated new Court will, if properly constituted and aided by an intelligent system of procedure, supply a want for many years past seriously felt by the mercantile community in the East. We trust that the Courts of first instance, restricting themselves more than has hitherto been the case to their functions as administrators of the law, and forbearing to usurp the legislative duties of the State or assume the moral authority of society, will render a recourse to the new Court as infrequent as the defects or obscurities of the law itself render possible or desirable.

PASSPORTS.

We have much pleasure in calling our readers' attention to the following:—

NOTICE.

Her Majesty's Minister authorizes the publication of the following Despatch which he has received from the Ministry for Foreign Affairs, informing him that from the 1st September next, British subjects may obtain passports to visit Kiyoto, Lake Biwa, and Nara through Her Britannic Majesty's Consul for Hiogo and Osaka, instead of, as hitherto, through Her Majesty's Minister.

AUGUSTUS H. MOUNSEY.
Secretary of Legation.

H. B. M. Legation,
Yedo, August 21, 1876.

(Translation.)

August 19, 1876.

SIR,—The line of railway between Ôsaka and Kiyoto being now completed, I have the honour to inform you that as a special convenience to those persons desirous of visiting the latter place for reasons of health, investigation, etc, permission will be given them to do so on the guarantee of their respective Consuls in Ôsaka and Hiogo. If, therefore, the British Consul informs the local authorities of the above two ports of those British subjects who desire to avail themselves of this privilege, permits will be granted to them by the said authorities. The limits within which these permits can be used are confined to the Kiyoto Fu, but as Nara and Lake Biwa are, though outside the jurisdiction of this Fu, celebrated places, an exception will be made as regards them. The limits within which it will be allowed to visit Lake Biwa are Hiconé on the east, Kusatsu on the south, and Shiotsu and Chikubujima on the north.

I am sure that Your Excellency will greatly appreciate this convenience in travelling, which my government has granted to your countrymen.

I have, etc.,

(Signed) SAMESHIMA NAWONOBU.

P.S.—I beg to add that the arrangement by which visiting Kiyoto by rail on the guarantee of the Consuls will be allowed, will come into force on the 1st of September next.

SIR HARRY S. PARKES, K.C.B.,
&c., &c., &c.

SPIRIT OF THE JAPANESE PRESS.

LITERARY INDEPENDENCE.

(Hôchi Shimbun.)

Why should those of our people who are called men of learning be so destitute of self-reliance? We are always grieved whenever we go to the booksellers' or to libraries and glance over their works. We are aware that we incur the danger of being called haughty and disrespectful for writing thus, but we can no longer keep silence on this matter, and any one who looks into the works recently published by our men of learning will see for himself how entirely destitute they are of all self-reliance.

Whenever we open a book we find that the preface in the first volume has been written by some influential man, which the author evidently esteems as a high honour, thinking that it will have no slight effect upon the sale of the work. Again, other authors or translators advertise that their work has been undertaken at the wish of such and such an exalted personage, and seem to esteem this as the highest of earthly honours.

Now can this be regarded as a real honour? We do not say that it is dishonourable. It gives a decoration, so to speak, to the book. But it adds no power to it; and although such prefaces may increase the sale of a work, they still do no small amount of mischief. and there is something very cowardly in the learned men thus proclaiming their own incapacity.

Of course there are exceptions in this matter as in most others, yet such is the general practice among our learned men.

We have been told that the French writers during the reign of Louis the Fourteenth are now despised for their subserviency, for they did not regard the completeness of their work as its chief merit, but thought only how far it would obtain the king's favour. This state of affairs continued in France for above fifty years, and the state of literature there was consequently far inferior to what it was at the same time in England.*

What was the reason why these learned men—those who should form the very foundation of the nation's greatness—should have acted thus in an enlightened country like France? The feeling which prompted men to look for everything towards the king was almost universal, and the *sarans* did not escape it, and thus lost their own proper feeling of self-reliance and self-respect. Our writers differ in many respects from those of France at that time.† They are not, indeed, desirous of obtaining the good will of the officials, but they wish to enjoy the benefit of their influence, and are destitute of any feeling of self-reliance.

Our so called men of learning are perpetually crying out that the Japanese people, the farmers, merchants, and even the Press, are all slavishly subservient. But let them look at home. Do they exhibit any different feeling? No; they are sharp enough in their comments on others, but are absolutely regardless of the beam in their own eye. And when some of them get their prefaces written for them by really learned men, it is worse still, for the reader takes up the first volume and is often deceived by thinking that he is approaching an excellent work after reading so good a preface. But when he comes to the body of the work itself, he finds it more than enough to try his patience. This is like the showman who

* It is curious to observe how often the Japanese writers may be detected in reading Buckle's History of Civilization in England.

† This is exquisite!

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

had a cat to exhibit, and painted a tiger on his sign-board. We do not think that we have been unjust in saying that works of this kind betray a want of self-reliance in our learned men.

It is probable that various excuses will be urged against our contention, but, let the writers say what they will, so long as they claim to be called men of learning and yet continue this practice, we shall say that they are destitute of all true self-reliance.

Hints to the Native Merchants.

(Chôya Shimbun.)

The Japanese merchants seem to take superficial views of trade, and fix their eyes on small present profits while they disregard the greater advantages of the future. Foreigners are never tired of saying this of them, and the native merchants should carefully remember it, and show more sense than to regard it with scorn as as if it were an insult.

The facts connected with the silk market this year are sufficiently notorious, and every one should be glad that our merchants have made large profits. The gain was unexpected and will more than compensate for all the losses which have been made of late years in the silk-worm egg trade. Prices have not yet fallen, and some have begun to say that there will not be silk enough left in the country for our own consumption.

But we hear both foreigners and natives saying that our merchants have been very short-sighted, and had they held their silk longer they would have reaped larger profits. Not being ourselves acquainted with trade we cannot say whether this is so or not, but looking at the question from a general point of view, we think that though they might perhaps have done better or the whole, they have still done fairly up to the present, and the future remains to be seen.

We shall now pass on to another question.

We understand that the Americans readily purchase the cheaper goods which have been sent by our merchants to the Philadelphia Exhibition, but try to lower the prices asked for the dearer ones; and our merchants, dreading the expense of bringing the articles back to Japan may lose their patience and reduce their prices. Whether this is exactly so or no, we shall not pretend to say; but presuming it to be thus, and an Exhibition being an important *rendezvous* for the whole world, we hope that our merchants will not recede from the prices they have fixed, for though the present loss incurred by doing so may be small, it will be very large in the future. If we once lower the prices for our commodities, we may depend upon it that we shall never be able to get them up to a proper level again, and therefore if the articles sent to America do not bring proper prices, let them by all means be brought back again to Japan, for there is no reason whatever why we should be solicitous about present losses and pay no attention to those in the future ‡ If the Americans think that all the articles we have sent over to their Exhibition are common, then we say, "Never send anything again to an American Exhibition."

The merchants need have no fear about acting upon this advice, and if they do so we will publish the details and let it be known by the whole world. Yet, be it always remembered, we are only writing regarding a rumour, upon the truth or falsehood of which we are quite unable to decide. Be it the one or the other, it is not only the Americans who are to blame in this matter, but our own merchants, who look to the small gains of the present and disregard the larger gains of the future.§

The Samurai Again.

("Chôya Shimbun"—August 20, 1876.)

We have, undeterred by the fear of boring our readers, since the early part of this month, repeatedly given expression to our views respecting the abolition of the pensions of the *samurai*, and we suppose other writers generally agree with those views as we have not observed any contravention thereof in the other papers. We are therefore inclined to think that our arguments have approached very nearly to the mark.

We recently, however, heard in the street a gentleman of good family giving expression with many sighs to his opinions on the issue of the pension bonds, and saying "Alas! the old spirit of "Japan will finally come to an end. It has hitherto been pre- "served only by the *samurai*, and the result of the recent abolish- "ment of their pensions will be that they will become of necessity "farmers, merchants or artizans, and how in that case, will they "be able to maintain the courage which of old they possessed? "If the *samurai* lose their courage, then the old national spirit of "Japan cannot be restored. No Raishi or Fujita Toko* will be "born amongst us. Whence shall such heroic poems as theirs be "produced or who shall wield such trenchant blades as theirs "were. Ah! it is past, it is gone. Henceforward the national "spirit of Japan will only decline." Many inconsiderate and headlong *samurai* will be found to look upon such language as this with the same reverence as they pay to the Imperial standard, and to meet together and angrily discuss the rules for their pension bonds. Also, are not such persons alike bigoted in their opinions and selfish in their conversation?

And in what did this "courage of the *samurai*" consist. Simply if our opinion of it be correct, in girding two swords around the waist, in squaring the shoulders, and strutting akimbo; in finding pleasure in forthwith cutting down those commoners who offended them; in hastily appealing to the sword for the decision of those disputes that arose among themselves; in looking upon the question of money by trade as degrading and unbecoming those who held military rank, and in shamelessly wearing tattered coats and trowsers. Can such conduct as this be approved of or called conservatism? Any person who possesses the least acquaintance with the distinctions between right and wrong can at once answer this question. And shall it be said that the ancient spirit of Japan has declined because this ruffianly courage has disappeared? Even since the wars of Genna (1596-1615) and Keichoʈ (1615-1624) the entire body of the *samurai* have, supported by the rewards that were granted to them, lived in daily increasing extravagance and idleness, and have done nought but grow fat. Nor is this all. Living themselves in the haunts of pleasure they looked upon the useful members of the people much in the same contemptuous light as they did dogs and horses: the sole secret of such conduct was the sinecure pensions with which they were surfeited, and the recent confiscation by the Government of those pensions, should therefore be spoken of as medicine administered for the cure of the surfeit of idleness from which the *samurai* have suffered. It is, accordingly, our belief that the *samurai* throughout Japan should feel grateful in their hearts alike to commoners who have hitherto had the kindness to support them in idleness, and to the Government for the kind measure which it has taken to cure them of the surfeit from which they have suffered.

Some person may, however, in despite of our opinions, say "Our "foreign relations are daily becoming more developed; powerful "foes, separated from us by the seas which surround our country, "stand before us; and if, by any chance, war should break out "between them and us, we should have only the strength of the "*samurai* on which to depend, for how could the weak and "cowardly commoners be employed?" This is a most mistaken sentiment, for has not the Government recently enrolled those very commoners, and have they not, after six months of instruction and drill, become effective soldiers? No difference has been found in this respect between the *samurai* and commoners. Indeed, as far as regards strength and health, the *samurai* of to-day are not to be compared to the commoners who have been wont to pass their lives labouring on the lofty mountains, in the deep valleys or in the wide and open plains. Nor is it only since the revolution that this has been so. In the wars at the close of the Tycoon's administration the services of the new levies far surpassed those of the feudal troops of the Shôgun.

What is called the "spirit of the *samurai*" is therefore entirely useless to the country at the present day, and is in addition productive of injury to it in many respects. How then can it be said to affect the national spirit in any way? Those who now bewail its decline are either blinded by bigotry as to what is right and just, or are only induced to do so by a discontent which approaches to madness. How mistaken are they! We, for our part, shall not only applaud the *samurai* and dance with joy, if, denuding themselves of their old evil customs and emulously devoting themselves to husbandry and trade, they become useful citizens; if they acquire their own livelihood; discharge the usual duties and hold the usual feelings of mankind; if they preserve their own independence, and excite what is the true and proper spirit—namely affectionate devotion to their fellow country-

‡ The word '*for*' here seems to be used in much the same manner as by Goldsmith when he said to Lord Shelburne, "I don't know why people call your lordship Malagrida, *for* Malagrida was a very good sort of a man!" [Ed. *J. W. M.*]

§ It would certainly not be easy to find an equal amount of nonsense within the same space as is to be found in this article. The writer is ignorant of the very first principles of trade, and the *Chôya Shimbun* ought never to have admitted so foolish an essay. Undoubtedly the Japanese merchants want many lessons, but they will laugh in the face of any one who teaches them in this manner. The writer began by admitting that he knew nothing of the subject, and should therefore have been content to hold his tongue upon it. [Ed. *J. W. M.*]

* Renowned scholars of antiquity. The first named is the author of the "Nihon Guaishi."

ʈ Civil wars, the result of which placed the Tokugawa Shôguns in power.

men, but we shall further say that the spirit of Japan has now become developed to a degree that it has never attained before.

The Nobles.

(From the "Osaka Nippô" of the 15th July 1876.)

Mr. Ozaki Saburô, Hôseik'wan of the second,—no we make a mistake,—the first rank, stated the other day in the Meeting Hall of the nobles that the Japanese nobles of the present day held the same position as the English House of Lords. This assertion was attacked on all sides by politicians of the first rank in acuteness and perspicuity. But neither with the assertion itself nor with the contradiction given to it are we concerned. Nor do we desire to penetrate the secret thoughts of other persons similar to the first named individual, and to make certain in our minds whether the various nobles consider the language of the politicians as shewing great want of feudal respect, and regard the foolish talk of Ozaki as conclusive and proof against all argument, or whether they approve of the views of Ozaki as being in accordance with their own private feeling. At the same time, if we may rely upon a recent rumour, it appears that the whole array of nobles most improperly petitioned the Prime Minister Sanjô to determine their position in the State, on a corresponding footing to that of the English House of Lords.

If this rumour be held to be false and without foundation, then we have nothing to say in the matter ;—but if on the other hand it be set down as true, in that case we cannot let it pass in silence and without enquiry. With three groans for every laugh, we will at once shew ourselves in opposition, and we must perforce make them recoil with the censuring remark that they cannot possibly possess the same power as the English nobles, and doing this we will bring them from their pedestal of ambition to the ground. For the present, then, we will consider this report as true, and on the question as to the Japanese nobility holding the position and powers of the English Upper House, we will shew that in point of fact this is not the case.

It is quite unnecessary to state that this subject has been discussed by the nation in all its bearing, but the nobles have nevertheless been deaf and obtuse, like "horses' ears to the wind." In consequence of this attitude on their part we will explain to them the true position of the English nobles, and we will wake them from their slumber of indifference, and to do this it becomes necessary to discuss and examine from what beginnings the English nobles have sprung, and what their occupations and duties are. With regard to the origin of the English nobles, they are descended from distinguished men whose talents have raised them above the multitude, and who have rendered services to the State,—men who have made the influence of their exertions and eminent services felt ever the four seas, while at home they have consolidated the renown of their country. This origin is precisely similar to that of our hereditary nobles, who hold their present high positions by virtue of the prowess of their ancestors. This is the universal opinion and therefore we throw no doubt whatever on the manner in which our nobility have gained their titles. "How is it then that the English peers have the right to "be debaters in the "Upper House" whilst our nobles have not "that right ; are not our rights and their's the same ?" A very proper question. There is no reason why there should be any difference in either country in the matter of hereditary succession. Here exists no field for doubt. But let us reverse positions and argue from the other side. Have the English nobles any special right by which they receive hereditary pensions and are allowed to eat the bread of idleness ? Once let it be admitted that the English nobles have the right to hereditary allowances from the State, and the liberty to eat the bread of idleness, and if the Japanese nobles bring this fact, supposititious though it really is, forward in support of their claim to the right of debaters in an "Upper House," they cannot be severely censured.

If we were now to put the question to the public, even a child of such tender age as to require to be measured before his height could be ascertained, would reply:—"There is a difference between "Japanese and English nobles. The English nobles provide them-"selves by their own efforts with clothes and food ; the Japanese "eat the bread of idleness, indulging in pleasure ; as yet they "cannot be named in the same breath." Ye nobles ! first make yourselves thoroughly acquainted with the true position of the English nobles, and with that of those of Japan, then speak and act. The reason that politicians do not censure English nobles but spurn those of Japan is as above stated. Namely, because there is a dissimilarity in the broad questions which affect men's rights. When the Japanese nobility rouse themselves to genuine exertions, then they resign the pensions which are the cause of their eating the bread of idleness, indulging in pleasure, when the only thing that forms part of themselves is their rank ; when such an advanced state of things as this has been reached, then, and not till then, will their countrymen regard them as the equals of the English Nobility, and grant to them the right of "debaters in an Upper House." Men there are who possess both rank and pensions, and indulge in self adulation, deeming themselves to be of the first importance and rank, who regard themselves as debaters of weight and distinction, and who arrogate to themselves the position of the English Nobility ; and others again there are like Mr Ozaki who countenance such ideas. But writers like ourselves, who reflect upon the affairs of the State from the stand point of the extension of the Rights of the People cannot, we say it with all respect, openly lend them our sanction ; nay more we beg to be excused from silent acquiescence.

But of those who have eyes and ears is it politicians alone who attach importance to the extension of People's Rights ? No ! far from it. There is not one intelligent person out of the many throughout the country who understand something, however little, of the *raison d'être* of the English and American Governments, and are acquainted with the principles of civilization, who, on hearing this rumour, would wish to permit such a state of things, as is, according to that rumour, contemplated. With energy in our arms and fire in our eyes we will say :—"This wish on the part of a "class which forms a useless element in the nation, to appear as "the representative counsellors of the people, and to secure for "themselves the position of a "House of Lords,"—on what "secret pre-eminence is it based ; what is there to warrant this "assumption of dignity and greatness ?" The administration of the present day in which there is one form of Government for all four classes, for high and low alike, and the divided form of administration under the ancient feudal system, are different ; and for persons actuated by narrow-minded selfish interests to attempt to assume the representation of a nation,—this cannot be permitted for a moment by an intelligent people like ourselves. If they wish to go so far as to obtain parliamentary rights, and returning to the old régime to take honour and prestige from the people, let them first surrender properly their pensions, and apologize for having eaten the bread of idleness, and it will be time for them to seek for the former. When this time comes then will this intelligent nation of our's admire their excellent determination, and pay that reverence to them which was accorded in times past to the various *Daimiôs*.

Oh ! Ye nobles, abandon somewhat of your selfish interests and views, and attend to the wide-spread opinions that are entertained in the country ! As we have repeatedly said, "If such gentlemen "as you should have special powers sufficient to gain your place "in the *Genrô-in*, writers of influence, and energetic men of the "middle class would be astonished, and would be unable to keep "quiet. How much more then is it the case that the public voice "of the country will not grant you the power that you seek, until "you have freed yourselves from the name of 'Eaters of the "bread of idleness,'—you who relying on the statement of one "or two scholars advance in your ambitious course, and have the "desire of securing the special privilege of "debaters in the Upper "House," and of obtaining a share in the administration. The "spirit of the country is unanimous in refusing to regard you as "equal in position to the English House of Lords, and if, in the "face of this fact, the rumour concerning your recent action be "true, what wonder if you are condemned both by your country-"men, and by foreigners ! Consider the matter, give your atten-"tion to wide spread views, and you will perceive that you "have put first what should be last ! Do not be vain-glorious, and "do not think yourselves superior to everything else !"

Let us now turn our eyes elsewhere, and observe the chiefs of the present administration. These being men of discernment of the civilization school, who are careful to watch the condition of the times and the state of the country, even if the wished for permission were granted to establish an English House of Lords in their Nobles' Assembly, no distribution of the authority of the Government would be made, and the right to discuss and enact laws would not be given. Again, even if the Nobles were a collection of men of ever so greatly recognized learning and ability, they would not be made representative men of the Government until the admission of the people were given that they were (sic) a useless class. People laugh at the assembly of nobles ; they praise the idea of resigning the nobles' pensions. Is there anyone who likes the argument of hereditary pensions advocated by Mr. Kiyogoku ? Is there anyone who finds fault with the pension resignation scheme of Mr. Asano ? The balance of opinion in the country tends in this direction.

Changes in Ken.

("Nichi Nichi Shimbun" of August 23, 1876.)

Notification No. 112.

It is hereby notified that directions have been issued for the abolition, amalgamation, or change in jurisdiction of the Chikuma and other *ken* named below.

(Signed) Iwakura Tomomi,
Udaijin.

August 21, 1876.

1.—The Chikuma *ken* is abolished; the province of Hida being added to the Gifu *ken*, and the portion of the province of Shimano to the Nagano *ken*.

2.—That portion of the province of Musashi lying within the jurisdiction of the Kumagae *ken* is added to the Saitama *ken*. The three departments of Yamada, Niida, and Ohara, in the province of Kôdzûkè, and within the jurisdiction of the Tochigi *ken*, are added to the Kumagae *ken*. The Kumagae *ken* office is removed to Takasaki in the province of Kôdzûke, and the *ken's* name is altered to that of Gumba *ken*.

3.—The Hamamatsu *ken* is abolished, and incorporated with the Shidzuoka *ken*.

4.—The Wakamatsu and Iwamae *kens* are both abolished and incorporated with the Fukushima *ken*. The three departments of Watari, Igu, and Karita, in the province of Iwashiro, are added to the Miyagi *ken*.

5.—The Tsuruga-oka and Oitama *kens* are both abolished, and incorporated with the Yamagata *ken*.

6.—The Tsuruga *ken* is abolished. Seven of the departments of the province of Echizen are added to the Ishikawa *ken*; while the department of Tsuruga in the above province, together with the province of Wakasa are incorporated with the Shiga *ken*.

7.—The Tottori *ken* is abolished, and incorporated with the Shimane *ken*.

8.—The Shikama and Toyooka *kens* are both abolished. The two provinces of Harima and Tajima, together with the departments of Taki and Higami, in the province of Tamba, are added to the Hiogo *ken*. The province of Tango, together with the department of Amada, in the province of Tamba, are added to the Kioto *Fu*.

9.—The Mitsuma *ken* is abolished, its portion of the province of Hizen being added to the Nagasaki *ken*, while the province of Chikugo is added to the Fukuoka *ken*.

10.—The departments of Usa and Shimogé, in the province of Buzen, and within the jurisdiction of the Fukuoka *ken*, are added to the Oida *ken*.

11.—The Miyasaki *ken* is abolished, and incorporated with the Kagoshima *ken*.

12.—The Kagawa *ken* is abolished, and incorporated with the Ehimé *ken*.

13.—The Miyôdô *ken* is abolished, the province of Awaji being added to the Hiogo *ken*, and the province of Awa to the Kôchi *ken*.

Corea.

("Nichi Nichi Shimbun" of August 13, 1876.)

A letter lately sent from Fusan in Corea, by a certain Mr. Tomita of the *Ô kura-gumi*, states as follows:—

"Hitherto there has been, at the boundary between the "Japanese Factory and the Corean territory, a barrier very strictly kept. This place was guarded by the Coreans, who did not "permit any egress whatever on the part of the Japanese. It is "said, however, that on the 20th of July an arrangement was "made between Mr. Miyamoto and the Head of Tôrai-fu, by "virtue of which free ingress and egress will ere long be allowed.

"Those articles from Japan that obtain a good sale in Corea, "are Indian (or *foreign*) cotton-cloth, chintzes, muslins dyed red, "chopping knives, wax, iron pots, gold-lacquered stands for food, "wine-bottles of variegated hue, Kokura striped cloth, silk lustring, hempen cloth, *bani* powder, purple powder, and umbrellas.

"The products of Corea are ox-hides, horse-hides, dog-skins, "rice, large and small beans, bêche-de-mer, ginseng, white cotton-cloth, and sea-weed jelly.

"In consequence, however, of the exceedingly dishonest dealings hitherto practised by the people of Tsushima, there are "many (Coreans) who have no confidence in the Japanese traders. "The Coreans, too, are not of good disposition. Although "very strict surveillance is exercised in regard to our going out "and walking outside of the barrier, still, with a bold spirit, I have "gone about in various places, and have entered the dwellings, etc., "of the Coreans, the different appearances of which I have observed. "In the first instance, I am tolerably well acquainted with the "condition of the neighbourhood of the coast, of which I will inform you at a later date. As a general rule, both the appearance "of the houses, and the custom of the people, as far as I have "seen at a single glance, are certainly worse even than those of "the savages in the neighbourhood of Liang-kao in Formosa. The "heat has been about 86°, but has lately increased from that to "90°. Corea has this year been visited by unusual drought, and "more than half of the work of planting out the rice-fields is "unaccomplished. The farming population wear an anxious "appearance.

"I shall, in a short while, proceed to Kôk'wa-fu also, from "which place I shall return for awhile to Yedo, when I will give "you further particulars."

The Same.

("Hôchi Shimbun" of August 11, 1876.)

A private letter, which was posted on the 21st ultimo, from a friend in Corea to one of the members of our office, says:—

"At 6 P.M. on the 14th we sailed from Tsushima, and at 9 A.M. "on the 15th arrived at the Public Office at Sôriô in Corea. On the "18th there was held, in front of our Commissioner's residence, an "examination of about thirty (Japanese) students of the Corean language; and to those who excelled there were given as rewards "some pens, ink, paper, fans etc., brought from Yedo. On the 20th "there was held an interview with Kôyûshô, Governor of Tôrai, "at the chief office at Fusan, distant from Sôriô about 6 *ri*. Affairs "seemed to be conducted on the most friendly footing. The Commissioner was impatient to set sail, but was pressed to stay, and "an entertainment was given him. The eatables were placed on "four-legged stands, 2 ft. in length and 1 ft. 2 in. in breadth, and "consisted of vermicelli, apples, beef, fowls, cakes etc.,—nine "varieties in all. The liquor was served in bottles like those used "to contain *saké* at Japanese religious festivals, and these bottles "were placed upon stands 8 inches (Japanese) square. The attendants were young boys,—ten in number. At the conclusion of "this entertainment, Kôyûshô went in company with our Commissioner to inspect the "Asama-kan." At this time he brought with "him, as parting gifts, one hundred fowls, a basket of musk-melons, "together with some apricots and various kinds of fish. While the "entertainment had been going on, music was played by what was "called the "Tôrai band." The musical instruments were violins, "two kinds of flutes, and large and small drums:—these brought "into our minds recollections of the ancient performances in Japan. "This year there has been in Corea a great drought, and the young "rice-plants have, it appears, been planted out three times. There "are also some fields in which there has not as yet been planted "any rice at all. From these circumstances, it is said, that there "will be a year of great scarcity.

"I have a good many other things to tell you, but while on "board-ship I did not write a diary, and while on shore the heat "has been unbearable and I have not been able to take up my "pen."

Our private letters from the North (11th instant), speak very hopefully of the chances of a pacific settlement. Neither England nor China, writes our correspondent, wants a war, and if it can be avoided there must be many chances against it to one in its favour.—We gather from the advices that the affair was, on a previous occasion, settled between Sir Thomas and the Viceroy; they had arrived at an understanding satisfactory, or at any rate acquiesced in, by both; but it was *upset at Peking*. This can hardly occur again. The famine is still severe, and yet grain is absolutely cheaper at Chefoo and Tientsin than in Shanghai: the plain fact being, we take it, that the atrocious condition of the roads and the absence of means of locomotion render the stores unavailable. They just cannot be conveyed to the famishing districts, and there they lie, almost within sight of the sufferers. The situation altogether is an anxious one, and the wonder never fails us how long the machinery of Government, weak enough always, but utterly unfitted for the burdens now imposed upon it, can go on.—*Shanghai Courier.*

The O. S. S. *Shantar* Captain Drenning, arrived here yesterday from Liverpool, having made the passage in fifty-two days. Deducting stoppages, her steaming time was forty-seven days. *Shanghai Courier.*

A VISIT TO FUSIYAMA.

A BRIEF account was given in these columns last year of an ascent of Fusiyama, and of a subsequent descent, the short time occupied by which excited more or less incredulity both among those who had and those who had not ascended the mountain. Of this incredulity, where it assumed the legitimate form of a doubt whether unintentional error, arising from whatever cause, had not crept into the statistics of the descent, I have neither the right nor the intention to complain. To the unjustifiable and offensive form of it, which, in anonymous letters, presumed to question my personal veracity, I shall easily be excused for having made no reply. The former kind of doubt is perfectly fair, and, as I took no pains to give certain details of my descent of the mountain which would have afforded excellent collateral evidence of the accuracy of my statements, I may in some measure be held responsible for the incredulity to which they gave rise. But had I given these details in reply to the doubts of all kinds which were expressed simultaneouly, I should have appeared to reply to those which were directed against my personal veracity, and this, of course, I could not be expected to do.

I effectually tested their value, however, by offering to respeat the descent this year, within the time specified, stipulating only that a forfeit, so heavy as to be severely punitive, should be paid in case the distance to be traversed was covered in less than two hours. It is hardly necessary to say that no one took up the wager.

Before entering upon the short account I propose giving of a visit to the mountain last week, it may be well to inform those of my critics who imagined that an error of some kind had crept into my statement of last year—an error generally supposed to have had it origin in my watch—how it was that I was convinced I had not been deceived in this respect. I started from the summit of Fusiyama at a quarter to 4 in the afternoon, and reached the tea-house at Shubashiri at exactly 6 p.m. It was a hot August day, and it will readily be understood that an exertion like this left me sufficiently heated. I therefore sat for as much time as permitted me the leisurely enjoyment of a cup of tea and a cheroot before bathing. I did not order dinner until I was dressed again, and yet I was half way through my meal before it was necessary to call for candles. I must be pardoned for the trivial nature of these details and the distasteful appearance of egotism which they give to my statements, but I cannot avoid these in offering the evidence here adduced to substantiate the accuracy of my account of last year.

On reviewing my descent, I found that I had lost fully twenty minutes in various ways—and it must be remembered that I was not doing it against time. I lost ten minutes by mistaking the track during a dense mist which came on during my run down; five minutes in having a pair of *waradji* fastened to my feet in the hope that they would oppose a broader surface than a boot to the loose ash and scoriæ of the path, but which I was forced to discard after a few steps; and about ten minutes which I spent quite unnecessarily in the first tea-house entering the wood on the track down. I thus knew that the descent could be made in less than two hours, provided, of course, no accidents intervened to prevent it, and on this my confidence in my proffered wager was founded.

I shall now proceed to give a short account of my visit to the mountain this year.

Our party consisted of Mr. Rickard, of H. M. Dockyard at Hongkong, and the Revd. Mr. Roberts, of the American Presbyterian Mission at Shanghai. We left Hakone early on the morning of Tuesday, the 15th inst., and crossed the range of hills which bounds the west end of the lake, by the first pass. But it would certainly have been better to cross the range by the Otometôge, in spite of the long six or seven miles which lead to it from the foot of the lake. The narrow path we had to follow lay through the long spear grass which covers this part of the country, and the dew on it was so heavy, that within a few minutes of starting we were wet through nearly to the waist. It is perhaps hardly fair to designate this little zigzag a 'pass;' the top of it is reached in half an hour, and the path is then carried along the brow of the hills for a mile or two, after which it leads through a pretty wood down to the grassy slopes of the western side of the range. It is curious to observe how much finer the herbage is on this side. The peasants keep it short cut, and pack-horses carry away in all directions to the neighbouring farms, for winter use, the fruit of the labourers' sickles. A prettier walk than this can hardly be found. The path is embroidered with wild flowers, the slopes, instead of being covered with the rank spear grass of the other side, are like close cropt park-land, and the picturesque manner in which the bushes, small shrubs and trees are disposed, almost suggests the happy application of art to the decoration of the landscape. The descent towards Gotemba takes the tourist somewhat below the level of the Hakone lake, and the road from the hill slopes which we have just descended, lies through pretty lanes bordered by hedges of evergreens, and through rice or garden land, cultivated and kept with all the care and neatness of Japanese husbandry. Here and there it passes between fine trees of many varieties, and is everywhere diversified, agreeable and interesting.

Arrived at Gotemba, a halt must be made at the tea-house kept by Omiya Shozaimon, some two or three hundred yards off the road, if only to encourage the civility and moderation of the host and hostess, and to enjoy the cool current of air which seems to pass on the hottest days through the scrupulously clean upper rooms of the little abutment to the main building. If the halt be long enough to permit it, a mid-day bath gives the traveller a luxury cheaply purchased at the expense of a walk which, though long and hot, is in itself a luxury.

The road to Shubashiri is never dull for a moment. Passing sometimes through avenues of trees, and at others by the side of a clear and rapid rivulet, it winds gracefully through the country for something like nine miles, the conquest of every one of which brings successively some new feature of Fusiyama more distinctly under observation. The soil soon begins to show the distance to which the ashes from the mountain were carried centuries ago, and though the upper surface is one of not unfruitful loam, the road which lies here and there some feet below it, discloses the bed of ash and scoriæ on which it rests.

It is gratifying to see that the road-maker has been at work here since last year. Some very bad places have been repaired, and two causeways have been constructed in a solid and yet economical manner over places where it would formerly have been impossible to take wheeled carriages. Thus the road between Gotemba and Shubashiri is now traversed by *jinrikishas*, of which there is a stand at the latter village.

Shubashiri remains what it seems always to have been—picturesquely placed, indeed, but dirty, untidy, ill-built, ill-kept, ill-odoured. Last year I halted at the large tea-house with the upper story which stands about half way up the street, and paid the penalty of a sleepless night for my indolence in not looking to see where or whether I could be better lodged. I now strongly advise all travellers who intend passing the night in the village, to go to the tea-house at the top of the street, which is large, clean and commodious. It is, however, better to push on at once to Maga-ishi. The five miles which separate the two places are better disposed of on the night before the ascent of the mountain, as the road has an average gradient of four or five degrees and is totally uninteresting. It is true that the chances are much against getting a good night at Magai-shi, where the accommodation afforded is but a mere mat shed. But it is certainly a disadvantage to begin the ascent of the mountain with a long walk of four and a half or five miles, every step of which is against the collar, and which entails leaving Shubashiri at 4 in the morning—in order to do which you must rise at 3—if the actual ascent is to be begun,—as it should be, by 6 o'clock.

Next morning, at something after six o'clock, we began the ascent, spent an hour over breakfast at the second rest-house, and arrived on the summit at 1.30 in the afternoon. The impression I received last year from the ascent was that the toil attending it had been greatly exaggerated. I then felt so little of fatigue, that I rambled about the summit for nearly an hour before sitting down, which it simply had not occurred to me previously to do. But I am free to confess that this year I was much more impressed with the labour it demands.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The sections between the 6th and 7th and the 8th and 9th rest-house are undoubtedly very long and arduous, and I am less surprised than I was last year to hear of the exhausted state on which many people arrive at the summit. The worst of the ascent is that it has nowhere the excitement or dignity of danger. There is no cutting of steps in the ice, as in the Alps; no looking down into those wonderful blue or opal crevasses in the glaciers which excite so much of wonder, admiration, curiosity and awe; none of the forced confraternity, half suggesting increased danger and half increased safety, of being tied together by ropes; there are none of the small ridges which the Alpine climber has here and there to traverse, where there is a world of snow on the one hand, and on the other, below him, death in a dreadful form as the penalty of one slip or false step, and none of that marvellously beautiful diversity and individuality of outline which belong to every separate peak in the Alps either of Switzerland, Italy or the Tyrol. Fusiyama appeals to, but does not excite, the imagination. The mind is at some effort to call up the picture of the eruptions which have left their traces on all the surrounding country, and there are no sufficiently long intervals of repose on the ascent to afford leisure, even if they infused strength, for the fancy to rekindle the mighty devastating fires long ago extinct, to conjure up the bellowing travail of the mountain, the floods of lava, the hurtling of huge rocks through the air, the lightnings and thunders of this vast forge. Yet Fusiyama is surely a grand and noble object, worshipful and deeply impressive by reason of its solitary majesty. Its sovereign power over all the surrounding nature is so absolute and indisputable, its sway so lofty and imperial. Seen from a distance of two or three miles from Shubashiri, its head towers so superbly over the gorget of clouds which usually encircles it after mid-day. And it is well from to time to stand, with veiled face, as it were, before a majestic scene such as this, to let its whole suggestive power work on our spirits, and remind us how small and how great at once we are—small in presence of the mighty forces which have raised this stately monument to Nature's material predominance over us; great in the possession of consciousness, will, reason and emotion, which justify us in asserting our superiority even over her. It is in presence of these scenes that man feels how richly he, and he only of the animals, is endowed with the prerogatives which enable him to subdue, to enjoy, and to understand something at least of this wonderful world in which he has been placed. Amid the sordid cares and mean employments of every day life—for such they are, be they whose or what they may—man fails to estimate at its true value Hamlet's superb apostrophe. But when he stands in the very presence of nature, when her spirit descends upon him with all its inspiring power, and his own soul is quickened with extraordinary life, it is then that he realizes, as he never otherwise can, "What a piece of work is man! How noble in reason! how infinite in faculties! in form and moving how express and admirable! in action how like an angel! in apprehension how like a god!"

The time occupied by our ascent was seven hours and fifteen minutes, including exactly two hours consumed in stoppages—one of fifty minutes for breakfast, and the others of five or ten minutes here and there at the rest-houses, as we felt disposed. The "stiff pulls" are between the fifth and sixth, and the seventh and eighth, rest-houses, the latter particularly so, as the track lies over the hardened lava which here forms an unyielding crust to the mouhtain. There is no regular path here as elsewhere, but no guide is required anywhere, first became the *débris* of the pilgrims' straw shoes mark their ascent the whole way, and, next, because the rest-houses are generally visible one from the other, and even if not, the line of ascent is so direct as to leave little room for doubt as to the path to be taken.

Arrived to the summit, half an hour of rest and a cup of tea—by far the best thing to work upon—qualify the visitor for exploring such parts of the crater as are easily accessible. There is a little peak, at a distance of five minutes walk from the row of huts on the summit, to which it is well first to walk, because it is the highest point of the mountain and affords a view freer from all obstruction than any other. If the tourist is fortunate in the weather, he will here enjoy a truly splendid panorama, with a diameter of little less than a hundred and seventy or eighty miles. The lake which lies below him nearly due east is not, as he is apt to imagine, the Hakoné lake but that of Yamanaka. Further to the left lies the lake of Kawaguchi in Jóshiu, and far away in the dim distance to north-west he may see the Nantaisan and Asamayama. To the east, Odawara Bay may be distinctly, and, beyond that again, Yedo Bay somewhat indistinctly, seen. To the south-east the eye travels along the coast until the outline fades into haze. Nor will the pilgrim be wholly fortunate unless he sees the superb cloud effects which the mountain affords. These are most likely to be enjoyed, in ordinary summer weather, between noon and six o'clock in the evening, and they are truly magnificent. The summit of the mountain remains clear, but its shoulders and waist are surrounded by billowy masses of dense white vapour of indescribable splendour. Here and there a momentary break may permit a glimpse of the earth beneath, but usually nothing can be seen landward but this vast ocean of cloud, amid which the peak stands as the only island in the word. Turning seaward, the ocean itself can be seen over the circumambient vapour, and affords a striking contrast to the turmoil and restless change of form of the clouds themselves.

Descending from the little peak just spoken of, there is a zigzag path to the left of the row of huts, leading down to the more accessible part of the crater. A house is being built there at present, not of blocks of honey-combed lavas of which the huts and rest-houses have been constructed, but of beams brought up with prodigious labour from the forest at the foot of the mountain. It is situated in a hollow, and is so far protected from the storms which rage on Fusiyama between the middle of September and the end of June. No doubt, too, it will afford a warmer and, so far, a more agreeable place of shelter than the present huts. But it is impossible to conceive a house more desolately placed, or one surrounded by aspects of nature more dreary and repelling. Near this building there are two small rude holes among the stones which form the flooring of the crater, from which a good supply of the coldest and purest water can always be obtained. I had heard before of this perpetual *donum Dei*, and had drunk the 'golden water,' as it is called, from the little ice-lined cisterns which are to be found in the more distant corner of nearly all the huts on the summit. I had been told, too, by Japanese, that these cisterns were kept perpetually filled by the operation of springs. In view of the fact that the huts are on the top of the crater and that the little peak of which mention has been made is the only higher ground, and that this ground is a mere conglomeration of lava and scoriæ, I was sorely puzzled to understand how these cisterns were replenished. But these two springs explain everything; and as there was still a fair amount of snow lying in this part of the crater and feeding the springs during the day as the sun melted it, my difficulty vanished. I watched a coolie filling the barrels he had brought for this purpose from one of the huts, and although he used his dipper quickly, I could not observe that the supply in the little cavity whence the water is taken was ever sensibly reduced

The path which traverses this shelf of the crater leads close to the edge of that deeper part of it which must have been the scene of the tremendous volcanic activity of by-gone times. At first sight it does not appear very deep, but some large stones which we threw over the edge did not touch the ground for four seconds. This, if I rightly remember the formula for falling bodies, would give a depth of 240 feet for the spot where first the stone touched. But it continued rolling for seventeen seconds, though lost to sight. The western side of this great cavity is covered with snow, which I imagine is perpetual, but it is so begrimed with the *débris* of the upper edge of the crater which are constantly falling upon it, as to present no attractive appearance. I have understood that this lower part of the crater was visited this year by a gentleman attached to one of the educational establishments in Yedo, but his experiences have not been given to the public, who, I think, would be interested in the record of them. But the descent and subsequent ascent must have been very arduous, and in some places possibly dan-

gerous, nor can it be easy to find a good spot by which to approach the task of exploration.

While engaged in examining the crater, a heavy thunderstorm overtook us, and a smart shower of hail was one of the evidences of the active electrical action above us. But our attention was soon drawn to a more curious phenomenon. There were some young Japanese on the summit and about us, whose hair, dressed in European fashion, seemed far more excited and restless than could be explained by the very gentle air then stirring, and each laughingly called attention to it in his fellows. I soon saw that this was due to strong electrical action, and on removing our own hats, both my companion and myself found our hair standing straight on end with far more energy than usually attends the experiment of being electricised while on a stool with glass legs. At first I thought that this effect must be due to the highly electrical condition of the mountain, which, as a point, would naturally give off electricity rapidly into the atmosphere. But as the thunder clouds above us rolled away to the north-east, the phenomenon disappeared, which led me to infer that it was due to the presence in the clouds above us of an opposite kind of electricity to that with which we ourselves were charged. I do not remember any instance on record of a similar fact, the true explanation of which, however, if my own should be erroneous, will present no puzzle to professional physicists.
